

Royal Commission on
National Museums and Galleries

Oral Evidence, Memoranda
and Appendices to
the
Interim Report

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2.; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1928

Price £1 1s. od. Net.

THE ROYAL COMMISSION ON NATIONAL MUSEUMS AND GALLERIES.

THE RT. HON. THE VISCOUNT D'ABERNON, G.C.B., G.C.M.G., LL.D. (*Chairman*).

THE HON. EVAN CHARTERIS, K.C.

SIR MARTIN CONWAY, M.P., Litt.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

SIR LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

SIR RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

SIR THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

SIR GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

SIR HENRY MIERS, D.Sc., F.R.S.

COL. SIR COURTAULD THOMSON, K.B.E., C.B.

SIR ROBERT WITT, C.B.E.

MR. JOHN BERESFORD (*Secretary*).

MR. J. R. CHAMBERS (*Assistant Secretary*).

NOTE.

The Interim Report of the Royal Commission on National Museums and Galleries with Oral Evidence, Memoranda and Appendices is published in two volumes as follows:—

INTERIM REPORT (Cmd. 3192)...	...	Price 2s. net.
ORAL EVIDENCE, MEMORANDA AND APPENDICES	...	Price £1 1s. 0d. net.

Postage extra.

The estimated cost of the preparation of the Interim Report, Oral Evidence, Memoranda and Appendices (including the expenses of the Commission) is £1,455. The cost of printing and publishing this volume is estimated by the Stationery Office at £652.

ALPHABETICAL LIST OF WITNESSES AND INTERESTS REPRESENTED.

ROYAL COMMISSION ON NATIONAL MUSEUMS AND GALLERIES.

MINUTES OF EVIDENCE.

FIRST DAY.

Wednesday, 13th July, 1927.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.

Sir MARTIN CONWAY, M.P., Litt.D.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. B. W. GILBERT (*Acting Secretary*).

Mr. EDWARD ROBINSON, Director, The Metropolitan Museum of Art, New York, called and examined.

1. (*Chairman*): I do not know in what form you would like to give us information, whether you have prepared a statement, or would prefer to answer questions put you by members of the Commission?—I have not prepared a statement, not knowing on what points the Commission might desire to have information from me, but I should be glad to answer any questions that I can.

2. Of course anything you say will be regarded as either confidential or not as you may wish.—I thank you for the consideration. I may say that when I read the Terms of Reference of this Commission as they were published in *The Times* I was impressed by the fact that you were faced by some of the same problems that have been engaging the attention of our Museum for some years past, and which we are now also taking up seriously.

3. Now the Metropolitan Museum at New York corresponds in which directions with museums here? You cover at any rate wider ground than any one museum in London?—Yes. The branches of art in which we are endeavouring to build up our collections are covered here by the British Museum, the National Gallery, the Victoria and Albert Museum, the Tate Gallery, the Wallace Collection, and to a certain extent the National Portrait Gallery, though we do not collect portraits as such.

4. Not the Natural History Museum?—No. We have no department of Natural History, this ground being covered in New York by the American Museum of Natural History, which is an entirely different organization with a different board of trustees.

5. And a Science Museum?—Such Science Museums as there are are either independent organizations or associated with some other institution.

6. Under separate boards of Trustees?—Yes.

7. Under what authority do you exist; Federal, State or Municipal?—The Metropolitan Museum is, like many of the American Museums, Universities, and Libraries, a private organization. It was incorporated under an act of the New York State Legislature originally passed in 1870 and amended a number of times since. It is governed by a Board of Trustees consisting of twenty-five members. Twenty-one of these are elected by the Museum Corporation and the other four are *ex-officio* members of the Board, including the Mayor of the City, the Controller of the City, the President of the City Park Commission, and the President of the National Academy.

8. (*Sir Martin Conway*): Are there any family representatives?—Not at all except as they happen to be elected by the Board of Trustees. The elective trustees are divided into seven equal classes, each class of three holding office for seven years, and on

the expiration of their terms they may be re-elected, as they generally are.

9. By whom are they elected?—By the Board itself, subject to the approval of the Museum Corporation, which consists of all life members of the Museum.

10. (*Chairman*): That obtains under what statute? Under the State?—No, under the constitution of the Museum itself which, in its act of incorporation, the State gave the Museum the authority to make and adopt. Now it may interest you to know something of the relations between the Museum as a corporation and the City of New York. In 1871, the year after the incorporation of the Museum, and before it had any home of its own, the City of New York agreed to erect a building for its purposes, which it did, and since that time every extension of the building has been added entirely at the cost of the City, the only exception being the gift of a special wing a few years ago by our President and his wife, but that was regarded as an exception and accepted as such by the City. The City has always contributed the money for the building but it does not dictate the choice of architect or plans. The Trustees are allowed to choose their own architect, subject to the approval of the City authorities, and to have the plans worked out according to their own ideas and desires. These plans are subject to the approval of the City Park Commission. This approval having been obtained, the contracts are awarded by the City, and the City then takes over the construction work, not with the idea of interfering, but simply to take that part of the work off the hands of the Trustees and keep the control of the expenditures in the charge of the City government, where it properly belongs. Despite the many changes in our City government since 1878, when the first part of the building was completed, that agreement has been lived up to by the City as well as ourselves. By this arrangement the City owns the building and the Museum holds it under a lease. This lease does not involve any money payment, but is in the form of a contract imposing certain conditions upon both parties. In addition the City makes an annual grant towards the maintenance of the building, this including not only necessary repairs for which the owner would be properly responsible, but also a certain allowance for the maintenance of the Museum as an institution. It has always been understood that no penny of City money should go for acquisitions to our collections, the understanding being that the City would provide and care for the building and the citizens should provide the collections to occupy it. When the Museum was started the City's contribution was at the rate of \$30,000 (or £6,000) a year,

13 July, 1927.]

Mr. EDWARD ROBINSON.

[Continued.]

but as the building has grown and the Museum itself has developed, that contribution has been increased from time to time. It is not a fixed amount, but last year for example the City's contribution was a little over \$380,000. The apportionment of these annual contributions is made by the City, based, however, upon the requisitions of our Trustees.

11. (*Mr. Charteris*): Do these City appropriations come out of some special fund, or the revenue?—They come out of the City's revenue and are included in its annual budget.

12. (*Sir Lionel Earle*): Is not \$380,000 rather a heavy sum?—No, not in proportion to our needs. At the time of the City's original appropriation \$30,000 represented about two-thirds of the cost of maintaining the Museum, but the sum appropriated last year was about one-third of the Museum's total budget.

13. (*Chairman*): The amount of the annual budget is?—At present over a million dollars.

14. Apart from purchases?—Yes. Our heaviest item is salaries and wages. We have now over five hundred persons in the employment of the Museum, including everybody from the Director down, and it must be remembered that most of the mechanical work required is done by our own people, such as painting, decorating, case-building, cabinet or carpentry work, all installations, etc., etc., for all of which we have our own shops in the building. One large item is, of course, the attendants, as we call them, or guardians of the various collections. These number at present, including night watchmen, about two hundred and twenty.

15. Can you give us the floor space?—I am sorry to say that I cannot, nor the number of our galleries. I have not these details with me, but I believe the number of our galleries, including study rooms, is about two hundred and fifty.

To give you some idea of the work which goes on in the building, I may say that a year ago last May, when we opened our latest extension to the building, it added about 30 galleries and a large central exhibition court. All these galleries had to be painted, installed, equipped with exhibition cases and pedestals, and the readjustment of collections involved changes in the arrangement of about 75 galleries in the older parts of the building so as to bring the collections into proper and convenient order. Much, but by no means all, of the cost of this work was paid out of City funds, and all, of course, under the direction of the authorities of the Museum.

16. Apart from the administrative expenditure what is the annual expenditure on purchases—is that merely the result of donations you may receive?—Absolutely if you include in this term bequests. In other words, everything one sees in the Museum today is the gift of some individual either directly or by the money with which it was bought. We have a large amount of funds which yield us an income that ought to be available for purchases, but as the Museum has grown and its needs have grown, and as prices and wages have increased, we cannot use these funds for such purposes to the extent we should wish because the City's appropriation for maintenance does not cover the same proportion of the cost that it did originally. As I have already explained, this has declined to about one-third of our expenditure for maintenance, and the balance has to be made up from funds which were given or bequeathed without restriction as to the use of income. Consequently our purchasing power has been hampered proportionately.

17. (*Sir Martin Conway*): Your income is about a million dollars?—I do not know the exact figures, but should say it might be approximately.

18. (*Sir George Macdonald*): In addition to your purchases you get many things as gifts?—Yes; a great many things are given.

19. (*Chairman*): We were anxious to know who is your purchasing authority?—In the last instance it is the Trustees. The Trustees do not delegate that power, but in a practical way our system works some-

what as follows: Take, for example, a picture or a work of sculpture which is offered for sale to the Museum. It is called first of all to the attention of either the Director or the Curator of the Department concerned. The Curator makes his recommendation to the Director, and upon the approval of the latter, if the recommendation is in favour of purchase, it goes before what we call our Committee on Purchases. This is a committee of nine trustees appointed by the President of the Board, which holds monthly meetings, and all objects recommended for purchase are submitted to that Committee. In the course of the year we have thousands of objects offered, a large proportion of which are not worth serious consideration. Those which are not of sufficient importance to bring to the attention of the Committee are simply placed on file in our archives. The Committee discuss the recommendations of the Director and the Curators at their monthly meetings, with the object placed before them when possible. The Committee decides partly on the basis of funds available, and partly upon the relative importance of the object submitted, action being taken accordingly.

(*Chairman*): That answers my question.

20. (*Sir Lionel Earle*): Is it decided by a majority of votes?—Yes. I have been in the Museum for 22 years, and can say that during that time it has been almost the invariable practice that if the Director and the Curator concerned recommend the refusal of the object under discussion it is not purchased by the Committee, but, on the other hand, it does not follow that the Committee will buy, or does buy, everything that is recommended.

21. (*Mr. Charteris*): The Committee are in direct touch with the Director and the Curators?—Yes.

22. The Curator must bring the object to the attention of the Director?—Yes. And, theoretically, the Director should bring it to the attention of the Committee, though for reasons that I have stated, this is not done in the case of objects of trivial importance, or otherwise undesirable.

23. (*Chairman*): Do you suffer from overlapping with other departments; other local museums?—No. The other museums in New York with which there might be danger of overlapping are: The American Museum of Natural History, the Museum of the American Numismatic Society, the Hispanic Museum, and the Brooklyn Museum of Art. With these we have co-operated successfully in the desire to avoid overlapping or competition. For example, the Natural History Museum has an ethnological department, the collections of which are primarily of a scientific rather than an artistic interest, consequently when material of this nature is offered to us we refer it to that museum. Years ago there was a considerable amount of such material in our museum. Upon its reorganization some 20 years ago this material was turned over to the Natural History Museum, thereby avoiding duplication of the same classes of objects within the city limits. With the Numismatic Society we have an informal agreement by which we do not undertake to develop a numismatic collection as such, reserving to ourselves the collection of such specimens or classes as are primarily of an artistic nature. We have also turned over to that society many coins of different periods and nations which we do not regard as necessary or important to us, inasmuch as there is this other institution which can take care of them properly.

24. The avoidance of competition is arrived at by personal contact with the directors of the several museums? You do not have any meetings with joint board?—No. We have no such meetings, but there is a perfectly friendly understanding between us.

25. As a matter of fact in principle overlapping and competition are avoided?—Yes.

26. How do you avoid overcrowding?—We do not.

27. How do you propose to avoid it?—Up to the present time this question has not arisen seriously, because we have not yet reached the limits to which our building is expected to grow. When our museum was incorporated the City assigned for its purposes

13 July, 1927.]

Mr. EDWARD ROBINSON.

[Continued.]

a relatively small space in Central Park, and there has never been any objection on the part of the City to our extending our building within the defined limits then assigned.

28. (*Sir Lionel Earle*): There is no fear of the Museum becoming too vast?—Who can tell what is going to happen in our country? In my time I have already seen so many unexpected changes in the direction of the development of the Museum that I cannot undertake to say. More than once we have thought that we must prepare some scheme for the ultimate plan and arrangement of the Museum along well defined lines, but such plans have not infrequently been either upset or modified by the bequest or gift of a large collection which was not contemplated in such plans.

29. (*Sir Robert Witt*): Have you thought of dealing with the matter by exhibiting less of what you already possess?—That question has arisen in the Metropolitan Museum as well as in others in America. Our storeroom space is now overcrowded. In some departments we have so-called study rooms, but they are necessarily limited in size and scope. The Metropolitan Museum of Art was not planned like the one in Boston, where they have two distinct series of galleries; one for a study series, the other for general exhibits.

30. (*Chairman*): You have not contemplated any scheme of severe restriction of the ordinary exhibits?—No. If the Museum purchases an object, or accepts an object or a collection as a gift, it is usually with the idea that it shall be exhibited, but here again we are faced by the fact that with the growth of the Museum in standard as well as quantity, what was acquired some years ago is no longer desirable for exhibition, as better things of the same nature have been acquired in the meantime.

31. Then that object goes where? To the storerooms?—That has been our practice hitherto. Such objects have to go into the storerooms as better things come along, but until recent years there has not been any serious consideration by the Trustees of this question of storage, and in the meantime the storerooms have become more and more crowded until we have reached a state of absolute congestion, and we now find that we must get rid of some of these things.

32. Have you power to lend, exchange, or sell?—Yes, but I must answer each of these questions separately. We have the power to lend what belongs to the Museum, and this power is exercised by the Trustees alone. The City is not involved in such matters. In regard to disposing of undesirable objects which have accumulated our Law Committee, consisting of three eminent members of the New York Bar, have given us their advice. They hold that the Museum has the power to dispose of any objects which the Trustees have purchased. Also that it has the legal power to dispose of bequests, but there is some question as to the expediency of exercising this power because of the risk that doing so might alienate interest in the Museum on the part of other possible donors, who might say "If that is what they do with their gifts, I will not give them anything."

33. (*Sir Robert Witt*): Policy, not law?—Yes. In view of the congested situation of which I have spoken and the necessity of immediate relief we have been preparing during the last few months a list of all the objects now in storage which the Director and the Curators concerned recommend should be disposed of as unlikely to be of use to the Museum now or hereafter. These lists are itemized in detail, stating the name of the object, how it was acquired, and in the case of bequests or gifts, the source from which they came. In the case of purchases there will be no difficulty as I stated. In the matter of gifts or bequests it was thought that we must feel our way by some preliminary experimenting. For this purpose we selected the section of Classical Antiquities and sent around to the representatives of the donors letters stating that the Trustees had decided to dispose

of the objects listed, but before doing so desired to ask whether the representatives of the donor wished to have these objects returned to the family. The letter stated that if no reply should be received within two months the Museum would consider itself free to take such action as it desired. Up to the time when I left America quite a number of answers were received, asking to have the objects returned, and it is curious to note that we learned later that some of the objects thus returned had been sold by the recipients.

34. (*Chairman*): Have you sold a lot?—No, as yet none of the objects listed, though the Museum has for some years been selling duplicates of the Cesnola Collection of Cypriote Antiquities which was purchased by the Museum many years ago.

35. (*Sir Martin Conway*): Does the position arise that they will allow you to exchange but not to sell?—There is no question of right, but what we are doing is purely a matter of courtesy. Our Trustees are very clear about that.

36. (*Sir Robert Witt*): As regards loans of exhibits, may you lend outside the United States?—It can be done.

37. A loan to us—I mean you have a legal power?—We have a legal power to do so. There is no restriction in regard to such matters, but every application for a loan has to be considered and decided by our Trustees.

38. (*Mr. Charteris*): If you sell a gift is the money obtained ear-marked for some other object to be associated with the person?—That question has not yet arisen as a matter of general policy.

39. (*Chairman*): Do you lend to other museums in the United States?—We do for special occasions. For instance some years ago the Art Institute of Chicago organized a loan exhibition of Dutch masters and their request for a loan from us was granted. Our museum generally makes loans of this nature to other museums, subject to proper precautions, insurance, &c., but not to private individuals, and certainly not to dealers. There is an advantage in lending to other public institutions because it develops a spirit of fraternity among them and there are times when we ourselves desire to borrow in the same manner from other museums. This has brought about a mutual feeling of relationship.

40. Practice of loans mutual?—Yes.

41. (*Sir George Macdonald*): With regard to the question of overlapping between museums in different cities, has any arrangement been made to prevent that?—No. I do not think so. The question has not come up definitely as yet.

42. You might find yourself competing against them in the market?—I was not thinking of that. I was thinking of cases where it was clear that these things could be shown in New York, but not in the Metropolitan Museum.

43. Yes. But what I wanted to get at was this; is it at all probable that the Metropolitan Museum in New York and the Boston Museum are bidding against each other in the market?—Yes. We do find that this happens occasionally.

44. You have no sort of understanding with them?—No. That is a matter which might be adjusted between the directors of the several museums, but as a fact we do sometimes find ourselves in competition in the public sale rooms.

45. When you speak of your powers in regard to selling objects there is nothing to prevent your doing it,—I am thinking for the moment of what private collectors do in this country, but our museums cannot do,—that is to take a limited number of specimens out of the collection? You can pick out a certain selection and dispose of the rest? You do that?—To a certain extent, though not exactly in the terms you state. It frequently happens that a testator bequeaths to the Museum such of the objects as it may select out of his collection. In these cases the Museum selects what it wants, but the balance is turned over to the

13 July, 1927.]

MR. EDWARD ROBINSON.

[Continued.]

estate, and is not disposed of by the Museum. When a collection is bequeathed with the condition that the Museum shall take the whole, then our Trustees accept or reject the whole according to their judgment.

46. There is nothing to prevent that?—No.

(*Sir George Macdonald*): Of course in the British Museum we cannot do that.

47. (*Chairman*): In the case of bequests in restrictive terms is there any legal power that you possess to override those restrictions?—No. Such bequests are rejected in toto unless our Trustees find it desirable to accept them.

48. (*Sir Robert Witt*): Have you ever accepted anything in that way?—Yes. In the early days the growth of the Museum was slow and its means were slender. Its inception was in the late 60's, and in the light of our present condition there are several interesting points in connection with its early development which bear upon this subject. In those years several gentlemen interested in such matters got together and said we must have a museum of art in New York. How much money will be required to start such a museum? And after deliberating they decided that it would require about \$250,000. They set about to raise the money and in two years all they had been able to secure was about \$160,000. That was the financial beginning of the Metropolitan Museum. In the years following the opening of the first part of its building, gifts either of money or works of art came in very slowly, and to enlist public interest the Trustees felt it necessary to accept everything that was offered, subject to any restrictions the owner saw fit to impose. In course of time this policy was found to be extremely hampering to the popular development of the institution, and in January, 1906, the Trustees passed a vote in which they declared that it was "inexpedient to accept donations of pictures or other objects of art, with conditions of any kind which would interfere with the free action of the Trustees at all times as to their location." Since that time this policy has been consistently followed. There has been but one important exception, which was in regard to the Altman Collection, an extremely valuable one as probably most of you know. In making his will Mr. Altman inserted the condition that the collection should always be exhibited in one or more galleries set apart exclusively for it, in spite of the fact that it consisted of works of art of many different periods and countries. Because of the exceptionally high character of the objects in this collection, the Trustees felt that it would not be in the interest of the Museum to reject it, and the restrictions imposed have been rigidly adhered to. From the point of view of the systematic arrangement of the Museum this is of course unfortunate, and moreover does not carry out the hopes of the testator in the impression made upon the public, as it is more apt to produce a sense of irritation upon visitors to find for example certain of our most important paintings separated by a great distance from the other picture galleries. There are a few other restricted collections in the Museum which give a false impression to the visitors as to the present policy of our Trustees. Some of these were accepted before the year 1906, and in those cases a legal obligation was entered into which cannot be relieved. Others are restrictions of a temporary character, the most notable example of which is the Morgan Collection.

49. That is a temporary restriction for fifty years which you respect?—Which we respect. The present Mr. J. Pierpont Morgan wished to give the Museum a large and very important part of the collections which he had inherited from his father, to be added to what the latter had given to the Museum in his lifetime; and as a tribute to his father's memory he asked that the combined collection should be kept together for a period of fifty years, at the end of which time the Trustees

were to be free to distribute them as they might see fit. This was naturally agreed to by our Trustees. While on this subject I should like to call your attention to two points which have an important bearing on it. One is that all the objects in these collections as now shown in what we call the Morgan Wing of the Museum are of a kindred and harmonious character, illustrating as they do the decorative arts of Europe from early Christian times through the eighteenth century; the other that Mr. Morgan does not object to our placing other objects of the same character in these galleries.

50. Do you charge anything for admission to the Museum?—Yes. On Mondays and Fridays. On those days this is done mainly with the idea of restricting the numbers of visitors.

51. (*Sir Robert Witt*): What do you charge?—Twenty-five cents on Mondays and Fridays, but Members of the Museum are admitted free on those days.

52. (*Chairman*): Do you provide guides for parties going through the Museum? Can they get a guide by applying to the Secretary?—Practically that is done in a number of ways. A visitor may go to the Information Desk at the entrance of the Museum and ask for a guide. If he applies without notice he takes his chance of there being one at liberty, but applications may be made in advance. These guides or "Instructors" as we call them, are a part of a very useful department of the Museum, which has been developed in the last few years. This we call our Educational Department, consisting of a Director of Educational Work and five "Instructors." These "Instructors" act not only as guides, but they also have classes and they also take charge of classes of children from the public schools of the City in accordance with a regular arrangement which is planned at the beginning of each school year. Classes are also carried on through the winter for what we call Members of the Museum, for which you have no parallel here. These get the services of the Instructors for guidance or class work free. Outsiders are charged a small fee.

53. What is the amount of this fee?—One dollar an hour for one to four persons, and twenty-five cents for each additional person.

54. (*Sir Robert Witt*): You have lecture rooms, and lectures are free?—Every Saturday and Sunday afternoon during the winter season, that is, from November to April, we offer free public lectures in our lecture-hall by well-known lecturers on art, mostly not members of our own staff. The cost of these is borne by the Museum without return, as part of our educational work. There are in addition various lecture-courses on week-days by our own Instructors, for some of which moderate fees are charged.

55. (*Sir Martin Conway*): You spoke about Members of the Museum. How does anybody become a member, and what privileges does he get by becoming a member?—The establishment of memberships of the Museum, which is now general among the museums of the country, was undertaken in the Metropolitan Museum about twenty-five years ago. I do not remember the exact year. Its purpose was to enable such persons, both in and outside of New York City, as were especially interested in the Museum to feel that they were sharing in its support and in return were receiving certain privileges and opportunities of keeping in touch with its growth and development. We have seven classes of these, differentiated according to the amount subscribed. These are: (1) Annual Members, who pay annually ten dollars; (2) Sustaining Members, who pay annually twenty-five dollars; (3) Fellowship Members, who pay annually one hundred dollars; and (4) Contributing Members, who pay annually two hundred and fifty dollars. The other three classes are: Fellows for Life, who contribute \$1,000; Fellows in Perpetuity, who contribute \$5,000; and Benefactors, who contribute or devise \$50,000 or

13 July, 1927.]

Mr. EDWARD ROBINSON.

[Continued.]

more. In the latter three classes the contribution may be either in money or its equivalent in works of art. These three classes are entitled to vote at meetings of the Corporation, which are held annually, and on such other occasions as the Corporation may be especially called together. It should be added that when the subscriptions of any person who belongs in one of the annual classes of membership aggregate \$1,000 he is entitled to be elected Fellow for Life. A Fellow for Life has not the power of passing on his membership to an heir or successor; but Fellows in Perpetuity and Benefactors may bequeath their memberships to any members of their family or others at the rate of one Fellowship in Perpetuity for every \$5,000 which they shall have contributed.

56. (*Sir Lionel Earle*): Does this system of membership produce a great deal of revenue?—It does. Last year, for example, the total number of members in the annual classes was 12,710, the largest in the history of the Museum, the membership having grown steadily year by year, and the total amount of money received from all classes of membership during the year was \$136,850.

57. The revenue from this money is at the disposal of the Trustees?—Yes, and it is applied to the maintenance of the Museum, not to acquisitions. The privileges to which all members are entitled are "A ticket admitting the member, his family and non-resident friends on Mondays and Fridays; ten complimentary tickets a year for friends, each admitting the bearer once on pay days; and invitation to all general receptions given by the Trustees for members; the Museum Bulletin, which is published monthly, the Annual Report, and a set of all handbooks and catalogues published for general distribution, if requested."

58. (*Mr. Charteris*): Is the arrangement for membership in the original terms of incorporation?—No. It was, as I said, adopted later.

59. (*Chairman*): What is your method of soliciting membership?—It is done mainly by telephone. This method was adopted experimentally because it had been tried elsewhere, but with some doubts of its success. It has been organised by our Secretary with remarkable results, as you see from what I have stated.

60. (*Chairman*): You have specialists engaged on it?—Yes. (*The witness then gave an explanation of the method by which this system was operated and some specific examples of its results.*)

61. (*Sir Lionel Earle*): Do people have to have any special qualifications for election?—No.

62. (*Sir George Macdonald*): If you were asked to put a monetary value on the exhibits in your museum could you do it?—No. It has not been attempted, and it is contrary to the policy of the Trustees to undertake any appraisal. We depend upon public spirit and the interest of the public at large for the support of the Museum, and feel that the results thus far attained, both in membership and in great gifts of money and works of art, have shown that the Museum has been very successful both in enlisting and holding that interest. I should like to mention one other thing that has been done for developing that interest and increasing the usefulness and popularity of the Museum. This is the Symphony Concerts, eight of which have been given each winter during the last nine years by one of the best symphony orchestras in New York City. The money for these concerts has been provided always by private gifts.

63. (*Mr. Charteris*): Is any charge made for admission?—No. There is no charge, and no tickets are issued. The doors are opened, and whoever wishes may attend them without restriction. Our audiences average about eight thousand at a concert, and it not infrequently happens that they exceed ten thousand; this in spite of the fact that our seating accommodations are inadequate for providing for more than a small proportion of these audiences, the greater part of them standing up for the two hours which the concerts last.

64. (*Sir Lionel Earle*): Is the Munsey legacy likely to affect the attitude of possible benefactors towards the Museum?—It is too early to answer that question, as this can be ascertained only by time and experience, but we certainly hope not.

65. (*Chairman*): Are your galleries lighted by electric light in the evenings, and are they open after dusk?—The Museum is thoroughly equipped with electric light. Our hours are from ten to five on weekdays and one to six on Sundays throughout the year. It frequently happens that because of bad weather it is necessary to light the Museum or parts of it within those hours, and on certain occasions in the winter we open in the evenings; for example, on Saturday nights, the concerts last from eight to ten and the building remains open and lighted until shortly before eleven, for the benefit of those who may wish to inspect the galleries before leaving. This has proved a popular movement and it is quite astonishing to see how many people remain after the concerts in spite of the fact that they have been standing through the evening.

66. Are your galleries well lighted by electric light?—Yes. We believe so, and we are constantly endeavouring to improve the lighting by new methods as these are devised.

67. (*Mr. Charteris*): Is the Museum well attended on Sundays?—Yes. The Sunday hours are from one to six p.m., and the average attendance during these hours throughout the year is over eight thousand. In the winter months it frequently increases to twelve thousand and more.

68. (*Sir Martin Conway*): I have a note here to ask whether you have any stringent regulations as to the labelling of exhibits—whether there is a rule that every object shall be labelled?—No. There is no hard and fast rule on this subject, but as a general principle it may be said that everything is labelled, the exceptions being in the case of a number of small objects which form a group and then we usually have a "group label." The Director is responsible for seeing that all the collections are adequately labelled, but the character and wording of the labels is generally left to the discretion of the curator in charge of the department concerned. Their policy varies in accordance with the nature of the material, some classes of objects requiring more description than others, for instance, in our Egyptian Department the labels as a rule contain more information than those in other departments, though this is not invariably the case.

69. Would you as Director call the attention of a curator to the lack of labelling?—Yes, naturally, but it is not advisable to have a fixed system applied to all departments because of the varying nature of the material. In the case of paintings, the effect of which would be marred by descriptive labels if these were attached to all the pictures in a gallery, we confine ourselves to stating the subject of the picture, the name and school of the artist by whom it was painted, with his dates and the source from which the picture comes; if it has been purchased from a special bequest or fund, as is generally the case, this is indicated accordingly.

70. Have you any custom of photographing every object which comes into the Museum?—Yes. Absolutely every object is photographed before it is placed on exhibition. In the majority of cases this photograph is primarily for the purposes of the Museum inventory or catalogue. By catalogue I do not mean our published handbooks, but the card catalogue which forms a part of the Museum archives, the photograph enabling us to identify positively any object about which a question may arise. A large number of our acquisitions are photographed also for purposes of sale; even objects which are lent to the Museum for special exhibitions or otherwise are photographed by us, but such photographs are not sold unless with the special permission of the owner. Our object in the matter of museum photographs is to serve the public in every way so far as it lies within our power. If the Museum has not of its

13 July, 1927.]

Mr. EDWARD ROBINSON.

[Continued.]

own initiative put photographs of any objects on sale this will always be done on request.

71. (*Mr. Charteris*): Are the Trustees in any sense experts—are they at all chosen for their expert knowledge?—They are chosen primarily for their interest in the Museum, and although this interest may bring with it some expert knowledge in one field of art or another, such knowledge is not regarded as a requisite in the election of a Trustee.

72. (*Chairman*): They are elected by a majority of the Trustees themselves?—Yes.

(*The Witness withdrew.*)

73. A certain number of them are retired every year?—They may be retired at the end of the term for which they were elected, but, as I have said before, they are generally re-elected for another term.

74. (*Sir Martin Conway*): And am I right in thinking that election to that Board is regarded as a considerable honour?—I hope so, and I believe it is.

(*Chairman*): We are very much obliged to you Mr. Robinson for the information that you have kindly given to us.

SECOND DAY.

Friday, 21st October, 1927.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.
Sir MARTIN CONWAY, M.P., Litt.D.
A. E. COWLEY, Esq., D.Litt., F.B.A.
Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.
Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.
Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.
Sir HENRY MIERS, D.Sc., F.R.S.
Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Mr. JOHN BERESFORD (*Secretary*).
Mr. J. R. CHAMBERS (*Assistant Secretary*).

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S., Director of the Royal Botanic Gardens, Kew, called and examined.

The following Memorandum by Dr. Hill was submitted by the Ministry of Agriculture in reply to the Commission's Questionnaire (*see Appendix I*):—

1. The Royal Botanic Gardens, Kew, come under the Ministry of Agriculture and Fisheries as regards administrative matters, and the vote for maintenance of the collections and salaries is included in the Parliamentary vote for the Ministry. As regards maintenance of buildings the Office of Works is responsible. There is no "Governing Body" other than the Minister of Agriculture and First Commissioner of Works, and the Director is responsible for the control of the scientific work of the Herbarium and Museums.

2. There are no difficulties of any consequence. There are no statutes or instruments which restrict the power to lend, exchange, or dispose of specimens or exhibits or on the power to exhibit a selection to the public, etc. These matters all rest with the discretion of the Director, and the utmost freedom is exercised in sending specimens on loan for *bonâ-fide* students in our Dominions and Colonies or in this country and to Herbaria in this country, the United States or Europe. It is the usual practice to send specimens for individual workers to some institution of repute in order to ensure their safe-keeping and due return. The Director uses his discretion in sending on loan *unique* or type specimens, otherwise the requests of scientific workers are met as fully as possible with the result that Kew benefits materially by reciprocal kindness on the part of similar institutions all over the world.

The Herbarium is not open to the general public, but any *bonâ-fide* botanical student is accorded full privileges for working and consulting all the material and books in the Herbarium and Library.

In the Museums all the specimens can be seen by the public, and special privileges are granted to *students* to work and *handle* the specimens at times when the Museums are not open to the general public. In addition to the maintenance and care of the collections, the work of the Museums staff is largely consultative.

3. The intercourse is so free at present on the part of Kew that nothing could be done to make it more so. We frequently send presents of duplicate

material from the Museums to University and Municipal Museums and to schools. The distribution of duplicate herbarium material to Herbaria at home and abroad is one of the most useful activities in the Herbarium, since in return we receive valuable accessions of useful material.

4. Every endeavour to prevent overlapping is made in relation to the Natural History Museum and the Royal Botanic Gardens, Edinburgh, as it is considered by Kew that these three institutions should be complementary to one another, and as Kew and Edinburgh freely exchange specimens for purposes of study it is unnecessary and would be a waste of public money for both Kew and Edinburgh to acquire exactly the same sets of specimens. With regard to the Natural History Museum, however, and the Herbarium of Trinity College, Dublin, considerable difficulty is often experienced, since neither of these institutions is permitted to send out specimens on loan for the purpose of study, even to Kew.

5. From 1st January, 1916, charges for admission were imposed.

In April, 1924, the charge on days other than Students' Days (Tuesdays and Fridays) were abolished.

From 1st January, 1926, the charges on days other than Students' Days were reimposed.

It is difficult to estimate accurately the effect of these charges on attendance. Prior to 1916 there was no provision for recording attendances. For the post-war years 1919 to 1926 (excluding 1924 and 1925) the average annual attendance was 1,146,754. For the two years 1924-25, when a fee for admission was charged only on Students' Days, the average annual attendance was 1,603,347.

Arrangements are made for the admission of school parties on educational visits at a nominal charge. The average annual attendance of teachers and scholars in the years 1916-26 (excluding 1924-5) was 16,388.

The proceeds of the fees for admission averaged for the years 1919-26 (excluding 1924-25) £6,711 10s. 7d.; for the years 1924-25 (Tuesdays and Fridays only) £2,125 0s. 6d.

6. The scientific staff is recruited in the ordinary way under Regulations of the Civil Service Com-

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

mission and has proved satisfactory. It would be useful if a few *junior* posts could be established in the Herbarium in order that young men, showing especial aptitude for botanical work, could be taken on to the staff and gradually qualify for the higher posts. Otherwise no alteration is desired in the present system which affords ample training for the higher posts.

7. Both in the Herbarium and Library and Museums the existing accommodation is almost exhausted. In the Herbarium a recent readjustment of hot-water pipes has made it possible to add cases for specimens which will take some 875,000 sheets, but this is not enough and in the course of the next two or three years an addition to the Herbarium will be necessary. Some of this may be obtained by widening the existing galleries, but a new building must be erected before very long.

With regard to the Museums the Office of Works have already prepared plans for a single *Timber* Museum to house the specimens at present displayed in Museums III and IV, as neither building is now large enough to house the large amount of valuable material recently received from our Dominions and Colonies and from home sources. These exhibits are of very great value in relation to the Economic resources of the Empire.

8. As far as this question concerns Kew matters are in the hands of H.M. Stationery Office.

9. *Students* have full facilities, as I have stated above, for working in the Herbarium and Library, Museums and Laboratory, and in the Gardens generally, and every assistance is given them in supplying them with material and accommodation. This is especially the case for botanists, foresters and agricultural officers serving in our Dominions and Colonies who are frequent visitors when home on leave.

EXAMINATION OF WITNESS.

75. (*Chairman*): We are indebted to you for your memorandum. I propose to ask you a few questions in supplement to what you have already told us. First of all in regard to your relations with the Ministry of Agriculture and Fisheries; are you directly under them?—Yes, Sir, for administrative arrangements and for matters connected with staff, and so on, but not in regard to the general policy of running the establishment.

76. Which is directed by yourself?—By myself.

77. And the question of special missions abroad or special enquiries abroad, can you undertake those on your own initiative?—After reference of course to the Ministry.

78. Now in your address to the Royal Society of Arts of 28th December, 1923, you alluded to the remarkable achievements of Kew in the economic and commercial spheres. Will you give us further details about them?—The historical cases which I think I mentioned there were the sending *Para* rubber to the East and *cinchona* to India, and so on, and since those times we have brought forward several matters of economic importance to the Dominions and Colonies. Among other things recently we have been getting seed of the plants (*Hydrocarpus* and *Taraktogenos*), which yield *Chaulmoogra* oil, which is a specific in the treatment for leprosy. We have obtained seeds from Siam and India and raised plants at Kew. These have been sent in *Wardian* cases to the various Colonies where the plants are likely to be successful, and we have anticipated the requests of our Colonies for that material. That is one of the recent things we have been doing. There are all sorts of miscellaneous enquiries we take up. We have had a good deal of correspondence with the Director of Agriculture in Palestine on the subject of bananas suitable for growing in the Jordan Valley, and we have obtained the proper plants to send out to them.

Recently I learned that it was desirable to encourage the cultivation of almonds in suitable Colonies, and I found there was a variety of almond, growing in the Island of Majorca, which was of considerable commercial value. Therefore I sent one of my staff recently to the Island of Majorca where this particular almond was growing, and he was successful in getting bud and graft material of this almond which he brought home straightaway to England. We placed it in the hands of a firm for budding and grafting, and next year I hope to send out a large number of young trees to Cyprus. It happens to be a particularly useful variety for a dry climate. This enterprise has been taken up on my own initiative with the sanction and help of the Empire Marketing Board and the Colonial Office. Then there was question concerning potatoes for this country. A great deal of genetical work is being done in connection with potatoes in order to combat various diseases to which the potato is susceptible, so I have been getting wild stocks and varieties of potatoes from Peru, and have sent them to Dr. Salaman, who has been working with the late Dr. Bateson in genetical matters in connection with the potato. Then, again, the Federated Malay States and the Straits Settlements Agricultural Department wanted the seed of a certain nut, the *Sapucinia* nut (*Lecythis*), from Brazil, and we obtained that nut for them and sent it out to the East. Quite recently the Seychelles were very anxious to grow a special kind of peppermint which is cultivated in Japan. I have ordered plants of this peppermint from a firm in Japan; they will come to Kew and then be forwarded to the Seychelles. An important line of research is being carried out in Trinidad, in connection with the Panama disease in bananas, at the Imperial College of Tropical Agriculture. In order to help forward the investigation and get them the various stocks which will help them in the particular work they are doing, I have sent out to Trinidad material I have obtained from the Canaries and also from the Federated Malay States, and I am just sending out one of my assistants, with the approval of the Empire Marketing Board and the Colonial Office, to the Federated Malay States and to Siam and probably also to Java to get stocks of various wild forms of bananas with a view to crossing them with the *Gros Michel* variety which is very susceptible to this disease which is causing great havoc in our West Indian Colonies. We have had a special quarantine house built at Kew where we shall grow the root stocks of these bananas. Our Mycologist and the Director of the Bureau of Mycology examine the stocks growing at Kew. As soon as they are satisfied that they are free from disease they will be sent out to Trinidad. It would be very dangerous to send them out without examination. In the East they have several diseases of bananas which fortunately do not occur in the West Indies; it is essential, therefore, that every precaution should be taken to prevent sending any diseased material to the West Indies. Then there is another interesting point we have been looking into for some time in connection with camphor. Camphor is a monopoly of Japan and is grown chiefly in Formosa. Many years ago camphor was sent out by our agencies to various of our Colonies, Mauritius and Seychelles in particular, and also to the West Indies. It was found in the West Indies, only a few years ago, when they distilled the wood they did not get any solid camphor at all, they only got camphor oil, and in Mauritius when we pointed this out to the Director of Agriculture and asked him to investigate the matter, all the trees were found to yield oil. I think only one single tree yielded solid camphor. The oil is of very little value commercially, and the solid camphor is a very important product. There is no botanical difference between these varietal forms, but there are two, or perhaps three, distinct physiological varieties, and the only one which is of commercial importance is the one which yields solid

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

camphor. It may be a climatic matter, we cannot yet tell. I have asked the Colonies concerned to undertake investigations by growing camphor at different altitudes, and so on. I have been in correspondence with the Director of Forests in Formosa, and he has sent me over seeds of oil and camphor-yielding trees from Formosa, and I have sent them out to the Colonies so that they may test the resulting trees at different altitudes and under different climatic conditions. I am also arranging with the Directors of Agriculture in Ceylon and in Mauritius to take cuttings of the different types of trees and send the Ceylon cuttings to Mauritius and the Mauritius ones to Ceylon to see if the oil-yielding variety of Mauritius will produce camphor in Ceylon and camphor-yielding forms in Ceylon will give oil in Mauritius. Kew receives a great number of other enquiries from different Government offices and from private individuals. The Ministry of Health, for instance, some years ago asked us to report on a cargo of nutmegs alleged to be diseased. The Government Chemist at various dates has asked us to undertake examinations in regard to tobacco, supplies of spruce for cellulose manufacture, preservation of vegetable tissues by carbon disulphide, and, only a few days ago, a matter relating to the adulteration of tea. The Government Veterinary Department asks our advice about poisonous herbs in connection with stock sickness. We also carried out a good deal of identification of timber samples for the Royal Air Force.

79. Do you suggest any method for increasing the usefulness and assistance of Kew?—I think the help we are able to render is fairly well known, certainly by Government Departments. I think all the Government Departments realise how much we can help them.

80. Do you think the public realise it?—I think they do on the whole. We get a large number of enquiries from manufacturers, firms and so on.

81. Passing away from that point, outside the herbarium you have various museums for exhibition and research?—Yes.

82. Will you state the main features?—There are four museums, one devoted to the products derived from Dicotyledons, such as tea, coffee, rubber, cocoa, &c.; another one devoted to the products derived from Monocotyledons, palms, grasses, &c., including most of the fibre plants and two museums devoted to timber, one to foreign and Colonial timbers and one to British timber and the articles made from British timber. They are housed in four separate buildings some distance away from one another, and only one was built to serve as a museum; the others are just buildings that happened to be on the premises which we have utilised as they became available, so they cannot be said to be ideal places for museum purposes. Perhaps the best of them is the one which was Princess Augusta's Orangery, which is museum No. 3, the Colonial timber museum. They are not museums in the same sense as the British Museum Natural History collections. They are not so much designed for show to the public as for our own research work. Our museum collections are really more comparable to the herbarium. They are a collection of samples and products all arranged systematically for reference and to some extent for instruction, but mainly their purpose is for reference, for helping us to give information to our various inquirers.

83. How far do they duplicate and overlap?—Very little, I should say. To some extent the Imperial Institute in their galleries have similar products, but they are arranged in quite a different way. For instance, our exhibit of cotton would be to exhibit the types of fibre and the different species and varieties of the cotton plant, whereas the Imperial Institute exhibit is on more commercial lines, to illustrate the uses to which cotton is put, the fabrics made from cotton, and so on. Our exhibits are more purely botanical. In regard to

rubber, we have the historical rubber samples; we do not exhibit to any extent the commercial developments of rubber. That is developed at the Imperial Institute.

84. Is there any inconvenience in the two being separated?—Ours and the Imperial Institute?

85. Yes?—No, I think not, because we have a very perfect liaison with the Imperial Institute now, and all the botanical matters that they have to deal with are sent down to us, and all the purely economic questions, which they are competent to answer, I send to them.

86. Is your museum accommodation adequate?—No, I am afraid I must say it is not. It makes it rather difficult having four scattered buildings. The original museum, the first museum of economic botany ever founded in this country, is our present museum No. 2, which was the Royal Fruit Store, the use of which was obtained by Sir William Hooker and from which I think it may truly be said the Imperial Institute has grown; but a fruit store, however adapted, does not lend itself to museum exhibitions. It is very dark and rather inconvenient. The Duke of Cambridge's old house, now the present museum of British timber, No. IV, is quite a useful building in many ways, but that, again, is not a perfect museum building, and even No. I, which was built especially as a museum, is more like a fine private house than a museum and is none too well lighted for the purpose. It serves very well but it is now so full that it is impossible to find room for expansion. We have done a good deal in the way of removing unnecessary specimens, and we have now no specimens with which we can dispense.

87. How pressing do you consider your problem in relation to museum accommodation?—It is not, perhaps, immediately urgent. I think there are more pressing problems. The useful thing to do would be to combine No. 1 and No. 2 museum and make one fine building to take all the economic products derived from both dicotyledons and monocotyledons and to combine the two timber museums. I may say the question of combining the two timber museums has already been put forward and the Office of Works have produced plans for a general Timber Museum by making an addition to the old Orangery of Princess Augusta, but nothing more has happened beyond the preparation of plans. I think the timber museum question is really an urgent one, because so many samples of timber are coming to us from all our Dominions and Colonies and they have to be correlated with the specimens in the herbarium, because it is impossible to identify timber from the sample of timber only. It has to be definitely correlated with the specimens of leaves and flowers, and we want the extra room to house what are really "herbarium specimens" in direct relation to the dried botanical specimens which we have in the herbarium, and we have no room now for their accommodation. We have a large number stored away which we cannot display. It is a very important matter in connection with the many questions relating to the utilisation of our Colonial timbers which are many of them very valuable.

88. Turning to the herbarium, the herbarium is really the pivot of your research work?—I think you must consider it in relation with the museums and with the garden. I do not think you can dissociate the herbarium from the museums and the garden. They are all linked together. The work of one is essential to the work of the other.

89. The herbarium has to have a garden adjacent?—Most certainly.

90. How would that apply to the question of the herbarium at the Natural History Museum; is that a great defect?—I should think it must render their work more difficult. I think perhaps it would be right to say a garden must have a herbarium rather than that a herbarium must necessarily have a garden attached to it, because there are one or

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

two instances, for example, the Hofmuseum, Vienna, the Herbarium of the National Museum, Prague,* the Smithsonian Institution Herbarium, Washington,* have no botanic gardens attached to them and there is a large herbarium at the University of California at Berkeley* with no garden attached. As far as I can recollect, those are the only examples of large herbaria unconnected with gardens.

91. In every other case the herbarium is joined on to the garden?—It is part and parcel of the same institution.

92. I think the Committee on Botanical Work in 1901 recommended that the whole of the botanical sections of the British Museum should be brought to Kew?—I think they did.

93. Was any action taken on that?—None, that I know of. I have read through the whole of the evidence and Report, and, as far as I know, all their recommendations are a dead letter.

94. What were the recommendations? Mainly the bringing of the herbarium and botanical sections to Kew?—Yes, to Kew.

95. And centralising them there?—Yes.

96. Would you think that would be to the public interest?—On general grounds I think I should say yes. There are many practical difficulties.

97. Which are what?—First, it sounds a small difficulty, but the specimens of the British Museum are mounted on larger sheets of paper than ours, $\frac{3}{4}$ inch longer and $\frac{1}{4}$ inch broader, so it is impossible to fit the British Museum specimens into our cabinets. That is one thing. It is impossible to cut the sheets of paper down because in a good many cases there are very old records on the back of the British Museum sheets at the top and bottom corners, in such a way that you cannot cut down the sheets. Very often also the specimens are so large that you would cut the specimen if you cut the paper. I think if it were decided to move the herbarium to Kew it could not be incorporated. I think it would be quite impossible to incorporate it, sheet by sheet, with the Kew collections.

98. They would have to be side by side?—I think it would only be possible to put them in a separate building as an entity. It would be quite easy of access if it were so placed, but I think it would be a grave mistake to attempt either to mount our specimens on larger sheets and incorporate them with the British Museum or, *vice versa*, to cut the others down.

99. Apart from the difficulty in regard to the size of the sheets, what other difficulties are there?—I do not think there is any other particular difficulty, speaking generally.

100. And would the library go with the herbarium if it were brought over?—I suppose there would not be so much need of a large botanical library at the British Museum if the specimens were transferred. I do not know whether you are referring now to the whole of the British Museum collection or only to the general herbarium.

101. There are two different proposals. What is your view of the two proposals? The herbarium, you have already said?—There is a large general herbarium, there is also a British and European Herbarium at the British Museum, two separate herbaria. I was only referring to the general herbarium.

102. What would be the difficulty regarding the British and European?—My own personal view, I am only speaking personally, is that that ought to stay and serve as a handy means of reference for people living in and about London. It should I consider remain where it is.

103. You would transfer?—The general collection. That would I think be the best plan, if it were going to be done at all, to transfer the general herbarium but leave the other where it is.

* I understand that it is proposed to connect these three Herbaria with Botanic Gardens in the near future.

104. What is the relative size of the two?—I do not know. I am afraid I have never been into the British Herbarium. I have never had any reason to consult it. I have never worked on the plants contained there as the resources of my own establishment have been sufficient for my own purposes. I know the building only from the outside.

105. Is botanical opinion generally in favour of a transfer to Kew?—I have not attempted to find out.

106. You have already said I think the two herbaria should not be amalgamated, the one would supplement the other?—Yes.

107. Passing to the question of fees, what is your general view about fees?—I do not think they are any drawback and I think in some cases they are a slight advantage. I do not know whether it is due to one or two notices I have had put up or whether it is due to the fact of the small charge of one penny, but the state of the gardens in the way of cleanliness and general tidiness on the part of the public has been very marked the last few years. Everybody who goes to Kew nowadays is rather pleasantly astonished that there is so little litter about the place.

108. That you attribute to the levying of a fee?—I rather think people take more care and interest in a place for which they have to pay a fee for admittance than in a place where they can go in casually without any payment.

109. The fee being one penny except on students' days when it is sixpence?—Yes.

110. We have a figure in some of the Treasury papers which gives for 1914 four million visitors to Kew; 1915 4,300,000; are those figures authentic?—No, I cannot say that they are. The way in which the number were counted in old days before we had turnstiles was very casual. The constables at the gates were supposed to count the visitors who came in. Probably on weekdays, when numbers were few, their countings were fairly accurate, but on Sundays, Bank Holidays and crowded days I rather gather from what I have learned that they counted the number passing through the gate for half an hour and multiplied that number by the number of hours the gardens were open. We always regarded the figures sent up with considerable suspicion. Since the turnstiles have been placed I have attempted to estimate the number of visitors. I do not see that there is any great difference in the number of visitors now coming to the gardens. When they were first put up Sir David Prain and I were much interested in what the result might be and I used on a Sunday afternoon to go round the garden and estimate the number of people in certain parts and what I took to be 50,000 on the old reckoning turned out to be something like 20,000 or 15,000 and I find that this had held good quite fairly well ever since. I should say the numbers now are on the whole rather greater than they used to be.

111. That is free entrance and one penny entrance?—Yes.

112. Compare one penny entrance with sixpence?—There is a very large difference. That is very much to the advantage of those people who want to come and study quietly in the gardens. Such people appreciate very much the opportunity of the quiet use of the gardens. The houses and museums are thrown open in the morning and they have all facilities for studying quietly. You see a great number of serious students on these days really deriving the pleasure and benefit which the gardens can give.

113. You would advocate the maintenance of the fee system, one penny on ordinary days and sixpence on students days?—Yes. I might add after a Bank Holiday we do not charge sixpence on that Tuesday as so many people have Tuesday free as well as Bank Holiday; the Ministry of Agriculture agreed that sixpence should not be charged on those Tuesdays that fall after Bank Holidays.

114. Your present revenue is between £6,000 and £7,000 a year?—Yes.

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

115. What is the cost of your staff at the turnstiles?—I am afraid I cannot give the actual figures. It represents the salaries of about nine or ten constables.

116. Do you see any method by which Kew Gardens can be more extensively used for instruction and education?—I think they are made use of a great deal. We have arrangements for parties of school-children in charge of teachers at reduced fees. Students can get a ticket, for the year at the nominal price of 5s. for every Tuesday and Friday throughout the year and before public hours on other days.

117. How many of those do you issue?—Upwards of 80 have been issued this year. 376 parties of school-children numbering 15,184 scholars and teachers visited the gardens last year. The number of students' tickets issued in 1926 was 82. In addition parties of students, under their own instructors, from Oxford University (Imperial Forestry Institute), Bristol University, University College, Southampton, etc., were given special facilities during visits of from one to two weeks. Special arrangements were also made for a course in Botany for Secondary School teachers (40), organised and conducted at Kew by the Board of Education.

118. Referring to the question of fees, you will remember that the admission fee was removed for two years recently and then reimposed by the present Government and the numbers recorded were rather higher for the two years when the fees were removed?—I do not think that indicates that there was anything but a slight increase in the numbers; what happened was this. When there was no fee charged people went into the gardens and went out for tea or lunch to the restaurants round about and the same people would come in at the gates two or three times in one day, especially local residents. So it was only a small extra number and that number was I think largely accounted for by the fact that people were able to go in and out at their pleasure.

119. Your conclusion would be that the penny rate does not exclude anybody?—Hardly anybody, except the few we really like to exclude; some of the small boys for instance who may do a great deal of damage.

120. (*Sir Lionel Earle*): You are quite satisfied that Kew should be under the Ministry of Agriculture?—Thoroughly.

121. With relation to the natural history botanical section, could not the cases which are used be transferred to Kew without disadvantage, so as not to vitiate the whole proposal from the point of view of the size of the specimens?—Yes, if the specimens came down the cases could come down too, provided there was a suitable place to put them.

122. The difficulty you gave was that they would not fit your cases, but that would not be a great objection, would it?—Not at all, but my idea was that the British Museum collection should remain an entity as it is at present, and it could remain in its own cases as well as in any other cases.

123. At Kew?—Yes, but not in any building that we possess.

124. Is there a great deal of duplication between your collection and theirs?—In recent specimens I should say that there is a fair amount, but it is almost impossible to say what would be duplicates and what would not without careful comparison of each specimen.

125. It is quite possible there might be a considerable amount of overlapping if that collection was transferred?—A certain amount I expect. One knows that they have similar collections to ours made by the same collector, but very often the specimen we have from Mr. A. may not agree with the specimen the British Museum have from Mr. A. Their specimen may be much more complete than ours, or *vice-versa*. It would not do, for instance, to say, the British Museum have Mr. Smith's collection from Chile and so has Kew; therefore we will throw out one of the collections without very careful examination.

126. But it might be possible by examination over a period of years to considerably reduce the size of the collection?—I think it might.

127. Have you not considerable models of very little importance in some of your timber museums which take up a lot of space and are of very little value? You have one large Japanese temple?—Yes.

128. Would it not be better, as regards your space, if those were eliminated?—It would.

129. They are absolutely no value, as far as I can see and the question is whether it would not be worth while attacking that problem to see whether, in view of the need for space, those things could not be removed and broken up. I do not think they are any value. The Imperial Institute might like them?—I think the Imperial Institute are anxious to hand over to us somewhat similar exhibits.

130. From our point of view it would be an advantage, would it not, if they were removed?—It only occupies a space about the size of this table.

131. But there are several of them. I think we saw more than one?—Yes. We have a model of an indigo factory and one or two things of that sort. The Japanese temple is not a thing we want and there are one or two others we do not particularly want, but the space realised would relieve us very little.

132. It would be something?—It would be something.

133. There have been complaints in Parliament from time to time in the last three or four years about the tea-room at Kew, the tea kiosk. Is it your opinion that it is totally inadequate for the public?—I am afraid it is.

134. It is my opinion, but I wanted to get that definitely. Of course it very much depends on the weather. In fine weather crowds go there in enormous masses. On wet days, or in bad weather, it is adequate. The question is what is reasonable for fine days and for the sort of days we have had this year; certainly on a Bank Holiday it is totally inadequate?—Yes.

135. You would be relieved to see a better and bigger building?—Yes, certainly, and I wish it was in a slightly different place. As you have mentioned the subject, I always feel it is rather a risk to us that it is so much in the gardens and that the people having business with the kiosk have access to so much of the gardens, as they have to use a gate which communicates with the garden generally. A great deal might happen. I do not know that it does, but thefts could easily occur. If it could be enclosed in a ring fence close to the road it would be far better.

136. I am very glad to see that you are in favour of the admission fee. You have tried I think two kinds of admission fee, 1d. and 2d.?—No, never 2d.

137. Did you never have 2d.?—No.

138. I thought it was 2d. after the Committee, on which I served; we recommended 2d. I was on the original Committee that advocated that. If you have never had it my question does not arise. —2d. was recommended but was never adopted. We started with a 1d. fee on 17th January, 1916.

139. Anyhow, you would not advocate raising it above 1d.?—No, I think that would be a mistake. It would not matter for individuals, but it would be a distinct hardship on poor people bringing a family, especially on a Sunday.

140. (*Sir Henry Miers*): You said the museums were regarded rather for research purposes than as public museums. They are, as a matter of fact, museums of interest to the public?—All I meant to say was that we did not arrange them with the special object of attracting the public. The information is there for the public. The specimens are fully labelled, but we do not make a display of information. We have not got the room to do it, but from time to time we do put special exhibits showing, for instance, the vegetable dyeing industry in Nigeria, and things of that sort which do interest the public a great deal.

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

141. There is no other exhibition of that sort at present?—No, except the Imperial Institute. They are the nearest to it.

142. But from a different point of view?—Yes.

143. What happened to the vegetable products museum that came from the disbanded 1851 Exhibition? Did that go to Kew? Was that the beginning of it?—No, it started before then, but we had a lot of material from that Exhibition. Whenever there is an exhibition of Colonial and Empire matters we have a great quantity of material sent to us.

144. So that in the case of your museums there is no overlapping with any other exhibition at all?—The Royal Botanic Gardens, to some extent, I suppose?—At Edinburgh?

145. No, the London ones?—I do not know what they have there.

146. They have a small museum of the same sort of thing? As regards Edinburgh is the same thing true?—Edinburgh is much more a teaching museum connected with the University designed for illustrating lectures. Of course, in all places there would be similar specimens to some extent.

147. Is it worth while that there should be at Kew a really fine vegetable products museum?—I think it is essential for the work we do for the Empire.

148. You think it should be far better than it is at present?—One would like to see something better.

149. You have collections of herbaria from different private collectors?—Yes.

150. Have you got the same difficulty about size there?—No, we have no difficulty, except as regards the Wallich Collection, to which reference is made in the Botanical Committee Report, which was the property of the Linnean Society of London and has now been presented to Kew. It would have been impossible to cut down the sheets and so we have that collection in its own cabinets arranged against one of the walls in the herbarium. We keep it intact and should not attempt to incorporate it. We also have some other collections which have not been incorporated, two of which are mounted on larger paper than the Kew sheets.

151. Would the donor of any given herbaria present them to one Institute rather than another? Is there any distinguishing character about them?—No.

152. It is quite a matter of chance?—A matter of chance; it is probably due to the individual having worked at one Institution rather than the other.

153. There would be no tendency to specialise on certain herbaria?—Of course, our main object is work on the floras of the Empire and, as you know, the floras of all parts of the Empire have been published from Kew.

154. In the matter of library; is there some overlapping there?—The British Museum have a certain number of books that we do not possess and if there were any question of incorporation, assuming that the staff would be increased to meet the new work which would be involved, I mean our staff *qua* Kew, then I think it would be necessary to have a certain number of duplicate books, because if you have a larger staff very often two botanists may be wanting the same book at one time: if one man has it the other man has to do without, so I think it would be necessary to have a number of duplicate books to add to our existing library, in addition to the ones which we do not possess at all.

155. Have you any accommodation for a large increase of that sort?—None whatever. It is difficult to know exactly what one can do to meet the growing needs of our own library as it is. I looked carefully all round the herbarium and library recently to see what I could do in order to find space for the growth of the library; we have used up every corner.

156. May I ask a further question, what is the size of the annual average increase in the herbarium?—Somewhere between twenty and thirty thousand sheets. I had a count made recently and we have

got about three million specimens in the herbarium now. I think our increase is between twenty and thirty thousand specimens a year, mainly in the form of donations from collectors in all parts of the Empire and in foreign countries.

157. Do they wish their collections to be kept separate, or can they be incorporated?—We always make it a provision when anybody is presenting anything to us that it has to be incorporated. We do not keep anything separate, except the Wallich Collection and the other collections to which I have referred, which some day I hope to be able to incorporate.

158. With that annual growth how long do you think your present accommodation will last?—I am afraid it is practically full already. Until the Office of Works were good enough to make an alteration in the hot water pipes the other day, so that we could get in more cases, we had a great quantity of material which could not be housed at all. Now we have that extra accommodation and are able to overtake all the accumulations that we had waiting; I am afraid we have practically filled up the accommodation we have been provided with.

159. Do you remember whether there was any reason why the sum of 1d. was charged. Sir David Prain told me it was estimated to cover the cost of the gardeners; there was some question of closing down the gardens?—I think the idea was that it might meet the cost of the constables patrolling the gardens.

160. There was no other reason for fixing it at 1d.?—No, not particularly, except that it was thought to be a sum that would not hurt the poorer pockets.

161. (Sir George Macdonald): Your expenditure I think runs to £55,000 to £60,000?—Yes, something of that sort.

162. You divide that into two parts, salaries and maintenance; how do you draw a line between those two?—It is on an estimate that goes in every year. The salaries are all fixed by the number of officers one is allowed to have and all the garden expenses have been worked out very carefully. It has gone on from year to year on that sort of basis.

163. I think perhaps I have not made myself quite clear. I was wondering what the distinction was between maintenance on the one hand, and salaries and wages on the other, because so far as I can gather from the appropriation account a great deal of the maintenance expenditure is for wages. I have the appropriation account here, maintenance is put down at £22,000?—Yes.

164. Salaries, wages and allowances at, roughly, £20,000. There was a considerable excess over the estimate under the heading of maintenance and it is explained as being due to increases in rates of pay, charges on re-assessment of balance of civil pay, cost of living bonus and so on, which shows that it refers to wages?—Yes. The salaries part refers to all the scientific staff and the maintenance part is the gardening side, the gardeners' wages and all that side of it. It is a question of the established and non-established.

165. Established and non-established?—Yes.

166. Does maintenance cover anything for purchases or anything of that sort?—Oh, yes; all the gardening materials, pots, tools, manures, &c.

167. Oh, yes; but I mean specimens?—There is a small grant for the purchase of herbarium and museum specimens of £300.

168. That comes under head 2?—Yes, there is a special sub-head under that.

169. You get no purchase grant?—No, but it is definitely earmarked for specimens in the sub-head of our estimate.

170. Supposing a transference were made of the general herbarium from the British Museum to Kew to what extent would that imply an increase in your maintenance charges or your salaries?—It would merely mean the payment of salaries on the Kew Vote which are paid to maintain the British Museum herbarium at the present moment.

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

171. It would not enable any economy of staff to be effected?—I do not think so, if the Herbarium is to be properly looked after and made use of.

172. There is no additional expense involved in maintaining two herbaria separately from what there would be in maintaining them together?—I think there would be a certain amount of reduction in that way, but not very much.

173. Then as to accommodation? In that eventuality you, I take it, would require additional accommodation?—We should want an entirely new building.

174. On the other hand, there would be a great deal more space given to the Natural History Museum if the herbarium were removed from there?—I presume there would be.

175. You spoke of your relation to the Ministry of Agriculture; do you refer to the Minister direct or to the Secretary?—To the Secretary.

176. I gather that there is no branch of the secretariat which has, as its special duty, the supervision of Kew?—No, on general matters I write to the Secretary. I have not yet had very much to do with the new Secretary, but I had a great deal of intimate correspondence with Sir Francis Floud, who always took the keenest interest in everything connected with Kew. Any matter with which he was directly concerned he dealt with personally. If it is a matter relating to the establishment then Mr. Shine or some other officer at the Ministry deals with it. Everything has worked extraordinarily smoothly and pleasantly. I must say I have found the Ministry most helpful in every sort of way and they have an intimate knowledge of our work at Kew.

177. But I gather that communication is, so to speak, short circuited. You have direct access to the Minister through Sir Francis Floud?—If need be, I should write to the Minister himself, but there has never been any occasion on which I have wanted to ask for his intervention.

178. There is no branch of the Ministry of Agriculture specially devoted to looking after Kew?—No. The establishment branch of course takes on all establishment matters, but they have not got a Kew branch. I suppose because we look after ourselves so well that they do not have to bother very much.

179. Under your second head I think I see what you mean. You say that the matter of loans, exchange and so on, rests in the discretion of the Director and you say in the last sentence that the Director uses discretion in sending on loan any specimens; does that mean that he refuses always?—No, but there are certain specimens botanists are sometimes anxious to see; they may be the only specimens in existence; it very much depends on who the enquirer is and where he is working as to whether I should feel justified in allowing a unique specimen to leave the herbarium on loan or not. If it is a case where it would be essential for the person to see it and he cannot possibly come to Kew, an exception may be made. But on the whole, it is advisable not to do so more than necessary.

180. So that it really only means the discretion is used in the superlative degree as regards the last sentence, and in the positive degree in regard to the rest?—Yes.

181. I take it your relations with the Natural History Museum are very friendly?—Perfectly.

182. And the only barrier to this exchange which you speak of is the regulation as to lending, is that so?—Yes, they have greater facilities for lending now than they used to have, and it is not so difficult to get specimens on loan, but they are a good deal more particular than we are.

183. Then you speak of Trinity College, Dublin, herbarium; that is in rather a different position now from what it was a few years ago?—They have a very fine historical collection there and the specimens are as a rule not allowed out at all.

184. I mean the relation of Kew to Dublin is not quite the same as it was ten years ago; it is a different Government altogether now?—Yes, but as far as Trinity College itself goes, I do not think the change of Government has affected matters very much; I am not sure, but I do not think the Government has had very much to do with the internal affairs of Trinity College.

185. No, but it is situated in a Dominion now, just like Canada?—Yes, but one has no more difficulty in getting material or anything from Trinity College than one had before. One's relations are on exactly the same friendly terms.

186. Then you speak under head 6 by the way of the transfer of the fees; they go as appropriations-in-aid, do not they?—They all go to My Lords of the Treasury; I do not know what happens to them.

187. I was rather puzzled by the Appropriation Account. You give figures of about £6,000 for admission fees, and I find here under head 1925/26 in the appropriations-in-aid admission fees Royal Botanic Gardens, Kew, and other miscellaneous receipts £3,364?—Which is that?

188. 1925/26?—That was the year when the penny fee was taken off, I think.

189. I rather think in the total charge here, 1925/26, it is given as £6,712, which is about double the figure in the appropriation accounts?—Yes, I have got the 1925 receipts here, £2,085.

190. (Mr. Beresford): The difference between estimate and expenditure? The figure you are talking of is the estimate?

191. (Sir George Macdonald): The estimate was £3,000 and what was realised was £3,364; this is what actually was received in 1925/26.

192. (Chairman): You want to know what the real figure is; perhaps Dr. Hill will look into that. —I have a whole lot of figures here, but I am afraid they have been made out from January to December. My figures are not the same as yours. I do not know whether you would care to see this. These are actual calendar years, which, of course, are different.

193. (Sir George Macdonald): Is that a calendar year?—For these figures because of the taking off of the pennies on the 1st January when the estimates were running to the 31st March, the financial year.

194. I think probably that is the explanation.—I think that is it; this is the financial year. Mine are for the calendar year.

195. I think that is probably at the bottom of it. Then under 6 I see you would like to have more posts for the young men?—Yes.

196. Does that mean there is a scarcity of young men coming forward for the higher posts, I do not mean at Kew, but generally?—Yes, there is a dearth of men of the right type. I am afraid the botanists turned out by the Universities do not turn their attention as much as they ought to to matters relating to systematic and economic botany. Their main object is some sort of laboratory work rather than the broader lines of the subject. They do not turn their attention to the economic possibilities; we get from time to time among our student gardeners young men who have a decided leaning that way, really quite able young men. In fact, our staff in the old days was entirely recruited from that type of young man. They were picked out from the ranks of the student gardeners when they showed a decided flair for that kind of work and we trained them on. We still have some of our assistants who started their botanical career in that way and they have done extraordinarily valuable work. At the moment there is one to whom I would very much like to be able to offer a post and give him a chance of rising to a higher post; he is now working for his London Degree in his spare time; officially he is working up the whole of the grasses for the flora of tropical Africa as a Temporary Technical Assistant on a very

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

small salary. He has also compiled two handbooks for the Colonial Office on the pasture grasses of East Africa.

197. Would you contemplate that a man trained in Kew might rise to be head of Kew?—I do not see why he should not.

198. I ask the question because I was rather struck with what you say here about the lack of candidates for the higher posts. The same thing is happening in connection with the Universities. I happen to know in connection with one or two that there has been real difficulty in getting just the right man and I wondered whether there was any connection between the two things?—I think there is.

199. Then on 8, on the question of publications, you say all these Kew matters are in the hands of the Stationery Office; do you do anything in the way of publication? You do not yourselves, of course, do the actual publication; that is done by the Stationery Office, but do you provide the Stationery Office with any material for publication?—A great deal. The Kew Bulletin is our chief medium of information to the public, on economic and botanical questions generally. That now runs to about 450 pages a year. It comes out in ten parts annually. Then there are our handbooks, lists of plants, and so on. Then there are the Guides to the various museums and the North Gallery which are really manuals of economic botany and are considered of very great value. They convey information about every sort of plant product, and anybody knowing them fairly well would be a thoroughly competent economic botanist.

200. These are for scientific workers?—They are on sale to the public, and they are quite readily bought.

201. Do you produce anything that is intended to attract the public pure and simple?—Yes, we have two Guides to the Gardens, one illustrated, a new edition of which was published the other day. I am glad to say that I was able to induce the Stationery Office to take great trouble in providing a worthy article, and they have done it, on good paper and with very good illustrations. Unfortunately, it came out very late in the summer, but I secured rather a good notice of it in the Press, and it has been selling at a very remarkable rate even during these dull days, as many as 30 or 40 were sold on a day like yesterday.

202. (Chairman): What is the price of it?—1s. There is another Guide which contains more matter but no pictures and which is sold for 6d. That is bought a great deal, too. I cannot tell you quite how many we have sold, but it runs to several thousand. Then we have postcards in colour and in black and white, and leaflets telling the public a certain amount about the cultivation and habits of plants. They have sold in quantities.

203. (Sir Richard Glazebrook): I gathered from Dr. Hill that he thought it might be desirable to remove the general herbarium to Kew, but not the British herbarium. He mentioned one other?—I understand it is altogether. It is, I believe, one herbarium, British and European.

204. British and European together. Sir Michael Foster's Committee of 1901 wrote, "The British herbarium, like the general herbarium, is for the purpose of research and can only be consulted by investigators and not by the general public." After explaining some of the difficulties, "But, as we have said above, we cannot attach great weight to these objections; and, obviously, if all the rest of the herbaria are transferred to Kew the British herbarium must go too; it could not be left alone at the British Museum." Have you any remarks to make on that very definite view?—I am afraid what I have said may seem somewhat selfish in a way. A British and European herbarium is of very great use to a large number of people who travel and collect plants in Europe or in Great Britain. Amateur

British and European botanists interested in the flora of Switzerland and so on, make collections of plants and need to identify them. Personally I do not want all these people, including a large number of ladies, disturbing the work in our herbarium, and I think the British Museum is very handy and the proper place for them to go to; the collections there are excellent and I think it would be far better to let such a collection remain there. There is a good deal of scientific work to be done on the European flora and I imagine it would be possible to allow serious students to consult it there just as we admit serious students to consult ours, but there ought to be some sort of botanical collection at the British Museum to illustrate that side of natural history. Another reason why I thought it might be a wise thing to retain the British and European herbarium there is that if you have a museum botanical collection there you must have a botanist or botanists in charge. If such officers have only to look after a museum, a collection which is to interest the public, it is rather a deadening thing, but if they have also a place where they could carry on some researches as well it would keep them alive.

205. (Sir Martin Conway): Supposing a transfer of the herbarium in the British Museum, it would not be added to?—I do not think it ought to be added to at all.

206. It would become a stationary and completed thing?—Yes.

207. You spoke of the size of sheets, and of being unable to put the bigger sheets with the smaller ones. Is there any objection to putting the smaller sheets with the bigger ones?—That is a question for the Office of Works.

207A. You have to have at any rate an arrangement for stacking the British Museum stuff when it comes. Would it not in the long run be simpler to adopt the larger size and put the smaller sheets with them? The sheets are about that size (*indicated*), are they not?—Yes. There is a small difference, as I said earlier. We have recently had some British Museum specimens on loan, and I tried them in our cabinets but they would not go in.

208. Your sheets would go in those of the British Museum?—They would, but your proposal would mean refitting the Kew herbarium with new cabinets.

209. It would, but once that was done surely there would be an economy in administration afterwards?—There is one curious point, which seems a very small one, but owing to the configuration of our building and the way the pillars are arranged, it would be impossible to get four cases of the British Museum size between our pillars and the wall; you could only get three. You can just get four of ours in, by getting rid of the hot water pipes, which I have been allowed to do by the Office of Works. There is not half an inch to spare. We can get 750,000 more specimens in by this new plan, but if it were a case of bringing in British Museum size cases they would each be an inch or more too wide.

210. (Sir George Macdonald): Did not you say you would require a new building in any case?—Yes, but if I understood Sir Martin Conway rightly he would like to see all our cabinets for the whole herbarium of the British Museum size, and that we should incorporate their collection with ours. That does not mean doing it in the new building only, because you have to begin with our arrangement of the buttercup family at the bottom and it goes right round the building. There would have to be British Museum portfolios throughout the building, so it would mean new cabinets everywhere.

211. (Sir Martin Conway): What is the relative size of the two collections, yours and that of the British Museum?—I have not seen the British Museum figures.

212. Are they at all commensurate?—Ours is, I believe, much larger. The modern British Museum collection, I understand, only started from the time of the removal from Bloomsbury. Up to then it was

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

merely a historic collection which you see, in studying the old evidence, really may be said to have belonged to Kew in the first instance, because it was largely made by the Kew collectors in the time of Sir Joseph Banks.

213. It is very puzzling having the two collections. All the collections which I made in my journeys went to Kew up to a certain time when I travelled with J. W. Gregory, but afterwards he induced me to send them to the British Museum. I sent 5,000 mosses and things to the British Museum. I did not know then, and I should not know now, what reason one has for sending them more to the one than to the other?—It may be that the Director or the Keeper of that department had greater persuasive powers.

214. Would it not be your choice to have only one collection?—Speaking as a worker, not as Director, I should say yes, I think it would be a great convenience, because if one has to travel about to see other collections it is a considerable trouble and waste of time.

215. You have to get out the same thing?—Yes, you have to see if they have it at South Kensington and compare it with yours, and if there is a large bundle of specimens which you cannot take with you, you have to carry them in your mind's eye and attempt to compare them. It is a considerable waste of time, and considerable inconvenience.

216. To unite the two collections would be the ideal thing to do if it were in any way practicable?—From the point of view of the botanist, certainly, I think.

217. (Mr. Charteris): If a student wants to work on a subject does he at present have to go to both herbaria?—Yes.

218. To South Kensington and to Kew?—Yes, nearly always.

219. What is the relative rate of increase of the two collections?—I do not know anything about the rate of growth of the British Museum collection.

220. Have you any estimate of the accommodation which would be required at Kew if the movement took place?—No. I did not think it was right and proper to institute any inquiries at the British Museum. I have only noted the size of the collection generally when I have been working there, and I am unable to form any estimate. Their cabinets are differently arranged to ours, and I do not know the extent of their stores and more private parts.

221. How many students work in the herbarium at Kew?—Last year we had 120 botanists resident in Great Britain, 37 Colonial botanists, 47 foreign botanists and about 357 general visitors, some of whom were students, and some in connection with special inquiries. Then we had 15 Colonial Office students who came to us to take up courses in botany for a month or two months, making 576 in all last year.

222. That is the total?—Yes. They were nearly all serious botanical students. Some of the foreign botanists were working with us for two or three months. We have three or four at present who have been with us for some two or three months now.

223. With regard to the junior posts which you speak of, what would be your idea of the number, and the remuneration to make it worth while?—About four, I think, so that one could train on the right type of young man, and if he obtained his London Degree and had in addition to the valuable Kew training the qualifications of the ordinary University candidates he could take his chance in open competition for a permanent post on the established staff of assistants in due course.

224. Could you give any idea of what the salary required would be?—I have two such posts established now, termed sub-assistants; the salary starts at £100, rising by £10 to £250 plus cost of living bonus.

225. What is the total number of employees altogether in the Gardens?—244, including everyone.

226. Of those how many are gardeners?—The student gardeners, the young men who come to us for two years, number 47, including the sub-foremen.

227. Are the student gardeners paid?—They are not paid wages, but they are given a subsistence allowance, and they are not allowed to be married. They come for two years, which may be extended to a third year if they are particularly worthy, or they may get promoted to be sub-foreman, when they get a higher subsistence allowance. In addition to receiving their subsistence allowance, they are given lectures in physics and chemistry, geology, soils and manures, various aspects of botany, and so on. Their winter evenings are occupied with lectures and practical work given by members of the staff or of London University, and they are given demonstrations among the living plants in the Gardens during the summer months. They get a very good general education in botanical work and the allied sciences, and from these men the Colonial Office select curators of botanical stations overseas, and men for junior agricultural appointments, and so on.

228. Are they selected by examination in the first instance?—No, mainly on my recommendation, and they are also seen by the Private Secretary for Appointments at the Colonial Office.

229. Do you find the employees you have at present are sufficient in number in the Gardens?—On the whole I think we are fairly well satisfied. We have not asked for any more for some time, but we do need one or two men on the Gardens staff for two reasons. One is that the hours of work have been reduced. When I came to Kew work started at 6 o'clock in the summer and ended at 6 p.m. Now work starts at 6.30 a.m. and ends at 5 p.m. The reduction of 1½ hours per day through the summer naturally means so much less work.

230. In spite of that the staff is adequate at present—fairly?—In a summer like this, no, there is such an enormous amount of upkeep in connection with the rapid growth of weeds and in keeping the place in good order that we find it very difficult to keep the Gardens in the best condition. Then we have to keep adding to the area under intensive cultivation. There has been an enormous quantity of new plants from China brought home by botanical explorers in recent years. These we have to grow and find space for, and their maintenance entails much additional labour. It will therefore be necessary to ask for two or three more labourers to be added to our staff next year.

231. (Sir Thomas Heath): As regards accommodation, I gather the most urgent need is really the single timber museum, because that has already been the subject of plans?—Yes.

232. Have you sent to the Office of Works any estimate of your probable requirements in two or three years for these other purposes, the library and herbarium?—Not yet, because the Office of Works are only just now finishing a piece of work consequent on altering the hot water system in the herbarium which allows for extra cabinets the whole way round each floor, making blocks of eight instead of blocks of six, and those cabinets are not yet finished. We have not yet therefore been able to realise the full benefit from the present alterations.

233. It has not been thought worth while to forecast any further ahead?—I have not dared.

234. I quite understand.

235. (Dr. Cowley): I should like to ask some questions about the general herbarium. If it were transferred to Kew, I suppose there would be a very considerable number of duplicates, would there not?—I expect there would be a certain number, but without making a careful inspection, sheet by sheet, I do not think one could say.

236. That, of course, would be a matter of considerable time and labour to determine?—Yes. It would involve very great labour.

237. But if the two could be amalgamated and duplicates eliminated, that would economise space very considerably, would it not?—Yes. But there it is rather difficult to say anything very definite until one can make a comparison, and that would take

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

very many years. The material would have to come down, and then I do not quite know who would do the work of selection. It would require an extra staff to go over the whole collection. Any elimination of duplicates would be from the British Museum collection and not from our Kew Herbarium.

238. In other words, it is not practicable?—It is not very practicable, as far as I can see at present.

239. With regard to the library, I suppose something of the same kind would apply, you could eliminate a considerable part of it, but you said you would require a number of duplicate books?—One could easily make out from a library list the books that were most used, and say what books it would be useful to have in duplicate. We know exactly what the British Museum have from their catalogue, and we know the books we wish to consult which we do not possess.

240. Do you consider that the fossil collection at the British Museum would suffer from having the herbarium divorced from it?—I should not have said so, but I am not a fossil botanist.

241. Neither am I. I was only wondering whether the two are used together.—I should think for certain fossils it would be more necessary to compare them with some of the plants in the garden, but it is so easy to get the material you want for comparison with fossils sent up that I do not think the question of fossils—

242. You could transfer fossils more easily?—You could send fossils for comparison at any time.

243. Or living things?—I do not think they ought to be considered very seriously. We have not any fitting place for fossils in connection with our collections. We have one or two in the museums, but I should certainly send fossil plants to the British Museum rather than retain them at Kew.

244. But no question of transferring them?—I do not think they would have a proper home with us.

245. (*Sir Courtauld Thomson*): Not having heard the previous questions and answers, as I have only just come in, it would not be fair to ask questions which may have been answered already, but if I may ask a general question I should like to ask if Dr. Hill has been able to form any opinion whether, generally speaking, the public as a whole are taking a more active interest in gardening and botanical research than they were a few years ago?—I should say certainly they are, to judge from the letters I receive, very much so.

246. (*Sir Henry Miers*): Research work is done at Kew, and there is a great deal of research work done at the British Museum. Are they working in different directions, or is there any overlapping; are they both doing the same sort of work?—No. We do our best not to overlap in any way. The British Museum realise that our main business is our work with Colonial floras, and they undertake research in some other direction. There have been instances every now and then when we have been working somewhat on the same lines. For instance, the British Museum carried out a piece of work on the flora of East Africa. We have been engaged on the flora of tropical Africa generally, and it might have been said it was more our sphere to work on that part of Africa rather than for the British Museum, because we have a great number of African specimens, and it would perhaps be better to have had all the African work done in one place.

247. It is true that the economic aspects are much more regarded at Kew than at the British Museum?—Far more.

248. In that direction there has been a real distinction?—Yes. There has been very little overlapping of any serious character.

249. Do not you think there is room for two great centres, one for systematic and economic work, and the other for applied botanical work?—I do not think you can differentiate. If you are saying that with regard to the two institutions, I do not think you could say that Kew was economic and the British Museum was systematic.

250. You say the British Museum is not systematic?—I think you could say that it is not economic, but I think we are working on purely systematic lines in exactly the same way as they are at the British Museum; botanical work on the economic side has been almost entirely carried out at Kew.

251. (*Sir Richard Glazebrook*): The remarks in the 1901 evidence, I think, answered at that time a question which one member asked. That was as to the saving or cost that might be caused by this. The Chairman says, after a series of figures, "Therefore it seems to me to come to this, that there would be a considerable initial increase of expenditure, and there might be a saving of £300 or £400 a year eventually." Mr. Murray, who was then Keeper of Botany at the Museum, or had been previously, replied, "Yes, you have exactly arrived at the figures I arrived at; a saving of £300 or £400 a year might be expected." Those figures are probably not of much value at present?—I should think they are pretty true, because there would be a saving in the purchase of specimens to add to the British Museum. From what I have said, the British Museum collection, if transferred, should cease to grow so that there would be no need of further purchases, there would be no need to have a staff to mount specimens, nor would paper have to be purchased for mounting, and all those incidental expenses which occur with a growing herbarium would cease, but that, as far as I can see, would be the only saving, and that would mean a saving of about £300 or £400 a year.

252. (*Chairman*): So that the advantages, if real, would be less financial than facility for research?—Yes.

(*Mr. Charteris*): Was the witness referring to the transfer of the whole herbarium, or a part?

253. (*Sir Richard Glazebrook*): I think that was the transfer of the whole, but I am not quite clear about that. I think the other part is comparatively small.—In those days I do not think they had specialised so much on the British herbarium as they have now. I know it is very much consulted by British and European botanists.

254. (*Mr. Charteris*): Which is the larger of the two?—The general, I believe.

255. At South Kensington?—I should say so, considerably.

256. (*Chairman*): We are greatly indebted to you?—Would you like me to furnish any particular information on any point?

257. I think we should like something a little more complete and precise regarding the result of the different scales of entrance fee. I find here that in one year, without a fee, there were 1,600,000 visitors, whereas the attendance during the year when there was a fee had fallen to 1,148,000. I am not sure whether those figures are accurate. In your answer to the Commission's questionnaire you say "For the post-war years 1919 to 1926 (excluding 1924 and 1925) the average annual attendance was 1,146,754. For the two years 1924-25, when a fee for admission was charged only on students' days, the average annual attendance was 1,603,347." You would say there was a small discrepancy between the two? This discrepancy appears to be considerable?—It is about 400,000, I think. It is very largely accounted for, I think, by re-entry, the same people coming two or three times the same day. I should think that might account for 100,000 or 200,000. Other matters which affected entrance were industrial matters, strikes, &c. They had a very large effect on our figures. We have, however, compared month by month when there were no strikes in those particular years, and the figures are almost identical, when there was no penny and when there was a charge.

258. The conclusion is justified that the penny does not really keep anyone out?—The penny, I think, does not keep anyone out. I have the figures month by month, and they are interesting. There was practically no difference,

21 October, 1927.]

Mr. A. W. HILL, C.M.G., Sc.D., F.R.S.

[Continued.]

259. You might send us some further statement on that point.*—The figures for the first four months of 1925 and 1926 were respectively 337,460 and 359,002. It seems fair to assume that but for the general strike in May and the subsequent industrial unrest the total for 1926 would have exceeded that for 1925.

260. (Sir Lionel Earle): A charge being made in 1926?—Yes.

261. (Chairman): And there being no charge in 1925?—That is so. Until the strike occurred the numbers for 1926 were rather greater. From those figures it looks, at first sight, as if the penny had had an effect, but if you analyse it carefully I do not think that really the penny made practically any difference.

262. (Mr. Charteris): Is the charge imposed by the Ministry?—By the Treasury. I think they said they wanted to have the charge. They found there was a loss of between £6,000 and £7,000 in revenue, and they thought it was a simple way of getting it back.

263. (Chairman): Has there been an equal amount of advertisement in the two years?—There has been no difference. We do not ourselves do any advertising, and I do not think the District Railway have made any difference since the penny was put on. They are our chief advertisers—quite unpaid.

* A statement was subsequently submitted (see Appendix 2).

(The Witness withdrew.)

ADDENDUM.

In answer to a supplementary question with regard to the herbarium, Dr. Hill furnished the following information:—

The herbarium collections are world-wide, and in addition to the material representing the floras of all parts of the Empire, the Kew Herbarium is particularly rich in specimens from South America, North America, China, Japan and the Near East.

The Kew Herbarium is probably the most representative herbarium in existence and contains a very great number of type specimens, and botanists from all parts of the world, and especially from the Continent and from North America, come to Kew in great numbers to consult the historic specimens which we possess.

THIRD DAY.

Thursday, 3rd November, 1927.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.
Sir MARTIN CONWAY, M.P., Litt.D.
A. E. COWLEY, Esq., D.Litt., F.B.A.
Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.
Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.
Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.
Sir HENRY MIERS, D.Sc., F.R.S.
Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Mr. JOHN BERESFORD (Secretary).
Mr. J. R. CHAMBERS (Assistant Secretary).

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S., Director of the Geological Survey of Great Britain and Museum of Practical Geology, called and examined.

The following Memorandum was submitted by the Department of Scientific and Industrial Research in reply to the Commission's Questionnaire (see Appendix I):—

The Museum of Practical Geology at 28, Jermyn Street, London, is in one respect not strictly similar to the other museums which are to be considered by the Royal Commission as it is in very large measure

ancillary to the Geological Survey of Great Britain and its origin, history and functions cannot be considered apart from those of the service as a whole. Consequently this memorandum outlines firstly, the development of the Survey and the Museum and their relations to one another, and, secondly, refers particularly to the questions set out in the Commission's Questionnaire.

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

(1) Origin and Development.

The Geological Survey of Great Britain was instituted in 1832 for the purpose of preparing geologically coloured copies of the new Ordnance Survey one-inch maps to be of service to science and industry by providing an accurate representation of the geology of Great Britain. The organisation was drawn up on lines suggested by Sir Henry De la Beche, who became the first Director. Work was begun in Cornwall and Devon.

In the course of its operations the Geological Survey had to collect large numbers of specimens of rocks, minerals and fossils. These were brought to London for investigation and for the determination of their nature, origin and petrographical history. In the course of a few years a sufficient number of specimens had been collected to justify the opening of a small museum in the Survey Office at Craig's Court, Charing Cross, and this collection was open to the public and to teachers of geology for study.

In about ten years the importance of this collection came to be generally recognised, and Sir Henry De la Beche conceived the plan of erecting a special institution to exhibit to the public the results of the work of the Geological Survey and the application of geology to arts and industry.

The present Museum of Practical Geology is the outcome of this scheme and was devised to serve three uses: (a) To provide the offices, library and laboratories of the Geological Survey of Great Britain where the maps are prepared for engraving, the memoirs written, and the necessary investigations in palæontology, petrology, mineralogy and chemistry carried through in connexion with the Survey's work and publications; (b) to provide accommodation for the Royal School of Mines with a staff of professors and with laboratories and lecture rooms necessary for the teaching of all branches of mining and metallurgy; and (c) to furnish space for exhibiting the work of the Geological Survey, the geology of Great Britain, and the practical applications of geology to modern industry.

Subsidiary to these main functions there were two others, (a) the library of the Geological Survey was not regarded as a private establishment but was set free for the use of the public who wished to obtain information regarding the geology of all parts of the world, and especially the economic geology of the British Isles and the Empire; and (b) attached to the Survey there was a small office, known as the Mining Records Office, which collected mining statistics for the whole of Britain. This work was transferred in 1883 to the Home Office.

The Museum of Practical Geology was erected on a site between Piccadilly and Jermyn Street and was opened in the year 1851 by Prince Consort. The ground on which it stands belongs to the Commissioners of Crown Lands; the holding is equivalent to a perpetual lease and is subject to a rental of £853 per annum. The Museum was designed by James Pennethorne and certain architectural features, for instance the door facing Jermyn Street, were due to Stevens. No substantial modification of the building has taken place since its erection. The dimensions are 159 feet north to south, 71 feet east to west (ground area 11,076 sq. feet). The building is about 80 feet high with a basement beneath street level and cellars extending a short distance under Piccadilly and Jermyn Street. Cubic capacity about one million cubic feet.

At an early date the space provided became insufficient for the purpose of the institution and two houses were leased in Jermyn Street. One of these was assigned as offices to the Geological Survey, the other contained, amongst other branches, the Mining Records Office. The lease of one house was dropped many years ago and new buildings now occupy the site. The other house continued in occupation till about 1901, when a part of Lyons Popular Restaurant was built on its site. The top floor of the Jermyn Street portion of the Popular

Restaurant was then leased by Messrs. Lyons to the Survey as working offices.

When the Royal College of Science was built at South Kensington the Royal School of Mines was transferred from the Geological Museum to the new premises in Exhibition Road; chemistry, physics and biology were transferred in 1872, mining in 1890. Certain of the professors of the Royal School of Mines had also been connected with the Geological Survey, but this was now discontinued and the two institutions were completely separated. The laboratories occupied by the Royal School of Mines were handed over to the Survey and were adapted for a palæontological department and for working rooms.

In 1901, when Sir Jethro Teall became Director, a good many changes and a considerable development took place in the Geological Survey and in the Museum. The old lecture theatre of the Royal School of Mines in the basement of the Museum was demolished. The lower portion was converted into storage cellars; the upper portion was added to the ground floor of the Museum. At the same time, to provide more accommodation for the staff of the Geological Survey, two of the galleries of the Museum were converted into offices. These were (1) the detached rooms of the first floor facing Piccadilly which are now the Director's offices, and (2) the top floor on the Jermyn Street side which now provides the drawing office, the petrological store-room and one working room for Survey staff.

At the same time considerable alterations were made in the materials displayed in the Museum: (1) the whole of the collection of English pottery and ceramics was handed over to the Victoria and Albert Museum, where part of it is now housed, the remainder being in the Bethnal Green Museum; (2) collections representing the application of the metals went to the Alexandra Palace; (3) the models of mining and metallurgical operations and machinery were mostly handed over to the Science Museum at South Kensington, where such of them as are still of interest are either displayed or stored for reference; (4) a considerable amount of material which represented good teaching specimens accompanied the professors to South Kensington. By these means more space was found for the collections of British geology specially relevant to the work of the Geological Survey and the economic applications of geology in general. The Survey and Museum were under the control of the Science and Art Department from 1853 to 1900 when that Department was merged in the Board of Education. On November 1st, 1919, the administrative control of the Survey and Museum was transferred from the Board of Education to the Department of Scientific and Industrial Research.

(2) Present position: Museum-staff arrangements.

The Museum of Practical Geology at present contains:—

(a) the headquarters of the Geological Survey of Great Britain, with Director's offices, palæontological, petrographical, chemical, mineralogical and palæobotanical staffs with their collections and registers, also the principal drawing office for the preparation of maps, and accommodation for about 67 staff (Scientific 20, Technical 13, Draughtsmen 9, Clerical 7, Other grades 18). The floor space devoted to these offices amounts to 11,874 sq. feet (independent of corridors and stairs);

(b) the library of the Geological Survey, which not only serves the uses of the Geological Survey and contains a complete series of the Geological Survey maps and memoirs, but is open to the public and is much used by geologists, engineers, soil experts, chemists, manufacturers, boring and mining firms, teachers, students, and others who wish to consult geological maps, records and books. It contains about 50,000 books and 12,000 maps;

(c) The Museum proper.

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

The Museum has always depended for illumination upon roof lights, and is consequently designed with one large hall which is about 60 feet high, 96 feet long, and 54 feet broad. It has two galleries (gangways) about three feet wide, along which British fossils are displayed in wall cases and in flat cases and drawers supported on the balustrade. The main floor contains table cases and wall cases showing British minerals and the principal economic minerals, ores and precious stones of Britain and the British Colonies. British rocks are exhibited in a side room attached to the main floor and lighted by windows off Jermyn Street. The ground floor, owing to defective illumination, is unsuited for the display of small specimens. In the original design half of it was devoted to the lecture hall. It is now used to show geological maps, British geological photographs, scale models of British geology, ornamental stones, building stones, and other material illustrating a certain amount of economic geology. The floor space is approximately as follows:—Ground floor 5,407 sq. feet, main floor 5,639 sq. feet, rock room 1,350 sq. feet, first gallery 1,729 sq. feet, and second gallery 1,975 sq. feet.

Minor rearrangements are constantly taking place, but no extensive modification of the fundamental plan of the Museum and of the arrangement of its main kinds of exhibits has been possible for twenty-five years.

Of the specimens exhibited, practically the whole of the fossils are British, and though there are a few important bequests and purchased sets, the great majority of the specimens have been collected by the Geological Survey in the course of its official work. The rocks also are practically all British. The minerals include a large number of British specimens, with examples also of colonial and foreign ores and of precious stones. The maps, models and photographs are all British and all illustrate the work of the Geological Survey.

The staff of the Museum at present includes the Director, who is also the Director of the Geological Survey; the Curator, who is also Librarian and has charge of the whole building; an Assistant Curator who serves as Mineralogist; an Assistant Librarian who superintends the library.

The services of certain officials of the Geological Survey are utilised for the purposes of the Museum. Thus the Palæontologist, with two Assistants, names, catalogues and arranges for exhibition all the fossils in the Museum. The whole of the rocks are similarly attended to by the Petrographer to the Survey. Chemical work required in connexion with the Museum is done by the Survey chemists; and diagrams, maps, &c., are sometimes prepared by the Survey draughtsmen. On the other hand, the Museum and Library staff also do much work for the Geological Survey. The subordinate staff of the Museum is not separated wholly from the subordinate staff which attends to the Geological Survey offices. The warding staff consists of eight ex-policemen. There are also two Technical Assistants and two General Assistants who attend to the cleaning and arrangement of the exhibits and of the Library; and there is a Museum Foreman, Carpenter, five Labourers and two Charwomen.

(3) *Objects and Policy of the Museum.*

The Museum has always been recognised as intimately connected with the work of the Geological Survey, and its cardinal objects have been (1) to illustrate the results of the Survey's investigations by the demonstration of actual specimens collected in the field, together with the maps and memoirs to which they relate, and (2) to show with especial detail the useful minerals and rocks obtained in Great Britain, with their varieties, as fully as possible, and to provide representative collections for consultation by industrial experts. The proper representation of general economic geology has been restricted by lack of space, but a number of colonial

and foreign specimens are shown; precious stones have been exhibited, as this is an important branch of commerce in London, and these exhibits are required for public reference. In connexion with the British geological exhibits, especially those of an industrial character, the Museum is recognised as the headquarters for information in Britain on these and all kindred subjects, and enquiries are dealt with daily by the Museum staff and by the Geological Survey officers.

The exhibition of British fossils is arranged in strictly historical sequence, so that the fossils of the same age are brought together, and their biological affinities are shown by subordinate groupings. In the same way, the minerals are arranged so as to exhibit their practical relations rather than their chemical or crystallographic affinities. In the Natural History Museum at South Kensington the exhibits include examples of many of the fossils and minerals that are exhibited in Jermyn Street; but in the Natural History Museum the classification and arrangement of the fossils is primarily of a biological character; in the case of the minerals it is chemical and crystallographic. The two Museums in consequence serve different functions and undesirable overlapping is thus avoided.

As these collections were started nearly a hundred years ago, and as the present Museum was practically full shortly after its erection seventy-six years ago, the growth of the collections has necessitated a systematic policy of depletion, and the practice of storing specimens that are but rarely required for reference has been adopted wherever possible. It is estimated that the Survey collects about 5,000 specimens a year, and the majority of these are registered and preserved for reference.

The principal transferences in block have been as follows:—

Pottery specimens to Victoria and Albert Museum.

Mining and metallurgical specimens to Science Museum, Alexandra Palace, and Royal School of Mines.

Various rocks to British Museum (Natural History).

Foreign and colonial fossils to British Museum (Natural History).

A large number of books to Science Library, South Kensington.

A large part of the Irish material to the Irish Geological Survey and National Museum, Dublin.

It should be noted that with few exceptions the collections illustrating the geology of Scotland are stored in Edinburgh, and a selection of them is exhibited in the Royal Scottish Museum, Edinburgh.

The storage accommodation in the Museum is principally found in the underground basement, but this contains also the furnaces, carpenter's shop, laboratories, strong rooms and mess rooms for subordinate staff. This storage accommodation is now fully occupied, and many corridors and part of the working rooms contain cabinets full of specimens, obstructing the staff in their work. A small amount of storage outside the building has been provided by the Office of Works within the last three years, and some material is stored in the Science Museum.

It will be seen that the growth of the collections is continuous though not rapid. All geological work in the field involves the collection of specimens for detailed investigation in the laboratory and in the office. The headquarters staff of specialists is constantly employed in the study of this material. Once determined and satisfactorily classified the specimens must usually be preserved for future reference and for the verification of records. Many are not suitable for exhibition, but most are of continuing scientific value. A certain amount is periodically eliminated. It has often proved important, when the geology of a district is revised, to have access to the specimens collected during the original survey, as many quarries and mines are

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

closed and the materials collected during the excavation of railway cuttings, tunnels, &c., if destroyed cannot be replaced. These collections must be stored in such a manner that they are immediately available for reference as enquiries may be received which require the production of material evidence before a decision is reached.

The value of this collection as a source of information was strikingly shown during the War when the demands for economic minerals from home sources became most urgent. The collections of British economic minerals and rocks and the records contained in the Museum and Library provided information regarding British sources of industrial materials that constantly proved of value. As a result of the work done at that period great additions were made to the collections of British economic minerals and rocks. Further, in view of the experience gained a series of Special Reports on British Mineral Resources was prepared, of which thirty volumes have now been published, several of which are already in their third edition. The analysed and described specimens on which these Reports are based are to be found in the reference collections in the Museum.

Similarly, during the War the collection of geological maps and memoirs of all countries in this Library proved of the highest value to the intelligence departments of the British Army and Navy.

The expansion of the library is equally important. Although depleted on two occasions by the removal of a large number of volumes, it now occupies the whole space originally assigned for the purpose and has spread into other rooms not meant for such uses. It contains one of the finest collections of geological maps in the world, including a great number of original manuscript maps of British geology of which no duplicates exist in other libraries. The special feature of the collection is the memoirs and maps of geological surveys of all countries. They are freely open for consultation by the public. The Library contains also the working geological literature required by the specialists employed in the Survey laboratories and Museum, and the more important standard works of reference on geology and kindred subjects. Worked in close co-operation with the Science Library at South Kensington, the Library finds it unnecessary to acquire the general literature of science, many general scientific journals, the transactions of scientific academies, and other publications not exclusively geological. These are borrowed when required from the Science Library. Books are not lent out except to the Survey staff and occasionally to Government Departments. By far the larger number of the books, memoirs and monographs received every month are exchanges from other geological surveys.

In March, 1923, the attention of H.M. Office of Works was drawn to the apparently unsafe condition of the roof of the Museum, and it was found on inspection that several of the cast iron girders at the north end were cracked. In April of the same year it was decided to close the Museum owing to the unsafe condition of the building, and a large supporting wooden tower was erected from the basement to the roof. About two-thirds of the roof glass and most of the slates on the roof were removed and replaced by wood boarding and rubberoid. As a result of further investigation by H.M. Office of Works it was decided to build a second wooden tower to support the south end of the roof. The whole roof of the main hall is now supported by timber structures. These repairs went on intermittently till July, 1925, when H.M. Office of Works stated that the Museum might be opened to the public provided that not more than six people were allowed to assemble in any bay of the galleries at one time, that the loading of the library gallery was reduced and that its use was restricted to the staff. A temporary electric lighting installation was supplied. The Museum was reopened to the public on 4th August, 1925, but owing to the

curtailment of floor space due to the presence of the supporting towers and the poor lighting caused by the removal of much of the glass from the roof, many of the exhibits had to be dismantled and the cases stored outside the building.

In February, 1926, H.M. Office of Works announced that further repairs were necessary to the west wall of the building, and the Museum was once more closed to the public. The Museum was reopened in April, 1926.

With reference to the questions submitted in the Commission's Questionnaire (see Appendix I) the following are the principal points in reply:—

(1) The Museum has no Charter, it has no formal lease, and is administered according to the regulations of the Geological Survey, of which the latest issue was made in 1924. The Director is the administrator under instructions from the Department of Scientific and Industrial Research, with an Advisory Board, the members of which are in touch with Geological Science and its economic applications.

(2) Current administration follows well recognised and long established practice. Objects of all kinds are freely lent to recognised specialists for purposes of study, but not to students. Exchanges of registered material are permitted with British and foreign Museums on the sanction of the Secretary of the Department of Scientific and Industrial Research. Special exhibits are occasionally arranged for the meetings of the British Association and the Geologists' Association, &c.

No serious losses of scientific material loaned for purposes of examination have ever taken place. The chief difficulty of administration at present is due to the inadequacy of storage for specimens and for books, and the insufficient working room for both Museum and Survey staff.

(3) It will be seen from the above statement that the Museum has transferred from time to time important material and books to other museums and institutions in the United Kingdom, but no system of loans has been instituted. It has received very little from other museums. Two such accessions may be mentioned. When the Geological Society of London decided, in 1911, to discontinue its geological museum the British rocks and fossils, numbering many thousands, were transferred to the Museum of Practical Geology, where they are now housed. Again recently, a small amount of material has been transferred from the Science Museum at South Kensington.

To arrange for loans and exchanges with London and Provincial museums would not be a matter of much difficulty, and would help to advertise the Survey's work and to disseminate geological knowledge; but it would require additional staff specially trained for such work.

(4) Purchases are not made on a large scale, as the amount of material collected by the field staff is more than sufficient to keep the specialists fully employed.

The annual Grant in Aid for Museum and Library purchases amounts to £525. This does not include furniture, binding of books, or mounting of maps. The Museum has not competed with other museums in the purchase of rare or valuable specimens.

The cost of publications, including the production of maps, is defrayed from the section of the Vote relating to the Survey and is adequate at present to meet the needs of the case. The whole of the financial provision both for the Museum and the Survey comes under review by the Advisory Council of the Department of Scientific and Industrial Research annually, who advise on the scientific needs of the organisation as a whole.

The Museum staff is in close touch with the British Museum (Natural History), the Science Museum, the Royal Scottish Museum, and the National Museum of Wales, and overlapping with other Institutions is avoided.

(5) No fees are charged either for admission to the Museum or library. The attendance in the Museum is small, and consists almost entirely of a specialist

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

section of the public, generally well trained in geological subjects. The revenue that could be drawn from admission fees would be negligible. In the present condition of the galleries the attendance of large school parties is not encouraged.

There are no special guides, but members of the staff give demonstrations to scientific clubs, &c., when requested.

Attendances prior to the War average over 50,000 per year (1910, 51,461; 1911, 50,988; 1912, 52,178; 1913, 51,630).

Since the War attendances have been as follows:—

1919, 27,577 (Museum nominally closed from 1st January to 31st March).
 1920, 30,111.
 1921, 26,829.
 1922, 24,054.
 1923 (closed from 13th April to 31st December).
 1924 (closed all the year).
 1925, 5,443 (Museum closed 1st January to 3rd August).
 1926, 15,247 (Museum closed 22nd February to 18th April).

(6) The scientific staff of the Museum is recruited by nomination, selection or restricted competitive examination. Suitable candidates possessing a recognised honours degree or its equivalent are nominated by their professors, and thereafter the appointment is made by Civil Service Commission examination, or interview or both.

The technical staff is recruited by nomination, interview and examination. On appointment the selected candidate is trained in Museum methods and technique by the scientific staff, and promotion to higher posts depends thereafter strictly on merit.

(7) The following is a summary of the existing accommodation and allocation of space:—

Floor	Exhibition	Library	Offices	Storage	Total
	sq. ft.	sq. ft.	sq. ft.	sq. ft.	sq. ft.
Basement ...	—	—	1,646	5,301	6,947
Ground Floor...	5,407	1,492	744	—	7,643
Mezzanine ...	—	1,243	—	—	1,243
Principal Floor	6,279	—	1,838	—	8,117
First Gallery ...	1,729	—	544	—	2,273
Second Gallery	1,975	—	{ 1,737 1,645 3,720 }	—	9,077
	15,390	2,735	11,874	5,301	35,300

(8) Catalogues of the Museum collections exist in manuscript, and handbooks have been published descriptive of the various models and special collections, together with a twopenny general guide; catalogues of the Survey collection of British geological photographs have been printed, and a full atlas of these photographs, with typescript descriptions, is available for consultation in the library. The library has a complete card catalogue with special catalogues of geological maps. Many of the Survey memoirs and reports are illustrated by exhibits specially prepared, and these memoirs serve as handbooks to the corresponding exhibits.

(9) The work of the Geological Survey and Museum is research of the highest kind. All facilities are given to specialists and to students so far as the space available will allow. Government Departments such as the Ministry of Agriculture, the Ministry of Health, the Mines Department, the Ministry of Transport, the War Office, the Office of Works, the Imperial War Graves Commission and the Committee of Civil Research are constantly supplied with information on geological matters, as are the organisations under the Department of Scientific and Industrial Research, such as the National Physical Laboratory, the Fuel Research Board and the Building Research Board.

EXAMINATION OF WITNESS.

269. (*Chairman*): We are obliged for your memorandum. We understand that the Geological Survey and the Museum now come under the supervision for administrative purposes of the Department of Scientific and Industrial Research, and that your work is unhampered by statutory restrictions of any kind, is that so?—So far as I know there are only two Acts of Parliament which refer to our Institution, one of these gives us sanction to enter any closed place and obtain samples necessary for our work; the other is the Mining Industry Act of 1926 which gives us access to mining plans and bores.

270. But your work is unhampered by any statutory restriction?—I think I may say that it is.

271. One of your main objects concerns the practical application of geology in Great Britain to modern industry. Could you give some illustrations of the sort of help you have been able to render in this respect?—Well, Sir, we prepare geological maps on various scales showing the geological structure of all parts of Great Britain and we devote special attention to the careful mapping of coalfields and other districts where useful minerals are obtained and we publish memoirs containing the results of our investigations into the stratigraphical and economic geology of Great Britain.

272. Do you think the help you are able to render industry is sufficiently realised in industrial circles or whether better arrangements could be devised for bringing science into industry?—I think the arrangements under which we work are working smoothly, and I am sure that engineers and mining men and all who are concerned with geology in its applications to industry are as a whole very well informed regarding the nature of our work and frequently consult us on questions.

273. You see no better arrangements than those existing that can be made?—I think the present arrangements are working very smoothly; we have few difficulties.

274. Now turning to the question of accommodation, your present building is dilapidated and removal to a new museum at South Kensington has only been deferred owing to financial stringency?—So I understand.

275. Your new building is estimated to cost approximately a quarter of a million; can you tell us how the new space in the new museum compares with your present building?—I think the exact figures might be obtained from the Office of Works with the plans, but I think I may say that the new building will be twice or perhaps two and a half times as large as the existing building.

276. We gather from Section (3) of your memorandum that the policy of giving away to various appropriate institutions considerable sections of work in parts of your collections has been caused mainly by reason of this lack of accommodation in Jermyn Street?—We have at many periods of our history given away masses of material, mostly in order to confine ourselves to our proper functions and to make the best possible use of our space.

277. Are any further separations or amalgamations contemplated?—If we do not leave the present building our accommodation there is so full I shall have to arrange again for a further process of depletion.

278. What would you do?—I can for example make further arrangements with the Science Library at South Kensington to take over more of our books because we have a working arrangement with them by which we can borrow from them at any time and again I might make arrangements with the National Museum of Wales to take over and keep for us a certain amount of our Welsh material. We have a very large bulk of stuff, a very large number of specimens in Edinburgh; our Scottish collections are mostly in Edinburgh, and we have an exhibition gallery in the Royal Scottish Museum. I might pass

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

along a certain amount of Welsh material to the National Museum of Wales.

279. Are there any further separations or amalgamations in view?—I should be very sorry unless absolutely compelled by restrictions of space to go in for an extensive policy of further depletions, but, of course, if I am compelled to do so—I must either have more storage or get rid of something.

280. What has been the result of the separations already effected, the result I mean in efficiency and economy?—Of the separations?

281. Of the depletions?—The depletions have given us more accommodation and especially as regards the library. We are enabled to get from the Science Library occasionally, the reference books we require which they have got from us, but no great depletions have taken place within my period of service on the Geological Survey, that is to say within the last 25 years, because about the year 1900 or 1902 by re-arrangements in the interior of the Museum we got a certain amount of additional storage which has enabled us to carry on for twenty years without much depletion.

282. Now turning to the question of overlapping, in Section (3) of your memorandum you claim that overlapping with the Departments of Geology and Minerals at the Natural History Museum is avoided; would you illustrate the difference between the two Institutions rather more fully?—The Museum of Practical Geology confines itself to the exhibition of British stratigraphical and economic geology, especially in reference to the work of the Geological Survey and of the maps and memoirs which they have produced and also it takes up the economic applications of geology, that is to say, the application of geology to arts, manufactures and industry. Now the Natural History Museum is more directed to the scientific study of palæontology and of mineralogy and petrology. They do not extensively handle the economic applications of geology and as regards their palæontology their investigations follow rather on biological lines than stratigraphical lines.

283. If you were starting a Museum with a clean slate would you start two museums or one?—I think with a Geological Survey like ours which has had an activity of nearly a hundred years it should have a museum in which to exhibit the results of its work.

284. Separate from the museum founded on the other lines?—I think the two museums should work in very close co-operation, but I feel they have distinct fields which each might usefully occupy.

285. I presume transfer to South Kensington as proposed will bring you into closer touch with the Natural History Museum and the Science Museum?—The draft plans show a passage between the new museum and the Natural History Museum, and they also show a passage between the Geological Museum and the Science Museum so that the new Geological Museum would practically form a link between the other two.

286. And would that lead to a certain elimination or economy of exhibits?—Yes, we could effect a certain amount of condensation and economy if we were in close proximity to these two museums.

287. What would be the extent of that fusion and economy?—I do not think it would amount to very much because the Museum of Practical Geology has been in existence now since 1852.

288. Your Museum?—Our Museum and it has been nearly full since it was opened and we have had very severely to restrict ourselves to our own special field. We have not had space to enlarge upon subjects which would bring us into conflict or overlap with any of the other museums of London. We have a few exhibits which we might hand over to other museums, but the aggregate bulk would not be really large.

289. What about your colonial collections, would it be expedient to have them over at the Imperial Institute?—Our colonial collections are only small

and mostly, in fact, entirely illustrate economic geology. It is impossible to illustrate economic geology by purely British material, for example, the geology of the gold industry or the geology of the diamond or manganese could not be fully illustrated by specimens obtained from within the British coasts and we prefer to use colonial material where it is good and suitable for our purposes to material derived from foreign countries. If we disposed of all the colonial material in our place it would not amount to very much, and it would seriously hamper our display of the economic applications of geological knowledge.

290. Then turning to the question of the library, would not removal to South Kensington enable considerable fusion to be made in your library?—We have already sent to South Kensington many thousands of volumes, and on account of the working arrangement which we have with the Science Library we confine ourselves to the acquisition of a class of books which is narrowly restricted to our own immediate uses. If we were transferred to South Kensington certain departments of our library, such as technology or geodetics or geophysics which are well illustrated by the Science Library, can be reduced in volume in our library, but we have not much of that. Our library is essentially a library of the Geological Surveys and maps of the world, together with the economic geology of Britain, British colonies and the world generally.

291. Is there any scientific co-ordination between you and any other scientific museum?—Well, we have a constant working arrangement with the Science Museum. Our library has handed over large numbers of volumes to them and we borrow from them as we require, but not very much. Also the Director of the Science Museum has lately come to an understanding with us as regards certain of his exhibits which he considers, if we ever have a new museum, could be more properly treated in our new museum. Then as regards the Royal Scottish Museum we have for many years been in very close association with it. We have also handed over to the Dublin Museum practically our whole accumulations of Irish material. We have very few specimens from Ireland inside our walls. With the British Museum our relations have practically amounted only to a working understanding. They recognise their field and we recognise ours. Occasionally we borrow a few specimens from them for study and occasionally we present them with a certain number of our specimens for their study and for their use, but we have not handed over to the British Museum very much material since we gave them our collections of foreign fossils. With the National Museum of Wales we are in constant correspondence, and our specialists visit that Museum and help them with their collections. These, I think, are the principal museums in Britain with which we might be supposed to come in direct contact.

292. Your contact is not in regular conference at regular dates?—We have no regular conferences, except that in the case of all these museums the staffs of the museums are in close touch with all our staffs.

293. Turning to the question of fees, what is your view on the question of fees generally?—Fees have not been charged for admission to our museum for very many years, probably not for sixty years, and as the attendance is not large I do not think that the aggregate amount collected would be—

294. Worth the cost of collection?—It would not amount to very much.

295. What is your average annual attendance?—Our attendance at present is somewhere about 25,000 a year, about eighty people a day is a pretty good attendance.

296. It was considerably larger before the war, was it not?—Before the war it was larger. In some years it was almost up to 50,000.

297. What is the cause of the decline?—I think the fact that our Museum has been so frequently

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

and irregularly closed during the last four or five years has broken our connection to a considerable extent with the public; besides the Museum at the present moment is dark and obstructed.

298. Do you give lectures in your museum?—We do not now, but for many years lectures were given in our Museum to working men by such celebrated lecturers as Professor Huxley and Professor Tyndall and many others. These were specially given to working men and they began somewhere about 1853 and they went on until about 1895 and then during the reconstruction of our Museum about 1900 the lecture hall was thrown into the Museum library and storage, so we cannot give lectures now because we have no lecture hall. We give demonstrations.

299. Were those lectures widely attended?—The number of seats in the lecture hall was 600, and the lectures were very popular, and tickets were as far as possible restricted to working men and students, and from the old reports of the Institution I gather that the whole number of tickets was regularly taken up. In addition to which our lecture hall was lent to various Scientific Institutions for occasional lectures and meetings.

300. You have ceased to give lectures mainly because you have ceased to have a lecture hall available?—I understand so, but lectures ceased before I became a member of the staff.

301. If you are transferred to South Kensington and have a lecture hall, would you contemplate having them again?—I think it would be very easy to arrange. In the plans of the new museum we have a demonstration room where small parties visiting the museum may get a demonstration before they go out into the galleries, but I understand the plans of a new lecture hall for the Natural History Museum and for the other museums are under consideration, and if we had the use of that lecture hall we should be able to give lectures.

302. Now turning to the question of your publications, do your publications cause a heavy deficit?—I think our publications, generally speaking, pay for themselves.

303. Can you give the figures?—Yes, I have all the figures here. I think our publications are slow sellers, but taken over a long period of time they nearly all sell out and some of them are in their second and third editions. As a whole I may say that our publications clear themselves.

304. You would perhaps give us the figures—hand them in afterwards?—I can let you have them afterwards.

305. Are your publications produced by the Stationery Office?—Yes, they are produced in the ordinary way by the Stationery Office.

306. Have you any suggestions for increasing the sales of your publications, either by advertising or otherwise?—We frequently circulate advertisement slips through the post to those people who we know are interested in our class of publication. Occasionally the Stationery Office inserts an advertisement in "Nature" or other scientific or technical journals. I do not know that a general policy of advertising would pay its cost, as our publications are of a very specialised class and as we distribute copies of our publications to Scientific Societies interested in geology immediately they are published, they are fairly well known to those people who are interested in that class of reading.

307. Do you see any way in which the general utility of your museum could be increased?—Well, the general utility of our museum at the present time is very small because it is in a state of darkness and dilapidation. It is lighted always with electric light, but if we had a new museum properly designed we could carry on all the functions which the present museum was designed to fulfil in a very much better manner than we can do at present, and we could serve the needs of education and the needs of industry in a very much better manner.

308. You really think transfer to a new building either at South Kensington or elsewhere is urgent?—I think it is very urgent.

309. Have you seen the plans of the new building?—I have seen the draft plans.

310. Those have your approval?—Subject to final discussion I have gone through those plans and they certainly meet our requirements.

311. (*Dr. Cowley*): There is very little that I need ask. How long do you suppose you could go on with your present building without serious depletion, further serious depletion?—I may have to close our present building at any moment.

312. Owing to the dilapidation?—I understand the roof is now quite safe with the temporary supports which have been put in; they will prevent any serious collapse, but supposing that either plaster were to fall from the roof or the glass in the roof were to break I would consider I was not justified in keeping that museum open to the public having regard to the public safety, or if a collapse was taking place in the galleries, or anything unsafe were to happen I would close it at once.

313. I rather meant, supposing you have to go on there for a year or two, would you require to deplete your collections further to make room?—Well, we are living, so to speak, from hand to mouth; we are carrying on as best we can under present conditions. I can see my way if nothing unexpected happens to keep that museum open for a couple of years or so, but I am prepared if anything happens to close it immediately.

314. The supports to the roof, from your memorandum, appear very much to hamper you?—Yes, the supports from the roof and the removal of glass from the roof obstruct the museum to some extent.

315. Do you find with the exchange of specimens and books of which you were speaking just now that the distance of these other museums delays your work very much?—We have not sent any considerable number of books out of our library for, I suppose, nearly twenty years and I have been doing everything I could by utilising all the space as far as possible to find room for the growth of our book collection, but our library receives large additions every year and I think I just have about two years' room for expansion.

316. Do you find that getting specimens from other museums for your work delays you much; does it take much time from your work?—Our library is, so far as our purposes are concerned, a very perfect library. We have a magnificent collection of geological literature and maps so far as they relate to the class of work we do. We borrow from the Science Library only such things as "General Proceedings" which are not purely geological but contain geological papers, and also textbooks or standard works on kindred branches of science.

317. But you also borrow specimens, I think you said?—We borrow very occasionally specimens from the British Museum, but these do not amount to a couple of dozen a year.

(At this point the question of the value of the Jermyn Street site was discussed.)

324. (*Sir Courtauld Thomson*): The only other question I have to ask is a small one, it is on the question of the electric light. I see in 1926 the electric light was £417 and in 1927 £280. I only wanted to ask does that mean there is less scaffolding now than last year?—The scaffolding has not been touched for about two years, but we had an old series of carbon arc lamps which were so venerable that they were engineering curiosities. These were recently replaced by a series of filament lamps of modern type which are hanging from flex all over the building. It is only a temporary illumination, but the new system is much more economical than the old system.

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

325. It does not turn on the scaffolding?—No. I do not think it does.

326. (Mr. Charteris): I just wanted to get a little clear the difference between the biological and the chronological, is that the distinction in the arrangement of specimens?—If you take any kind of fossils, for example, let us say the corals, in the Natural History Museum you will find all the corals together and all the fishes together from the earliest geological time up to the present day. They have a gallery, for example, which is wholly devoted to fossil fishes; any kind of fish known or found in any kind of rock is there in its proper place with its name on. In our place we take the fishes of the epochs and put them with the shells and the corals of the epoch; and everything else. We show geology from a more or less historical point of view. We take all the things that lived on the earth about the same time and put them together. The British Museum studies them according to their class irrespective of their age.

327. Then you require two sets of the same object to illustrate the two different classes?—Every student of geology is taught geology according to the textbooks on a stratigraphical basis. In every textbook on geology half the book consists of a description of the stages of the world's history and the life that characterised that epoch, so our method of treating geology is fundamental. Besides, from the point of view of mapping, it is the only possible basis on which to go and from the point of view of industry and the identification of the horizons of rocks in which valuable minerals may be deposited. Then the stratigraphical method which puts all things on a certain level and belonging to a certain time in the same place is the only possible one for the economic application.

328. Suppose it was moved to South Kensington, you would have at South Kensington two sets of the same objects?—In some cases the same objects would be shown as illustrations of a particular group of animals or plants and in our case they would be shown as fossils characteristic of a certain age or a certain group of rocks.

329. It would not be possible to combine the same results with the same set of objects?—Quite impossible.

330. That is what I wanted to appreciate. Does the Geological Survey go on all the time?—The Geological Survey at present has field parties executing field work all over Great Britain.

331. And is being continually altered?—It has now been going on since 1832 and it is more active than ever it was. We are now engaged very largely in an up-to-date re-survey of our principal coalfields and that is being published year by year, but we are also surveying other districts in which economic minerals practically do not occur. Our commission is to produce a satisfactory and accurate geological map of Great Britain.

332. In the normal course of events will the day ever come when the Geological Survey is completed?—I shall never see it. Geology is a progressive science and the information we compiled when we were working in certain areas 70 years ago is now quite insufficient to meet immediate requirements. Every Geological Survey has to bring its work up-to-date periodically. Some of our maps are over 80 years old and they are thoroughly in need of revision.

333. And it has continually to keep pace with changes that are taking place?—We have to keep pace with the growth of our science and also with the accumulation of information relative to British geology in the various districts and also with the demands of industry which get more urgent every year.

334. Then as far as the practical value of the museum is concerned, apart from the Geological Survey, do engineers consult you in regard—does a mining engineer consult you in regard to sinking a pit shaft or a water engineer consult you in regard to water bearing strata?—We have enquiries as re-

gards mining engineering and as regards water every day.

335. Then, if a mining engineer wants information, does he require to study the specimens in the museum as well as studying the maps which you have prepared?—He may require to study both the specimens and the maps or he may ask us questions which involve our having to examine the specimens in order to give him a correct answer.

336. And you have a great number of those questions addressed to you?—We have those questions every day.

337. And that is one of the practical purposes which the museum serves?—That is one of the practical purposes the museum and the library serve. We have practically always in the library people asking questions about geology.

338. I see from your statement that two transfers have taken place. The mining records have gone to the Home Office?—Yes, they were sent to the Home Office.

339. And the School of Mines has gone to South Kensington?—The School of Mines has gone to South Kensington.

340. Is it desirable or not that those should be kept together with the Geological Museum?—The Mining Records Branch is exceedingly well looked after now by the Mines Department. It has all the necessary powers to compile mining statistics and the Imperial Bureau of Mineral Resources also fills that task exceedingly well. The Imperial College of Science and the School of Mines have been very much enlarged and have a magnificent building in South Kensington and if we were taken to South Kensington we should once more be in close contact with their students.

341. And that would be an advantage?—That would be a very great advantage.

342. What number of actual students study at the museum?—I could not tell you. The students who come to the museum are very largely students of geology and geography attending the various colleges of London University. There are always two or three of these. When I left the office just now there were half a dozen and they get the information required for their studies, the geological information from the maps and books in our library. We keep no record of the number of students as apart from other visitors, but we have students in our library at all hours of the day. There are practically always a few students there, sometimes two or three or more.

343. Then I see the Geological Society's specimens were transferred to the Geological Museum at some time?—The Geological Society had a museum which was composed of materials that had been presented by various members of the Society and served to illustrate important geological papers which had been printed in the publications of the Society. They suffered from limitation of space for their library and they dispersed their collections about 1910. The foreign specimens were given to the British Museum and the British specimens to ourselves. I do not know how many there were, but about 35,000.

344. Have those been absorbed into the collection or remain in their entirety?—These are registered and deposited in our museum so that we know where they are and can obtain access to them at any time.

345. Were there any duplicates in their collection which are in yours?—An historical specimen cannot be considered as a duplicate. The original material which was figured or described in a scientific paper which was read to the Geological Society is deserving of being kept, even though we have another similar specimen in our own collection. The original specimens are always of sufficient value I should think to be kept. We have these specimens in racks of drawers, and we are registering them so that the public and ourselves may have ready access to them at any moment.

346. Then I see collections representing metals were sent to the Alexandra Palace?—The specimens representing metals were dispersed. About 1900 the

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

last of them were sent away. Some of them I think went to the Science Museum and some were taken to South Kensington as lecture specimens for the use of the Professors in the School of Mines. I cannot say what their ultimate disposition was in every case, but they disappeared from our museum.

347. If the move took place to South Kensington and you had sufficient space, would it be desirable to restore those to the museum?—The subject of metallurgy and of mining is within the province of the Science Museum. We confine ourselves to economic geology and stratigraphy. There is going to be a passage between the Geological Museum and the Mining and Metallurgical Museum. We should not acquire that material; we should leave it to the Science Museum.

348. Do you see any directions in which economies could be effected?—We work our museum I should say on the most economical basis. I think the figures there prove that we work that museum in a more economical manner than any other.

349. Do you think you could work more economically if you had more space?—Not necessarily. I do not see that the amount of space provided would increase the economy. You see our staff has been enlarged; within the last ten years our staff has been enlarged very considerably, and our museum is staffed very largely by men who are essential officers of the survey establishment. A great deal of the contents the museum gets from the Survey for nothing. Our fossils are collected for the Survey and then shown in the exhibition. Our rocks also. We must have experts on our staff to determine these things with complete accuracy, and what the museum does for us is principally to exhibit the work of the Survey, which is done essentially by the Survey officers.

350. How many Survey officers are there?—I could not give you the exact figures, but all told we are rather over a hundred. I can give you the exact figures if you will allow me to refer to some papers. We have about 50 scientific men in addition to having assistants, collectors, draughtsmen, warders, labourers, and so on. The whole staff is rather over a hundred.

351. And the field workers are collecting specimens every summer?—Every geologist who is working in the field collects a certain number of specimens in the course of his work for study at home and in the laboratory, but when the collecting will occupy more than a very short time we send out trained collectors to the field to do that kind of mechanical work; instead of employing scientific men to do it we send out trained collectors who obtain satisfactory specimens, and these are sent in then for determination by the specialist.

352. (Sir Martin Conway): I have only two questions to ask. When the museum is moved to South Kensington there will be three geological libraries; there will be your library; there will be a geological library with the Natural History Museum and one in the Science Museum. Could those three be economically consolidated into one?—A certain amount of consolidation might take place, but these libraries are essentially working tools for the staff, and if you consolidate these libraries you would have to triplicate standard works of reference, because our men working in their office require to have these works to their hand for consultation. The men working in the British Museum would require to have the same. In fact, at present we sometimes have to buy more than one copy of a work because it is required to be at hand in more than one department. Our library aims particularly at having a thoroughly good collection of the geological maps and the work of Geological Surveys all over the world. If we were allowed to we would serve as a general library on this subject for the whole of the Institutions at South Kensington, but the standard reference works on the branches of science which we investigate would have to be in each institution.

353. The other question is quite a different one and has relation to the Imperial Institute. Is there any object in maintaining a separate museum of collections of practical geology of the British Empire in the Imperial Institute; does not that necessarily duplicate your work?—In the Imperial Institute the minerals of the various British Possessions are exhibited and some of the exhibits like Canada and Australia are exceedingly good. We have a few exhibits from these places, but we do not profess to be able to show Imperial geology.

354. So that you have one geological collection biologically arranged in the British Museum; you have one stratigraphically arranged in your own museum, and you have a third collection in the Imperial Institute. Could not that be co-ordinated with the other two? Is there any object in an entirely separate organisation for that necessarily with a library and assistants, and one thing and another?—There is no museum in London which exhibits the geology of the world, and there is no museum which fully illustrates the geology of the British Empire, though the Imperial Institute has very valuable exhibits of Empire geology. We ourselves restrict ourselves fairly closely to Great Britain, and our Colonial exhibits are merely to illustrate economic geology, not to illustrate the geology of the Empire. Such Colonial exhibits as we have are meant more particularly to show the economic geology of various metals and branches of industry.

355. The British Museum collection does illustrate the geology of the world, does it not?—Not so far as I know.

356. Does it set a limit?—The British Museum collection illustrates the paleontology of the world and the mineralogy of the world.

357. (Sir Richard Glazebrook): I have here the report of Sir Hugh Bell's Commission if I might ask Sir John Flett one or two questions in regard to that. You are aware of the Bell Report?—Yes.

358. Have you anything to say in regard to the recommendations or are you generally in agreement with that?—The important point regarding the Bell Report was that on that report the space was allocated to us at South Kensington, and the British Museum consented that that space which previously had been regarded as earmarked for the British Museum should be allocated to us.

359. And you accept that?—That is the principal permanent result of the Bell Report.

359A. There is one sentence here which answers the question put. After referring to the work of the Museum of Practical Geology and the Science Museum, it goes on to say: "If these two were brought together they would provide the basis of a collection that would be complete as regards stratigraphical and economic geology." Is that your view?—It is a very large question which has been much discussed, and on which I am not prepared to give a definite answer. There is no museum in Britain which deals with geology in its broadest aspects, and there are four museums which are interested in that subject, the British Museum of Natural History, the Geological Museum, the Science Museum, and the Imperial Institute collections. Exactly what would be the best line of development I am hardly prepared to say, because I do not think it is practical politics. The whole of those four institutions at the present moment are more or less hampered for want of development. The Imperial Institute, our museum, and the Natural History Museum are asking for more accommodation, and the Science Museum is, I think, half built, and I do not think any of these four institutions would be willing to tackle additional responsibilities in their present state.

360. I think that is all on that point. You did refer a little time ago to the temporary electric lighting installation. Are you satisfied with that?—The electric lighting is only a temporary makeshift. It is all hung by flexes from the roof across the galleries. I have it inspected at frequent intervals,

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

but it is obviously not designed to last more than a very short time.

361. What as to fire risks?—I consider the fire risks are very, very grave. Our museum is full of dry timber which has been there for four years, the temporary roof is made of cardboard and of tarred paper, and I consider the fire risk is very great. If anything was to happen to that roof, the whole place would be in a blaze in ten minutes and the whole of our collection, representing nearly one hundred years' work, would be absolutely gutted.

362. (*Sir George Macdonald*): Your museum or store differs from the other institutions we have to consider, because it is really not, I take it, so much an independent organisation as an adjunct of the Survey?—It is to some extent, you may say, the shop window of the Survey. We display our most instructive and best things in that museum, and it also grew up very closely in connection with the School of Mines, which was the sister institution, and our building was built for the two institutions side by side. Consequently, the museum has been from the first even more a museum of the economic application of geology than a museum of stratigraphy. It is both, but started as a museum of economic geology.

363. When one considers the question of providing accommodation, it is not merely accommodation for the museum, but accommodation for the staff of the Survey?—That is so.

364. Can you give us any idea of the relative proportion of space that you would allocate to each purpose?—Sir R. J. Allison and I considered carefully the possibility of providing a satisfactory library, laboratories and offices for the Geological Survey, and on the draft plans which Sir Lionel Earle has there you will see that space is allocated to the various departments of the Survey in the rear of the museum.

365. Can you give me any idea of what proportion of space?—I have not the figures. I could get them out for you.

366. It would be considerable at all events?—Yes, it is so. It is about one-fourth of the cubic space of the museum.

367. Of course, the cost of your staff divides itself into proportions, which imply a much larger expenditure on the Survey than on the museum?—We took the existing staff which was allocated to the London headquarters. We have offices in six places; we have an office in Edinburgh, one in Newcastle, one in Whitehaven, one in Manchester, and one in York, and we have the headquarters in London.

368. Then there is another respect, I gather, in which your museum differs from other museums in that you do not have a large attendance of the general public there.—Our attendance has always been comparatively small. The majority of the people who come to our museum are people trained in geology, and the great number of them have a question to ask us.

369. Then, on another point, rather a different point, when the Chairman was asking you about the clearances you had effected and the reason for your effecting them, you said it was in order that you might have space in which to conduct your proper work. Does not that rather imply that you were rather going outside of your proper work before?—We are extremely restricted as regards space, and if you will excuse me, I did not quite catch your question.

370. I wanted to get an explanation of the phrase you used in your reply to the Chairman that you cleared out those objects in order that you might have room for devoting yourself to your proper work. That suggested, to my mind, that you were doing something that might be dispensed with.—At one time, Sir George, we received donations and bequests from many geologists of specimens of fossils from British Colonies and from different parts of the world, and people deposited these with us. When we had to sacrifice something that was what we had to sacrifice.

371. Yes, but did these involve any work, or was it merely space they involved?—The investigation of foreign fossils, rocks and minerals is more the province of the British Museum, and we handed them all the foreign fossils, amounting to 50,000 to 70,000, because we have so much material that is flowing into our museum from our geologists working all round Britain that we have not enough time to study that material.

372. You think there is nothing in your museum now that would be more properly housed in the British Museum?—I do not say that, but the total amount of it would be very small.

373. I have heard something about the collection of minerals that some people think might be more properly housed elsewhere.—We have a very valuable collection of minerals known as the Ludlam Collection.

374. That was in my mind.—We are identifying minerals practically every day, and must have specimens available for comparison. You cannot name a mineral out of a book any more than you can a fossil out of a book. You must have a mineral there to compare with the material you have got, and if you stripped us of foreign minerals we could not adequately study the British minerals.

375. I am not quite sure that the British Museum authorities would altogether agree.—I do not think, if they came in and took what they wanted, that they would take very much.

376. Would not they take the Ludlam Collection?—I do not think they are burning for the Ludlam Collection. Their collection is so rich that the few specimens we have are not good enough for them. Their mineral collection is far in advance of ours.

377. You explained very clearly the difference between the functions of the two museums in regard to the display of specimens, that you are primarily concerned with stratigraphical geology. Is there any respect in which you are overlapping with the British Museum in regard to economic geology, do you think?—The British Museum will not touch economic geology. The British Museum is concerned with pure science, and I do not think any question of economic geology is dealt with at the British Museum.

378. May I read this sentence from the memorandum received from the Keeper of the British Museum: "The Museum is also frequently asked to identify minerals, rocks and fossils, information about which is required in connection with questions of economic importance."—The British Museum would restrict itself in that case to mineralogical identification.

379. "Of economic importance"?—They would identify the specimen.

380. It seems to me the answer in your questionnaire suggested that you and they were doing very much the same thing in some respects.—I should be very much astonished to learn that the mineralogists of the British Museum do much mineralogy on an economic basis. However, you can ask Sir Henry Miers, who knows that question most fully, having been in charge of those galleries, but taking such questions as fireclay, oil shale, any of the economic rocks, building stone, I do not think anybody would go to the British Museum to ask a question on that subject, and those are the subjects on which we publish our reports.

381. Is there any duplication or overlapping between you and the Royal School of Mines in regard to enquiries and so on?—We do no teaching.

382. I am thinking of enquiries, not of teaching?—I do not know that the Royal School of Mines answers enquiries.

383. You do not think so?—If they do, they do it as private workers. They have no enquiry department.

384. Then I wanted to ask a question about Scotland. I understand that your Scottish material is all housed in Edinburgh?—It is all in Edinburgh, with the exception of a very small amount which is in Jernyn Street.

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

385. Do you think that is a right principle?—We have had a branch office in Edinburgh, the Scottish headquarters, for nearly 60 years.

386. But do you think, from the scientific point of view, that it is a serious matter, detrimental to the study of geology, that the Scottish objects should be housed in Scotland and the remainder of the British objects housed here?—I have not only to consider the scientific aspect of the question, but also the practical, and we must remember that the people who are concerned in our class of geology in Scotland prefer to have an office in Scotland to which they can go, meet the staff, and obtain the information they require.

387. Yes, it was the museum that was in my mind.—Therefore, that staff in Edinburgh must be provided with a library and must have its collections beside it, because scientific men cannot do scientific work without their material on which they do the work. Therefore, seeing we have had to keep up a thoroughly efficient staff in Scotland, we have kept by far the greater part of the materials on which they work and to which they need to refer in Scotland beside them, and the system, in my opinion, has worked admirably.

388. I was asking the question, because in the case of some other museums there have been serious questions of overlapping and competition between London and Edinburgh for purely Scottish specimens. In your case, with a unified administration, no difficulties of that kind arise at all.—As regards the Geological Survey, all Scottish questions are generally dealt with in Edinburgh, but of course Edinburgh is in a very inferior position as regards general geological collections. When I was a student in geology in Edinburgh, I had to come to London periodically to get an opportunity of studying in the great museums in London because the exhibition of geology in Edinburgh was insufficient for students' purposes, but the exhibits of Scottish geology in the Royal Scottish Museum as far as we can make it is completely satisfactory as an illustration of Scottish stratigraphy and the work of the Geological Survey in Scotland.

389. Do they attempt in the Royal Scottish Museum to have much of a geological collection apart from what you supply them with?—I should think we have perhaps four or five times as much material in our office as we have in the museum.

390. Yes, but I was asking with regard to geology. Perhaps I ought to know myself without asking the question, but do they in general geology in the Royal Scottish Museum aim at having a large collection, or do they content themselves with being, thanks to your location in Edinburgh, the headquarters of what you might call Scottish geology?—The general geological collection in Edinburgh is at the present moment under revision because a new hall, as you know, has been allocated in the new extension, and I could not tell you exactly how the matters stand, but our Scottish exhibit in the Edinburgh Museum is, I should think, about the major part; it is larger than the general exhibit. There is a very good, but not large, collection of general minerals.

391. Enough to be illustrative?—Very good, but palæontology and general geology is, I think, exhibited in the Royal Scottish Museum on a small scale.

392. (Sir Henry Miers): In Section (1) of your memorandum you mention the top floor of the Jermyn Street extension over Lyons' Café, and am I right in supposing that practically all the survey work goes on in that extension?—No. As you will see from the plans which Sir Lionel Earle has with him, we have survey offices in the Piccadilly front, and we have survey offices also in the Jermyn Street front of the Museum itself, in addition to which we have that top floor on the back part of the Popular Café.

393. I understand that this lease expires in 1932, and if you lose these premises would it be possible

to carry on the survey work in the present building?—We cannot carry on the survey work without accommodation, and at present the Lyons' extension and the museum itself are absolutely full both of staff and of collections. When the Lyons' lease falls in I am told it will not be renewed, and Sir Lionel Earle will have to find us some more accommodation. That is in five years, I believe.

394. In Section (2) of your memorandum you mention that no extensive modification of the fundamental plan of the Museum and of its arrangement of exhibits has taken place for 25 years, because it has not been possible in the present premises. Does that allude to a re-arrangement that will take place in the new building if provided at South Kensington?—We have not yet fully considered what would be done with the new building, because it is a good principle first to catch your hare before you cook it, but we have an idea, looking at the draft plans, how we would divide that building of four floors. We should take the first floor and make it a more or less general and, if we can, an attractive show of geological principles. The second floor we would try to use as a hall of British stratigraphy and the work of the Geological Survey, using fossils, minerals, rocks, maps and everything. The third floor we would use for the economic application of geology with special reference to British industries, and if I could I would like to show a fair amount of Imperial industries there also, because many of the minerals in which British capital is deeply involved are really to be got only from our Colonies. Then I thought I would keep the top floor at any rate reserved for study collections and for research work. That, of course, is merely a suggested scheme.

395. The sort of re-arrangement you contemplate in Section (2) which you cannot carry out in the present building, and which you wish to carry out in the new building if provided?—We are merely adapting ourselves to circumstances in the present building: the circumstances get worse and worse, and we are simply making the best we can of the old building. I may say it was about the year 1902 in which we had a re-arrangement by which the lecture room was converted into a museum. About the year 1905 our walls began to give us trouble and it became fairly certain that we would not be very long there. It ultimately culminated in the Bell Report which allocated space for us at South Kensington. Then we were closed during the whole of the war, all doing war work. Then in 1920 or 1921 the roof began to give us trouble, so that for the last 20 years or so we have been living from hand to mouth.

396. In Section (2) you allude to the fact that the survey staff help in the museum work. Is that in itself desirable, or would you prefer to have the museum kept quite distinct from the survey staff?—We find we must for our survey purposes have the experts who deal with fossils, rocks and minerals for our survey work, and when the material has been determined by them a selection of the best of it is passed into the museum, so that arrangement works very economically and very satisfactorily.

397. I wanted to ask a question about the collections. Is it your view, as far as the fossils are concerned, that the collections should be almost entirely British, and as far as economic geology is concerned that they should be perfectly general?—The fossils we have in our museum are practically entirely British.

398. Is not the answer to be found in the question put by Sir Martin Conway when he asked about overlapping with the Imperial Institute, because I gather they should have all the Colonial fossils worth speaking of?—We have no Colonial or foreign fossils in our museums, or at least the number must be infinitesimal. We have a certain number of Colonial ores and economic rocks, but the total number is small, and they are all examples of economic geology.

399. Would not there be three collections overlapping: (1) stratigraphical and economic in the

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

Geological Museum, (2) palæontological in the Natural History Museum, and (3) Colonial in the Imperial Institute?—We have no Colonial and Imperial fossils, and the Imperial Institute shows no fossils.

400. Do you think it is very desirable to have larger exhibits, if you had more space, relating to economic geology, such things as water supply and mining models, and so on, or would they pass into the hands of the Science Museum?—We have been greatly hampered by lack of space in showing the economic application of geology. Immediately after the war we issued a series of investigations into British economic geological resources, we accumulated a large amount of material, and printed 30 volumes on British industries. We had a large amount of material, we had the descriptive memoirs but we had not the room to put the material out. All the identified and described specimens of British economic rocks on which these monographs were framed are in the museum, but we can only show a very small quantity of them.

401. In reply (1) to the Commission's Questionnaire you allude to the Geological Survey Board. Would you mind stating exactly what its functions are?—The Board?

402. Yes, the Geological Survey Board?—We have an advisory board, which has a chairman, who is Sir Francis Ogilvie, who was at one time Secretary of the Board of Education and Director of the Science Museum. We have certain official representatives who are from the Development Commission, the Ministry of Health and the Mines Department, and then we have a number of others who represent geological science who are principally professors in British Universities. This board meets several times a year and considers the general questions of policy.

403. But it is only an advisory board?—I think it is purely an advisory board. It does not interfere with the actual administration, but it gives its opinion upon all questions that arise as regards policy.

404. It would, for example, suggest a programme for the next year's work?—I submit reports to them frequently, including one elaborate report every year; they offer criticisms and suggestions, and they frequently suggest lines of research, and difficult or doubtful matters are referred to them for an opinion. Their support, of course, is most valuable.

405. Then there is a question I wished to ask due to the fact that I have been visiting a great many local museums lately. You mention in reply (3) to the Commission's Questionnaire that the Geological Society's museum was handed over in part to your museum. Is it possible that similar offers will be made from local museums about the country? I ask this, because there are very important geological collections lying hidden and neglected in many local museums. I mention particularly Sir Thomas Wardle's collection of carboniferous fossils in Staffordshire.—Any collections of British fossils that are offered to us we should be very pleased to accommodate, and to register and deposit them and make them accessible to all people who wished to work upon them. The whole of our collections are open to research.

406. You would welcome any such offer as that?—Yes, so long as they are British.

407. Some of them are really languishing and will be destroyed unless they are taken over by some institution. In relation to a question that was asked before about the economic aspect of the British Museum and the Museum of Practical Geology, is not it the case that anyone desiring knowledge that would involve consulting foreign specimens would go to the British Museum, but if it was to be found by consulting British specimens he would be more likely to go to the Geological Museum?—We receive questions of all kinds as regards the greatest possible diversity of subjects, but all those

who are especially interested in British resources and in British geology are likely to come to us, unless perhaps they were required to get a verdict on presumably a new fossil, when the various palæontological departments of the British Museum, being extremely specialised in these matters, would be able to give an opinion of the highest value, or possibly on a new mineral, but if it has an economic bearing I suggest they would come to us.

408. With any questions on such matters as oil they would be likely to go to the Imperial College?—Well, there is no oil in Britain, i.e., the amount of oil that has been found after most elaborate researches is not worth while. We do not profess to be able to give advice about foreign questions regarding oil.

409. I thought those questions would bring out the different spheres of activity.

410. (Sir Lionel Earle): You mentioned, Sir John, that in the past you have had certain depletions. Do you consider those have diminished the value of the usefulness of your museum?—Do you mean the library or the collections?

411. The collections?—I do not think it has increased the value of the collections, because a certain amount of comparative foreign material is often very useful to us.

412. You talked also about possible further transfers to Scotland and Wales. If that were done, would you consider that affected the usefulness of your museum?—If we send any specimens we have to Scotland, we can immediately recall them to London.

413. And from Wales, too?—They are all registered, and if we wished to see them we could get them by post in 24 hours. In the same way, if we deposited any material in Wales, it would all be registered, and we would make it a condition that if we required to refer to them at any particular time they should be sent back to us for examination.

414. If you had new premises or sufficient space, you would not eliminate those specimens to Scotland or Wales, or would you?—I might some of them.

415. As regards lecture halls, you said you had no lecture hall. Would not it be possible for the working man or the student to have guide lecturers to go round explaining and teaching on fossils, apart from a lecture hall, say a knot of 30 or 40 people?—We have never had a guide lecturer because our attendance is small, but many scientific clubs, societies and schools apply to us for a demonstration, and we invariably give them. I have several applications on my table at present, and we give an hour's demonstration in the museum. We could very easily arrange for a large attendance of London County Council school children, but with our galleries in such a state that you cannot allow more than six people on them at one time, we cannot—

416. I am talking about if you were situated without even a lecture hall?—We have not the working space, and a lecture hall which is empty for five days a week in which there is perhaps one lecture a week, it seems it would be a waste of cubic capacity in a place like ours.

417. That I understand, but when you had proper lectures, with Professor Tyndall, you said every seat available was taken up?—I referred to the old annual reports of the Museum Director, and the number of tickets generally available was 600, and repeatedly in those reports there are statements that the whole 600 had been applied for; in fact, I understood it was necessary to make sure that the applicants as far as possible were working men, because those lectures at that time were famous.

418. But your present premises are insufficient. If you had proper premises, guide lecturers might be a popular and educational move?—I think they would be.

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

419. The only other question I have is this; of the 80 or 90 people who attend per day, can you tell me are the greatest number of those scientific or commercial, or are the greatest number in your opinion purely visitors from curiosity?—We have a certain number of visitors who stroll in casually, especially if it is a wet afternoon, but in fine weather I do not think you will find anybody in that museum who has not an errand.

420. Not even flirtatious couples?—Our museum is very badly constructed for that now, and you will find if you go there that the whole of our museum is open. One warder on each floor can see everything that takes place in that museum, and it is no longer adapted for that use.

421. If you go to the newly designed building at South Kensington, would it require more staff for your museum?—The new museum is designed very skilfully, and the warding of that museum can be carried out with a very small staff. It is very open. It is not like some museums, and a small staff would ward it, but especially in the arrangement of the new exhibits at the time that museum is first occupied I should probably require a considerable amount of assistance to get it ready in a reasonable time.

422. I mean more actual staff at work?—I do not think that museum, according to the architect's designs, is a museum which calls for much staff.

423. I am not talking of messengers, porters and so on, but merely of the scientists?—It would not require a great addition to the scientific curatorial staff.

424. (*Sir Thomas Heath*): The only question I was going to ask was really about the fossils which seemed to me to be a great question as to whether there was overlapping, or particularly why the fossils were required at Jermyn Street. I understand it is all a question of the making of the geological maps and the history of the geology of this country. Would it not be possible to have those specimens, supposing they were given to South Kensington, in close proximity to your own things, but nevertheless combined with the Natural History Museum fossils?—In that case we should require to send regularly to the British Museum in order to borrow our own reference specimens. When a geologist is asked as regards the age of a rock, he constantly requires to consider what fossils it contains, and if our fossils were in the custody of another body we should have to go there and get their permission to transfer them, and if they are registered material it would require a considerable amount of time. The working geologist can no more work without his registered and studied fossils and specimens than an engineer can work without his patterns and drawings, or the commercial man can work without his samples. These are the things that we require to have on our table before we can answer a question. We cannot identify a fossil from a picture in a book. You might require to compare the specimen with specimens we have previously got from the same locality, and these specimens must be beside us just as books of reference must be beside the working literary man.

425. Must you have them there always for the purpose of keeping your maps up to date?—Every geological question of a stratigraphical nature requires that you should have palæontological evidence. These questions are part of our daily work, and the accurate determination of fossils is daily going on. We have three men working in the museum at the actual determination of fossils. It is going on every day, and when new fossils come in and require to be determined we must have not only the literature, the books, but the specimens of similar material which have been accumulated during previous years.

426. (*Chairman*): I understand it to be your view that your present bad accommodation seriously impedes your useful economic work?—Well, we are doing our best under the circumstances. We have

a badly lighted laboratory, we have men working in dark rooms, but you see I have scattered a large part of our staff out of London, which I could not possibly accommodate in London. That principle of opening branch offices was developed five or six years ago. We had not the accommodation in London for more than a limited portion of our staff.

427. That was adopted compulsorily?—Partly, but I also thought it was not a bad policy to have in the principal coalfields and mining districts representatives who would be in personal touch with the principal engineers and leaders of industry.

428. Now, you said there are four geological museums in London, and yet there is no complete geological museum?—There is no museum in London which illustrates the general geology of the world.

429. Is that a satisfactory arrangement?—It would be a great thing for the study of geology in London if such exhibits could be put up.

430. That would be the fusion of the existing museums?—I really could not say what would be the best method of developing such a museum.

431. But you regard the present arrangement as deficient and unsatisfactory?—The present arrangement is not completely satisfactory.

432. And is not such as you would adopt if you had a clean slate?—Well, of course, you cannot have everything. Museums have undergone a gradual development, and a perfect museum has not yet been evolved. Our London museums are a magnificent series of museums, but I suppose there is room for improvement. I should not like to be asked to elaborate a programme for the development of those museums.

433. (*Sir Richard Glazebrook*): Could Sir John indicate anywhere a museum of the kind he has in mind when he speaks of the perfect museum? For instance, the Cambridge Museum, does that approach it?—It is a comparatively small museum. I do not know of any country that has a museum which illustrates the whole world. Some of the University museums attempt to do so as an illustration of general principles of geology, but they are all comparatively small museums.

434. What about the museum at New York?—The Natural History Museum in New York is probably the most ambitious of that kind in the world, and has the widest outlook.

435. And if the Commission wished to examine into the details of such a museum, would that be the one we ought to inquire about?—The Natural History Museum in New York has many excellent features, but I am not sure that all those features would be adaptable to British conditions.

436. Sir Thomas Heath in his question referred to the keeping of your maps in order as being your primary object. It is an important object, but is it the only object for which you work?—We regard the making of a good map as one of our cardinal functions. With each map we publish a descriptive memoir, but we are essentially a survey body. Out of the map many things arise—palæontology, petrology, mineralogy and many things, but I should say that the map might be regarded as the foundation of all our work.

437. Economic geology requires a knowledge of the fossils, or does economic geology require access to knowledge of fossils, or are fossils used only for keeping a map in order?—Let us take, for example, the development of a coalfield. In many cases the first thing that the engineers do is to insert a series of bores. We have an Act of Parliament since 1926 by which we have the privilege of examining all those cores. We break them up, and if there are any fossils in them we carefully have them studied. Often the correct identification of the position of the strata in which that bore is made depends on minute characteristic fossils, which can only be determined by an expert palæontologist, and

3 November, 1927.]

Sir JOHN FLETT, K.B.E., D.Sc., LL.D., F.R.S.

[Continued.]

the development of the field may depend on the character of a minute fossil which has been got out of a bit of rock.

438. For that purpose it is necessary to have your own collection of fossils?—We have in our museum many thousands of specimens taken from such exploratory bores, and if a doubtful question arises we can go to our collection and take out specimen after specimen of the fossil in question and make as nearly certain as possible whether this fossil which is in this bit of rock is the right thing.

439. Could you do that equally well if you had not that collection?—We could not possibly do it without the materials there.

(The Witness withdrew.)

FOURTH DAY.

Friday, 4th November, 1927.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARACTERIS, K.C.

Sir MARTIN CONWAY, M.P., Litt.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Mr. JOHN BERESFORD (Secretary).

Mr. J. R. CHAMBERS (Assistant Secretary).

Mr. C. TATE REGAN, F.R.S., Director of the Natural History Departments, British Museum, called and examined.

The following Memorandum was submitted by Mr. Tate Regan on behalf of the Trustees in reply to the Commission's Questionnaire (see Appendix I):—

1. The Natural History Museum comprises the Natural History Departments of the British Museum and is governed by the same Trustees as the Bloomsbury division of the Museum. It is therefore unnecessary to repeat here the details which will be included in the information supplied with regard to the parent institution. Only those points are considered which are peculiar to South Kensington or in which the two institutions differ.

Since under the original Act of Incorporation (26 George II, xxii; 1753) constituting the Museum it was enacted that specimens once received "into the said general Repository shall remain and be preserved therein for public Use to all Posterity," a special Act (41 & 42 Victoria, LV; 1878; "An Act to enable the Trustees of the British Museum to remove portions of their Collections") was required to enable the Trustees to remove the Natural History collections to the new building at South Kensington.

The Director and Principal Librarian is appointed under Clause 16 of the above Act by the Crown and "shall have and hold the said office during such Time as he shall behave well therein," the appointment being therefore for life. The Director at South Kensington is, like the remaining Officers and Servants, appointed by the Principal Trustees, and holds his office under the ordinary Civil Service regulations.

The distinction between the two offices is clearly brought out in the Statutes and Rules for the British Museum (latest edition issued in 1922).

"Chap. II. Rule 2. The Director (of the British Museum), being, by the Act of Incorporation, the person to "whom the care and custody of the British Museum are chiefly entrusted:—

"(1) Shall be responsible for the safety of the Museums, and of the property and Collections therein. . . ." Under Rule 4 he is made the Accounting Officer. On the other hand, under Rule 5: "Subject to the General authority of the Director and Principal Librarian, as prescribed by

the Act of Parliament the Director of the Natural History Departments shall discharge the duties defined . . . so far as they relate to those Departments. . . ."

2. The subordination of the Museum at South Kensington to the one at Bloomsbury, as indicated in (1) above, introduces complication in the administration of the former, inasmuch as all the correspondence with the Treasury is transmitted through Bloomsbury.

Some difficulty is introduced into the administration of the Natural History Museum from the fact that whereas there are five Departments there are only two Deputy-Keepers and thus in three of the Departments there is no member of the staff who has been specifically appointed to assist the Keeper in the administration of the respective Department and to act for him in his absence. Since the Deputy Keeperships carry a higher status and a higher salary the Principal Trustees have found it impossible to ignore the claims of experience and ability, and it therefore happens that at the present moment neither of the two largest Departments—Zoology and Entomology—has a Deputy Keeper. Consequently, the absence of the Keeper causes at least some, and possibly at times great, inconvenience, for the senior Assistant Keeper on duty may have no aptitude for administration and probably will not have been kept in constant touch with the work of the Department. The Department of Zoology, owing to its size, the varied character of its work, and its wide distribution in the Museum building, requires two Deputy Keepers, the one for Vertebrates and the other for Invertebrates. It may be mentioned that at Bloomsbury there are ten Departments and ten Deputy Keepers.

In the beginning the Trustees were strictly debarred from allowing any part of the Collections to leave the Museum premises. Thus it is laid down in Clause 9 of the Act of Incorporation that the "Repository" was to be erected or provided within the Cities of London or Westminster or the Suburbs thereof, and the collections, libraries, and additions made to them "shall remain and be preserved therein for public Use to all Posterity," and the identical wording is included in Clause 1 of the

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

Act (41 & 42 Victoria, LV; 1878) that authorised the transference of the Natural History Collections to South Kensington.

This stringency has, however, been relaxed by 7 George III, xviii, which gave the Trustees the power at any Meeting where at least five were present to "order any Duplicates of printed Books, Medals, Coins, or other Curiosities, to be exchanged for Manuscripts, Books, Medals, Coins, or other Curiosities; or to direct any such Duplicates of printed Books, Medals, Coins, or other Curiosities, to be sold or disposed of, and the Money to arise by such Sale to be laid out in the Purchase of Manuscripts, Books, Medals, Coins, and other Curiosities, that may be wanting in, or proper for, the said Museum. . . ."

The Act 47 George III, xxxvi, enabled the Trustees, "or any Seven or more of them (the Archbishop of Canterbury, the Lord Chancellor of Great Britain, or Lord Keeper, and the Speaker of the House of Commons for the Time being, respectively, or any Two of them, being of the Number), present at any Meeting specially assembled for that Purpose, to order that any Articles in the said Museum which they then adjudge to be unfit to be preserved therein, shall be exchanged for Manuscripts, Books, Medals, Coins, Statues, or other Things more suited to the existing Collections and the Nature of the Institution, or to direct the same to be sold or disposed of, and the Money to arise by such Sale to be laid out in the Purchase of Manuscripts, Books, Medals, Coins, Statues, or other Things which may be wanting in or proper for the said Museum; . . ."

Lastly, Clause 3 of the Act 41 & 42 Victoria, LV, reads: "The Trustees of the British Museum may also give away any duplicate works, objects, or specimens not required for the purposes of the Museum: Provided always, that the power hereby conferred shall not extend to any duplicate works in the Royal Library of King George the Fourth, or in the Cracherode, Grenville, or Banksian Libraries, or to any objects presented to the Museum for use and preservation therein."

The Trustees have therefore the power in the case of: (a) Duplicate specimens, to exchange, sell dispose of, or give them, with the exception of manuscripts, which are definitely excluded, and of duplicates in certain libraries and gifts to the Museum, which may not be given away though they may be exchanged, sold, or disposed of; (b) worthless specimens, to exchange, sell, or dispose of them. In any case similar specimens (but including manuscripts) must be acquired, and the proceeds cannot be used for other services of the Museum. The Trustees have constantly made use of the powers bestowed on them with regard to duplicates, and have made numerous gifts of natural history specimens to local museums and teaching institutions.

The Trustees have no power to loan specimens incorporated in the Collections. It was for that reason that the Art Act (29 Victoria XVI) had to be passed to enable them and other bodies similarly restricted to participate in the Paris Exhibition of 1867 and Exhibitions of National Portraits at that date. They do, indeed, send specimens, under certain conditions and for a strictly limited period, to outside experts to be named and worked out in instances where the work can be better done than at the Museum, either because the expert in question is exceptionally well qualified to investigate the particular specimens or has at his service an exceptional collection with which those specimens may be directly compared; but such specimens, while not yet worked out, are not regarded as forming an integral part of the Museum collections.

The Trustees are in no way restricted in their discretion in deciding what specimens shall be exhibited in the public galleries and what specimens shall be included in the study series. Donors have occasionally endeavoured to make stipulations as to the exhibition or distribution of the specimens offered, but the

Trustees have, at least for many years, been reluctant to agree to conditions which may cause the utmost inconvenience in the event of a rearrangement of the Collections. When the position has been explained to them, prospective donors have rarely, if ever, insisted on the conditions which they had formulated. On the other hand, the Trustees have always readily met the reasonable wishes of donors.

3. As has been explained under (2) above the Trustees are precluded from making loans of specimens in the Museum Collections; but they already have unfettered power to exchange with other institutions duplicate specimens and any that are worthless to the Museum, and this power is constantly being exercised. It is by the medium of exchange that many gaps in the Museum Collections are filled.

There is little doubt that the Trustees would be prepared to form Loan Collections of Natural History specimens for circulation to local museums in this country, provided that (1) the necessary legislation was passed to enable them to do so, and (2) the necessary additions were made to the staff for dealing with the large amount of clerical and other work that would be entailed.

4. The need for closer relations between the various museums was considered by the Sub-Committee, under the chairmanship of Lord Haldane, which was appointed by the Reconstruction Committee in July, 1917, to investigate the machinery of government, and was confirmed in its appointment when the Ministry of Reconstruction began its brief existence, and the following recommendation was made in its report published in 1918 (Cd. 9230): "As regards the other national museums [i.e., other than the Museum of Practical Geology, the suggested transference of which to the Department of Scientific and Industrial Research was approved] . . . we think that the responsible authorities might consider with advantage the possibility of entering into regular arrangements, by means of a body representative of each of the museums, and established for the purpose, whereby the spheres of the respective museums should be arranged with the view to the avoidance of competition for objects, and to the development of each museum to the full as a centre of education and research. From the latter point of view it would no doubt be desirable to secure that the Board of Education, and the general organisation for research and information . . . should be associated with any movement in this direction." In the following year, 1919, the Adult Education Committee, appointed by the Ministry of Reconstruction, in its report on libraries and museums (Cd. 9237) recommended that "the powers and duties of the Local Government Board (now merged in the Ministry of Health) regarding the (local) public libraries and museums should be transferred forthwith to the Board of Education." No action was taken on either recommendation, and as regards the second strong dissent was promptly expressed by the local authorities concerned.

At the present time co-operation between the British Museum (Bloomsbury) and the Natural History Museum is assured by the fact that they are governed by the same Trustees and are under the same Accounting Officer (the Director and Principal Librarian). No machinery exists for formal co-operation with other museums, but there is constant unofficial communication and co-ordination. The officers of the various institutions dealing with the same or allied subjects (especially the senior ones) are necessarily acquainted with one another, being members of the same learned societies and working together in their administration.

As has already been indicated in the memorandum submitted with regard to the British Museum (Bloomsbury), the Trustees are definitely unfavourable to the idea of a joint Board for the control

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

of all Museums and Galleries, which would diminish the responsibility and authority of the several Governing Bodies. On the other hand, they fully approve of organised intercommunication between the Directors and heads of Departments of the several institutions. Conferences between delegates from the Governing Bodies might also serve a useful purpose from time to time, but usually for a specific purpose, and limited to the institutions actually concerned, it is seldom that there would be business to do for which representatives of the Governing Bodies of all the national institutions could profitably be brought together.

There is little or no competition between the Natural History Museum and other museums in this country in the purchase of specimens

A more important point than the possible overlapping in the acquisition of objects is the more serious overlapping that may occur in function between the Natural History Museum and other institutions. As is indicated in the report of the Haldane Committee a museum has a dual function: to act as a centre of education and as a centre of research. It is in the second of these that the Natural History Museum is becoming increasingly valuable to the nation, and in this work it must and does impinge on other institutions, but it should do so in such a way that there is useful co-operation and not waste of effort through overlapping. This point is more fully considered under (9) below in connexion with research.

As centres of education the Royal Scottish Museum at Edinburgh and the National Museum of Wales at Cardiff cover the same ground, if, in consequence of the difference in size, not so completely, as the Natural History Museum, and no one would dispute the desirability of such overlap any more than in the case of the curriculum at different Universities; but there is no evidence of competition between the three museums for the same objects. Experience at South Kensington suggests that the raising of prices is generally due to competition by museums in the United States of America.

The Museum of Practical Geology contains the specimens collected in the course of the Geological Survey of Great Britain and a certain number of foreign specimens required for comparison; its outlook is, as its name expresses, mainly practical and economic. The Ludlam Collection of Minerals should perhaps properly be in the Natural History Museum; its diversion to Jermyn Street is said to have been caused by a feeling of annoyance towards the Natural History Museum on the part of the testator. The work of this Museum does not appear to duplicate any done at the Natural History Museum, either in the Mineralogical or Geological Departments. The Geological Department at South Kensington is concerned less with stratigraphical geology than with the study of fossils as extinct animals and plants, their relationships to each other and to living forms, and their arrangement according to a natural classification.

Sir Joseph Banks was the great promoter of the Kew Gardens during the whole of his working life, but feeling the importance of an intimate connexion between botany and the other branches of natural history he decided to bequeath his extensive herbarium, together with his library, to the British Museum. Circumstances were altered by the appointment in 1841 of Sir William Hooker as Director of Kew Gardens. He brought with him an extensive private herbarium and this, at his death in 1865, when his son, Dr. J. D. Hooker succeeded him, was purchased by the State and, together with the Bentham herbarium presented in 1854, formed the nucleus of the Kew Herbarium. Before the removal of the Natural History Departments to South Kensington the development of the Department of Botany was hindered by the want of space at Bloomsbury, and it was outpaced by the herbarium

at Kew, which was fed by the proceeds of Government expeditions. After the removal to South Kensington the Department of Botany was in a position to expand more rapidly, and in 1900 it contained about 1,700,000 specimens as compared with 2,000,000 at Kew; the growth of the Department at South Kensington has since quickened considerably, and the total number of specimens contained in it now exceeds 4,500,000. Many inquiries into the relative position of the British Museum and Kew Gardens have been made, particularly when the congestion at Bloomsbury began to be felt, as the most obvious solution was to establish the natural history collections elsewhere, either together or singly. The last inquiry was made by a Treasury Committee in 1900, which in a majority report dated 11th March, 1901, recommended the transference of the whole of the botanic collections in the British Museum to Kew, with the exception of the exhibited series. The Trustees did not accept the recommendations and the Treasury decided to take no action.

At the present day the Trustees are in substantial agreement with the minority note, signed by Lord Avebury in 1901. They have at all times been adverse to the dismemberment of the Natural History Departments and regard the magnificent library at South Kensington as the cement which binds them together. For many years there has been no competition for acquisition of specimens between Kew and South Kensington, and no duplication of work, as Kew has concentrated on the products of India, South Africa and the British Possessions in the Tropics, whereas the Natural History Museum has paid special attention to plants from Europe, Australia, and the West Indies. The Director of Kew and the Keeper of Botany co-operate to prevent competition and overlapping of work.

The Trustees consider that there would be no economy in moving the botanical collections to Kew. Great expense would be incurred in making a building to house them, and there would be no reduction of staff, as the work done by both institutions would have to be continued. The advantage to students of retaining as complete a collection as possible of recent plants in the same museum as the fossil plants is great.

5. No fees have at any time been charged for admission to any part of the British Museum since it was first opened to the public in 1758, and without further legislation the Trustees have no power to make any such charge. The whole question was fully considered five years ago, in 1922, in consequence of the Government adopting the recommendation of the Geddes Committee on National Expenditure that a charge should be made for admission, and deciding to promote the necessary legislation to enable the Trustees to impose it. The proposal, however, met with such universal and strong opposition that the Government finally withdrew the Clause 9 in the Fees (Increase) Bill which was intended to give the Trustees the power to charge for admission to the Museum.

It is extremely difficult to forecast the effect of admission fees on the attendance, and therefore the yield from such fees. The Geddes Committee in its Third Report (Cd. 1589, 1922, p. 89) made the recommendation that: "such a rule (the imposition of a small entrance fee) should be made general for all National Museums and Art Galleries without distinction, in view of the growing expenses of these institutions. The retention of three free days a week, including Saturdays and Sundays, and the granting of 'free passes' to *bona fide* students would, in our opinion, preserve all the necessary educational facilities." The Committee estimated that £3,500 would be realised in the year 1922-23 by fees as regards the Natural History Museum. Although it is nowhere actually stated, the Committee appears to have had in mind an entrance fee

4 November, 1927.]

MR. C. TATE REGAN, F.R.S.

[Continued.]

of sixpence, and according to the estimate it must have presumed that as many as 140,000 visitors would be prepared to pay this fee in preference to waiting for a free day, but no indication is given as to the basis of the estimate. There can be little doubt that it is largely in excess of probability.

During the year 1926 the total number of visitors to the Museum on each day of the week is as under:—

		No. of days.	Average.
Sunday ...	78,818	52	1,516
Monday ...	80,071	52	1,540
			(1,292 excluding Bank Holidays.)
Tuesday ...	67,100	52	1,290
Wednesday ...	68,619	52	1,320
Thursday ...	66,798	52	1,285
Friday ...	66,281	52	1,271
Saturday ...	83,626	51	1,640
	511,313	363	

The Museum was closed on Good Friday and on Christmas Day, which fell on Saturday.

The total number of visitors on the four Bank Holidays (Boxing Day fell on Monday) was 18,059, and altogether 14,468 attended the Guide-Lecturer's tours. The number of visits made for special enquiry and study during the year was 23,564. Incidentally it may be noted how uniform is the attendance on week-days other than Saturday if the abnormal effect of the Bank Holidays be ignored. There is a slight excess on Wednesday which may be due to the effect of the mid-week half-holiday.

On the assumption that the third free day would be Wednesday the total attendance on the proposed paying days—Monday, Tuesday, Thursday, Friday—is 262,191, excluding the Bank Holidays which presumably would still be free. But this figure includes students and research workers, and it must be recognised that many students do not at present register as such because they find the exhibited series and the labels accompanying them fully meet their requirements, and the number would be largely increased were an admission fee charged. Further a large proportion, which during the holiday seasons may be as high as three-fourths, of the visitors are of school age, and most of them unless admitted free would remain away. The deduction of the students at present registered would bring the attendance down to less than 250,000. Experience at the National Gallery suggests that the effect of the imposition of a fee of sixpence would be to reduce the attendance to one-tenth or not more than 25,000, and the total receipts would be under £625.

If the fee were uniformly one penny the effect on the number, though not so great, would still be appreciable because it would almost certainly keep out most of the elementary school children to whose parents one penny is not a trivial amount, and it is likely to have a deterrent effect on other casual visitors, so that £1,500 is an outside estimate of the amount that might be anticipated.

A third alternative would be a charge of one penny on other than the sixpenny days. To the amount given above—£625—should in that event be added £750, making a total of £1,375.

There are, however, certain contravailing expenses to be set against these receipts. Turnstiles must be installed, the initial cost of which would be £250. Attendants would be required to work them. Two would be required on duty at a time, so that, to provide for meal-time relief, sickness, and holidays, a staff of three would be necessary as none of the present staff could be spared for the purpose. The basic weekly wage would be at least on the scale 29s.-1s.-34s. together with bonus at the rates current, and in addition uniforms would be required at about £5 per year; total cost on present bonus £399-£435.

The reduction in the attendance would necessarily affect the sales at the Bookstall and the receipts at the lavatories, and may be estimated to amount at least to £450. In the first year the estimated total cost would amount to £1,100 in round figures.

As has been pointed out above, it is extremely difficult to estimate the effect of admission fees on attendance and the probable yield from such fees, and the figures given in the following Table as to the effect of three alternative proposals can only be regarded as approximate.

TABLE I.
Estimated Effect of Admission Fees.

Admission.	Visitors.	Gross Receipts.	Net Receipts First Year.
		£	£
1. Free ...	500,000	—	—
2. Sunday, Wednesday, Saturday and Bank Holidays, Free. Monday, Tuesday, Thursday and Friday, 6d.	300,000	625	-475 (Loss)
3. One Penny ...	360,000	1,500	400
4. Sunday, Wednesday, Saturday and Bank Holidays, 1d. Monday, Tuesday, Thursday and Friday, 6d.	205,000	1,375	275

6. The scientific and technical staff of the Natural History Museum may be divided into two distinct groups—(a) Higher Grades, and (b) Lower Grades. Promotion from the latter to the former is possible, but only in exceptional circumstances. It may be pointed out that while the work of the Museum has grown enormously—largely because of its increasing economic value—the size of the staff has not been correspondingly expanded. In order that the work should somehow be carried on a large number of workers are employed in a temporary capacity, the word temporary being used in the technical sense to signify that there is no security of tenure and the posts carry neither pension nor gratuity; many of these so-called temporary workers have been employed at the Museum for many years.

(a) The Higher Grades consist of 1 Director, 5 Keepers, 1 Assistant Secretary, 2 Deputy Keepers, and 40 Assistant Keepers and Assistants. On the occurrence of a vacancy the appointments board at every university in Great Britain and Northern Ireland is notified. Applicants write to one of the three Principal Trustees and ask to be placed on his list of candidates. Eventually the Principal Trustees meet and select from the candidates on the lists those to be examined. The list of candidates thus nominated is sent to the Civil Service Commissioners, who in due course, after an examination of the nominated candidates, report to the Trustees the successful candidate for each vacancy. Formerly there was a pass examination in a number of subjects and a competitive examination in special subjects depending upon the Department in which there was a vacancy; now there is an elementary pass examination, and the candidates are interviewed by a Board, which includes the Director and the Keeper of the Department concerned. The appointment is thereupon made by the Principal Trustees under the terms of the Act of Incorporation. The procedure has the merit of eliminating wholly unsuitable candidates at an early stage and saving them from a useless expenditure of time and money, but it in no way hinders candidates of suitable qualifications from proceeding to the examination. The educational attainments expected of candidates are at least Second Class Honours at a recognised University, or the equivalent.

An Assistant on taking up his appointment is as a rule placed in charge of some particular part of the

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

collections and is entrusted with the responsibility for their proper conservation and arrangement. He is usually the only member of the staff working at the section of natural history given to his charge, and consequently within a very few years he becomes recognised as the Museum expert of this subject. He is supervised by the Keeper of the Department as regards his attendance at the Museum and the general discharge of his duties, but as regards his scientific work he becomes increasingly responsible and independent. The only training therefore which he can receive for the higher posts in the Museum is provided by himself. When a keepership falls vacant the practice has been to promote the senior member of the scientific staff of the Department in question unless he is unsuitable for a controlling post or for any other reason. Reference has been made in reply (2) to the Commission's Questionnaire to the difficulties arising from the small number of deputy keeperships—only two—at the Natural History Museum. Until the past few years these posts, or the Assistant Keeperships which corresponded to them on the old establishment, were confined to the Departments of Zoology and Geology, and the claims of the members of the staffs of the other Departments for promotion on account of their scientific attainments did not receive consideration; but in the case of recent appointments it appears to have been felt that, as the posts were so few, the claims of scientific attainments could not be ignored, and at the present time the two largest Departments are without a deputy keeper. The following Table gives the number of posts above and below a basic salary of £800 in the higher grades at the Natural History Museum, British Museum, Victoria and Albert Museum, and Science Museum, together with the ratio of the posts above to the total number, which measures the prospects of promotion at the several institutions.

TABLE II.

Higher Grades at the Principal Museums.

	Total.	Above £800.	Below £800.	Ratio.
Natural History Museum...	49	8	41	6.12
British Museum	73	20	53	3.65
Do. excluding Office and Library.	45	14	31	3.21
Victoria and Albert Museum	34	11	23	3.09
Science Museum	18	6	12	3.00

In the statistics of the Science Museum the posts have been classified according to title and not to salary, as there has been a discrepancy in scale between this Museum and the others which has recently been modified by the Civil Service Arbitration Court.

The figures have been given for the Departments outside the Library at Bloomsbury—Department of Printed Books, Maps, Charts, and Plans, as it is officially styled—because in the character of their work they correspond more closely to the Natural History Departments. If the posts of Director and Secretary were included as within the prospects of promotion the ratio would be improved to 2.94; the most satisfactory figure perhaps is the mean 3.07.

A study of the Table shows that, whereas in the Archaeological Departments of the British Museum and in the other Museums mentioned there is one higher post for two lower ones very nearly, at the Natural History Museum there are five below £800 corresponding to each higher post. The character of the prospects naturally affects the recruitment, and it is proving difficult to secure for some of the vacancies candidates of the calibre required.

It may be remarked that women are eligible for appointment to the Higher Grades at a lower salary, and three have recently been appointed.

(b) The Lower Grades consist of 1 Staff Officer, 6 Higher Grade Clerks, 39 Clerks, 20 Attendants,

4 Preparators; and also 1 Hall Superintendent, 3 Hall Attendants (or Clerks), 1 Photographer. Under the present organisation there are three distinct categories: Clerks, with the possibility of promotion to Higher Grade Clerkships and the post of Staff Officer; Attendants; and Preparators. The Clerks are recruited at the Civil Service Clerical Examination at the age of 16-17 years. The Attendants and the Preparators are appointed by the Trustees subject to passing a qualifying examination by the Civil Service Commissioners; the limits of age for Attendants are 18-30 years old. Promotion from the Attendants to the Clerks is allowed, but in very exceptional circumstances, and Treasury sanction has been secured only in one special case.

At the Natural History Museum the work required of these ancillary grades does not admit of division into the three distinct and separate categories of the present scheme, and its revision has been under discussion with the Treasury. Experience of museum work for many years has shown that the best results are obtained by having one category only. The Attendants should be recruited from boys fresh from school and assigned to any class of work which requires to be done, whether it be cataloguing, labelling, registering, etc., or preparing, mounting, assisting in the laboratory, etc., and for which they evince aptitude, provided that during the probationary period they have proved themselves up to the standard expected. An avenue of promotion should be provided to the higher classes of the ancillary grades.

Owing to the differing character of the lower grades at the several museums it is not feasible to compare them as was done above for the higher grades. In the following Table the figures are given as regards Attendants and Clerks for the British Museum and the Natural History Museum, from which it will be seen that the ratio of higher posts is about the same at the two Museums, especially if it be remembered that at Bloomsbury there are two posts with no equivalent at South Kensington, namely:—Accountant (£550-£700) and Assistant Secretary (£500-£600).

TABLE III.

Lower Grades in British Museum and Natural History Museum.

	Total.	Above £250.	Below £250.	Ratio.
Natural History Museum...	66	7	59	9.4
British Museum	163	15	148	10.8

The size of the collections in the Natural History Museum and the scope of the work have grown rapidly, and the economic value of the services rendered by the Museum steadily increases, but the staff of the Museum has not been correspondingly expanded. Since the beginning of the century the Higher Grades have increased in number from 36 to 49 or 36 per cent. With the view of coping with the increase of work it has been found necessary to employ a large number of temporary workers, about 19 being engaged on scientific and 19 on ancillary work. In 1924 the Trustees brought to the notice of the Treasury that if the staff were to be of a size adequate for the proper performance of all the duties that appertain to the Natural History Museum an addition of 16 to the Higher Grades was required and 39 to the Lower Grades, the total initial cost amounting to about £11,000. The Treasury agreed to an addition of three Assistants and further temporary workers provided that the increase should not exceed £2,000, which means that, as the new Assistants are granted the normal incremental additions to their salaries, so will the amount available for extra temporary workers diminish. The average cost of the complete requirements of the Trustees would be about £22,000, but from this should be deducted the amount at present expended on temporary workers who would be replaced by established

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

staff, about £5,000, leaving a net increase of £17,000.

The Museum staff for exhibition work in the public galleries is extremely small. The Department of Geology has only two preparators and one workshop attendant for the work of preparing and mounting fossils and making casts, whereas the American Museum of Natural History has no fewer than 13 for fossil vertebrates alone. The Department of Zoology has two preparators, the one mainly engaged in making casts of whales, whale paddles, etc., and the other in repairing and remounting birds. New exhibits are acquired for the Mammal Galleries either by purchase or by gift, but the remaining zoological galleries are at a standstill. The Reptile and Fish Galleries in particular are far behind the level reached in America, and it is to be desired that the Museum should have a staff with the technical skill and artistic ability to effect the necessary improvement.

7. The Natural History Museum building faces very slightly west of due south. The front of the building consists of twin Central Towers, between which is the main entrance, and long galleries extending from them to terminal towers, which are less lofty, but considerably larger in section than the others. Behind the central towers lies the central block, composed of the Central and North Halls, both of which are top-lighted, and behind the front galleries lie other galleries running northwards and therefore parallel to the Central Hall. There are three floors of galleries in the front of the building, namely, the Ground, First, and Second Floors. The First Floor is reached from the Ground Floor by the Grand Staircase which, rising to the east and west from the half-way landing, reaches the East and West Corridors of the Central Hall which are here slightly below the level of the First Floor, but rise to it near the stairway bridge. This bridge spans the Central Hall near the front and from its summit rises a flight of stairs to the Second Floor. The Ground and First Floors are respectively 22 ft. and 21 ft. in height and both are lighted by side-windows. The Second Floor, which is not so lofty, is top-lighted.

The Central Hall measures 170 ft. in length and 57 ft. in width, from which space must be deducted the part occupied by the Grand Stairs, and on either side lie five bays measuring 20 ft. square which are used for exhibition purposes. The North Hall measures 77 ft. in length and 57 ft. in width and has two large bays, one on either side, each measuring 37 ft. by 20 ft.

The front galleries measure 278 ft. in total length and have a width of 50 ft. for the 233 ft. of the gallery proper, 12 ft. for the 8 ft. archway in the cross-wall, and 60 ft. for the 37 ft. of the pavilion in the terminal tower.

Immediately on either side of the central block is a narrow corridor 10 ft. in width and 137 ft. in total length, which is interrupted on the west side by the vestibule giving access to the Fish Gallery from the Central Hall. On either side a corridor, of similar width, and 198 ft. in length, crosses the northern end of the side galleries on the Ground Floor; all of these side galleries and contiguous corridors are top-lighted. Next to the corridor adjacent to the Central Hall are three pairs of galleries, respectively 39 ft. and 18 ft. in width. Across their southern ends run corridors, 25 ft. in width on the east and 17 ft. on the west side, the difference arising from the provision on the latter side of a narrow corridor, formerly private, giving access to stairs leading to the Basement.

As the Museum is approached by a semi-circular rising drive, the Ground Floor is raised above the actual ground level; underneath the whole of it is the whole of the Basement, 16 ft. in height, with the exception of the northern corridors on either side of the central block which are carried upon an open colonnade.

The allocation of the exhibition space is as follows:—The Central Hall is used for the Index

Museum which serves as an introduction to the more extensive collections in the galleries, for special exhibits (including enlarged models of insects of economic importance), and the elephant specimens which cannot be accommodated in the Mammal Galleries. The North Hall is devoted mainly to the Domesticated Animals and Economic Zoology.

On the west side the Bird Gallery is in the front of the building, and British Vertebrates are exhibited in the pavilion. The northern galleries are devoted to Fishes; Insects and Crustacea; Starfishes, etc.; and Shells. The exhibited specimens of Whales are arranged in a galvanised-iron building on the west side of these galleries. The Corals are contained in the cross corridor on the south side. On the First and part of the Second Floor are the Mammal Galleries, but owing to the lack of space in them the exhibited series have expanded over the Corridors of the Central Hall.

On the east side the ground floor is almost entirely given over to the exhibited series of palæontological specimens (fossils). It may be observed that lack of space has necessitated some of the large fossil reptiles being placed in the side gallery on the west side devoted to recent reptiles. On the first floor is the exhibited series of mammals, minerals, rocks, and meteorites, and a small part of the second floor contains the exhibited series of botanical specimens.

The enormous expansion that has taken place in the natural history collections since their removal to South Kensington and, above all, the development of the Museum as a research institution, has been rendered possible largely because of the lofty basement which underlies the whole building. The rooms on the outside are used as studies or workshops, and the central part, which is almost inaccessible to daylight, is mainly devoted to storerooms. Soon after the building was erected a separate building at the rear was found necessary for the collections stored in spirit on account of the fire risk, and some ten years later it was extended about half as much again; but in 25 years the enlarged building proved too small, and soon after the war the erection of one half of another and very much larger building was put in hand. The old building contains a storeroom measuring about 180 feet in length by 47 feet in width with a height of 17 feet. To increase its accommodation it has subsequent to its erection been provided with galleries along the end walls and down the centre which carry additional cases. The building also contains six studies or workrooms on two floors. The New Spirit Building consists of a central entrance with lobby, with lifts and the stairs encircling them, from which extends the east wing to stairs at the end of it; the west still remains to be built. On each of the four floors are two large storerooms; the one measures 54 feet in length by 35 feet in breadth, and the other is still larger because it includes the recess behind the stairs shaft, which is 13 feet by 23 feet, so that the longer length of the storeroom at the back is 67 feet. On the other side of the corridor, 7 feet in width, which runs from the entrance lobby the whole length of the building, lie a series of two studies and three workrooms, each of the former being 11 feet and of the latter 22 feet in length, and both 13 feet in width. The height of each floor is 16 feet, and allows of a mezzanine floor being placed in each storeroom, thus increasing the cupboard accommodation by at least 50 per cent. The ceiling level of the studies and workrooms on the top floor has been reduced to about 12 feet. In addition to the rooms mentioned there is, except on the ground floor, a small room above the entrance.

The Old Spirit Building is devoted to the collection of Fishes, and the remaining collections stored in spirit are contained in the New Spirit Building. The accommodation in the New Spirit Building provides room for the expansion that may be reasonably anticipated during 25 years and possibly longer. Among these collections alone in the Museum is

4 November, 1927.]

MR. C. TATE REGAN, F.R.S.

[Continued.]

there no congestion. In the Old Spirit Building it is proposed to extend the galleries along the side walls in order to allow for the growth and proper arrangement of the important collection of Fishes.

In addition to the rooms in the Basement and the Spirit Building, there are others in the towers and above or adjoining the corridors in the central block, and part of the galleries on the ground and second floors has been cut off for study and storage purposes.

When the Murray Oceanographical Collection was received at the Museum room was found for it by taking over a galvanised-iron building—Block B—which, though on ground definitely allocated for the extension of the Museum, had for many years been in the occupation of the Board of Education. This same room is being used for the collections brought back by the Royal Research Ship "Discovery," which has been engaged in the Antarctic waters investigating the habits of whales and allied matters, and members of the "Discovery" staff will work there while at the Museum.

The working space has been allocated as follows:—The administrative offices are placed in the corridors of the first floor of the North Hall, including rooms above. The accommodation is insufficient for the stock of publications, and the bulk of it is kept in various storerooms and passages in the basement; this system, which is unavoidable in the circumstances, is responsible for much expenditure of time and labour in transferring the stock to the offices as it is required. Some relief would be obtained were an additional storey to be erected on the east side similar to the one on the west, but so far the need for economy has prevented the necessary funds from becoming available. The Director's room is in the West Central Tower on the ground floor, and the room underneath is used for the work connected with the Index Museum.

The General Library is housed in the east corridor adjoining the Central Hall on the ground floor and a small part of the north corridor into which it leads, together with rooms in the basement underneath. An extension has recently been provided in the central basement.

The Department of Zoology occupies altogether more than half the space in the Museum premises. As has already been stated, the collections in spirit are housed in the two Spirit Buildings, and the staff occupied with those collections are housed in the same buildings. The north-western part of the basement is used for the reserve series of whales, and a study and workshop are adjoining. The Collections of Birds are contained in the end western gallery on the north side of the Bird Gallery and expand into parts of the adjoining galleries, which have been screened off for the purpose, and the northern corridor is used as studies. In the space as now allocated to the Bird Room and its extension there remains no more room for expansion, as it is impossible to encroach further on the exhibition galleries. About half the Upper Mammal Gallery, on the second floor, has been necessarily taken away from the exhibited space in order to provide a Mammal Room for the storage of the study collection and for workrooms. A wooden mezzanine floor has been placed in the Pavilion at the end in order to increase the accommodation. A second workroom and a study have been built over the west corridor of the Central Hall. The study on the second floor of the West Central Tower is also used by the Mammal section. The Keeper's study is underneath, on the first floor, in the same tower. The Zoological Department is provided with other storerooms, including two large ones, in the basement.

The Department of Entomology is possessed of the rooms adjoining the front west corridor in the basement, except that a few rooms are used by the Imperial Bureau of Entomology, the work of which is so intimately bound up with this Department. The congestion in the workrooms has for many years

been so great that galleries on mezzanine floors for carrying additional cabinets have been placed in most of them, and the acquisition of the Oberthür Collection of Lepidoptera early in 1927 necessitated the closing of a corridor in the central basement and its conversion to a storeroom. Moreover, the space available for the staff and students to study the collections is so restricted as to constitute a serious hindrance to progress in the work.

The studies, workrooms and storerooms of the Department of Geology are provided in the eastern basement and the north corridor on the east side on the first floor. The Geological Library is contained in one of the smaller galleries on the first floor. The Keeper's room is on the ground floor in the east Central Tower, and the room underneath is also used by the Department. The work of the Department is greatly hampered by the want of sufficient space for laying out the remains of the large fossil reptiles, for their storage and study. When the money is available it will be possible to extend the accommodation by erecting galleries or mezzanine floors in certain of the rooms.

The rooms of the Department of Mineralogy are very scattered. The Keeper's room is in the east Central Tower on the second floor near the entrance to the Mineral Gallery, and a study lies off the stairs at the other end of the Gallery, at a slightly lower level; most of the studies and workrooms are in the south-east corner of the basement, and the chemical laboratory is in the extreme rear of the central basement. By bringing the corridor in the basement into use as a storeroom it has been found practicable to meet the annual expansion of the collections, but unless additional space be made available for the provision of mezzanine floors it will not be long before no further cabinets can be accommodated.

The Department of Botany is housed in the east side of the second floor, the third and fourth floors of the Central Towers, and the upper part of the East Tower. With the exception of the small section used for the exhibited series the whole of the east gallery is given over to the General Herbarium, and the Botanical Library is placed in the pavilion in the East Tower. The European Herbarium is housed in the additional room built over the east corridor of the Central Hall. The Keeper's room is in the east Central Tower. The Cryptogamic Herbarium is on the third floor of the Central Towers, and higher up are laboratories. In the General and Cryptogamic Herbaria the limits of space have nearly been reached, and it has not yet been practicable to provide a laboratory conveniently placed with regard to the General Herbarium.

At the date when the new Natural History Museum was planned the rapid growth of the collections when freed from the constrictions of the gloomy and cramped quarters at Bloomsbury was not, and indeed could not have been foreseen. The northern galleries on the ground floor, alternately wide and narrow, were so arranged with the idea that the wide galleries would be public and the narrow ones private. In the arches between them it was thought would stand cases on view to the public on one side and accessible to the staff on the other. By the date when the Museum was ready for occupation it was found necessary to use four of the six narrow galleries for exhibition purposes. It appears to have been entirely overlooked that there would be need of accommodation for the administrative offices and for a library and reading-room. Moreover, it was supposed that the Natural History Museum would be supervised by a Sub-Committee of the Trustees and the meetings of the Trustees would continue to be held at Bloomsbury only, and so no provision was made for a Board Room. Experience speedily showed that it was extremely inconvenient, if not impracticable, to administer the new building from Bloomsbury, and offices had to be created out of corridors, and a dining-room converted into a board-room, and

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

a lecture-room into a refreshment-room. Further, a place had to be found for a library; it was a difficult problem, and the best solution that could be evolved was the conversion of the narrow corridor contiguous to the Central Hall on the east side. Some thirty years later most of the corresponding corridors on the west side had to be used for the zoological library. It may perhaps be considered unfortunate that the preservation of the architectural lines has led to much waste of what has come to be valuable space in the Towers. The rooms are in the first and second floors, carried to the same height as the galleries on the same floors, and, although in floor space only 21 feet square, have a height of 22 feet or 21 feet; indeed, in each case there is space almost for two rooms in the height.

It has been suggested in the press and elsewhere that accommodation for the rapidly-growing study collections might be found by reducing the exhibits, and taking over part of the exhibition galleries for purposes of storage and study. On the other hand, it is evident that many of the exhibition galleries are overcrowded and that more space is needed for exhibition purposes. For example, the exhibits in the British Pavilion at the end of the Bird Gallery could be increased by the addition of further groups if there were room for them; and those now shown would be seen to much greater advantage if they could be spaced out. Large crowds must have plenty of room and a variety of objects to view; they cannot be concentrated in a small space to look at a few selected exhibits. In the month of August last nearly 100,000 visitors came to the Museum.

The contrary policy to that suggested above would appear to be sounder, namely, to regain the valuable exhibition space used for the storage of Mammals and Birds by removing these collections to new buildings of the type of the New Spirit Building, where convenient studies would be available for the staff and others working on the collections, and room for the expansion and proper arrangement of the collections would be provided.

A new room for the exhibition of Whales is urgently needed. The present Whale Room is a galvanized-iron building with matchboard lining which was erected in 1898 as a temporary expedient pending the permanent extension of the Museum on the west side. It is neither large nor lofty enough for the proper exhibition of whales. The new room as planned will have a basement underneath to provide the space badly needed for the study series of specimens, which is growing rapidly in connection with the work of the Royal Research Ship "Discovery" in the Antarctic. As the result of the work of this ship on the movements and habits of whales it is hoped to take effective measures to prevent their extinction, and the threatened ruin of the whaling industry.

Increased accommodation for the Department of Entomology is the most special present need of the Museum. The hindrance to the work caused by the congestion of the collections and the restricted accommodation for students is a matter that has aroused much adverse comment, as the relation of systematic work on insects to economic problems and the importance of insects in connection with agriculture, health, &c., is now generally recognized.

The General Library is contained in a narrow corridor, badly lit and badly ventilated, and is provided with no accommodation for students and readers. The position of the Zoological Library is similar. The Geological and Botanical Libraries are not so restricted, but constant complaints are made by workers in the former as to the bad ventilation. The Mineralogical Library is scattered all over the Department owing to the want of a large room for it; some of the book-cases are in the Keeper's room and in the public corridor outside it on the first floor, and the remainder in the corridor and the rooms in the basement. In the event of the transference of the exhibited series in the North Hall

the space set free would lend itself readily to the purpose of a library and reading-room, and the present corridor could be used as a workroom.

The preponderating importance of the research aspect of the Museum must be borne in mind whenever any considerable extension of the Museum is taken in hand. It is studies, workrooms and store-rooms that are needed, not exhibition galleries; and the ratio of the space allocated to the two categories should not be less than two to one. Among the important needs of the Museum as a centre of education is a lecture theatre adequate in size and properly equipped.

8. So far as the Natural History Museum is concerned, the answer to this question may conveniently be given under two headings:—(i) Publications and (ii) Reproductions.

(i) Publications.

The natural history publications of the Trustees consist of (a) Scientific Catalogues and Monographs, (b) Guide-books to exhibited series in the Museum Galleries, (c) Economic Pamphlets and Leaflets, (d) Picture Postcards and other pictorial reproductions, and (e) the "Natural History Magazine," the quarterly journal issued by the Trustees.

The Museum catalogues are standard works, and are frequently the only complete monographs of the groups dealt with; this, for example, is the case with the catalogues of Birds, Reptiles, Batrachians, and Fishes, most of which are now out of print. In the past, when the collections were smaller, the known species were fewer in number, and the literature to be studied was less extensive, it was possible for members of the staff to prepare those complete catalogues. At the present day, however, although new editions would be of great value to the Museum and would be welcomed by scientific workers throughout the world, it is impossible to prepare them without a considerable increase of staff. For example, it is estimated that the preparation of a new edition of the catalogue of Fishes would occupy the whole time of one man for twenty-five years; but only one member of the staff can be assigned to Fishes, and his time is almost entirely devoted to the determination and incorporation of accessions and the arrangement of the collection.

The publications are written and edited almost entirely by members of the staff of the Museum, but occasionally experts outside the Museum and workers at the Museum not on the established staff are engaged by the Trustees to prepare catalogues and reports. The Keepers of the several Departments are responsible for editing every kind of publication which is concerned with any part of the collections under their charge.

The actual production of the publications, including both letter-press and illustrations, is put out to tender among a small number of firms which are known to be capable of executing the high class of work that is required, and as a general rule the Trustees allot the order to the firm submitting the lowest tender. The cost of all these productions is met out of the Museum Vote, and the work is neither done nor paid for by H.M. Stationery Office. The annual expenditure has averaged between £5,000 and £6,000.

The publications are sold to the public in two ways: (a) direct from the Museum, either at the bookstall or by post, and (b) through a few firms which have been appointed agents, through whom all orders from booksellers are received and executed. The receipts at the bookstall, including orders by post, amount to over £1,200 a year; more than half of this amount is in respect of Picture Postcards, and the greater part of the balance comes from Guide-books and Economic Pamphlets and Leaflets, only a very small amount from Catalogues and Monographs. The sales through agents bring in about £500 a year; in this case more than three-quarters of the amount comes from Catalogues and

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

Monographs, and the remainder is made up from sales of Picture Postcards and the "Natural History Magazine."

Against the receipts from direct sales at the Museum must be set the wages of the two saleswomen employed and perhaps a small charge for the upkeep of the bookstall. The opening of the bookstall has very considerably increased the sale of publications, but, except for the saleswomen, no other additions have in consequence been made to the Museum staff. The agents are allowed a rebate of 32½ per cent. on categories (a) Scientific Catalogues and Monographs, (d) Picture Postcards and other pictorial reproductions, and (e) the "Natural History Magazine"; and of 10 per cent. on the remainder, (b) Guide-books and (c) Economic Pamphlets and Leaflets. Of the first rebate the bookseller receives 25 per cent. of the retail price, and the agent 10 per cent. on the balance, i.e., 7½ per cent. The second rebate is divided between the two parties as may be mutually arranged by them.

The retail price of the various productions, as compared with the cost prices, are approximately as follows:—(a) Scientific Catalogues and Monographs 150 per cent., (b) Guide-books 120 per cent., (c) Economic Pamphlets and Leaflets 125 per cent., (d) Pictorial Postcards and other pictorial reproductions 200 per cent., and (e) the "Natural History Magazine" 200 per cent. It has been the policy of the Trustees to sell the expensive publications in category (a) which would appeal only to specialists at practically the cost of printing; after allowing for the agent's rebate there remains only the small balance of 2½ per cent. Moreover, at least 80 per cent. of these publications are presented or remain in stock. In the case of these gifts it must be remembered that in general the Museum receives other publications or specimens or help of some kind which it could not otherwise obtain except by payment. In the case of institutions with which there is a regular exchange of publications care is taken that an approximately equivalent value is received. In the case of categories (b) Guide-books and (c) Economic Pamphlets and Leaflets about 75 per cent. of the stocks are sold and the remaining copies are used for presentation purposes. In the case of the remaining categories (d) Picture Postcards and other pictorial reproductions and (e) the "Natural History Magazine" very few are presented, and practically the whole of the stocks disposed of is sold. The cost of the "Magazine" is materially reduced by the receipts from advertisements.

The accounts of the stock of publications are kept at the Natural History Museum and are submitted to annual examination by the Auditor-General. The Bookstall is provided with an imprest account which is regulated by the variety of the publications on sale there. Stock is taken annually and is checked more frequently. The retail value of the stock plus the cash in the till should be exactly equal to the amount of the imprest. Small discrepancies have been noted which are chiefly explainable by the fact that the public, inadvertently or of intent, have taken goods from the counter without payment; with a staff of only two it is not feasible to watch everyone among a group of a dozen persons or so who may be around the counter, and the difficulty is increased by the fact that the Bookstall has a counter on two sides at a right angle. A cash register, the reading of which is taken weekly and compared with the actual money takings, is in use to check the money received; the agreement has been always almost absolute. The annual loss, indeed, has always been well within the risk money allowed.

The money taken at the Bookstall, which includes the orders mailed direct to the Museum, is remitted to the Accountant at Bloomsbury. To him the Museum agents send the amounts due in respect of the publications ordered through them less the authorised rebate. The total receipts are credited to the

Museum Vote as appropriations in aid and are allowed for in the annual estimates.

(ii) Reproductions.

Owing to the very small staff of preparators at the Natural History Museum, too small for the requirements of the Museum itself, the Trustees do not sell casts of any of the objects contained in it. There is, however, an arrangement whereby the Museum receives a royalty of 15 per cent. on casts of such objects prepared by the Casts Department of the Victoria and Albert Museum (which absorbed the business of Brucciani & Co.) or by Messrs. R. F. Damon & Co. from moulds made by the staff of the Natural History Museum. These royalties do not bring in more than about £25 a year. In all probability a very considerable increase in revenue could be effected were a staff large enough to undertake the work available, as requests for casts are constantly being received, but cannot be met for lack of staff to do the work. The amount received from the sale of casts is credited to appropriations in aid as in the case of the publications. Attention has been drawn in (6) above to the inadequate provision of preparators.

9. The main business of the Natural History Museum is to collect all sorts of natural objects, whether animal, vegetable, or mineral, and to take care that these collections shall be as complete as possible, well preserved, accurately named, arranged according to a natural system of classification, and accommodated in such a manner as to be readily accessible.

The scientific staff is concerned principally with the attainment of these objects. Each member is responsible for the conservation and arrangements of some collection or some portion of one. He identifies the accessions in the group which he is studying and incorporates them in the collection; he makes recommendations for purchases or exchanges to the Keeper of his Department, and attends to visitors or answers correspondents who enquire concerning his particular subject. The work of determining accessions leads to the description of new species and often to the revision of the classification of a genus or family. A new collection may be so important as to deserve a separate report. In general, however, the claims of routine and administrative work, of visitors and correspondence, allow so little time during official hours for research and the preparation of scientific papers that only the man who is willing to devote his spare time to his work can acquire a high scientific reputation and be of most service to the Museum.

Systematic work, besides being of considerable scientific interest, is also of great practical importance. The value of the Museum collections and of its expert staff lies in the fact that through them the correct name of an animal, plant or mineral can be obtained, and the name is the key to all that is known about it. The value of a natural arrangement, which results from work on classification, is that, though little may be known about the species identified, much may be known about its nearest allies.

There is little provision for the young student working for examinations, apart from the exhibited series, but experts from foreign museums and research workers in this country are constantly studying at the Museum and, so far as the accommodation will permit, are given every facility for their work. At the present time the scientific staff of the Royal Research Ship "Discovery" are working in the Museum.

The Imperial Bureau of Entomology is accommodated in the Department of Entomology, and is thereby enabled to determine the species of any insect sent from British possessions overseas by means of direct comparison with the collection of insects and with the help of the Museum experts. This is the first step towards ascertaining its life history and the means of dealing with it. Moreover,

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

the Bureau has in addition the use of the extensive natural history library.

Although the Imperial Bureau of Mycology is housed at Kew, it is in constant touch with the Department of Botany. The staff of the Imperial Institute frequently consult the Museum, and enquiries are often received from many other institutions.

Inasmuch as the function assumed at the Natural History Museum as regards research is to study the subjects of zoology (including entomology), geology (including palæontology), mineralogy (including crystallography and petrology), and botany (including mycology) from the purely scientific and particularly the systematic point of view, other institutions or bodies, such as those which have been mentioned, that are concerned with the applied and economic aspects of these subjects are in frequent consultation with the Museum.

Many members of the Museum staff take an active part in the affairs of learned bodies such as the Royal Society, the Linnean Society of London, the Zoological Society of London, the Marine Biological Association, the Ray Society, the British Ornithologists' Union, the Entomological Society of London, the Geological Society of London, the Royal Geographical Society, the Mineralogical Society of Great Britain and Ireland, and other bodies concerned with research.

The advice of the Museum is constantly being asked by Government Departments, and the Museum is represented on committees set up from time to time on matters connected with natural history. Thus the Museum is or has recently been represented on the following Committees: Committee for research in the dependencies of the Falkland Islands ("Discovery" Committee), Committees of management of the Imperial Bureau of Entomology and of the Imperial Bureau of Mycology, Advisory Committees of the Imperial Institute, "Barrier Reef" Committee, Tsetse-Fly Committee, Committee on Geophysical Surveying, Advisory Committee under the Birds' Protection Acts, Oil Menace Committee, Wild Waterfowl Committee, &c. The Museum is constantly consulted on questions of the protection or the control of animals or meeting the depredations of pests; and mammals, molluscs, mites, ticks, and parasitic worms which are thought to be concerned with the transmission of disease or in attacks on commodities or crops are sent for examination. Almost daily inquiries are received from Government Departments. Sanitary Officers, Medical Officers of Health, Public Health Departments, and others with reference to insects, and frequently by special request visits of inspection are made by members of the staff of the Department of Entomology. In the same way the Department of Botany is consulted with regard to many problems, such as methods of dealing with algae and fungi in water supplies, fungous diseases in man, animals, plants, and commodities. The Museum is also frequently asked to identify minerals, rocks, and fossils, information about which is required in connection with questions of economic importance.

Only a portion of the natural history collection—fossils, minerals, and rocks—can be regarded as obtained by excavation, but it has been thought that a general answer on acquisitions would be more useful.

Accessions to the Collections and the Library are made in the following ways: 1. By purchase, (i) through dealers or other vendors, or (ii) as the result of collecting expeditions which may be (a) entirely financed and controlled by the Museum, or (b) privately conducted for another purpose, the Museum contributing towards the cost for the sake of the natural history specimens that would incidentally be collected; 2. By exchange; 3. By donation or bequest; and 4. Partly by purchase and partly by gift.

The only source for the acquisition of specimens by purchase is the grant annually voted by Parliament

for this purpose. The following have been the annual amounts since the beginning of the century:—1901-1904, £5,800; 1905-1913, £5,500; 1914, £6,500; 1915, £500; 1916, £600; 1917-1919, £750; 1920-1922, £6,500; 1923, £5,500; 1924-1927, £6,700.

The reduction in 1923 was caused by the critical state of the national finances in that year, and the increase afterwards of £200 on the previous period is the contribution towards the cost of the "Zoological Record" which was of necessity incurred, as otherwise its publication would have been brought to a close. The amount available for the purchase of specimens (including books) and for meeting the attendant expenses such as freightage, insurance, and equipment has, therefore, with the exception of one year, been constant since 1920, and in view of the altered value of money is far less than what was available for the purpose before the war. A further difficulty has accrued from the diminution in the business of supplying museums and teaching institutions. Many dealers went out of business during the war and were not succeeded by others, and there has been a tendency, perhaps inevitable, on the part of those that remain to concentrate on the provision of teaching collections or of material required in commerce, which together form a fairly steady market, rather than to risk money on sending collectors to regions difficult of access on the chance of securing specimens of sufficient interest to be wanted by museums and at a cost to allow of a profit; the fluctuating exchanges and other financial difficulties which characterised the years following the war have seriously curtailed the market in museum specimens. The Trustees have therefore found it increasingly necessary to take active steps to add to the collections by sending out collecting expeditions or by contributing to the cost of expeditions organised by explorers. Apart from the peculiar difficulties of the times such a course becomes increasingly inevitable as collections grow. In the beginning anything almost that comes along is novel and therefore welcome, but as the series grows there remain gaps which may never be filled by accessions haphazardly made. The Trustees therefore sent a small expedition to Australia to secure collections of the native fauna, some species at least of which appear to be in serious danger of extermination, and they have now an expedition in East Africa to explore the deposits containing dinosaurian remains and to collect specimens for the Museum. In none of these is a member of the Museum staff employed; but in instances where favourable opportunities have presented themselves and the duration of absence has been at the most a few months the Trustees have sent the member of the staff who had charge of the group for which the accessions were required.

The Museum is indebted to many explorers and travellers for valued additions to the collections; often the specimens are given, but sometimes a contribution is asked towards the cost involved in securing them. Valuable collections, too, have been received as the result of the work of collectors who have been paid by private benefactors or out of private funds.

The system of exchange has been of the greatest utility to the Museum. By its means many valuable additions have been made to the Library as has already been mentioned. Duplicate specimens are constantly being exchanged for others of which the Museum stood in need; for instance, to no small extent it is in this way that the Collection of Meteorites has come to include such a large proportion of known falls.

The Museum has benefited greatly by the generosity of donors who have either given specimens in their lifetime or bequeathed them on their death.

In conclusion, some information may be given about the growth of the Collections. The rate is probably about the same in all the Departments, and the particulars of the Department of Zoology (including

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

Entomology) in which a census has been taken at various dates will suffice.

In 1880 the zoological specimens (excluding the Protozoa) numbered 1,300,000; in 1895, 2,250,000; in 1904, 3,000,000; in 1923, 6,100,000; and in 1927, 7,300,000.

The growth of some of the principal collections is illustrated by the following figures.

TABLE IV.

Growth of the Zoological Collections.

Collection.	1882.	1904.	1927.
Mammals	20,000	50,000	90,000
Birds	75,000	400,000	730,000
Reptiles and Batrachians.	20,000	50,000	80,000
Fishes	40,000	75,000	120,000
Mollusca	230,000	400,000	680,000
Crustacea	15,000	35,000	140,000
Insects	800,000	1,700,000	5,000,000

For the proper carrying on of the work of the Museum the collections must continue to grow. The collection of Fishes, for example, contains probably examples of about 14,000 of the 20,000 known species; many of these are represented by a single specimen only and few indeed by a series indicating changes during growth, sexual differences, geographical races, &c. Every year several hundred new species of this group are described. The necessary growth of the collections must involve in the future considerable increases of expenditure on buildings and on staff, which are already much overdue.

The growth of the Museum—collections, buildings, and staff—is intimately related to the large place taken by scientific studies in schools and universities, and to modern applications of science in agriculture, fisheries, medicine, mining, &c. With regard to the collections it may again be emphasized that a single individual is not sufficient to illustrate the characters of a species, in which the male may be unlike the female, the young unlike the adult, and which may vary according to climate and other conditions. With regard to the staff, it may be pointed out that not only does the conservation and arrangement of a large collection occupy more time than that of a small one, but also that modern systematic work is much more detailed than formerly, as a necessary result of the increased number of known forms. Also the determination of species new to the Museum involves a search through literature that becomes more extensive every year. Finally the Museum expert is asked to advise on all kinds of matters relating to his group, both economic and purely scientific, these inquiries being much greater in number and wider in scope than they were even 20 years ago.

EXAMINATION OF WITNESS.

441. (*Chairman*): We are much indebted to you for your memorandum. I propose to ask a certain number of questions on the memorandum. I gather that under the existing arrangements the Natural History Museum is subordinate to the Museum at Bloomsbury, the Director of the latter being Accounting Officer for both institutions. Does this situation give rise to any administrative difficulties?—Yes. The Director at Bloomsbury is the Accounting Officer for both institutions, and therefore technically responsible for expenditure, but in addition he is Director of the British Museum as a whole, including the Natural History Departments, whereas I am Director of the Natural History Departments of the British Museum, a subordinate post. The Director at Bloomsbury attends all the

meetings of Trustees at South Kensington as well as at Bloomsbury. This arrangement, I think, is unnecessarily complicated, but the degree to which it is unsatisfactory depends to a large extent upon the personal qualities of the two Directors. The Director at Bloomsbury is in a position to interfere, if he wishes to do so, in matters he does not understand, and, in the past, such interference has placed the Director at South Kensington in a very difficult position. Taken at the best, I think that however much the Director at Bloomsbury may allow the Director at South Kensington to manage his own affairs, he must put the claims of his own Departments first, to the disadvantage of Natural History. I myself should not like to be director of both Museums, and if I were I think archaeology would suffer.

442. In order to effect the change so that you became your own Accounting Officer, would the existing statutes governing the British Museum have to be amended?—Yes, they would have to be amended, but I do not think that would be a Parliamentary affair. I think the Trustees have power to alter their own statutes so far as that goes; in fact, they have done so in the past. In 1885, for example, they altered the statutes and gave Sir William Flower the title, Director of the Natural History Museum, at a salary equal to that of the Director at Bloomsbury, and practically an independent position. In 1898 they revoked that.

443. When did they first make the change?—In 1885. It is quite within their power to alter the statutes in that way.

444. In your opinion, if such change were made, would it help to solve staff difficulties?—Yes, I think it would. It would enable me to go direct to the Treasury. I could represent to them the small number of higher posts as compared to other museums, the administrative difficulties it causes, and the effect on recruitment. I think if I could put that direct to the Treasury we might get some satisfaction.

445. What facilities have your staff for studying abroad? Are travelling expenses allowed?—There is a very small grant for that purpose. I myself, and many other members of the staff, have visited and worked in museums abroad, but in my own time, and at my own expense.

446. At your own expense?—Yes. Now we have a very small grant, £100 a year for that purpose, and for attending congresses. Some men have accompanied collecting expeditions, and then the expense can be met out of the Purchase Grant. But in general we are so much understaffed that except in special circumstances, when the advantage to the Museum appears very great, we do not allow men to interrupt their work by going abroad. If my staff were larger, I think it would be greatly to our advantage to send men abroad more and on collecting expeditions more.

447. Both for collecting expeditions and for the purpose of studying comparisons?—Yes.

448. On the question of overlapping, I gather that so far as zoology and its various branches are concerned, there is no overlapping with any other State museum in England?—That is right.

449. On the other hand, between the Geology and Mineralogy Department of your Museum and the Geological Survey Museum at Jermyn Street, and between Botany at your Museum and Botany at Kew, there appears to be a certain amount of possible overlap. Dealing with Geology and Mineralogy first, what do you say about that?—I should say there is no overlapping or duplication of work at all in Geology and Mineralogy. You are referring, of course, to the Jermyn Street Museum of Practical Geology? In our Geological Department we have fossils of the whole world arranged in Zoological groups, and they are studied in their relation to each other and to living forms, as animals; at the Museum of Practical Geology they have British fossils collected by the Survey, arranged according to

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

age and district, and these are studied in relation to the rocks in which they occur, quite a different type of work and a different arrangement of material. In our Department of Mineralogy, we have minerals and rocks of the whole world, the minerals arranged in chemical and crystallographic order, the rocks according to their chemical composition and mode of formation. At Jermyn Street the minerals and rocks are British and illustrate the work of the survey and economic uses. There again the work is, I think, entirely different. In the Museum of Practical Geology the specimens illustrate British Stratigraphical Geology and Economic Geology and we have no such arrangement.

450. So even if you could start with a clean slate, you hold it would be in the interests of efficiency that Geology and Mineralogy, as studied at South Kensington and Jermyn Street, should be under separate direction?—Yes. It would be very difficult to bring the Geological Survey work under the Museum direction, and on the other hand it would be very difficult to put either of our departments under the Geological Survey. The work of our Geological Department is very closely related to that of the Department of Zoology, and they ought to be kept together. As to Mineralogy, that is more remote from the rest of the work done in the Museum. I do not think that science would gain if it were placed under the Survey, which has quite different aims. I think our collection of minerals is the finest in the world, and the scientific work done on it is of great value and ought to continue on the same lines.

451. It is proposed as you know, to bring the Geological Survey Museum to South Kensington to a site adjacent to yours. Would it be possible to incorporate the pure Museum side of the Survey with your Museum Department?—I think not. The collections illustrating the work of the Survey should not be incorporated with our collection, although they could be added to it. They must really be kept distinct; they are quite differently arranged, and if we had them we should require additional space to show them. I think they illustrate the work of the Survey and ought to belong to the Survey.

452. There would be no advantage in placing them under one direction?—I think not.

453. On the question of the Geological Libraries, is any amalgamation possible there, or desirable?—May I add something to the last question? I think perhaps we have things that would improve the Geological Museum Series, and they have things which might be better with us, in particular some minerals and type fossils. We could arrange some exchange with advantage to both. As for the libraries, I think it would probably be better to keep them apart. There also we might have co-operation and some exchange. Their work is different. Many of the books they often use are hardly at all used by us, and many of the books we frequently use are hardly used by them, and it is a great convenience to have books near your work. In the museum, as you know, we have departmental libraries, and each man has in his own room certain books which he alone generally uses.

454. We were told yesterday by Sir John Flett that there were in London four Geological collections, but that none of these museums attempted or claimed to represent the whole wide field of the world.—I should have said, so far as we were concerned, that for Palaeontology, for that side we represent the whole world, undoubtedly, and Mineralogy represents the whole world.

455. (Sir Martin Conway): It is not stratigraphically arranged?—No, we do not represent stratigraphical geology. We are not absolutely complete in that way. That is a question of arrangement. It is often suggested that we should have the zoological things arranged faunistically as well as systematically, but I do not consider we are incomplete because we do not do that. We do not show

the animals of India or Africa together. That is rather a parallel. Stratigraphical geology shows fossils arranged according to the strata in which they occur.

456. (Chairman): Turning to botany, you say, in reply (4) to the Commission's Questionnaire, "There is no duplication of work." Are not the two herbaria, yours and that at Kew, very largely duplicates?—That depends upon what you mean by duplicate. Probably there are a large number of species represented in both herbaria. But I think there are very few specimens that could be eliminated if you amalgamated the two.

457. Very few?—Very few indeed. Systematic work demands a large series of specimens of a species and I think most of the specimens in both herbaria are needed. I stated in the Memorandum that Kew specialises in certain regions and we in others. As an example, our British and European herbarium is quite different from anything at Kew, and they have practically no collection of that sort.

458. What is the number and the cost of your staff devoted to botanical work?—The Botanical Department has a permanent staff of 7 scientific men and 8 clerks and attendants. There are also 3 paid temporary workers. The total salaries come to between £6,000 and £7,000 a year.

459. If the botanical exhibits to the public were left with you, as recommended by the 1901 Committee, what approximately would be the cost of the staff required to supervise that?—That is an extremely difficult question to answer. I regard that proposal as quite impossible.

460. Would you give us the reasons?—Yes. I think the exhibits depend upon the department, and should go with it. If botany is to go, I think it should go as a whole. If it is thought that Kew is sufficiently central for research workers, and visitors who want to consult a botanist or to identify a plant, it ought to be sufficiently central for the public who want to look at plants. I do not know what sort of cost would be involved. We have never had such a thing as someone to look after exhibits apart from the Department.

461. You think it would be inadvisable to separate the two?—Yes.

462. Is it not the case that in general herbaria both in foreign countries and in the British Dominions and Colonies, are attached to or connected with botanical gardens?—Sometimes they are, sometimes they are not. I asked Dr. Rendle, the Keeper of Botany, to answer that and the next two questions. Perhaps I may read his answer:—

"Herbaria abroad are frequently attached to Botanic Gardens for various reasons.

"The association is often historical—in the older institutions the two were a single foundation for the economic and medicinal study of plants, and the practice has remained till the present day.

"In a new country, such for instance as the Australian dominions, a single institution under one head would represent the limit of effort possible; unless a Natural History Museum were also founded, when, as for instance in New Zealand, the Museum and Garden are distinct.

"It is a matter of history and economy. At Vienna the Herbarium is in the Natural History Museum in the centre of the town; there is also a small Herbarium in the Botanical Gardens on the outskirts.

"The two most important herbaria in the United States are the Government Herbarium in Washington which forms part of the National Museum and the Gray Herbarium of the Harvard University; the former has no connection with a garden and the small garden surrounding the latter building has fallen into disuse.

"At Chicago the Herbarium is in the Field Museum of Natural History; a magnificently planned institution.

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

"At Ottawa the Herbarium is attached to the Geological Survey.

"At Cape Town the Herbarium forms part of the South African Museum. The functions of a great general Herbarium such as our own are quite distinct from that of a Botanic Garden. The Herbarium is for the scientific comparative study of the flora of the whole world and demands series of specimens of each species illustrating variation and distribution; the botanic garden illustrates the possibilities of growing plants from other countries for use or ornament and also aims to give some general idea of the types of vegetation in various parts of the world."

There is no more reason why a herbarium should be attached to Botanic Gardens than a Zoological Museum to Zoological Gardens. In Paris, I believe, both botanical and zoological gardens are associated with the Museum.

463. Turning from the question of botany, is it correct that your most urgent requirements are further spirit room accommodation, further whale room accommodation, further entomological accommodation?—That is not quite correct. The collections in the new spirit building are housed to allow extension for some time, but the collection of fishes in the old spirit building is not so well provided for. I particularly wanted to get the whole of the new spirit building when it was built a few years ago instead of half, so as to put the collections in their permanent positions and avoid a further transference and rearrangement, but now that we have the half, we cannot say that the spirit accommodation is our most urgent need. The new whale room and an extension of the entomological department are urgently needed and receive special attention, I think, because of the extended investigations on whales now in progress and the generally recognised economic importance of entomology. But other collections are very much congested, many of the exhibition galleries are overcrowded, and proper library accommodation is also very badly needed.

464. The proposals you have been discussing provisionally with the Board of Works, would they merely overtake arrears, or would they allow for further expansion?—They allow for expansion: a proposal to overtake arrears and then start getting congested again would be no good at all. All the proposals are to allow a certain margin.

465. If the recommendations of the Botanical Committee of 1901 were carried out, presumably the space set free could be utilised for your collections which are now congested?—It could be used in some way or other. That space is most suited for exhibition. It is really an exhibition gallery. I think it would be very inconvenient to try and use it for entomology, for example; the Entomological Department being in the basement, it would become split into two widely separated parts. I think it would probably be best to use it for exhibited mammals. The mammal galleries are tremendously overcrowded.

466. That would not add anything to your research resources?—I do not think it would. It would have a very small effect.

467. Could not any such extension as may be essential be provided on the place between the Science Museum and the Natural History Museum rather than by extending beyond the great wings east and west?—To begin with, that involves the pulling down of the old spirit building, which would mean an extension of the new one at least to Queen's Gate and perhaps round the corner along it. That would be one thing involved. Then we must find room somewhere for the sand pits, photographic room and other buildings which are dotted about over that space. Vans of course come into the Museum at the back, that is where everything comes in, and one would have to provide free access. That would have to be considered, and I do not think a building in that position could be very high between the Museums for reasons of light, it would have to be comparatively

low. Perhaps a building in that position could be utilised for a library and for exhibition galleries, but I do not think it could be used much for studies and study collections, being in such a position between the two Museums.

468. Why would it be unsuitable for study purposes?—On account of the light.

469. Taking the space you occupy, what is the present ratio of space between exhibition and research?—I should say they are about equal, about half and half. Possibly the studies and study collections occupy a little more than half.

470. How does this ratio compare with that in corresponding museums?—That I am afraid I do not know. That would require a lot of correspondence to answer.

471. There is the question of extension. You at present occupy about one-third of the total area of your site at South Kensington.—That is what you make it?

472. Yes.—You have to take out of that the Court Yard in front, that roadway running up, and the steps and so forth must obviously stand. You are considering that?

473. I give you that. The question arises, how are you going to occupy the remaining two-thirds minus the front steps?—I think we want to occupy most of it. Plans for extensions go out right to Exhibition Road on one side and Queen's Gate on the other, and I understand are coming forward nearly to the Cromwell Road.

474. Would the Natural History Museum occupy the whole of that space economically?—Oh, yes. We want for our present collections twice the space we have at once to do things properly.

475. Is that so?—Yes.

476. In paragraph 7 you allude to the enormous expansion since the removal to South Kensington in development for research. Could you give examples in brief of the results of such research, especially of its utility to the Nation in the economic sphere?—Yes. I should like first to say that the work done in the Museum on the classification of animals, plants and minerals is an important branch of science which could be done only in a place like that with the aid of large collections, in this work the Museum plays its part in the advance of knowledge, and the high standard of the work is shown I think by the number of members of the staff elected to be Fellows of the Royal Society. So that I claim that merely for the advancement of knowledge the Museum is worth carrying on as much as any other institution. But in addition to that the work has a great practical value. It enables animals or plants or minerals to be correctly named. I might perhaps read a memorandum from Dr. Bather, the Keeper of Geology, on this subject. He says:—

"The collections in the Geological Department are arranged and studied in their purely scientific aspect, without reference to economic questions. The proposition that you cannot apply science until you have the science to apply is admirably exemplified by these studies. Modern coal-mining, oil-prospecting, water supply, and many other exploitations of the Earth depend on a precise knowledge of the succession of strata, not in the broad way good enough 100 years ago, but by each minute subdivision; these subdivisions can in the majority of cases only be recognised by the contained fossils, and in all cases it is the fossils alone that assure certainty. The discrimination of the strata thus depends on a minute and refined knowledge of fossils, such as can be obtained only by prolonged study of large collections. Our experts are consequently consulted, not indeed by the commercial exploiters, but by the geologists whom they employ. A succession of students comes to study the various fossils of plants and animals that have been found of value in such stratigraphical studies, but one never knows what kind of fossil may not prove of the utmost importance to-morrow. A deep boring is

4 November, 1927.]

MR. C. TATE REGAN, F.R.S.

[Continued.]

made, an obscure fossil is observed in a core, the engineers and geologists are at a loss; the fossil is sent here and passes from hand to hand till it reaches the expert whose purely scientific knowledge enables him at once to identify it, or at least to state the age and stratigraphical position of the rock. It may be, as in one case, the single scale of a fish which shows that the bore is below the Carboniferous and that search for coal would be fruitless; or it may, as in another case, be the single plate of an Echinoderm enabling an expert to say that the bore is still high up in the Mesozoic rocks. The pecuniary value of such knowledge may be estimated in many thousands of pounds, but it would not be forthcoming were it not for the previous single-hearted search after knowledge for its own sake." That is Dr. Bather's contribution to that question, and I might say that in the annual report of the Museum Sir Sidney Harmer when Keeper of Zoology, which then included Entomology, instituted a section which he called Economic Zoology, so that year after year particular instances were given. That has been carried on, and it now appears under two departments, Entomology having become separate. I have brought up the annual report for 1920 and can give you extracts from those sections if you like?

477. Perhaps you might put that in?—Yes.*

478. Are the references marked?—Yes. And so on for all Departments. Do you want more examples?

479. What examples have you there?—I have rather an interesting one from Dr. Prior. This was a war enquiry when it became important to know what the fragments of rock for concrete used in German fortifications were, where they came from; and by means of our collection we were able to say exactly where these things came from. It was a question whether they had been transported across Holland. It was rather an important thing. Another war enquiry—this came in regard to optical instruments—was the sources of fluor and Icelandic spar. There it was rather curious that a number of visitors came to the department of Mineralogy all asking for the same thing, and we did not know what it was all about until a day or two afterwards. The Government Departments concerned, it appeared, had sent to everyone whom they thought could give them information, and they had all come to the Museum, but one of them, instead of that, sent the enquiry to Dr. Prior, the head of the Department, who then of course sent the information direct.

480. Assuming the rate of expansion indicated in your answers continued unchecked, what accommodation would you want in the next 25 years?—We want more accommodation already; I should say that we certainly want at once the western extension and a considerable extension on the east. The Museum has fallen behind altogether in my opinion. We choke up what should be exhibition galleries with study collections, the study collection of birds takes up the whole of one gallery and half of two others. The collection of mammal skins takes up two-thirds of a very fine exhibition gallery. I want those galleries for exhibition and others in the same condition, and to have buildings of the type of the new spirit building, studies and study collections together, conveniently lighted studies, and collections which are accessible. That is really necessary.

481. Turning to the question of co-ordination, I understand at present there is no organised inter-communication between the Directors and heads of Departments of the various State Institutions?—That is correct.

482. Should you be in favour of organised inter-communication?—No, I cannot see any advantage in that. Our own Museum, the Natural History Museum, is so entirely different from any other, the work is so entirely different from that of any other institution, that I cannot see any advantage in an official meeting with other Directors.

483. You see no advantage in the Directors of the different institutions meeting at regular intervals in Committee?—No. I think all that is quite unnecessary. It would not be of any value.

484. As regards publications, your annual expenditure is now between £5,000 and £6,000, against receipts from sales amounting to less than £2,000?—Yes.

485. Do you consider that result satisfactory?—Yes, I should consider that quite satisfactory. We have many types of publications, of course. As regards the things which are sold at the bookstall, the guide books and picture postcards, I think they pay their way, although the picture postcards at present do not do so well as they will, because we have started them fairly recently and are building up a stock, so that we shall get more profit from them when we have a good stock. But as regards our other publications, monographs, catalogues, and so forth, they are the result of scientific work done in the museum. A large part of them are given away to other institutions from whom we get their publications, so that our library to a large extent depends on the output of publications, and I think we get good value. Some are given away also to scientific workers who benefit the Museum by giving us collections, or by their work.

486. Would you be in favour of the Stationery Office undertaking themselves, or arranging for, your publications?—No. I think that would only lead to complication and delay. We are very satisfied with our present arrangement.

487. As regards loans. I gather you are in favour of more extended arrangements regarding loans, but that legislation would be required to give effect to the policy?—I see no reason why the museum should not have loan collections in the same way that the Victoria and Albert does if there were a demand for them. I am not at all sure there is a demand, but I think we could put up some nice things—mimicry of insects and things of that sort—which might go round the country. That would mean legislation: it is not at present allowed for.

488. It could not be done by the Trustees?—No, I think not.

489. What arrangement have you for eliminating unnecessary specimens?—The principal arrangement is that we do not take them. We do not take any things we do not want, as a rule, and as soon as the thing is not wanted we take steps to give it away, or try and give it away, and if that is no good we destroy it.

490. The amount you eliminate is comparatively small?—Yes. We have to keep the things. They have been worked on. Can I give an example? About 1860-1870, Dr. Günther wrote a catalogue of fishes, and the collection then was very largely made up of skins and stuffed specimens, many of them large. We never get those in now, we get all our fishes in spirit; those stuffed specimens are a great nuisance to store and yet we have to keep them because they are in his catalogue, the things his descriptions are based upon, and so we cannot eliminate them; they are of historical interest.

491. You have to keep them permanently?—Yes.

492. You say there is no great demand by provincial museums for loans of specimens?—I have not heard of it. They often come to us for duplicates, and we give them a good many duplicates, but often we have not got what they want; they frequently want something very rare and good which we cannot spare.

493. Are you in close relation with provincial museums?—Very fairly so, yes.

494. Would the extra staff required for a loan collection be a serious item?—It would require some sort of clerk and some sort of scientific man to arrange the things—£1,000 a year, something of that sort.

495. Regarding restrictive bequests, are you much hampered by directions by testators or donors?—No, not much. There have been bequests which we really

* See Addendum to Evidence.

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

could not refuse although they were accompanied by provisions that they should be kept together, or something of that sort, but as a rule, we have got people to modify that. The Adams Collection in entomology we had to keep together for 20 years before incorporating it in the main collection. We try to avoid taking them on conditions, and most people see reason and do not make foolish bequests.

496. You see no necessity for legislation on this subject?—I do not think so. I think that might frighten people if they thought conditions would not hold.

497. What about a lecture hall, and facilities for giving lectures?—We have no lecture hall or facilities for giving lectures. The Trustees do run a series of lectures—at least they appoint a lecturer for the Swiney bequest, but there we get a lecture hall elsewhere. I think it would be of some value to have one. We get parties in the Museum like the Geologists Association who come and want to see things. It would be very nice to have a place where you could demonstrate and talk, and of course there might be public lectures given by the staff or others.

498. What guide lecturers have you?—One.

499. Is he fully occupied?—He goes round two hours a day officially. I think 11 to 12 and 3 to 4, and he takes special parties, school children and others. I think he has quite a busy time.

500. You think further facilities of that nature are desirable?—Another guide lecturer might possibly be useful. I am not at all sure about that. Instead of having an organised tour, to get hold of people and talk to them and take them on an unorganised tour—that is the sort of thing I prefer. It might be possible to do something more in that way.

501. Are you in close touch with educational authorities?—No, I do not think so, specially. Many schools come. They write and get the services of the guide lecturer.

502. Do you see any way in which the usefulness of your Museum from the public standpoint could be increased either by advertising or by other means?—No. As it is, we get a good deal of free advertisement. The newspapers are always willing to put in odds and ends if we send them or to come down if there is anything special going on. They send representatives.

503. You do a good deal of press propaganda in that way?—A certain amount.

504. (Sir Lionel Earle): Would Sir Frederic Kenyon welcome the divorce of the present position of the accounting officer and that sort of thing?—I have never talked it over with him, but I have heard, at second hand, that he does not regard this position as his own doing or as one that he is very keen on.

505. He evidently would be very glad to get rid of the accounting officer duties?—That I do not know. I am afraid I have never discussed it with him. I myself have been Director only since March.

506. On the question of Geology, we heard in evidence yesterday that the Natural History Museum did occasionally answer questions addressed to them on the economic side. I think in your evidence just now you distinctly told the Chairman you did not deal with the economic side?—No, I think that is a misunderstanding. Our work is not intended to be economic work; it is systematic, purely scientific work, but the whole point of Dr. Bather's memorandum was to show that it has great economic importance, and people come constantly to use the collection for economic purposes. If they want a fossil identified we identify it without asking whether that is for economic purposes or not.

507. Is not there a possibility of considerable overlapping between your work there through that and the Geological Museum in Jermyn Street who are supposed purely to deal with the economic side?—They only deal with British, to begin with.

508. I am talking of British.—No, I should say not. The Jermyn Street people themselves come to us when it is a question of accurate determination of fossils.

509. You do not think there is any overlapping in that direction?—No, I should say not.

510. With regard to the space at the back of the building, you said you did not think a building could be high because of the light. That is a question of planning and seeing exactly what the amount of light would be, but is it your opinion that if those places, the spirit museum and the other small buildings, were entirely wiped out and the thing properly built, you could get sufficient space, building right through the two streets at the back, and still leaving a road without adding to the wings?—No. You would not get sufficient space in that way.

511. I think you could get a great deal higher than you think without interfering with the light—get a 45 degree angle, it is all anyone wants.—I can understand exhibition galleries—you showed me a plan—I can understand that type of building you planned being there.

512. But I am not at all sure that for research you can conceive anything much worse than the underground rooms we saw the other day where all your research people are. As regards light, it is not good—the insect room.—It has good windows.

513. Yes. Buildings at the back would have better light than those rooms.—Would the windows have better light?

514. Yes.—Those windows face right out on to the gardens.

515. They do, but I do not think they are very deep; they are sort of terra cotta, rather recessed in the building which takes away from the light. I think modern flush windows would be much better, and you would not have to sacrifice everything from the architectural point of view if you built at the back, because it would not be exposed on the road.—The sort of thing I have in mind is something, say, five storeys high, each floor, say, of fourteen feet, and something of the type of the new spirit building. I do not think you can put that sort of building between the two museums. I should like your opinion on that.

516. Not quite the same, but I think you could have a very much more utilitarian building than anything you have in mind, a purely utilitarian building, than anything you have in the big museums now, without being an eyesore. It is a question of simplicity of design and good proportions. But you would not favour, if it could be avoided, the wings coming out and ruining the front garden?—I hate that idea personally.

517. So do we all; the question is whether we can obviate that by a building at the back and doing away with that disgraceful slum-looking place.—Those things have got to go somewhere.

518. They might be more economically and better used?—The sand-pits and fan-chambers must be in the open air.

519. I do not say you could get your whale rooms there.—I am wondering whether that is not what we could get there. I am not sure. The plan you showed me showed two long galleries above a basement, and possibly one of those galleries might be suitable for whales. It seems to me more the sort of thing we could get there than buildings for research.

520. (Sir Henry Miers): You said that in the immediate future double the present space would be required. With regard to reply (9) to the Commission's Questionnaire, am I right in assuming that the growth of the Zoological Department may be estimated as about doubling itself in 25 years, the collection doubling itself in 25 years?—I think it has been about that. I think the collection has doubled since about 1904.

521. It seems true of the herbarium as well, and possibly of other departments.—It is more than true of insects. They have about quadrupled in the same time.

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

522. What is the prospect 50 years hence?—It is very difficult to forecast the future. Fifty years ago no one had the slightest idea of the work of the museum or of the growth of the museum, and I should not like to say what developments are possible in 50 years. There may be an entirely different idea of the whole thing.

523. You cannot go on expanding at that rate on the present site?—No. I think that is a very important question, the way in which that site is being filled up with all sorts of buildings, the Technical College, Science Museum and the Geological Museum.

524. The Geological Museum occupying part of the site originally meant for the Natural History Museum, and possibly growing at the same rate?—Possibly.

525. Ought one to look more than 25 years ahead in making any plans now?—I think you ought.

526. Does that lead to some sort of dissociation the one from the other of the collections, rather than further concentration?—I have always thought that the Museum having been crowded up in the way it has been by other Museums on the same site, in the future there must be a dissociation; ultimately I should say both Mineralogy and Botany will leave and it will become purely a Zoological Museum with Palæontology.

527. That is my point.—I think it must come in the future at some time; and bringing Jermyn Street down rather puts a seal on Mineralogy stopping there. That is one reason why I am against it.

528. (Sir Lionel Earle): You are not a supporter of the Bell report on this question?—No, not at all, I think it was a great mistake, the Museum was forced into it.

529. (Sir Henry Miers): With regard to the individual collections, it is very hard to refuse great gifts. You get a collection of 20,000 beetles or 30,000 butterflies, the collection is accepted as a whole, and it is not possible to select only what is wanted from it?—Not as a rule, but as a rule the whole is wanted.

530. Could you explain why it is wanted? Offhand it looks as if there must be a large number of duplicates?—Yes, but there are not. A species does not depend on one specimen. You cannot know the characters of a species from a single individual. Go into the street: you might say from one man that the characters of the English race are that they are 60 inches round the waist, 4ft. 5 inches high and have red hair, but you want far more than that to know what the characters of a race are. You cannot do it with one specimen, you must have a large series to know the variation and the differences in sex and the differences between the young and the adult, differences at different seasons of the year, and so forth.

531. That is true of the larger animals as well as insects?—Yes.

532. With regard to the actual exhibition space required, do you think the present exhibition space ought to be sufficient? You mentioned one case in which it requires enlarging—I think the western end of the bird room?—Yes.

533. But do you in general say you want more exhibition space, or that the present space is enough?—My opinion about it is that the Museum as it is now was built for exhibition, and what I want to do is to get it back for exhibition. I cannot see where whales are going in the present museum, and I think you must have a new room of a different type for them, but, apart from that, what I should like to do would be to get back the upper mammal gallery which, when I went to the museum, was used for exhibition, to get that back for exhibition. At the present it is two-thirds boarded off, and used for the mammal collection. I should like to get that collection and the bird collection transferred to new buildings where they would be properly arranged and available for study in relation to well-lighted work rooms, and then another thing, the galleries

of fossil invertebrates, there you have a study collection mainly in the galleries. You have these table cases with exhibited specimens and drawers underneath full of the collections. That is an absolute waste of exhibition space, and I should like to get all those out in the new buildings and use those galleries for exhibition. In that way, if we can get new buildings for studies and study collections, I think we have sufficient exhibition space in the Museum.

534. I asked because the statements in reply (7) to the Commission's Questionnaire do not seem quite consistent. In one place it is said that what is wanted is a place for study collections and not exhibition, and in the next place it is claimed that more exhibition space is required. Probably the answer you have given explains that?—Yes.

535. Why is it necessary to have such large systematic collections exhibited, because the general public does not take an interest in systematic collections, they are rather for experts, while exhibition galleries are mainly required for the general public.—The general public likes mammals and birds, which take up most of the room, and those are the galleries which are so much overcrowded. The general public does not want the fossil invertebrates. Those I should reduce very much, and use those galleries for things they do want. Large fossil reptiles are very badly shown at present in a gallery quite unsuitable for them. The domesticated animals is another series that wants more room, and especially the British animals. We could use one large gallery for the British groups quite well.

536. That leads me to a further question. Would it be possible to gain any space by showing less of some of the large systematic series and providing more storage space behind some of the wall cases as has been done in the British Museum with the Greek vases? I am taking things like fossil fishes or shells, which do not interest the public and which would be accessible to experts in storage rooms and would, if taken away from the table cases liberate space.—Yes, but I am afraid I do not know the British Museum arrangement.

537. You have a wall case removed, say, six feet towards the centre of the gallery, you take away some of the table cases in the gallery and turn their contents out into the space behind the wall case so as to decrease the amount of exhibited collections and increase the amount of storage collections.—As far as I can visualise it for the Museum, it sounds an extraordinarily inconvenient arrangement. I have a strong objection to the word "storage." I may have used it myself but the word "storage" implies things put away and not used. Our collections we must have so that we can constantly get at them. They must be well arranged in their proper order and available for the students, and they should be next to the rooms in which the students work.

538. I meant "storage" in that sense. The specimens behind the cases would be in similar cases for the use of the experts, not for the use of the public.—You would have to go a long way to look at them.

539. It is done at Cambridge with the Archaeological collections. They move the cases forward and they put the archaeological collections behind as a study series.

540. Leaving that point, may I ask one more question about the Kew proposals. You do allude to the fact that it is undesirable to separate the fossil plants from the recent forms?—Yes.

541. And the existence of the fossil collection is largely in favour of keeping the herbaria in the museum?—Yes.

542. Can you develop that?—A student of fossil plants naturally consults the recent ones, in the same way as a student of fossil animals consults the recent ones. I think everyone wants to—although I am not at all sure to what extent the systematic

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

botanists go in for palaeobotany, but I think the palaeobotanist should have the herbarium to consult.

543. There is no question of keeping the fossils and recent forms together in the same building?—No.

544. That is not sound?—No. It might have been a possibility if we had started in that way, but we cannot start it now.

545. *Sir George Macdonald*: One very small point with regard to staff at the opening of the memorandum. It is rather outside our purview, but I should like to make sure that I quite gather what is in your mind. You speak of the deputy keepers, and say, as I understand it, that you have only two deputy keepers in five departments?—Yes.

546. And that fact has prevented you from making promotions, as if you had five deputy keepers you would have one for each department?—We really want six, because the department of zoology is so big that it should have two.

547. Supposing you had six?—They should be definite posts.

548. You mention that at Bloomsbury there are 10 departments and 10 keepers, but of course there are a number of departments with no deputy?—They have a very large Department of Printed Books, with three deputy keepers, so two departments have no deputy keeper, but some of their departments are quite small—

549. You will not say they are unimportant?—No, but for administrative purposes they do not so much require a deputy keeper.

550. It is not the importance of the department at all, but experience and ability that must regulate these appointments, however you have it?—Yes, to some extent.

551. I merely point out that that argument of yours I do not think carries you very far really.

552. When you speak of forming loan collections, do you not think you would require to acquire specimens for the purpose?—We might sometimes have to. It would depend what the idea was. We might be able to spare them from specimens in the museum or get things in for the purpose.

553. If you had to acquire them, that would add to the cost?—Yes.

554. If you had not to acquire them, that means there are specimens now which could be eliminated?—No, I would not say could be eliminated.

555. Could be loaned permanently?—Could be loaned. We have very large collections of duplicate shells and duplicate butterflies, which are given away constantly. People can come and select them. Schools and all sorts of educational institutions can have them, and also foreign bird skins; they can come and select and take as many as they like.

556. The organisation of a system of loan collections would be really instructive and useful, and you would probably have to acquire a certain number of exhibits?—Yes. I have been re-organising the exhibit of mimicry in the central hall, and it is astonishing how difficult it is to get the things I want from five million insects for that exhibit.

557. Coming to the question of Kew and South Kensington, you say that in your opinion no economy would be effected by combination?—Yes.

558. Do you imply, taking staff first, that if the two herbaria were under one supreme administrative body—let us take the position that the British Museum Trustees control both—would they maintain two independent herbaria with staffs of the size which are maintained now?—It is a very difficult thing.

559. It is purely supposition?—It is either a proposal for our collection to go to Kew or there is the proposal for Kew to come to us. You will not eliminate much in that way. You must maintain two collections. It means a new building for Kew or a new building for us. Then the herbaria are differently arranged: ours is a systematic arrangement and I believe theirs is a geographical arrangement. Our plants are on sheets of a certain size

in cabinets to take those sheets and theirs on sheets of another size; the amalgamation of the two collections seems to me an enormous work. I think probably the most economical plan, if you put them in one place, is to maintain them separately in separate buildings, with separate staffs.

560. Then you mention the building. You say in your memorandum there would be no economy, because a new building would be required at Kew if you were transferred there. Would the expense of building at Kew be as heavy as building at South Kensington?—I suppose it would be much the same.

(*Sir Lionel Earle*): I should say not anything like as much. You could build perfectly well in stock bricks at Kew, because the present herbarium is in stock bricks, whereas you could not do that in South Kensington, or I am afraid you could not. I should think you could build infinitely cheaper at Kew, because you can use quite a common material, London stock bricks which is the cheapest brick we have.

561. (*Sir George Macdonald*): I gather from your memorandum that there is a sort of distribution of geographical territory between yourselves and Kew?—Yes. That is purely a personal arrangement.

562. Does that extend beyond the herbaria? What does it cover?—It covers the fact that our men try and get collections from certain regions and Kew from others, and we work on them.

563. You specify, I think, Europe, Australia, and the West Indies as your own province?—I think so.

564. Dr. Hill told us a great deal about the work Kew were doing in the West Indies?—It is quite possible.

565. And again you say that you leave India, South Africa and the Tropics to them, but I rather think that Dr. Hill also mentioned that you too were working in East Africa?—Yes, I think that must be so—the thing cannot be exactly hard and fast. If a man goes collecting in East Africa and gives us his collection we shall take it and work on it.

566. So that the geographical frontiers are not really followed?—They are not as hard and fast as that, but they are there.

567. Come to a geographical frontier which is nearer home—what about Scotland? What are your relations with the Royal Scottish Museum or have you any?—I should say we have practically none.

568. Do you think it desirable that you should have?—It is mainly, as far as I know it, an exhibition museum.

569. It is a national museum?—It is not to any large extent a research museum.

570. I rather gathered from what you said in your answer to Sir Lionel that exhibition was the main function of a museum?—It is important, but it is not the main function of the Natural History Museum.

571. Taking it on the ground of exhibitions, what do you think the function of a national exhibition museum in Scotland should be?—I should have thought mainly Scottish.

572. What view would you take of the destination of a unique specimen that happens to be in Scotland? Should it go to London or remain in Scotland?—It would be more convenient to have it in London.

573. No doubt.—I think it is a great nuisance when people are working on a group and come to a museum to see the collection to find everything they want except two things—say one in Cambridge and one in Edinburgh.

574. But could anyone who was studying the fauna of Scotland do it in London as matters are?—I think so.

575. Completely, and would not require to go to Edinburgh for that purpose?—I should say he would do it better in London.

576. So that really you have been collaring our specimens?—We have specimens from Scotland.

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

577. Do not you think there is something to be said for co-ordination? I understand there is nothing in the way of competition as regards purchase between you?—No.

578. I believe difficulties sometimes arise in other ways. I heard a case some years ago of an English shooting tenant who brought a black hare to South Kensington, and the Edinburgh people said it should have gone to Edinburgh. Last week I saw something in the newspapers—you have no doubt heard about it, when about a fortnight or three weeks ago there was a school of more than 100 whales which found their way to Scotland and got stranded. I understand the position is that if a whale which is cast on shore belongs to a particular species it is the property of the proprietor of the land; if it belongs to some other species it is what is called a whale royal, and is the property of the Crown. In this case there was no competition for possession but it was a question of who should deal with the intolerable nuisance which had arisen, whether it was to be the local proprietor or the Board of Trade, and as I read the story in the newspaper *South Kensington* sent three experts up to the North of Scotland to determine the species of whale which had been driven ashore. Now do not you think at least two of those experts might have been spared if you had communicated with the Royal Scottish Museum?—No, I do not think you have got the whole story.

579. I am only telling you what I saw in the newspaper.—We have arrangements by which stranded whales are reported to us at once from any part of the country.

580. That I know?—This was obviously a great find; as to the experts, as you call them, who went up—one was Mr. Hinton, a member of the scientific staff, an authority on whales, but the other who went up was a preparator, who makes casts and so forth and is not a scientific expert at all. I was not aware that three had gone from the Museum.

581. That was the number given in the newspaper?—The third man was not sent by us. He is a friend of the Museum who went at his own expense and is giving valuable help. Mr. Hinton is our expert who went up and he is very busy. He has been there more than a week getting skeletons and skulls and has sent two whole specimens to us to have casts made.

582. I understand no specimen of that particular variety has come to Britain before?—I have no doubt that a duplicate cast will go to the Royal Scottish Museum.

583. I am merely asking for something which will be a reply to the public criticism which is being directed against the wastefulness of sending three experts, whereas the Natural History Museum at Edinburgh should have been asked to assist?—I think it was the best and most economical arrangement.

584. Can you tell me how long this arrangement about the whales is going on? Sir Sidney Harmer told me of the arrangement and said it would probably last for three or four years, but it is still going on?—It might go on indefinitely.

585. I think that is a matter which you and Dr. Ritchie might have a little understanding about, even if you had to send your three men in the end?—I think there would only have been delay in communicating with Dr. Ritchie to begin with.

586. There are telegrams?—I do not think they would have been of much help. Hinton is the man who knows all about whales, he is obviously the man to go, and if he goes he must have someone who can help him with the dissections and in the rough work.

587. In talking of exhibitions you say in reply (7) to the Commission's Questionnaire it has been suggested in the newspapers and elsewhere. What do you mean by "elsewhere"?—I have heard this from

various people, this idea; in fact Sir Henry Miers rather suggested it as a possibility of cutting down the exhibited series.

588. I think we have it in Sir F. Kenyon's memorandum?—I have not seen his memorandum. I did not mean that.

589. You think a different principle applies to the Natural History Museum than applies to Bloomsbury?—It is possible to cut down a certain part of the exhibits, as I have said, for example these fossil invertebrates which are not at all interesting. On the other hand there are various parts of the exhibition, birds and mammals for example, which are tremendously overcrowded, and cutting down elsewhere would give us room to expand these.

590. You speak about the lecture theatre. Do you give lectures at the present time?—It is the College of Science who lends us the lecture theatre.

(*Sir Henry Miers*): They were formerly given in the Natural History Museum many years ago.

591. (*Sir George Macdonald*): I gather you think it a desirable but not altogether an essential part of any extension?—Yes, that is how I should regard it.

592. You do not find it impossible to find a lecture theatre in the immediate neighbourhood as matters are at present?—No.

593. There is one other thing, but it is hardly a question. I was much interested in Dr. Bather's memorandum which you read, but I could not help wondering whether Sir John Flett had written it because the two illustrations were identical with those he mentioned yesterday?—It is very curious, that the two illustrations should be the same, the fish from Palaeozoic rocks was certainly determined by Sir Arthur Smith Woodward and the plate of the Echinoderm was determined by Dr. Bather. Sir John Flett might have given them as examples, but they did not belong to his museum.

594. I do not think he said he gave them, but he gave them as the type of work done at his museum?—Yes.

595. Do you not think there is some danger of duplication of work in matters of that kind?—I cannot see it at all.

596. You mention in your memorandum the collection of minerals at the Geological Museum?—Yes.

597. You feel that ought to be in the British Museum?—I think the Ludlam Collection would be more properly housed there. It was bequeathed or given to them because there was a disagreement with the Museum or with the Museum Keeper.

598. Well, we had better warn Sir John Flett not to admit you to the Geological Museum, because he says if any officer of the Natural History Museum came in there he would not covet the mineral collection?—Dr. Prior seems to think that particular collection would be more properly housed in the Natural History Museum. I do not know anything about it myself.

599. So that certainly is a matter which requires co-ordination from what you say.

600. (*Sir Richard Glazebrook*): You regard, I understand, the expenditure on scientific publications as to some extent recouped by the proceedings you have had from foreign academies and societies?—Yes, and museums.

601. And in that way expenditure is saved as otherwise you would have to buy these publications?—Yes.

602. So that ought to be taken into account in considering the profit and loss account. Have you ever had any experience of working in top-lighted galleries?—No, I cannot say I have.

603. Have you considered that at all when speaking about the difficulty of lighting buildings at the back?—The bird room at the museum is a top-lighted gallery, but it is not at all satisfactory.

604. But it is not properly top-lighted?—You mean one can arrange top-lighting properly.

605. Thirty years ago I opposed very strongly in connection with the National Physical Laboratory the use of top-lighted rooms, but I came round after

4 November, 1927.]

MR. C. TATE REGAN, F.R.S.

[Continued.]

five or ten years' experience to it entirely and I think you would find a very large space on the top floor might be obtained by a proper system of top-lighting. It is merely a suggestion. You were good enough to arrange for the Royal Society at Wembley a very satisfactory exhibition in which experiments were actually performed and that sort of thing. Do you think anything of that kind would be valuable or useful at the Museum?—You are thinking not of the part that I arranged, but of the plant physiology. No, I think that is not quite our business.

606. I forgot for the moment it was the Physiological Department.

607. (*Sir Martin Conway*): I should like to ask a question or two. There is no geological museum in this country in which the minerals of the whole world are stratigraphically arranged?—You mean the fossils.

608. No, the minerals. You do not have them arranged stratigraphically?—No, ours are arranged chemically.

609. In the Jermyn Street Museum the British minerals are arranged stratigraphically, but there is no museum that arranges the minerals of the whole world stratigraphically. Your minerals are arranged how?—According to their chemical structure and formation.

610. So that they duplicate Jermyn Street?—No, they have British minerals arranged according to their economic uses.

611. You say it is essential to have the two libraries separate. Can you have them under one staff?—You can amalgamate libraries and increase staff, but there is a tremendous advantage in having the library near the work.

612. Could not they be administered by one principal librarian instead of two, and could not you economise in staff?—The librarian in our Geological Department is a clerk.

613. You could not save anything by having one staff for the two united libraries?—I do not think you could do much in that.

614. Coming to publications, the Bloomsbury Museum publish a British Museum Quarterly which is a popular thing and has an increasing circulation. Do you publish or think of publishing a Natural History Quarterly?—Yes, we have a similar thing.

615. Does that have a good circulation?—Quite fair.

616. (*Chairman*): What number?—I could let you have it if you wanted it. I will make a note of it.

617. (*Sir Martin Conway*): Do you give away a large number of duplicates?—Yes.

618. And still you have not power to lend?—No, that is so. The duplicates are things that are not wanted, but we cannot lend.

619. Even if you had superfluous duplicates that might make a loan collection you could not lend them?—We have power to lend superfluous duplicates. We could do that, but, of course, we always say, "You can keep them."

620. You could not form a loan collection?—No.

621. You have spoken about the need for further room for a library?—Yes.

622. When talking about the space that might be afforded if the herbarium were removed you have not referred to using that as a library?—It is rather remote for a general library. A general library ought to be in a central position. It would go very much better in the building proposed at the back.

623. As to the Jermyn Street Museum, it is proposed that that should come adjacent to the Natural History Museum and occupy the site which you want to use for another purpose. At the present time it is separated by a considerable distance from the Natural History Museum. Is there any reason why the Jermyn Street Museum should not go to a place like Kew?—No, I see no reason at all. Certainly the work is not so close that they need to be with us.

624. Would the Jermyn Street Museum serve the purposes, not of the general public, but of the people who require to use it if it were at Kew?—Yes, I think so, except that it is a little further to go.

625. About your own collection, supposing you were crowded for space, would not it be cheaper to put the bird collection, for instance, in some other place and thus gain room, rather than building on your expensive site an expensive building?—No, if you follow that up it means transferring the whole Museum.

626. Not the whole. You say you want to keep the Museum for exhibition that would include birds?

—Yes. I think the study collections must be with the exhibits.

627. They must remain?—Yes.

628. Is there nothing else you could turn out and send on to a cheaper site besides the herbarium?—Well, of course, if there is any idea of building a new museum in the future, I should consider mineralogy is more apart from the rest of the Museum than anything else. The rest of the Museum is biological; the mineralogical staff are chemists and physicists.

629. As far as you are concerned, you would not weep to see the Jermyn Street collection and your mineralogy collection go to some such place as Kew?—I should not weep to see the Jermyn Street collection go there, and I can foresee that at some future time mineralogy will go somewhere. At the same time, although I know little about mineralogy, I am rather proud to have under me the finest mineralogical collection in the world and to keep the whole thing together. I think the Trustees like to keep the Museum as a complete natural history museum.

630. I daresay they would like it, but it is cheaper for the taxpayer and equally efficient for men of science if another arrangement is made?—Yes, it has always seemed to me a possible arrangement.

631. (*Mr. Charteris*): In your memorandum you set out certain statutes under which you have certain powers, and they seem very wide with regard to sale and exchange?—Yes.

632. You cannot lend but you can sell and can exchange any articles?—I think so.

633. I see the second power relates to any articles and the first only to duplicates?—The sale of duplicates.

634. 7 Geo. III relates to duplicates. At the present time you have the power to sell or exchange any article, whether duplicate or not. Has it ever been resorted to?—I cannot remember a case where I have sold anything.

635. You have not found it a useful provision so far?—No.

636. For the purposes of exchange, do you make much use of it?—Yes, exchanges are going on all the time.

637. Exchanges with museums in any part of the world, or only in England?—Mainly with museums elsewhere.

638. That you have found useful?—Yes, very.

639. Apparently it is a power which exists only in the British Museum and is not found in other cases?—I did not know that, but it is very important for us.

640. I am not clear on this point at all about the removal of the herbarium to Kew. You disagree with the report of the Committee of 1901?—Yes.

641. You do. Let me ask you this. Suppose a student of botany desiring to inform himself fully on the subject, does he not have to have recourse to both museums, the herbarium at Kew and the herbarium at South Kensington?—You are talking about a research worker, working on a particular group.

642. Supposing a professor of botany taking a class round, and desiring to inform them fully of the science of botany, would he have to have recourse

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

to both places?—No. I think for class work either place probably would be quite good.

643. To that extent there would be duplication, that you could have recourse to either for the purpose?—Yes.

644. That would dispose of that, but take the person who goes deeper into the matter, the person I suppose for whom largely the two herbaria exist, the serious student who desires to follow up a line of research?—Yes.

645. From Dr. Hill we gathered he would have to go to both?—I think he would.

646. From his point of view, it would be an advantage to have the two in conjunction?—Yes, I should say it would.

647. Can you tell us what number of students visit the herbarium at South Kensington in the course of the year?—Well, I should think the number is about 4,000. The annual report would give the number for one year.

648. That would be students following up a particular line of research?—No, the figure is given for students or visitors who come with inquiries, people who come to the department for information which you cannot get from the exhibited specimens. There were 3,443 for the year 1920.

(*Sir Henry Miers*): 3,900 in 1925.

649. (*Mr. Charteris*): There are two classes of people, first those who give instruction to classes who would avail themselves of one or the other, and the second category a student desiring to follow up a certain line of research who would have to go to both?—Yes, except for certain groups.

650. Would it be fair to say that the herbaria exist principally for the serious student who desires to follow up particular lines of research?—Yes, they exist very largely for him at any rate.

651. Then, with regard to the two geological museums, perhaps the ground has been fairly fully covered, but this question has occurred to me. Are inquiries addressed to South Kensington by mining engineers?—No, I should think not often.

652. Because I think you gave an instance in which what you called the minute and refined study of fossils had thrown light on the question of the sinking of a mine shaft?—I think if a mining engineer puts down a bore and gets a fossil he might send it to us for identification.

653. Is not that precisely the function performed by the Geological Museum?—Not altogether, I should think.

654. It is the function which they claim to perform?—It may be, but the accurate determination of fossils depends more on our work than on theirs.

655. It is the practical application of geology?—Yes.

656. Which the Geological Museum has in the forefront of their claims that it is their practical function?—Taking that particular example of that fossil fish, if, in fact, it went to the Geological Museum—which I am not sure of—they would have brought it down to Sir Arthur Smith Woodward, who is the great authority on fossil fishes. They have not at the Survey a man who could accurately determine a fossil of that type.

657. That particular illustration, as far as it goes, would be in favour obviously of an amalgamation of the two museums?—No, because the work of the Geological Survey is entirely distinct from ours. I do not see how the museum could run the Survey. It is more than I should care to take on.

658. I gathered yesterday from Sir John Flett that it was quite a common practice in the case of a mining engineer wishing to know the strata that he had got to sink to, or for a water engineer desiring to find a water bearing strata, to go to the Geological Museum?—I think that would be right; also if he took typical fossils he would get what he wanted there.

659. If it becomes a little more abstruse he has to go to South Kensington?—Yes. There were two

men from Jermyn Street yesterday determining fossils.

660. If the two were together that would be unnecessary?—No, if the two museums were together they could come more easily. They would not have to go so far.

661. There was one question I wanted to ask about the Haldane findings in 1917 which you quoted in your statement. I gather you do not agree with the conclusion that committee came to: "We think that the responsible authorities might consider with advantage the possibility of entering into regular arrangements, by means of a body representative of each of the museums, and established for the purpose, whereby the spheres of the respective museums. . . ."—No, I think that is quite wrong. I cannot see any advantage in it. Each museum has its own business.

662. Did that committee call evidence?—I could not say. I do not know anything about it.

663. At any rate, it is a conclusion you do not agree with?—No.

664. (*Sir Thomas Heath*): Just one question about the Geological Museum. Would the economic question that arose be answered by you or Sir John Flett? A mining engineer applies to Sir John, and you say Sir John Flett has to come to you in order to get any fossils identified?—Yes, sometimes.

665. Does Sir John Flett answer that enquiry, or do you?—I should think probably he would. We should give him the information he asked for.

666. You would be expert advisers to him?—Yes.

667. (*Chairman*): It is quite possible that the mining engineer might have gone to you direct, and then you would answer him direct by letter?—Yes. If people send things to be identified, we identify them.

668. (*Sir Courtauld Thomson*): One more question with regard to the Geological Museum in Jermyn Street. By your answers, as I understand them, you say there is no overlapping, and beyond exchanging possibly some of the specimens which you think would be desirable, do you think it is advisable or desirable to take any more drastic steps towards co-ordinating or amalgamating those two collections?—No. I do not think it is desirable. I think that we and Sir John Flett both perfectly understand what our work is, that it is distinct, and that we do not need any other arrangement.

669. May I put it as high as to say that the conditions are ideal?—Yes, I think they are.

670. I have nothing more to say on that point. In reply (9) to the Commission's Questionnaire you say that a great deal of the time of the scientific staff is taken up with visitors and answering enquiries by correspondence?—Yes.

671. Does that apply to students and scientific bodies? Is that the correspondence with students and scientific bodies?—It is with them and all sorts of other people. We get a number of different kinds of things sent for identification or with enquiries.

672. What is the official attitude towards the public? If a member of the public asks for a particular specimen to be identified, is the official answer an act of courtesy, an act of grace, or is it considered part of the official duty to answer the public generally?—No, it is not the official duty to answer any member of the public, but where we can determine things for the public we do so; it depends entirely on what is sent. It is rather an act of grace to determine things. I mean to say, if a man sends something and wants its name, and it is going to be two or three days' work to do it, we really cannot do it, unless there is some special reason. We tell him, "This appears to be so-and-so," and leave it at that, and give him some idea what it is. Generally we can identify without any trouble, and then we do so; but we do not like to waste time on frivolous enquiries.

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

673. I only wanted to know what the official attitude towards the public was, whether positive or a negative one, to stimulate their interest?—I think we do undoubtedly stimulate the interest of people by answering their questions and determining things for them.

674. (Dr. Cowley): You say in reply to (6) of the Commission's Questionnaire that the amount of staff required would involve an increase of expenditure of £17,000. Does that mean the whole increase of staff required at present for your needs?—No, that was an estimate put forward some few years ago when the Trustees asked for an increase of staff.

675. You mean it would be larger now?—I think it would be larger.

676. And as the collections grow, as they evidently do, the need for staff would increase more?—Yes. I have put it in the memorandum, I think. It is not merely the growth of the collections, but the growth of the work, and the time taken in doing it.

677. Then as regards reply (4) to the Commission's Questionnaire you say there would be no economy in removing and that you have explained, but you have also said that in times to come, when it becomes necessary to remove the present building, you would send away the herbarium or the botanical collections and mineralogy. Would you propose that the botanical collections should then go to Kew? Would that be the best arrangement?—Possibly it would.

678. You would put it off as long as possible. That is what it comes to?—The museum has a tradition for scientific work, for pure scientific work, which it is very important to carry on, and one is always afraid that if any part of the museum is separated and placed under some other body which has not that ideal, the work may suffer in the future.

679. Then you speak of the Departments of Entomology and Mineralogy as being so very much congested, and I remember when we visited you the Department of Entomology was in a very congested state. That grows rapidly?—Very rapidly.

680. Have you any scheme for carrying on pending the building of some new accommodation?—No, we carry on as best we can. It is very difficult

681. You have no drastic scheme of re-arrangement or anything of that kind which would help you for the next year or two?—No, we cannot do anything without new buildings.

682. Because it must be some time before the new buildings are available?—Yes.

683. In the meantime, must the department become more congested?—I think so. We had exactly the same experience with the spirit collections. We were asking for a new spirit building for some 25 years before we got it, and you could hardly move in the old building.

684. One more question. You mention in reply (8) to the Commission's Questionnaire the loss from publications. Of course, a loss of £3,000 is a considerable sum, and you could buy a considerable amount of literature for that, although you say that you receive a certain amount of literature in return?—Yes, a great amount.

685. Do you consider that that loss is worth while?—Yes, quite. The publications are part of our work. It is part of the museum policy and business to issue monographs and catalogues. We have a high reputation for them, and we want to carry on, although they have not a profitable sale. No expensive scientific work has a profitable sale.

686. That I know.

687. (Sir Martin Conway): May I ask one question? You say the museum doubles in 25 years. Do you mean that is going on arithmetically or geometrically?—It has been an arithmetical progression. I know in the case of the collection of fishes, with which I was connected for a long time, we added 2,000 a year pretty regularly, and year after year about the same number.

688. (Chairman): In view of this progression, I should like to be quite clear as to what dissociations you ultimately contemplate. You said you thought mineralogy would have to be dissevered, and botany?—Yes.

689. So you would be left with pure zoology?—Zoology and palæontology.

690. That would be the ultimate fate?—Yes, that is bound to come in time.

(Chairman): Thank you, Dr. Regan. We are greatly indebted to you.

(The Witness withdrew.)

ADDENDUM.

The following examples were given by Mr. Tate Regan of the results of research work undertaken at the Natural History Museum, especially with regard to its utility to the nation in the economic sphere:—

1. It has been repeatedly pointed out that a great deal of the research done in the Zoological Department, while not directly economic, forms the basis for purely economic work elsewhere; for example—everyone who is working on the internal parasites of man and domestic animals will find it necessary to have at hand the "Synopsis of the Families and Genera of Nematoda," by Baylis and Daubney, published by the museum last year. A very great deal of work had been done in identifying the molluscan carriers of the tropical disease "Schistosomiasis" for medical officers and others who are engaged in its investigation. Much of this work is very scantily recognised by those whom this museum has helped. Similarly, Mr. Hirst, who until lately was the assistant in charge of the Arachnida, was constantly being consulted by the Imperial Bureau of Entomology and by medical and veterinary officers, for the identification of injurious mites.

If examples of more directly economic work are wanted it may be pointed out that the administration of the Plumage Act depends very largely on the museum for the identification of doubtful

samples of plumage which are sent here by the Customs authorities. The work occupies a great deal of the time of the staff in the bird room.

2. *Microlepidoptera* and *Coleoptera*.—Research carried out in 1913 conjointly by the Department of Entomology and War Office into the ravages of insects among Army biscuits, with a view to discovering means of prevention, was authoritatively stated to have resulted in an annual saving to the country of £10,000.

For the Grain Pests (War) Committee of the Royal Society, 1916-20, faunistic and statistical investigation of samples of grain was carried out. More than 450 such samples from all parts of the Empire were examined, and the insects found therein were determined.

Three volumes on *Coleoptera* (beetles) have been written by a member of the Department for the "Fauna of British India," primarily for the use of Forestry Officers and Economic Entomologists in the Indian Empire. Other published results of work of economic utility done in the Department of Entomology on *Coleoptera* are the following:—

On a new species of Melolonthid Beetle (*Phytalus smithi*) destructive to Sugar-cane, 1912.

On Sugar-cane pests (*Rhopaea*) in the Fiji Islands, 1915.

4 November, 1927.]

Mr. C. TATE REGAN, F.R.S.

[Continued.]

On the pests of Cacao in West Africa, 1917.
On the *khapra* grain-pest in India, 1917.
Pests of Sugar-cane in Mauritius, 1919.

3. The great practical importance of a properly classified general Collection of Insects from all parts of the world, is shown by the following case. About 1909 an unknown beetle appeared in the sugar plantations of Mauritius, increasing year by year, and inflicting enormous damage by destroying the cane-roots, and devastating the fields. Although countless millions were destroyed, nothing was effective in checking the spread of the pest. At last specimens were sent to the Department of Entomology, and, after being compared with others in the collection, were found to belong to a West Indian species, subsequently described under the name of *Phytalus smithi*. On inquiry in the West Indies, an unknown grub was found at cane-roots in Barbados, and specimens brought to London proved identical with the beetle grubs received from Mauritius. Upon one of the West Indian grubs was found a tiny parasite recognised as the grub of a parasitic wasp. Efforts, ultimately successful, were now made to import the parasite into Mauritius from Barbados. Introduced wasps immediately found and attacked the subterranean grubs; the parasites have multiplied rapidly, and established themselves, and it is hoped the beetle will become as unimportant in Mauritius as it is in Barbados.

4. *Lepidoptera Heterocera*.—The following are among the published results of work carried out in the Department of Entomology during the last few years:—

Investigation into identity of species of *Cosmophila* (these moths are cotton pests).

Description of two new species of the genus *Metadrepna* (*M. andersoni*, Tamm, is a moth injurious to coffee-trees).

5. *Description of a new processionary moth* (Notodontidae: injurious to pine trees in Cyprus).—It will now be possible for economic entomologists to attack the problem of control of these pests, and to publish their results in connection with definite species, instead of working in the dark. Preventive and remedial measures differ for different insects, and unless a particular pest be described in print in such a way that it can afterwards be recognised with certainty, and referred to by name, the requisite remedial measures cannot definitely be indicated, and no progress will be made in its control.

6. *Hemiptera*.—The following are among the results of research carried out during the period 1922-1927:—

Description of new species of *Lygus* (Cassidae) infesting potatoes in Java.

Description of a new species of *Triphleps* (Anthocoridae) preying on the eggs of the cotton boll worm (*Heliothis obsoleta* H.S.).

Description of a new genus and species of Jassidae (*Cicadulina zeae*) injurious to maize in Kenya Colony.

Description of a new genus and species of Capsidae injurious to the flowers of the Kola tree (*Cola acuminata*). A systematic revision of the species of Indian and Oriental Rice bugs (*Leptocoris*).

7. Considerable work has also been done on the cotton stainers (*Dysdercus* and *Oxycanenus*), the coffee bug (*Antestia lineaticollis*), the froghoppers of the Sugar-cane (*Tomaspis*), etc.

Numerous Hemiptera of economic importance have been named for the Imperial Bureau of Entomology.

8. *Diptera*.—Since the year 1898 collections of mosquitoes have been received from all parts of the world, and systematic research on these has resulted in a classification by means of which the known species, including the carriers of malaria, filariasis, yellow fever, and other formidable diseases, may be distinguished in both the larval and adult states. As a further result of these researches the number of known species of mosquitoes, which was less than 200 in 1901, stands at the present time at about 1,200.

Similar researches carried out in the Museum upon tsetse-flies, including carriers of sleeping-sickness and Tsetse-fly disease of animals, have led to a knowledge of nineteen distinct species, whereas only seven species were known a quarter of a century ago.

Researches upon other blood-sucking flies, and upon the common house-fly, have also been carried out, and the results have been published by the Trustees in pamphlets, which are in constant demand by Medical Officers of Health, and members of the public.

9. *Hymenoptera*.—The parasites of insect pests of *sal* and other forms of timber, as well as those of grain and of African silkworms, and many parasites of tsetse-flies, have been studied, named and described. As a result these parasites can now be identified, and the Imperial Bureau of Entomology is attempting to breed some of them in large numbers, with a view to utilising them in the control of the various destructive insects referred to.

10. *All Orders of Insects*.—Collections made during a series of recent expeditions, as those to Mount Everest, the South Pacific ("St. George"), and Samoa, have been worked out, and a large number of new genera and species have been described and published.

11. *Coleoptera*.—During the last 30 years over 100 memoirs on beetles containing descriptions of about 1,000 species new to science, have been published by members of the Department.

12. *Hemiptera*.—Since 1922, 46 papers have been published on insects of this Order, including faunistic papers relating to Rodriguez Island and Yunnan. Sixty new species, 23 new genera, one new subfamily, and one new family have been described during the last five years.

FIFTH DAY.

Thursday, 17th November, 1927.

PRESENT :

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.
 Sir MARTIN CONWAY, M.P., Litt.D.
 A. E. COWLEY, Esq., D.Litt., F.B.A.
 Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.
 Sir RICHARD GLAZEBROOK, K.C.B., LL.D.,
 F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.
 Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.
 Sir HENRY MIERS, D.Sc., F.R.S.
 Col. Sir COURTAULD THOMSON, K.B.E., C.B.
 Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).Mr. J. R. CHAMBERS (*Assistant Secretary*).

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D., Director and Principal Librarian, British Museum, called and examined.

The following Memorandum was submitted by Sir F. Kenyon on behalf of the Trustees in reply to the Commission's Questionnaire (*see Appendix I*):—

1. The British Museum was founded in 1753 to provide in the first place for the reception of the collection of Sir Hans Sloane, the Cottonian Library, and the Harleian Collection of Manuscripts. The collections of Sir Hans Sloane, which are described as consisting of "books, drawings, manuscripts, prints, medals and coins, ancient and modern, seals, cameos, and intaglios, precious stones, agates, jaspers, vessels of agate and jasper, chrystals, mathematical instruments, drawings, pictures and other things," were by his will to be offered to the nation for £20,000, which was avowedly much less than their real value. The Cottonian Library, originally collected by Sir Robert Cotton in the reigns of Elizabeth and James I., had been presented to the nation by the Cotton family, and (after suffering serious injury by fire in Ashburnham House in 1731) was still awaiting the proper accommodation promised for it by Queen Anne. The Harleian Manuscripts, collected by Robert and Edward Harley, Earls of Oxford, were offered by the widow of the second Earl and their only daughter, the Duchess of Portland, for £10,000, to be kept together as an addition to the Cottonian Library.

The Act of Incorporation (26 Geo. II., c. 22) provided for the raising, by means of a public lottery, of a sufficient sum of money to pay the two above-mentioned amounts of £20,000 and £10,000 to purchase and equip a General Repository for the collections acquired and to instal them therein, and to provide a capital endowment of £30,000 for the upkeep of the Repository and the salaries of the staff. To hold and administer this property a body of Trustees was created. The Trustees included eighteen high officials of Church and State, the President of the Royal Society, the President of the College of Physicians, two representatives each of the three families (Sloane, Cotton and Harley) whose collections constituted the Museum, and fifteen other persons to be elected for life by the official and family Trustees above-named. The Trustees were required to erect or provide, within the cities of London or Westminster, or the suburbs thereof, one General Repository to contain the collections then acquired, and such other collections and libraries as they should be willing to admit, to remain and be preserved therein for the public use to all posterity; upon trust that free access should be given to all "studious and curious" persons at such time and in such manner and under such regulations as the Trustees should direct.

The Act further provided for the appointment by the Crown, from two names to be recommended by the Archbishop of Canterbury, the Lord Chancellor (or Lord Keeper) and the Speaker of the House of Commons, or any two of them, of a Principal Librarian, "to whom the care and custody of the said General Repository shall be chiefly committed." The rest of the officers and servants required for the care and preservation of the General Repository were to be appointed from time to time by the same three dignitaries (generally known, though not so designated by the Act, as the Principal Trustees) or any two of them.

This original constitution of the British Museum has been very slightly modified subsequently. In the following year seven Trustees, including two out of the three Principal Trustees, were made a quorum for the election of Elected Trustees. The President of the Society of Antiquaries and the President of the Royal Academy were added to the list of ex-officio Trustees in 1824, and a representative nominated by the Crown in 1832. Representatives of the Townley, Elgin and Knight families were also added in recognition of great benefactions received from them. The total number of Trustees is now 51, viz., 26 Official Trustees (including the three Principal Trustees), one Trustee appointed by the Sovereign, nine Family Trustees, and 15 Elected Trustees.

A Standing Committee of the Trustees, consisting of the three Principal Trustees and 15 Trustees to be annually appointed at a General Meeting, was instituted in 1850, as a result of the strictures of the Royal Commission which reported in that year. The previous Standing Committee was an open one, which any Trustee might attend, and the Secretary summoned such Trustees as he thought likely to be able and willing to attend. The Trustee nominated by the Sovereign was made an ex-officio member in 1881, and in 1897 another elected member was added. The total number is now, therefore, twenty. The Standing Committee meets at Bloomsbury on the second Saturday in every month except August and September, and at the Natural History Museum usually eight times a year. It acts as an executive committee of the Trustees, and the general administration of the Museum is in its hands. Its minutes are confirmed at General Meetings of Trustees, which are held twice a year at each Museum.

The Elected Trustees, though less than a third numerically of the whole body, supply in practice the major part of the Standing Committee. The Official Trustees (though some of them are among the most active members of the body) are for the most part

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

fully occupied with their own offices; their tenures of the office on which their Trusteeship depends are not necessarily long, and they may not be much interested in museums. The Elected Trustees, on the other hand, are elected precisely because they are known to be interested as well as competent; and acceptance of election implies willingness to attend with some regularity. At the present time the Standing Committee consists of the three Principal Trustees, the Trustee nominated by the Sovereign, two Official Trustees, one Family Trustee, and thirteen Elected Trustees (one of whom is also temporarily an Official Trustee).

The election of Trustees is consequently a matter of much importance for the welfare of the Museum. According to the Act of Incorporation, the Trustees who have themselves been elected have no voice in the election of their colleagues, which is confined to the Official and Family Trustees. Since the Elected Trustees, as shown above, include most of those who take the greatest interest in the Museum, this provision is somewhat anomalous; but it may operate so as to keep the actual governing body of the Museum from being too much a self-chosen group. Constitutionally, the appointment is by free election in which all Electing Trustees have equal power; and up to 1863 this seems to have been the actual practice. It was common for several candidates to be proposed, and the election was made after discussion. In 1861 it is recorded that the Archbishop proposed the candidates who were elected, the First Lord of the Treasury being present among the Electing Trustees but not taking any conspicuous part in the election. In March, 1863, the Archbishop being absent but the other two Principal Trustees being present, the proposal was made by the First Lord. This started a practice, which became habitual, of proposal (almost amounting to direct nomination) by the Prime Minister of the day. From 1863 to 1915, whenever the Prime Minister was present, he proposed a candidate, and his candidate was elected (not quite always without opposition). On several occasions, however, the Prime Minister was not present, and the proposal was made by some other Trustee, not necessarily a Principal Trustee.

During and after the war this practice fell somewhat into abeyance, the Prime Minister taking little share in the affairs of the Museum. In January, 1924, at a meeting of the Electing Trustees at which the Prime Minister was present, attention was called to the constitutional right of any Trustee to put forward a candidate. It was represented, with general assent, that the Prime Minister was often in a position to propose suitable candidates, and that his association with the interests of the Museum was beneficial; but it was agreed that the Prime Minister has no exclusive or overriding right of nomination, and that the concurrent rights of the other Trustees should be recognised. In practice it has been usual for the Principal Trustees (to whom the other Trustees can, of course, make suggestions) to consult with the Prime Minister, and a name or names are presented to the Trustees by consent.

Whether logical or not, the government of the Museum by Trustees appointed as described above has worked well. It has given the Museum a governing body composed of men of high standing in political, academic and intellectual spheres, experienced in affairs and interested in the well-being of the Museum. Such a governing body is in every way preferable to a governing body composed of specialists. Its members are not likely to concern themselves overmuch with the details of administration; they are accustomed to be served by experts and to know when to trust them and when to control them. They are able men, accustomed to extensive supervision, and such of them as are not specialists on a particular subject are well equipped to require the Director and their other officers to explain and justify the proposals which they lay before them.

The Trustees give strength and authority to the Museum in dealing with Government Departments; and they command the respect and confidence of the general public.

One condition of the maintenance of such a governing body is that it should have real power. Men of the position and experience required for it will not care to serve on a merely advisory committee. To subordinate them to some central control, whether a Government Department or some body of super-Trustees, would be to make the machinery of administration more cumbrous and less efficient, and would deprive of its special characteristics a system of government which has hitherto given satisfaction both to the staff of the Museum and to the general public.

2. The Act of Incorporation, after reciting a codicil to the will of Sir Hans Sloane, in which he expressed his desire that "his Collection in all its branches might be, if it were possible, kept and preserved together whole and entire," provides for the transfer of the Collection from his Trustees to the newly constituted Trustees of the British Museum, "so as the said collection be preserved entire without the least diminution or separation," and for the erection or provision of a General Repository, in which the Sloane, Cottonian and Harleian Collections and any additions thereto shall remain and be preserved for public use to all posterity.

Under this Act it has always been held that the Trustees have no power to remove any portion of the Collections from the Museum; and when it has been desired to do so (as when the Natural History Collections were removed to South Kensington, or the provincial newspapers to Hendon) special Acts of Parliament have been obtained for the purpose.

Such powers as the Trustees possess to alienate or to lend objects forming part of the collections rest upon specific Acts of Parliament of 1767, 1807, 1878 and 1924.

(1) The Act 7 Geo. III, c. 18, enacts that "whereas there are now, and there may hereafter be, in the various Departments of the British Museum, many duplicates of Printed Books, Coins and other Curiosities, which it would be proper to dispose of, in order to make room for others; . . . be it enacted . . . that it shall and may be lawful to and for the said Trustees and their successors, or any five or more of them, at any meeting assembled . . . to order any duplicate of Printed Books, Medals, Coins, or other Curiosities, to be exchanged for Manuscripts, Books, Medals, Coins, or other Curiosities, or to direct any such duplicates . . . to be sold or disposed of, and the money to arise by such sale, to be laid out in the purchase of Manuscripts, Books, Medals, Coins and other Curiosities, that may be wanting in or proper for the said Museum."

(2) The Act 47 Geo. III, c. 36, enacts that "whereas among the several Collections and Additions thereto, which from time to time have been and may be placed in the British Museum, there now are, and hereafter may happen to be, some articles which are unfit to be preserved therein; and it would be beneficial for the said Institution that the Trustees thereof should have power to select and dispose of such articles either by way of exchange or sale, so that such articles, or the produce thereof, be applied in obtaining other things, which may be wanting to, or proper for the said Museum: . . . be it enacted . . . that it shall and may be lawful to and for the said Trustees and their successors, or any seven or more of them (the Archbishop of Canterbury, the Lord Chancellor of Great Britain, or Lord Keeper, and the Speaker of the House of Commons for the time being, respectively, or any two of them being of the number) present at any meeting specially assembled for that purpose, to order that any articles in the said

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

Museum, which they then adjudge to be unfit to be preserved therein, shall be exchanged for Manuscripts, Books, Medals, Coins, Statues or other things, which may be wanting in, or proper for the said Museum."

(3) The Act 41 & 42 Vict., c. 55, which authorises the removal of the Natural History collections to the building then in course of erection at South Kensington, and the transfer of all or any of the pictures belonging to the Trustees to the National Gallery or the National Portrait Gallery, in Clause 3 authorises the giving away of duplicates as follows: "The Trustees of the British Museum may also give away any duplicate works, objects, or specimens not required for the purposes of the Museum: Provided always that the power hereby conferred shall not extend to any duplicate works in the Royal Library of King George the Fourth, or in the Cracherode, Grenville or Banksian Libraries, or to any objects presented to the Museum for use and preservation therein."

(4) It was at one time supposed that the powers of disposal conferred by the above-named Acts might cover loans, and occasional loans of duplicate prints were actually made. In 1924, however, a legal opinion was sought from the Solicitor to the Treasury, which was adverse to the existence of such powers. A bill to authorise loans, under strict limitations, was therefore promoted by the Trustees, and was passed into law as the Act 14 & 15 Geo. V. c. 23, which enacts as follows:

"The Trustees of the British Museum shall have power at their discretion, and under such regulations as they may think fit from time to time to prescribe, to lend, for public exhibition in any gallery or museum under the control of a public authority or university in Great Britain, any duplicates of printed books, prints, medals, coins or other objects comprised in the collections of the Museum, or any object, not being a duplicate, which in their opinion can be temporarily removed from the Museum without injury to the interests of students or of the public visiting the exhibition galleries of the Museum."

The regulations made by the Trustees under the powers conferred by this Act define the objects which may be lent as follows:—

"2. Loans will in general be confined to:—

(a) Duplicates.

(b) Objects not required for public exhibition in the British Museum, and for which there is little demand on the part of students, and the loss or damage of which would not seriously affect the completeness of the collections.

3. No object that has been acquired by gift or bequest shall be lent, unless the consent of the donor or testator, or of his representative, has been received."

The Act authorising the disposal of duplicates has been frequently utilised in the Departments at Bloomsbury to which it applies, viz. Printed Books, Prints, and Coins and Medals. In these Departments it is possible that actual duplicates may occur, and duplicate books, prints, coins and medals have repeatedly been sold, exchanged, or otherwise disposed of, to the great benefit of the collections. By order of the Trustees, objects received by gift or bequest are not to be thus parted with: and the importance of this provision is indicated by the fact that Lord Fitzwilliam in 1816 was deterred from presenting his collections to the British Museum by the existence of the power to dispose of duplicates, and presented them to the University of Cambridge instead. So far as duplicates are concerned, the powers already possessed by the Trustees appear to be amply sufficient.

The Act authorising the disposal of objects considered to be unfit to be preserved has been much less frequently utilised. A strict view has been taken of

what constitutes unfitness. It is difficult to foresee exactly what use may be found for any article in the time to come, and it is dangerous for any one generation to be liberal in the removal of objects which have once been thought fit for inclusion in the collections. The requirements of scholars and specialists grow constantly more exacting. Specimens which at one time may be regarded as superseded may subsequently be found to have historical or artistic value. The drawings of the "primitives" of Italy or the "post-impressionists" of France might once have been regarded as "unfit to be preserved," but now have to be acquired at great cost. The Bodleian Library in the 17th century could dispose of the First Folio of Shakespeare because it was regarded as superseded by the Third; and the twentieth century might make similar mistakes as to the needs of the twenty-third.

It has to be remembered also that collections in a museum, and especially those in the British Museum, are on a very different footing from those of a private owner. A private collector seldom aims at completeness or exhaustiveness, or at meeting the needs of students. If he has got a fine specimen of a particular class of object, he may reasonably dispose of inferior specimens from his collection. But the collections of the Museum have to serve a different purpose, or rather several different purposes. Apart from the selected specimens exhibited to the general public, the Museum needs a large variety of specimens for the use of students. The strength and reputation of the British Museum rest, in great measure, on the extent of its collections, quite apart from the excellence of individual specimens. A student of Greek vases, prints, coins, antiquities of all kinds needs not only the finest specimens of each type, but a large number of those which are of less artistic merit, but which throw light on style, workmanship, subject or authorship. Completeness is a consideration of the first importance, as well as excellence of picked exhibits.

The true safeguard against the accumulation and retention of really valueless objects is that no head of a Department has either as much space or as much money as he would like to have. If, therefore, there are in his Department objects of which the utility has certainly departed, he will be glad to clear them out to obtain more elbow-room; especially if he is able to sell them, and thereby augment the funds available for purchasing what he really does want. The power to do so exists, but it is right that the procedure should not be too easy, and it should be used only with great caution.

It may be observed that in 1902 an application was made to Parliament by the Trustees, under pressure from the Treasury, for power to dispose of printed books of minor interest. The proposal aroused strong public protests, and Parliament eventually rejected it. It is probable that any proposals to give the Trustees extensive powers of weeding the collections would be received with grave misgivings, and that the public would prefer the risk of having too much to that of having too little.

3. There can be little question as to the value, as a part of general museum policy, of a central institution which should be able to make loans to municipal, and perhaps to overseas museums. Such an institution would strengthen local museums in a respect in which they are often weak, namely the power to stimulate and maintain public interest by novelty and variety in their exhibitions. Change is of the essence of life; and while even the smallest museum may do something by fresh grouping and varied combination of its collections, nearly all would be greatly assisted if they were able to draw upon a central store for nucleus exhibitions on particular subjects.

An analogy may be found in the proposals of the recent Departmental Committee on Public Libraries, which recommends the institution of a Central

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

Library, linked with the British Museum but with a wholly independent stock of books, from which libraries and students throughout the country would be able to borrow those books which local libraries do not themselves possess. A central lending depository for museums might well be found equally useful.

It has often been suggested that the national museums in London should themselves act as such depositories, and that their collections should be available for loan to municipal and even to overseas and foreign galleries. It has been represented that this policy would at once strengthen the local museums and relieve the pressure on the space available in London. So it would, but at the cost of gravely weakening the national museums, of inconveniencing students, and retarding research. The proposal in fact rests upon the misconception that the national museums have large accumulations of superfluous objects, and upon a misunderstanding of the needs of students. As explained in the previous section, effective research requires large collections of objects. Fifty Greek vases or terracottas in a single museum may enable a student to make useful comparisons or classifications; but scattered over twenty or thirty museums they would be useless for this purpose and of little value for any other. Moreover, the greater the Museum, the more important is it that students and visitors should be able to count on finding in it the objects which they know to belong to it. A minor museum may lend with little inconvenience to any body; but a museum such as the British Museum serves science best by retaining its collections and keeping them at the disposal of students. What is really superfluous can be disposed of as explained in the previous section.

The preferable policy would accordingly be, as in the case of the Central Library mentioned above, to form a completely separate collection of objects available for loan; and for this a large nucleus already exists in the Loan Department of the Victoria and Albert Museum. Lending has from the first been an integral part of the organisation of that Museum; and it would seem that the needs of municipal museums could be most easily met by strengthening and extending it. The British Museum might be able to co-operate by transferring to this central depot some of those objects which the Trustees desired to dispose of under the powers described in the previous section; but separate funds should be available for the purchase for the central collection of objects not desired for the main collections of the national museums.

A special department, to which the Trustees could give important assistance, would be that of casts. As explained elsewhere, a scheme was formulated some years ago for the establishment of a Department of Casts, with a repository of its own, under the administration of the Victoria and Albert Museum; and the Trustees agreed to transfer to such a Department the very valuable collection of moulds in their possession. This scheme has so far been only very imperfectly put into operation, and in particular the repository which is an essential element of it has not been provided. If, however, the scheme were fully carried out, a large source of supply would exist from which a great part of the needs of local museums could be met at relatively slight cost.

4. Hitherto the intercourse between the different national museums has been informal, but it has not been lacking or ineffective. The personal relations between the senior staffs of the several institutions are, and have been for a considerable time, entirely friendly, and communications have been frequent with regard either to details of administration or to technical subjects in which two museums are jointly interested. Social intercourse and exchange of information have been promoted by the formation, a few years ago, of a Museums Dining Club, at which discussions take place on questions of museums

policy. At the same time there would be advantage in a more organised system of intercommunication. Periodical meetings of Directors and of Heads of Departments would lead to more uniformity in the treatment of kindred problems, and would give occasion for the staff of one Museum to visit another, — a practice which at present is rather treated as if it were a neglect of duty, whereas visits to other museums, whether at home or abroad, may be very useful in suggesting new ideas. With this object in view it would be desirable that, if periodical meetings should be instituted, they should be held in the different institutions in succession, and should include an inspection of any recent novelties or additions.

Increased intercourse is desirable more for the sake of the discussion of administrative details and the stimulus arising from the interchange of ideas, than for the elimination of competition, which in practice is almost non-existent. Overlapping between different museums undoubtedly exists, in the sense that more than one museum collects objects of the same kind. Thus the Botanical Department of the Natural History Museum and the Royal Botanic Gardens at Kew both collect flowers, and the Geological Department and the Museum of Practical Geology in Jernyn Street both collect fossils. These will be dealt with in the Memorandum from the Natural History Museum. At Bloomsbury such overlapping as exists concerns the Department of Mediæval Antiquities, Ceramics, and Prints and Drawings.

The Department of Mediæval Antiquities collects objects of the Middle Ages from the historical point of view, as a part of its record of the history of mankind and especially of this country. The Victoria and Albert Museum collects objects of the same period as representations of mediæval art, and with the special purpose of the encouragement of craftsmanship. At Bloomsbury these objects fall into their proper place as illustrations of the history of civilisation, and it would be a glaring defect if the national museum ignored the history of the country after the close of the Saxon or Norman period. The collections there are arranged by countries and periods; their artistic side comes into account because the art of a country is part of its history, and no picture of it is complete which does not show its intellectual and artistic development. English alabaster carvings, French enamels, Italian majolica, German plate, Flemish carvings are parts of the history of their respective countries, and show the state of civilisation reached by those peoples and the setting in which they lived. In addition, there are the objects possessing specific historical associations, such as seals, medals, and articles once owned by famous men. At South Kensington the underlying principle, as it was the motive for the foundation of the Museum, is the encouragement of technical craftsmanship. There, objects are grouped according to their material, as examples of skill in the handling of gold, silver, bronze, iron, wood, and so on. There is no real overlapping here. The same objects have importance from different points of view, and both points of view are essential. The country cannot dispense with either a technical or a historical museum, and requires in different places different groupings of objects of the same nature. All that is necessary is that the institutions concerned should regard one another not as rivals but as colleagues, and should take care to avoid competition in the market. This is done, as will be stated below.

The same principle applies in great measure to the collections of Ceramics in the same two museums. The point of view at Bloomsbury is primarily historical, at South Kensington primarily artistic. But in practice the similarity is greater, and there is no great difference between the arrangement of a ceramic collection on a historical or on an artistic basis. If the two collections were injuring one another by their co-existence, and if the country were having two weak collections instead of one

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

strong one, something might be said in favour of their combination. There is no reason, however, for believing this to be the fact; and provided that the interests of students do not suffer, there is considerable advantage, in a city of the size of London, in having more than one place where objects of a given class can be seen. Human endurance has its limits, and the amount that can profitably be seen on one visit is limited. If all the national collections of pottery and porcelain were brought together in one place, the total would be much greater than could be exhibited without overwhelming the visitor. Two visits to two exhibitions of moderate size are much more profitable than one to a very large exhibition, or even than two, since the visitor, unless he is an expert, is likely to be crushed and discouraged by the quantity of objects offered to him. From the point of view of the general public, therefore, two exhibitions are better than one; and it is not believed that the student suffers when, for most purposes, either collection suffices, and when the two collections are so near that comparison is easy. Such disadvantage as still remains could be met by increased power for loans between the London museums, which would allow of occasional temporary concentrations of particular groups, without detriment to the interests of visitors, who would at worst be referred from Bloomsbury to Kensington or *vice versa*.

The question as it affects the Department of Prints and Drawings is rather different. A witness before the Commission of 1848 suggested that, as a matter of principle, it would be proper that this Department of the British Museum should be transferred to the National Gallery, so that oil paintings, water colours, drawings, engravings and all kinds of prints should be concentrated within easy reach of one another under the same roof. The witness did not, however, even at that time, regard this as a practical proposition, and it would be still less so now. Rather the tendency has been to divide instead of to concentrate, as is shown by the creation, since that date, of the National Portrait Gallery and the National Gallery of Modern Art at Millbank. The advantage to the general public is very obvious, for the reasons set out in the last paragraph. The Print Room at the British Museum has acquired a reputation and position of its own, which no one wishes to disturb; nor does it desire to absorb the water colours from the Tate Gallery and the Victoria and Albert Museum. Even the purpose of a concentration of all pictorial art could not be realised by a move, since the prints in the Print Room need to be supplemented by the prints in the Departments of Printed Books, and important sections of both western and oriental art to be sought in the Department of Manuscripts and of Oriental Printed Books and Manuscripts. Ideal concentration could only be effected by the creation of a vast museum quarter, in which all the museums and picture galleries would be brought together; and that is neither practical nor desirable. But, as suggested in the previous paragraph, the interests of students, and occasionally of the general public might be served by increased powers of inter-loan, strictly confined within the limits of London.

There remains the question of competition between institutions in the matter of purchases. There appears to be an impression that such competition exists; but this is a delusion. It is quite an established practice at the British Museum to inquire, when objects of certain kinds are in the market, whether other institutions are contemplating their purchase; and this applies not only to other national collections in London, but to national or quasi-national collections elsewhere, such as the National Library and Museum of Scotland, or the Bodleian Library. There is seldom any difficulty in arriving at an amicable understanding, sometimes that one institution or the other shall stand aside altogether, sometimes that one institution shall not begin to bid until the commission of the other has been defeated by outside competition. No national institution

wishes to exhaust its funds in competition with another, and friendly intercourse between staffs provides an easy solution. It may be added that on certain occasions the National Art Collections Fund provides a useful clearing-house for the claims of the different museums and galleries; and it can be affirmed that its allocations of purchases and benefactions to the several institutions command general satisfaction.

5. The Act of Incorporation, as stated above, provided that free access should be given to the collections of the British Museum, under regulations to be prescribed by the Trustees, to all "studious and curious persons," which phrase may be presumed to cover the two categories now described as students and the general public. No fees for admission consequently have ever been charged at the British Museum, and the Law Officers have more than once ruled that fresh legislation would be necessary to empower the Trustees to levy them. In 1916 a proposal was made, as a war measure, that fees should be imposed; but it was dropped in face of the opinion of the Law Officers. In 1923 the Geddes Committee recommended the imposition of fees, and a clause authorising it was introduced, in spite of the strongly-expressed reluctance of the Trustees, into a Bill of that year. This elicited vehement protests outside the Museum, which took voice in Parliament and in the Press; and after the clause had passed (with amendments) through the Standing Committee by the smallest possible majority, it was withdrawn by the Government on Report. It was quite clear that public feeling was against the proposal.

The question at issue is a very simple one. Is it desired to encourage the use of the museum, or is it not? There is not the smallest doubt that the imposition of fees discourages attendances. The British Museum fortunately cannot quote from its own experience, but the experience of the National Gallery and of the Victoria and Albert Museum will be at the service of the Commission. Fees at both these institutions were imposed on certain days with the deliberate purpose of discouraging the attendance of the general public and reserving the galleries mainly for the use of students. That was the purpose and that was the result. The question, therefore, simply is whether it is worth while to exclude the public (and especially, of course, the poorer members of the public) for the sake of the pecuniary return to be expected from fees.

As to the extent of the pecuniary return, only a very vague estimate can be given. The total number of visitors to the Museum on week-days (Sundays would presumably be free anyhow) has of late years been in the neighbourhood of one million. Of these, about one-quarter have been holders of tickets for the Reading Room or Students' Rooms, who would presumably be exempt. If a fee of sixpence were levied on three days of the week, it is probably safe to assume that those three days, instead of providing half the attendance of the week, would not provide more than one-third. The yield at this rate would be about £6,000 per annum. From this deductions have to be made (a) for the fact that Saturdays and Bank Holidays, when the attendance is greatest, would presumably be free days, (b) for a decline in the receipts from guide-books and picture postcards.

The policy of the Trustees has always been against the imposition of fees, and in favour of the increased use of the Museum by the public. It would be inconsistent to institute official lectures, as has been done, with connected programmes of instruction, and then to discourage attendance at them on three days of the week. The nation has a very large capital invested in the Museum, and it is better to look for the return on it from the educational advantages offered to the public, than from a trivial taking of cash at the turnstiles. It seems the sounder policy as well as in accordance with the original Trust, to make the Museum as attractive as possible to the

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

public, and to regard it as an element in the cultural education of the community. Even a financial profit may be expected from its increased popularity, since the sales of its publications and photographs will be increased. The Trustees would, therefore, regard the imposition of fees as a retrograde step, inconsistent with and harmful to the policy of the development of museums which they desire to encourage.

6. Entrance to the higher posts in the Museum (Assistantships) has since 1860 been by limited competition. Applicants have first to obtain a nomination from one of the Principal Trustees, which places them on the provisional list of candidates. Early in each year the Principal Trustees meet and consider the vacancies which have to be provided for during the year, and select from their list a sufficiency of the candidates best qualified for the Departments concerned. These names are forwarded to the Civil Service Commissioners, by whom the competition is conducted. Before the war this took the form of a competitive written examination of a rather simple kind. Latin, Greek, French and German were compulsory subjects (except for Oriental Departments), but the standard of the papers was not high, and discrimination of the best candidates was not always well effected. Now the examination consists of qualifying papers in English, Arithmetic, and General Knowledge, followed by an interview with a Selection Board. The Board is nominated by the Civil Service Commissioners and has of late years usually consisted of the First Commissioner as Chairman, the Director of the British Museum (or of the Natural History Museum), and the Keeper of the Department in which the vacancy exists. They have before them the record of the candidate's career and such testimonials as he may have chosen to submit. The Board's selection is final, subject to the passing of a medical examination.

In the statement of conditions of appointment, applicants are informed that the standard of qualification may be taken as that equivalent to a first or second class in honours at a university. Latin, French and German are practically essential for all departments at Bloomsbury. Greek is not now demanded, unless it is needed for the particular vacancy to be filled. For the larger Departments (Printed Books and Manuscripts) technical knowledge of the subjects dealt with in those Departments is not required; credit can be given for it if it exists, but a good general education, with evidence of ability, is the main desideratum. For other Departments (Egyptian and Assyrian, Greek and Roman, Coins and Medals, Oriental) some training in the archaeology or languages required is expected, and in those of Prints and Drawings, British and Mediæval Antiquities, and Ceramics and Ethnography, at least some evidence of a taste for those subjects. But in general it may be said that ability rather than previous technical training is the main requirement. In such an institution as the British Museum, where materials for first-hand work are plentiful and trained seniors are at hand to supervise and assist, a new entrant, if he has ability and willingness, can acquire his technical knowledge after entrance. Several of the most eminent members of the Museum staff had at the time of their appointment to the Museum no acquaintance with the subjects in which they eventually acquired a world-wide reputation. All appointments are subject to confirmation by the Trustees after two years.

The limits of age for admission are from 22 to 26 years of age; but provision is made for the acceptance of candidates above that age if they have been engaged on work analogous to that required of them in the Museum. Thus training in the British Schools of Archaeology in Athens, Rome or Jerusalem, or experience in excavations, can be taken into account. A candidate entering at the age of 25 receives the full initial salary of £250 (with bonus); if he is younger, a deduction of £20 per annum is made; if he

is older, an advance may be allowed with the assent of the Treasury.

There is no special training for the higher posts in the administration, but the members of the staff, as they acquire experience, are more and more associated with their chiefs in the working of the Department, and so qualify themselves to succeed to the higher posts in due course. *Solvitur ambulando*.

7. The "General Repository" prescribed by the Act of Incorporation was found in Montagu House, which, with the extensive gardens to the north of it, was purchased in 1754 for £10,000 and conveyed to the Trustees. On this site the present Museum stands. For nearly fifty years Montagu House sufficed, since few additions were made to the collections, but from 1804 to the present day the history of the Museum buildings* has been one of continual expansion to meet continually recurring congestion.

The first encroachment on the gardens was made in 1804-8 by a building erected on the west side to receive the Egyptian antiquities captured from the French in 1801 and the Townley Marbles purchased in 1805. But the main transformation of the Museum into its present form arose from the acquisition in 1823 of the Library of King George III. With a view to the accommodation of this, and to provide for the future expansion of the Museum, Mr. (afterwards Sir Robert) Smirke was authorised to prepare plans for a great quadrangle covering the site of Montagu House and gardens. This plan was carried into effect in successive stages between that date and 1852. The eastern side, containing the King's Library on the ground floor, was completed by 1828, the western, incorporating the building of 1804-8, by 1834, the northern by 1838. In that year a Select Committee of the House of Commons sat on the buildings of the Museum and recommended the completion of Smirke's plan (involving the removal of Montagu House and the building of 1804-8), with certain additions, at an estimated cost of £250,000. The execution of this plan was spread over many years, and was not finally completed until 1852, when the main quadrangle and the front courtyard were finished practically as they stand to-day.

Meanwhile the Elgin Room had been erected in 1831, parallel with the western side of the main quadrangle, to replace the temporary building in which the Elgin Marbles had been housed since their purchase in 1816; additional galleries had been completed, also on the western side, by 1851 for the accommodation of the Assyrian sculptures from Nineveh; and in 1852, when the quadrangle was complete, Panizzi propounded his plan for a large circular Reading Room to stand in the centre of it, which was carried into effect in 1854-7. After this there were only minor extensions at Bloomsbury for over twenty years; but this cessation of building operations led to great congestion, which was only relieved by the removal of the Natural History Collections to South Kensington. The necessity of increased provision for these collections had long been obvious; and after proposals for the erection of new galleries on the adjoining sites to the east, north, and west of the Museum had been successively rejected by the Treasury, the Trustees in 1860 proposed their removal to South Kensington. Treasury approval was obtained in 1861, but a Bill to authorise it was rejected by the House of Commons in 1862. Eventually the erection of the new Museum in Cromwell Road was commenced in 1873; an Act authorising the removal of the collections was passed in 1878; the building was completed in 1880, and the collections were transferred in the course of the years 1880-85. The relief thus given to the collections at Bloomsbury was by that time very much overdue.

* Recorded in an illustrated monograph, *The Buildings of the British Museum*, of which a small edition was issued in 1914, on the occasion of the opening of King Edward the Seventh's Galleries.

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued]

The next extension at Bloomsbury was due to the bequest in 1879 by Mr. William White of the sum of £72,000 for the purpose of increasing the accommodation in the Museum. With this money the Trustees were able to build the present Mausoleum Room on a vacant space to the west of the main quadrangle and the White Wing at the south-east corner, in which accommodation is now found for parts of the Departments of Manuscripts and of Ethnology, the Oriental Religions Rooms and the Iron Age Gallery. This wing was completed in 1884.

A step of very great importance, which must influence the development of the Museum for generations to come, was taken in 1894, when the Government, on the recommendation of the Chancellor of the Exchequer, Sir W. Harcourt, with much forethought purchased the entire block of land contiguous to the Museum on the east, north and west. This land, which had been valued at £240,000 in 1859, was sold to the Government by the Duke of Bedford for £200,000, and thus ample space for expansion was secured. Part of the northern frontage (in Montagu Place) is now occupied by King Edward the Seventh's Galleries, erected between the years 1906 and 1914 as the result of a bequest of £50,000 in 1899 by Mr. V. S. Lean, to which £150,000 (with some deductions) was added by the Government in 1903. But the remainder—the two ends of the north side, with the whole of one side of Montagu Street on the east and of Bedford Square and Bloomsbury Street on the west—remains available for the future needs of the Museum. At present the houses are let on leases (terminable at seven-year intervals), the rents from which (amounting now to almost £8,200 per annum) go in payment of an annuity (terminating in 1949) to replace the purchase money, and in relief of the Parliamentary grant.

One further increase of accommodation was obtained in 1902 by the purchase (under the Act 2 Edw. VII, c. 12) of land at Hendon, on which a building was erected for the storage of provincial newspapers. This building has been full since 1922, and papers which ought to be housed there are now being provisionally stored at Bloomsbury; but ample land is available for extensions of it.

It will thus be seen that land has been provided by the foresight of the past, both at Bloomsbury and at Hendon (and also at South Kensington), sufficient for the needs of the Museum for as long a period as need be taken into account. It remains to consider what those needs are.

The present policy of the Trustees does not contemplate any immediate increase of exhibition space, with one exception. The present galleries of the Museum are large enough for the needs of the general public, and any extension of them would only add to the fatigue of visitors without increasing their edification. The main needs of the Museum fall under four heads: (1) storage for printed books and newspapers, (2) the Department of Ethnography, (3) storage and study space for the Departments of Antiquities, (4) a Lecture theatre.

(1) *Printed Books and Newspapers.*—The need for the continual growth of the Library is obvious, if the Library is to be kept up to date and maintain its position as the first library in the world. Books and newspapers published in the United Kingdom come to it automatically under the provisions of the Copyright Act, whereby the publishers are bound to send, and the Trustees to receive, a copy of every book published. Similar provisions are made by special legislation of the Irish Free State, the Dominions of Canada and South Africa, and India. The working of the Copyright Act is one of the subjects specifically referred to the Commission, and will be dealt with in a separate section of this Memorandum. Further, if the efficiency and reputation of the Library are to be maintained, a large number of foreign books and periodicals must be purchased. At present about £5,000 a year is

devoted from the Grant-in-aid of Purchases to this purpose. In addition, purchases must be made to improve the antiquarian branch of the Department.

As a result of these measures, the annual accessions to the Library now amount to about 40,000 books and pamphlets, about 100,000 periodicals and parts of volumes, and about 250,000 single numbers of newspapers. To accommodate these, it is estimated that about one mile of additional shelving is required each year. The space now available is so small that it is already too late to make provision for the accessions which will inevitably arrive before any additional accommodation can be provided; and, as will be shown below, the existing accommodation is already dangerously overcrowded. The Trustees are under a statutory obligation to receive the greater part of these accessions, and cannot seriously curtail their purchases without detriment to the efficiency of the Library. They are therefore entitled to look to Parliament to enable them to fulfil their obligations.

The main book-stack of the Library, commonly known as the Iron Library, is built around the circular Reading Room, enclosing it in a rectangle composed of steel bookshelves, abutting immediately on the exterior of the Reading Room itself. So far back as 1920 a scheme was proposed by the Office of Works and approved by the Treasury for the extension of this book-stack by the addition of another storey. One quadrant of this new storey was erected in 1923, and is in full use, while elsewhere in the book-stack additions are annually made by means of hanging presses, which slide in front of the original fixed presses. Proposals for the erection of another quadrant of the new storey were included in the Estimates for 1925, and money was voted for it by Parliament. The preparation of plans for this work, however, led the Director of Works of the Office of Works to entertain grave doubts of its expediency, and the work was delayed in order that he might make a fresh examination of the whole structure and report upon it with reference both to its stability and to its security against fire. It is this report, which was received in October, 1926, that is the main occasion of the present crisis.

The report stated that, while the structure of the Reading Room itself is sound, and may be considered to be secure for another 50-70 years, the whole structure of the Iron Library is too slight for the purpose for which it is used. Dangerously high stresses are found to exist as the result of the addition to the original structure of suspended rolling presses. Not only is it not considered practicable to build the additional storey on the existing quadrants, as previously contemplated, but within the last few weeks the Director of Works has strongly urged the removal of over 200 of the existing hanging presses. The books from these presses (about 80,000 in number) will have to be stacked on the floor of the King Edward Building, in total disregard of their proper classification, until provision is made for them. Further, the report states that the conditions with regard to fire are highly unsatisfactory. The whole of the Reading Room and Iron Library constitutes one immense risk, without subdivision either vertically or horizontally. A fire of even small dimensions might lead to collapse in one portion, which might progressively involve the whole structure.

The gravity and urgency of the situation are therefore evident. For at least seven years past the Trustees have foreseen the need for expansion, and have endeavoured to provide for it. In every direction they have been blocked. The addition of more hanging presses is prohibited and the removal of some of those already in use is demanded; the erection of a new storey is declared to be impossible; the extension of the Hendon Repository, once promised, has been withheld on the plea of economy. Meanwhile the Library grows, and must grow if it is to maintain its usefulness. No modification of the

17 November, 1927.]

[Continued]

Copyright Acts can do more than diminish the rate of growth, and no modification which is at all likely to be made will diminish it to any great extent. Provision of a far-seeing (but not necessarily of an immediately very expensive) nature is an urgent necessity.

A scheme has accordingly been prepared, at the request of the Trustees, by the Director of Works; and it was the presentation of this scheme, together with the representation of the needs of the Natural History Museum, that led to the appointment of the present Commission. This scheme comprises (a) the enclosing of the Reading Room with a fireproof wall so as to isolate it from the Iron Library, (b) the reconstruction of the Iron Library in four quadrants each consisting of six storeys, built of reinforced concrete throughout, with fireproof concrete floors and with artificial light and ventilation. The first step would be the erection of two annexes, which would hold the contents of the first quadrant to be dealt with, together with the normal accessions of the Library during the period of reconstruction. These annexes would be so designed as eventually to form part of the permanent reconstructed building. The building so reconstructed would provide a total of 650,000 lineal feet of shelving, as against 157,000 in the present Iron Library. It is estimated that, at the present rate of growth, this would provide for the needs of the Library for 72 years in respect of books, and for 38 years in respect of newspapers. The period of reconstruction, if proceeded with continuously, would be about 15 years. No authoritative estimate of cost has been given, but a figure of £368,000 was at one time mentioned. A provisional estimate of the cost of the two annexes which would form the first portion of the scheme, and which it is urgently desired should be put in hand without delay, is £33,000.

This, then, together with such extension of the Newspaper Repository at Hendon as may be authorised, is the scheme at present before the Government. It is a scheme which takes account of the future, while its cost will be spread over a considerable number of years. It would make possible the orderly expansion of the Library, with a scientific arrangement which is at present compromised by the hand-to-mouth expedients which are forced upon the staff; and it would ensure the future of the Library for a period as long as the present generation need take into account.

(2) *Ethnography*.—The one Department at Bloomsbury which needs a large addition of exhibition space is that of Ethnography. The Ethnographical Collections at present occupy the upper floor of the east side of the main quadrangle. Here there is a long range of galleries, packed to overflowing with objects from Asia, Africa, America and Oceania, where the visitor passes in a few steps from the pottery of ancient Peru to the canoes of the Solomon Islands, the fetishes of Benin, the carvings of the Maoris, and the implements of the Esquimaux. It is quite impossible for the visitor to gain a clear idea of any one civilisation. The effect is simply that of a large curiosity shop. In addition, quantities of materials are stowed away in the basement, inaccessible either to students or to casual visitors. Temporary relief has been found by utilising the residences formerly occupied by heads of Departments; but this is neither adequate nor satisfactory.

The British Museum contains ample materials to furnish out a first-class Ethnographical Museum; and the British Empire, which is in contact with the backward races in every quarter of the globe, ought to possess such a museum in its capital. A building of the size of the Natural History Museum would not be too large to do justice to all the material available. In Belgium, a large museum is devoted solely to the products of Belgian Congo. At Bloomsbury, there is a small fraction of that space to represent the whole world. What is wanted is a series of rooms or compartments, each of which would be reserved for a single people or connected group of peoples. In each room the visitor would

have before him a single civilisation, illustrated by maps, wall-paintings, and photographs (including stereoscopic views), together with the objects pertaining to that civilisation. The uses of such a museum would not be confined to enlarging the ideas of the general public and giving them a livelier realisation of the problems of empire. It would play an invaluable part in that ethnographical training which is now regarded as a necessary preparation for the young men who are going out to hold official posts in Africa and other parts of the Empire.

One solution of the difficulty would be the creation of a separate Museum of Ethnography. Power to remove the ethnographical collections was included in the Bill of 1862 dealing with the Natural History collections; but this part of the scheme was not pressed. Failing this (which might be a very proper subject for the beneficence of a millionaire interested in the welfare of the Empire), a solution might be found by the utilisation of the Montagu Street site. Here a range of galleries might be erected, parallel with the present Ethnographical Gallery, and united to it by a number of cross galleries. In this way the available exhibition space would be trebled, which would be by no means too much; and ample storage would be provided below.

The sooner some such provision is made, the better. Travellers are continually bringing back specimens from all parts of the world illustrating the life and occupations of the backward races. It is very desirable that they should do so, as these primitive civilisations are always in danger of perversion or extinction as the result of contact with Europeans. The more material that can be collected while they are still uncorrupted, the better; and as local varieties are endless, the range of such collections is unbounded. Much material also exists, scattered up and down the country in private hands, some of which (especially objects brought home by early travellers from unspoiled lands) would be of much greater value if transferred to the National Museum.

(3) *Departments of Antiquities*.—Several other departments are in difficulties in respect of accommodation, notably those of Oriental Printed Books and Manuscripts, Ceramics, and British and Mediæval Antiquities. Here, however, the main need is not for exhibition space, but for storage. The policy of the Trustees, if space were available, would be to exhibit less, rather than more, to the general public, and to form study collections which would consist of rooms in which objects would be stored much more closely than is desirable in exhibition galleries, and without reference to display, but in such a way that they would be readily accessible for specialist students. This would be to apply to antiquities the methods already in use for printed books, manuscripts, prints, and the natural history collections. To these rooms would be withdrawn a portion of the objects now thronging the exhibition galleries, and it would then be possible to display the rest more effectively.

If and when galleries are erected on the Montagu Street and Bedford Square sites, nearly the whole, with the exception of the part required for Ethnography, could be allotted to storage and studies, and ample provision would thus be available for a long time to come.

(4) *Lecture Theatre*.—At present there are no facilities at Bloomsbury for lectures or the use of a magic lantern. Such lectures as are given have to be held in the room known as the Assyrian Basement; but this room is part of the exhibition galleries of the Museum, and is constantly required for other purposes, such as temporary exhibitions. Moreover with the continual accession of fresh objects from Mesopotamia, it cannot be long before it will be occupied by a permanent part of the Assyrian Department. A lecture theatre is an indispensable part of the equipment of a live museum, and only with its help can the educational resources of the Museum be made effective. A suitable theatre, with independent access, could be erected on a part of

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued]

the available site, and there can be no doubt as to its utility. It would not supplant, but would supplement, the peripatetic lectures now conducted by the Official Guide-Lecturers, which explain to the public the contents of the exhibition galleries in the presence of the objects themselves.

8. The publications and other reproductions of the British Museum fall into four principal categories, (1) Catalogues, (2) Guide-books, (3) Photographs, (4) Casts and Electrotypes.

(1) *Catalogues*.—These are full-scale scientific catalogues of sections of the collections, each aiming at completeness within its own scope, but with a varying amount of detail according to the subject. The principal is of course the General Catalogue of Printed Books, first issued in 393 parts in the years 1881-99, completed up to the year 1900 in a supplement of 45 parts, and since continued in periodical Lists of Accessions. Apart from this, the output of the several departments (excluding publications now obsolete) may be roughly classified as follows (the figures being those of volumes):—

	Catalogues.	Guide-books.	Reproductions.
			Volumes.
Printed Books	32	5	2
Manuscripts	66	7	37
Oriental printed Books and Manuscripts.	58	—	—
Prints and Drawings ...	35	9	34
Egyptian and Assyrian ...	25	14	63
Greek and Roman ...	38	11	2
British and Mediaeval ...	7	10	—
Ceramics and Ethnography	3	8	—
Coins and Medals	60	9	20
Total	324	73	158

The catalogues as a whole are not financially remunerative. They are priced so as to cover the cost of production (apart from authors' salaries), if all copies are sold; but many copies are in fact given away, either to public libraries and institutions in this country or to foreign libraries, from many of which return gifts, more or less equivalent, are received. Whether financially profitable or not, however, they are essential. The first duty of a museum is to catalogue its contents; otherwise their utility is, at the least, greatly diminished. Every self-respecting museum of any importance should have a catalogue in order that students may be aware of its contents. The catalogues of the British Museum are part of its contribution to learning and education, and their production is a plain duty.

The position of the Museum in respect of catalogues is fairly satisfactory, but in most departments gaps remain to be filled, or old catalogues to be brought up to date. The production of these volumes depends mainly on the adequacy of the staff. The Departments of British and Mediaeval Antiquities and of Ceramics and Ethnography, in particular, and the Oriental section of the Department of Prints and Drawings, have staffs so small that the production of catalogues is inevitably slow. The quality of the staff is of the highest, but the quantity is inadequate.

The Catalogue of Printed Books stands in a category by itself. The original catalogue and supplement have long been out of print. Libraries which have subscribed for the Lists of Accessions since 1900 have been able to keep their copies up to date; but no new library is now able to obtain a complete copy. Inquiries as to a reprint are received from time to time, especially from America. Ideally, it would be desirable to reprint the whole catalogue, bringing it fully up to date; but this would be a very long and expensive undertaking. An alternative

would be to undertake a Twentieth Century Catalogue, commencing where the old catalogue leaves off, and absorbing all the Lists of Accessions. A scheme for such a catalogue was prepared shortly before the war, but has perforce remained in abeyance. If funds were available it could be undertaken, and it would have a certain, though limited, sale.

Another project in connection with the Catalogue of Printed Books is the supply to other libraries of catalogue-entries for books, in the same manner as the Library of Congress does in America. This scheme is described and recommended in the Report of the recent Departmental Committee on Public Libraries. The initial work would be merely that which the Museum necessarily undertakes to catalogue its accessions, and the additional cost of issuing reprints on cards for libraries in accordance with their demands would be small, while the economy of labour in the public libraries, each of which now has to do its own cataloguing, would be great. A charge would of course be made for the cards, which would at least go far towards covering the cost of production.

(2) *Guide-books*.—Apart from the brief Summary-Guide (with plans), which serves the purpose of the casual visitor, each department is provided with a series of departmental guide-books, according to its needs. These are not merely guides to be used in the galleries of the Museum, but are in effect short illustrated handbooks to their respective subjects. As such they have a considerable educational value, and are much used by students and schoolmasters. The supply of them is now almost complete, but new editions are of course required from time to time. Their price before the war was usually one shilling or less; now it varies between a shilling and half-a-crown. At these rates they pay their way, and no attempt is made to do more. Along with them may be classed occasional monographs on particular objects or groups of objects, of the same price and aimed at the same public; e.g., those on the Royal Gold Cup, the Rosetta Stone, the Babylonian Story of the Deluge, the Naval Exhibition, &c.

(3) *Photographs*.—This branch of activity dates from the institution of a Publication Stall in 1910 (to which a second one, on the upper floor, was added in 1921). Since then the sale of photographs, and especially of picture postcards, has developed greatly, and it is now both educationally valuable and lucrative. A special feature in the sale of postcards is their issue in sets dealing with particular subjects, which gives them considerable educational value. At present there are 79 sets of postcards in monochrome on sale, nearly all consisting of 15 cards with a leaflet of description, and sold at one shilling; 13 sets of 15 cards each in colour sold at 2s. 6d.; and 30 sets of 6 cards, each in colour, sold at one shilling. In addition, there are 240 unclassified cards, sold singly at a penny, and about 350 larger photographs, some in colours, sold at prices varying from sixpence to five shillings. In this direction considerable development is possible. Now that the Museum possesses an official photographic staff (for which authority was only given this year), it will be possible to increase the number of objects photographed, and thereby probably to increase the demand. The production of coloured postcards and larger reproductions may also be expected to increase. At first only the simplest subjects could be attempted with success. It was necessary to train the photographers, and photographic processes needed improvement. The progress made is remarkable, and now nearly all classes of illuminated manuscripts can be admirably reproduced, either as postcards or in larger sizes. The first editions of these reproductions cover the cost of production, and subsequent reprints yield a profit of from 50 to 75 per cent.

A photostat apparatus was presented to the Museum by the Carnegie Trustees in 1922, and now that an official staff is available it is hoped greatly to improve its output. The demand for such reproductions is rapidly increasing.

17 November, 1927.] Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued]

The development of the sales of publications may be seen from the following figures of sales:—

	1910-11.	1920-21.	1925-26.	1926-27.
	£	£	£	£
Catalogues and Guide-books.	2,516	3,224	4,185	3,460
Postcards and other Reproductions.	Nil	1,901	3,307	3,548

The figures from recent estimates for the printing of catalogues, &c., are as follows:—

	1913-14.	1920-21.	1925-26.	1926-27.
	£	£	£	£
Catalogues of Printed Books.	1,700	2,250	3,060	4,500
Other Departmental Catalogues.	4,772	4,837	4,045	4,100
Guide-books ...	1,250	4,210	1,180	1,000
Postcards and Photographs.			1,950	1,500

Sales are effected partly over the counter at the Publication Stalls, partly through orders supplied directly from the Director's Office, and partly through agents, of whom the principal are the Oxford University Press and Messrs. Bernard Quaritch, Ltd.

(4) *Casts and Electrotypes*.—Before 1817 (when the arrival of the Elgin Marbles created a demand for reproductions) no modelling of objects in the Museum was done, except by casual private enterprise. From 1817 to 1835 casts were supplied by Westmacott at his own expense and for his own profit. In 1835 the Trustees took over the business, and between 1835 and 1857 spent £9,415 on moulds. In 1857 an arrangement was made with D. Brucciani, whereby in return for a payment of £130 per annum he warehoused and took care of the moulds, from which he supplied casts for his own profit, without payment of royalty. On his death in 1880 the moulds were removed to the Museum, and it was arranged that Brucciani's firm should continue to handle them, paying a royalty of 15 per cent. on the sale price of casts from new moulds (but not on those from old ones). In 1904 a *formatore*, A. Biaggotti, was taken into the employ of the Trustees for small work. Between 1903 and 1909 over £1,400 was spent on moulds and casts, but the total royalty receipts from 1881 to 1909 only amounted to £656. In 1909 the scale of royalties was revised upwards, but no attempt was made to convert the supply of casts into a profit-yielding concern.

In 1919 (by which time the number of moulds in the possession of the Trustees amounted to over a thousand, with a capital value of not less than £12,000) the firm of Brucciani was in financial difficulties, and liquidation, involving the dispersal of their stock, was in prospect. As the whole supply of casts for Schools of Art depended on this stock, the Royal Academy took up the matter, and eventually, on an offer being received from a public-spirited individual to acquire the business for £6,000 and hand it over to a Government Department, the Treasury authorised the Board of Education to accept it, stipulating that every effort should be made to carry on the business on a commercial basis. The Trustees agreed to come into this scheme, and to place their moulds at the disposal of the department organised by the Board of Education with headquarters at the Victoria and Albert Museum, partly to support a scheme which seemed to be for the national benefit, and partly to obtain the relief to their own storage accommodation which would

result from the transfer of the moulds to the new repository which it was proposed to establish on the outskirts of London. They would also be relieved of the cost of the upkeep of the moulds, though a *formatore* would be retained for small work in the Museum.

The scheme has not developed in accordance with plan. The repository, which was an essential feature of it, has not been provided; the moulds have continued to occupy the basement of the Museum; the Trustees have remained responsible for their upkeep, while no royalties have been paid to them by the Victoria and Albert Museum. The amount due for the years 1922-28 is £239 13s. 10d. Full particulars could only be supplied by the authorities of the Victoria and Albert Museum, but it is understood that they have been hampered by the demand that the department should show an annual profit, and that capital expenditure, either for maintenance and enlargement of the stock, or for promoting its sales by advertisements, has been impracticable.

It is suggested that the potential benefit to national education would justify a more enterprising policy. Schools of Art, which have restricted their expenditure since the war, will be bound before long to refresh their stock, and profit might be expected from the sale to the general public of small and relatively inexpensive reproductions of good quality at stalls to be established in the museums. Some capital expenditure would be necessary in the first instance, and probably some increase of staff (at present there is much delay in the execution of orders); but the loss could in no way be large, while the service to the artistic and intellectual education of the country would be great.

A separate category of reproductions is that of casts and electrotypes of coins and medals. This is carried on entirely by the Trustees' staff. The demand has increased markedly of late years, the receipts having averaged about £47 per annum for the last three years. The service is, moreover, capable of expansion. The staff is not sufficient to cope with the orders received, many of which are consequently refused, while others are much delayed in delivery. It is believed that the establishment of an adequate staff and plant for electrotyping would very soon justify itself financially, as has been the case with photographs and other publications.

9. The assistance of research and the provision of facilities for students constitute one of the two main functions of the Museum. Research is promoted by the official publications of the Museum, by the non-official contributions of members of the staff to learned works and periodicals, by information given to those in search of knowledge, and by the accumulation, proper arrangement, and cataloguing of the materials needed by students. Facilities are provided in the shape of Students' Rooms. The principal of these is, of course, the Reading Room, with its annexe the North Library, in which accommodation is given to students requiring an unusual number of books at once, or books of special value, and where the current numbers of scientific periodicals can be consulted. The visits to the Reading Room amount to about 170,000 per annum. The accommodation is sufficient for the present demand, but only barely sufficient. Occasionally, readers find it difficult to obtain seats. So far as can be judged from opinions received, or expressed in print, the service gives satisfaction. It is often said that there is no better place for a scholar in the world, either for certainty of finding what is needed, for promptitude of supply, or for the assistance given by the staff. The Room has been fortunate in its Superintendents and its traditions.

The Newspaper Room provides separate accommodation for about 15,000 visits in the year. Provincial newspapers are brought up from Hendon on request normally once a week. If an applicant's need is urgent, he may be allowed to go down to Hendon, but there is no regular accommodation there for readers.

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued]

In addition there are Students' Rooms in several of the Departments. The Departments of Manuscripts, Oriental Printed Books and Manuscripts, and Prints and Drawings have regular Students' Rooms of some size, while accommodation for a few students can be provided in the working rooms of the staff in the Departments of Egyptian and Assyrian Antiquities, Greek and Roman Antiquities, British and Mediæval Antiquities, and Coins and Medals. The need for better storage accommodation, with facilities for access by qualified students, has been emphasised in a previous section of this memorandum.

It is not known that Government Departments need any special facilities. Information is, of course, readily furnished on request, and reports and valuations are regularly supplied for the assistance of the Board of Inland Revenue. At present books can only be sent out for production under subpoena in a Court of Law, when they remain all the time in the personal custody of an officer of the Museum.

The Museum has always been in close relations with other bodies devoted to research, notably the Societies for the Promotion of Hellenic and Roman Studies, the Egypt Exploration Society, the Royal Numismatic Society, the Palæographical Society, the Bibliographical Society, the Society of Antiquaries, and the British Academy. There is no doubt that these relations have been mutually profitable.

Excavations have been promoted, encouraged, and undertaken by the Museum for the last century. The most notable earlier examples are the excavations of Layard, Rawlinson, Rassam and Budge in Assyria, of Fellows and Newton in Asia Minor, of Smith and Porcher in Cyrene; while in later times work has been conducted at Ephesus, Cyprus, Carchemish, Ur and other sites in Mesopotamia, and at Lubaantun in British Honduras. The pre-eminent position of the British Museum is due in large measure to these undertakings, which also serve a most valuable purpose in stimulating public interest. This has been particularly manifest of recent years.

In the preceding sections answers have been given to the special questions on which detailed information was requested in the Commissioners' letter of July 23rd. There remain a few points, not covered by those questions, which come within the terms of reference. On these, as requested, summary statements are appended.

Growth of the Collections (para. 2 of Terms of Reference).

That any live Library or Museum must continue to grow is obvious. The growth of the Library has been referred to above, and will be further dealt with in the section treating of the administration of the Copyright Act. The Department of Manuscripts must expect continual accessions, of which the largest may be expected to be the political correspondence of the 19th century. The 18th century is already fairly well represented, especially by the Newcastle and Hardwicke Papers; but for the 19th century, although important provision for certain periods has been made by the acquisition of the Liverpool, Canning, Broughton, Peel, Layard, Campbell-Bannerman, and other collections, much more may be hoped and expected in the way of these valuable materials for history. The papers of the 20th century will follow in due course. The Departments of Antiquities must also expect to grow. Exploration is in continual progress in Egypt, Palestine, Mesopotamia—countries in which England has special responsibilities. There is much yet to be done in Asia Minor, Central Asia, and Central America, while the resources of China are hardly beginning to be tapped. Unless the British Museum is to decline from its present high position, expansion in these Departments is to be expected.

So far as the cost of acquisition is concerned, no material increase in expenditure can be expected in existing financial circumstances. It is true that,

with the rise of prices and the increasing competition of America, the Museum cannot hope to secure the best of the objects that come into the open market; but the Parliamentary grant (£25,000), though not illiberal at the time when it was fixed, has fallen very materially in purchasing power; and it is only with the help of its many generous friends that the Museum can hope to be able to maintain its position until times are more propitious. The assistance of the National Art Collections Fund in this respect is of great value, and the formation of a similar organisation to deal with printed books and manuscript documents is in contemplation.

Nor is any great increase in the cost of staff to be expected. A few additional assistants are desirable, especially in the Departments of Ceramics and Ethnography and of British and Mediæval Antiquities; but that need hardly be taken into account. It is to be observed that the increase in the total cost of the Museum during the last ten years is due almost entirely to the general increase in the pay of the Civil Service, which is a matter of national policy, not dependent on the action of the Trustees. Unless there should be further changes in Civil Service rates, the salaries of the Museum may now (with a few exceptions) be considered satisfactory, and no material increase in total expenditure need be estimated for.

The main increase needed in expenditure is in respect of buildings; and this has been dealt with elsewhere.

Copyright (para. 5 of Terms of Reference).

The right to receive a copy of every book published in the United Kingdom, formerly (under the Act 8 Anne. c. 19) a privilege of the Royal Library, was assigned to the British Museum in 1814 by the Act 54 Geo. III. c. 156, and confirmed by the subsequent Acts of 1838, 1842 and 1911. Under these Acts a copy of every book (the term "book" being given the widest possible definition, so as to include every kind of printed matter) must be delivered at the British Museum within a month of publication, and a receipt given for it; and since the Trustees have no power to dispose of any object in the Museum (except under the restrictions stated above), every book or printed paper remains in the Museum in perpetuity. It has also been felt that, since the publishers are required to present their books to the Museum, they have the corresponding right to expect that the books will be found there if needed. In some cases, when it has been desired to reprint a book or article, it has appeared that the only extant copy was that in the British Museum.

Relief has, however, been granted to the Museum in one respect. By the Act of 1911 registration at Stationers Hall was abolished (perhaps over-hastily). Thereupon a firm with a large output of patent medicines bethought them that their labels, leaflets, &c., which they had formerly secured by registration at Stationers' Hall (paying a fee therefor), came within the definition of a "book" in the Act, and could be presented as such at the Museum, and a receipt demanded, without payment of any fee. Their example would certainly have been followed by others, and the prospect of the whole time of several members of the staff being occupied by making out and signing these receipts was so formidable that relief was sought and obtained by the Act 5 & 6 Geo. V. which authorised the Board of Trade to make regulations, on the application of the Trustees, excluding from the operation of the Copyright Act advertisements and other trade matter.

The early Copyright Acts were not very vigorously enforced, and it is only since the Keepership of Panizzi (1837-1856) that it has become even approximately true that every book and paper published in the United Kingdom is to be found in the British Museum. In the preceding half-century many gaps have been brought to light which have had to be filled by purchase. The question is now raised,

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.O.B., Litt.D., D.Litt., LL.D.

[Continued.]

whether it is desirable to relieve the pressure on the accommodation of the Museum by giving the Trustees a right of selection and rejection. It is unquestionable that under the present system a great amount of rubbish is received; and the whole question is whether it is worth while to accept this rubbish in order to be sure that nothing which is of value is overlooked. It may be taken as quite certain that under any system of selection some publications would be rejected which subsequent generations would search for, and which would then have to be purchased, sometimes at high prices. The experience of the pre-Panizzi period, when completeness was not sought, proves this. It is also illustrated by the experience of the Universities. Oxford and Cambridge have the right of selection, and naturally use it; and the result is that one frequently hears that such-and-such a book is not in their libraries, and must be sought at the British Museum. The early works of writers afterwards famous are often of slight merit and published obscurely, and would often be rejected under any system of selection. No committee could have been blamed which rejected Shelley's earliest works ("Zastrozzi," "St. Irvyne," "Margaret Nicholson," "Poems by Victor and Cazire"), and in fact all of these were actually passed over under the lax system of copyright enforcement then in force. Many other instances will occur to anyone acquainted with the history of literature. The most obscure and intrinsically valueless books and newspapers are constantly demanded for one reason or another. In calculating the balance of advantage it must be taken as quite certain that there would be some loss as well as some gain.

On the whole it may be submitted that there is much to be said in favour of having one repository in which almost *anything* may be sought with a good prospect of success. Moreover, the relief to be expected from a system of selection would not materially affect the problem of accommodation with which the Museum is now confronted. Suppose (an outside supposition) that the annual growth of the Library were reduced from one mile of shelving to three-quarters of a mile, the *immediate* need would not be less than it is now, and the only difference would be that if sufficient provision were made for the needs of 30 years at the present rate, it might suffice for 40. Is it worth while to imperil the position of the British Museum for so little, with the certainty that the Museum will often have to acquire by purchase works which it might have acquired for nothing in the first instance?

It may be recalled that in 1902, under pressure from the Treasury, the Trustees sought powers from Parliament to reject or dispose of printed books considered unnecessary for the Library. The proposal met with strong criticism in the Press, on grounds similar to those stated above, and eventually it was rejected by Parliament, and the erection of the Repository at Hendon was authorised instead. It is not likely that the proposal would be better received now.

The only measure which can be regarded as both practicable and useful would be a slight extension of the powers already granted by the Act of 1915. The regulations which the Trustees are thereby authorised to make for the exclusion from the operation of the Copyright Act of 1911 of trade Advertisements might be extended to a few other well-defined categories, among which may be specified (a) Local time-tables, the contents of which, with the exception of advertisements, are included in the general time-tables issued by the Companies, (b) Registers of voters, which are incompletely supplied, which occupy much space and are never consulted, and of which it is understood that complete sets exist at the Home Office, (c) Specifications of patents, which are accessible at the Patent Office and certain local Public Libraries, and perhaps (d) games and puzzles, which it should be possible to register and protect otherwise, without deposit in

the Museum. The exclusion of these categories of objects would give some relief both to the accommodation in the Library and the time of the staff; but it is not pretended that the economy in space would be very material.

Bequests. (Paragraph 7 of Terms of Reference.)

Inconvenience is no doubt caused when a testator requires that his bequest should always be kept together, or should all be exhibited to the public, or should be treated in any particular way. Unless the bequest is of such first-class importance that it can stand alone (as, for example, may be considered to be the case with the Waddesdon Bequest), or is so highly specialised that it can be exhibited intact in immediate contiguity with the other objects of the same class possessed by the Museum (as in the case of the Frank Lloyd gift of Worcester porcelain, or the Falcke bequest of Wedgwood ceramics), a proviso that it shall be kept together is ruinous to scientific arrangement. It also defeats its own purpose, which is presumably the commemoration of the name of the benefactor. Unless a collection is of commanding size or importance, the visitor is apt to pass it by without much consideration; at best, the benefactor gets this one chance of being noticed. Whereas, if his collection is scattered among the general collections of the Museum, his name will appear on the label of each object; his commemoration is increased a hundred-fold. A striking example may be seen in the case of the Franks bequest. In the collections of the British and Mediaeval and the Ceramics and Ethnographical Departments the name of Sir Wollaston Franks occurs at every turn, and his memory is assured of a grateful immortality.

Where possible, these considerations are put before intending donors, who can generally be satisfied of the justice of this reasoning. Bequests to which such conditions are attached are refused, unless (as above indicated) they are exceptionally important or can be absorbed without injury to the scientific organisation of the Museum. Whether it would be wise to prohibit such conditions by law is another matter. The Museum depends much on its benefactors, and it is dangerous to discourage them, or incite them to think that they can obtain fuller recognition elsewhere. The example of Lord Fitzwilliam, quoted above, is a warning. The best policy is to show by example that ample honour is done, in labels and in public display of lists of notable benefactors, to those to whose generosity and public spirit the Museum is indebted for a very large proportion of its collections, and for the position which it holds among the museums of the world.

If any legislation is contemplated, it should at least be of universal application (e.g., that no restriction as to location or grouping should be valid after a certain term of years), so that it may not operate to the disadvantage of the national collections in comparison with others.

EXAMINATION OF WITNESS.

691. (Chairman): We are greatly indebted to you for your memorandum. I gather from your reply (1) to the Commission's Questionnaire that you are definitely in favour of the Trustee system and prefer that system to Ministerial direction or a General Museums Board?—Yes. I think it is an excellent Governing Body and works well and has given satisfaction both to the Museum and to the public.

692. What is your practice regarding purchases and bequests? Is there any authorisation by the Trustees or any subsequent endorsement? Do you desire a modification of the present arrangements?—The present arrangement is that all purchases, all gifts and bequest are reported to the Standing Committee of the Trustees at their monthly meetings. The keeper of the department concerned reports on them. I discuss those reports with the

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued]

keeper before the meeting and then it is my business to present those reports and recommendations to the Trustees. If they wish for further details the keeper concerned can be sent for and cross-examined. Every purchase and gift has to be approved by the Trustees.

693. Before it is made or after it is made?—Before it is made, with the exception of certain small powers. The keeper and the director have power to make small purchases without previous authority and these are reported at the next meeting.

694. Up to a given figure?—Yes, the keeper can make purchases up to £20 on his own authority or, with the concurrence of the director, up to £100.

695. Do you desire to modify the present arrangement?—No, I think it works well.

696. You say that the keepers of individual departments have authority up to a limited figure?—Yes.

697. Do you think it would be an advantage if the director and principal librarian of the British Museum were relieved of the duty of being accounting officer in respect of the Natural History Museum at South Kensington?—It would be a clear gain to the Director at Bloomsbury to be relieved of that responsibility because it does tie him in respect of attendances at Trustees' meetings and gives him a certain amount of extra work. Whether it would be an advantage to the Museum I do not know that I am the best person to judge.

698. Do you see any objection to it?—I do not want to argue against a change which, as I say, would relieve myself and my successors, but probably I ought to mention that I believe the impression of past Directors of the Natural History Museum has always been, with one exception, that it was a benefit to them to have the assistance of the Director of Bloomsbury; but I do not wish to press that.

699. If such a change were made would legislation be necessary, or have the Trustees the necessary power with the approval of the Treasury?—I imagine legislation would be necessary. It is a question, of course, for a lawyer, but the Act of Incorporation lays it down that a Principal Officer should be appointed for the care and custody of the Museum, and he is not permitted to supply his place by a deputy. That is referred to in the Trustees Statutes, which twice repeat it. First it is said: "The Director being by the Act of Incorporation the person to whom the care and custody of the British Museum are entrusted shall be responsible for the safety of the museums and of the property in connection therewith"; and then, in defining the authority of the Director of the Natural History Department, the Statutes say: "Subject to the general authority of the Director and Principal Librarian, as prescribed by the Act of Parliament, the Director of the Natural History Department shall discharge certain other duties"; so that certainly it has been regarded hitherto as an obligation prescribed by statute.

700. Turning to the question of disposal of objects and of loans, you say in reply (2) to the Commission's Questionnaire that the authorisation for the disposal of objects considered unfit to be preserved has been much less frequently utilised than your powers in respect of the disposal of duplicates. Do you see any objection to a policy so conservative?—I think it is safer than a policy perceptibly more liberal in regard to disposal. I think there are quite serious dangers in a policy of selection by the present generation; I mean *any* present generation. It is so difficult for them to foresee the conditions of future generations, and it is safer to err on the side of taking too much than on that of taking too little.

701. You cite the question of the Shakespeare folio; that, of course, is rather an extreme instance?—That is quite an extreme instance, but there are other instances which either have occurred or might have occurred. The requirements of scholars at the present day in matters of minute variations are

much greater than they were, for instance, one hundred years ago. It is equally difficult for us to say now what the needs one hundred years hence will be. It is quite clear that our predecessors one hundred years ago would not have foreseen what we wanted. They certainly did not take the views that we should have taken now, and it is quite possible, if they had had powers of selection, they would have disposed of things which we are glad to have now.

702. Have you any methodical weeding out system in your various departments?—No, not methodical in the sense of at periodical intervals. If at any time a keeper suggests that objects have become superfluous then their disposal can be considered.

703. You are clear that under the present system you are not incurring great disadvantage from congestion or inability to make full use of your treasures?—No, I think we can make full use of them. We could make better use by a re-arrangement and possibly to some extent increase accommodation by the policy of exhibiting fewer objects and providing storage for the rest. I do not think we can say that we are risking the inadequate use of our treasures by congestion.

704. Under the Act of 1924 the Trustees of the British Museum are authorised to lend out to museums in Great Britain any objects which, in their opinion, can be bodily removed from the Museum without injury. To what extent have you acted under this authority?—There have been a good number of loans from the Department of Prints and a few printed books, but I think that is all.

705. Do you advocate an expansion of that?—I think so, in moderation. I think, for one thing, probably the powers of loan are not very widely known at present and that probably we shall find we can lend more than we have lent in the past.

706. To take a definite instance, would you not agree that the Tate Gallery should constantly receive loans of water colours and prints both from you and from the Victoria and Albert Museum?—I do not think we should have any objection, if they wished for them. At any rate I think it is desirable that, if necessary, powers should be taken to make that possible. In my memorandum I have suggested that increased loans between national museums within the limits of London are unobjectionable.

707. And desirable?—Yes, desirable if there are not strong objections in particular cases. The objections which apply to loans in general I do not think apply to loans between Government Departments in London.

708. That would exclude loans to provincial museums?—Yes, except within the limits already laid down.

709. What would you say regarding a central lending depot such as the Victoria and Albert Museum being established? Is there any danger that such a depot would only receive second-rate objects?—I should not call it a danger. I should call it the principle upon which such a depot would exist. It would never be intended that first-class objects would go into such a depot to be circulated about the country. That lending depot would, in principle, consist of objects which, though not of first-class value, were still of interest and would be of great assistance to provincial museums. I do not think the provincial museums themselves would expect to get the best pictures from the National Gallery or the best objects from the British Museum.

710. Would you create a special lending depot at the British Museum or would you extend the department that now exists at the Victoria and Albert Museum?—I should have thought it was much better to extend the existing department of the Victoria and Albert Museum. They have experience of lending work and it would be only duplicating administration if a second department were established at the British Museum.

711. Your statutory powers of loan under the 1924 Act would seem to be adequate, if exercised, as

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

regards Great Britain, but as regards extension of the power to lend abroad legislation would be necessary if the policy was considered desirable?—Yes. Personally I do not think the policy is desirable, nor do the Trustees. They have considered the question and they are definitely against the policy of lending abroad.

712. What is the practice in that regard of foreign museums?—I have no very full information about it. There is a rather elaborate system of inter-loan in Germany between the various State institutions there and they are quite willing to enter into arrangements for exchange with foreign countries, but then I think they realise that they have more to gain by that than to lose; they would borrow more than they lent. I do not know at all fully about other countries. Occasionally objects are deposited in the British Museum from abroad, principally books, but not to any very great extent.

713. Is it not the case that objects of art belonging to the French Government are utilised in French Embassies abroad with advantage to the national artistic prestige?—I think you probably know more about it than I do, but is it not the case that the French Government buys objects of art for that particular purpose, that it deliberately buys paintings and other objects of art, partly with the object of encouraging contemporary artists and partly for supplying provincial museums and galleries, public buildings in France itself and I suppose also Embassies abroad. The British Government does not do that. Of course it might conceivably do so.

714. Turning to the question of overlapping and co-ordination. Overlapping is admitted to exist both by you and by the Victoria and Albert Museum in a certain number of departments?—Yes.

715. The defence is that, though in many cases both Museums purchase and collect the same objects, they do so with a different purpose, you with a view to history and the Victoria and Albert with an eye to art?—Yes, especially applied art. It was very largely for the instruction of the technical craftsman that the Victoria and Albert Museum was founded and his needs have been kept in view all through its history.

716. To what extent do you consider this defence is valid? Would it not be possible for art and history to be studied effectively in one and the same Museum?—In one and the same Museum if you increased the number of objects, so as to present both points of view. You could not have any less departments; and you could not have the same objects serving the purpose of a historical exhibition and a technical exhibition. For instance, the case occurs to me of the controversy there was some few years ago about the Indian Collection at South Kensington. It was proposed that the Indian Collection should be broken up and distributed according to the materials concerned in order to bring similar materials together; Indian textiles with textiles from the West; Indian metals with metals from the West, and so on. There was a very strong agitation headed by Lord Curzon against that on the ground that it broke up the unity of the Indian Collection, and, therefore, lost historical value and the value of impressing the public with the importance of Indian history and Indian art. I think that would apply, to a certain extent, to a good many other subjects. If you are thinking of the technical craftsman you arrange objects in accordance with their materials, to show how different materials have been handled at different times and in different places. If you are thinking of the history of the country you naturally keep the objects from a particular country, or of a particular period, together.

717. In the absence of some definite co-ordinating arrangement, is not there risk of the younger institution, the Victoria and Albert, becoming a second British Museum situated at South Kensington?—It is a danger which, if it exists at all,

could be only in one or two departments. In most of the departments there is no overlapping.

718. Those departments being ceramics?—And what we call British and Mediæval Antiquities. We have a certain amount of the later mediæval antiquities which do, to some extent, overlap with those at the Victoria and Albert Museum.

719. Hitherto has either institution paid much heed to the other when it was a question of developing a new department?—The question of developing a new department is so rare. In the last 60 years I think there has been only one new department created at Bloomsbury.

720. The Ceramics Department?—The Ceramics Department has been made into a separate department within the last 60 years, but of course it was not a new collection; what now constitutes the Ceramics Department existed before as ceramic collections.

721. Existed at the British Museum as well as South Kensington?—Oh, yes, to some extent at any rate considerably earlier than South Kensington. There were ceramics in Sir H. Sloane's original collection. It was developed mainly by Sir Wollaston Franks who began collecting for the British Museum in the early fifties. I do not know the history of the ceramic collection at the Victoria and Albert Museum, but the Museum itself began after that date, and I imagine that their ceramic collection only became serious some time later.

722. Classical sculpture has been hitherto collected by the British Museum alone?—Yes.

723. And Mediæval and Renaissance sculpture is collected at the Victoria and Albert Museum?—Yes, with this exception, that we have mediæval alabaster carvings at the British Museum, but we have not Renaissance sculpture and should not regard that as within our province.

724. The question arises whether a frontier of this kind should not be established in other departments?—It might be. I do not know. It depends on the specific case.

725. Can you think of any better method of defining frontiers or preventing overlapping for the future than by regular co-ordinating arrangements, by meetings of directors and heads of departments? No. I think that would be a very proper development, that the intercourse which hitherto has been informal should be a matter of regular practice.

726. Would not a regulation establishing a Joint Buying Committee composed of representatives of the overlapping departments be an effective check on the possible danger of competition?—No, I should have thought it would complicate the procedure and introduce rather useless additional machinery for purchasing. Provided that there is arrangement for intercourse between the officials, a formal Joint Buying Board would be of no advantage.

727. If co-ordinating committees of officials were agreed upon, would not their setting up involve the establishment of a committee of the governing authorities to whom questions of policy would have to be remitted?—I should have thought not, because the occasions would be so very rare. In most cases the officials would be able to settle any outstanding question among themselves, if necessary of course referring to their respective governing bodies for confirmation. I do not think a Joint Board composed of those governing bodies would require to meet often. If anything of the kind was required I should like to suggest a sort of parallel in an institution which has come into existence within the last few years, namely, the Archaeological Joint Committee. That is a Committee composed of representatives of the principal Archaeological Societies, and it meets when required to consider questions which affect the joint interests of archaeology in general; and questions of that sort have been referred to it from Government Departments, especially the Colonial Office, in connection, for instance, with the organisation of departments of antiquities in countries for which we are more or less responsible. That is a body that only meets when there is something for it

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

to discuss. It can be summoned for a particular purpose when there is business to be done; otherwise it does not meet. It seems to me that this would be ample for what might be required in connection with the governing bodies of the various museums and galleries. There might be an arrangement for some such Joint Board which would meet when required and to which questions might be referred, for instance, if there were questions interesting the Government, in which more than one museum was concerned.

728. Would such a Board deal with questions of finance?—When they overlapped. Of course nearly all questions of finance relate only to one institution, and the others would not be interested or concerned in them. Now and again there might be questions of what you might call competitive finance, and in those cases the Government might refer the question to this Board.

729. And questions of accommodation I presume too?—Do you mean if there were questions of one museum providing for part of the collection of the other, or competing for sites, for instance?

730. Competing for sites or possibly giving accommodation to some other museum?—Yes. I should like to point out that this idea of a joint board is only a suggestion of mine. It must not be taken that the trustees are responsible for it.

731. This kind of co-ordinating authority might smooth the path of approach to the Treasury?—Yes, but only exceptionally. As I say, the Treasury might refer to it if they wanted to get the views of more than one museum or to bring them into line with one another.

732. It occurred to me that such a body acting on the Report of Lord Haldane's Reconstruction Committee, might have solved some of the present difficulties?—I think the present difficulties had arisen before Lord Haldane's Committee. I do not see how this body could have helped, because these difficulties mostly did not arise from competition between the different museums, but I suppose from the effect of the war which has led to accumulations of arrears in several museums. The most the Board could have done would have been to assist the Government with advice as to relative urgency in the different places.

733. Turning to the question of the Copyright Act, you say in your memorandum: "It is unquestionable that under the present system a great amount of rubbish is received." On the other hand your present proposals for modifying the existing intake are confined to the exclusion of (a) local time-tables, (b) registers of voters, (c) specifications of patents, (d) games and puzzles. Would that be adequate relief, even if such relief were afforded?—It would not be very material.

734. Perhaps you could tell the Commission something more about the 1902 proposals which Parliament rejected. What was then proposed to be excluded?—Yes. First I ought to correct the date. The actual proposals were before Parliament in 1900. 1902 was when they led to action. A Bill was introduced in 1900 which authorised the Trustees, first, to place local newspapers since 1837 in the custody of the Council of any County or Borough, and, second, to make rules respecting disposal by destruction or otherwise of printed matter which is not of sufficient value to justify its preservation in the Museum, such rules to be subject to the conditions applying to the rules made for the Public Record Office, which establish a Destruction Committee for consideration of the documents to be destroyed. That was the Bill as introduced in 1900. There was a good deal of opposition and in face of that opposition the Bill was withdrawn. The Trustees then consulted the then Lord Chancellor as to whether action to the same effect could be taken under their existing powers, under the Act of George III, and he advised that it could not. Then, as an alternative, a Bill to buy land at Hendon was prepared in 1901 and was passed in 1902; and that established the existing newspaper depository at Hendon.

735. And you obtained no relief as to the amount of your intake?—None.

736. What is a rough classification of the character of the printed matter, other than books, which comes in under the existing law?—There are not many headings under which you can classify it. There are books, newspapers, almanacs and diaries, games and puzzles. Those are the only heads which the keeper of printed books has been able to suggest. I beg your pardon—maps and music; those are two important sections of the printed book department.

737. If Parliament took a different view from 1900 or 1902 and laid down that the intake was to be reduced by 25 per cent., what are the things you would throw overboard?—You could not do it by classes. It would be a question of throwing overboard the less valuable contents in the various classes. You could not reject all history; you might reject some school histories and things of that kind. You could not reject all books of art, but there are some which are worthless and which you would be glad to dispose of. It would be a question of weeding out those which appeared to be the less valuable books in each category of literature.

738. Your present intake amounts to 40,000 books and pamphlets, 100,000 periodicals and parts of volumes and 250,000 single numbers of newspapers. Is that an increasing quantity? How does your present intake compare with what you received 20 years ago?—I have brought the figures for 1902. Those I mentioned in my memorandum were just round figures. The figures for 1902 and 1926 are these:—

	1902.	1926.
Books and pamphlets	28,140	34,968
Serials and parts of volumes, which would include all sorts of periodicals	62,058	104,978
Maps and atlases	1,516	996
Music	8,803	8,798
Newspapers in single numbers...	242,963	261,300
Miscellaneous	3,806	7,137
Total (all items)	347,286	418,177

739. The amount of increase is not very considerable except in periodicals?—The largest increase is in the periodicals; altogether it is something like 20 per cent.

740. Does that enable you to form an estimate of what the intake will be in 1950, or 25 years hence?—At the same rate it would give in round figures 500,000 items in 25 years time from now and 600,000 in 50 years time.

741. How does the British Museum compare in respect of the Copyright Act with the main National Libraries abroad? Are your obligations graver?—I think they vary a good deal. I do not know any return where all the obligations of the different countries are put together. In France I think since the Revolution they have had the right to a copy of every book; I believe they now have the right to two copies of every book published in France. In Germany the copyright laws, as I understand, are State laws; therefore the Berlin Library gets everything published in Prussia, but not what is published in Bavaria or Saxony. Similarly Bavaria and Saxony have their own collections. In America the Library of Congress has a right to everything, but it exercises a right of selection. Those are the only countries of which I have information at present.

742. Would it be possible or desirable to get rid of some of your obligations by putting them on to local museums or local libraries?—I do not think so, because, after all, local publications are not only wanted by local people. They are, as often as not, wanted by the people working centrally.

743. On the question of accommodation you say in your memorandum that even if the Copyright Act could be drastically amended forthwith, the immediate need for enlargement of your library would

17 November, 1927.] Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

not be less than it is now?—Yes. The immediate need depends upon what we have actually got now on the spot and what is coming in within the next few years.

744. Your present scheme envisages the reconstruction of and addition to the present iron library at a cost, including fire-proofing, of some £400,000?—That is the scheme which holds the field at present.

745. Have you considered alternative schemes?—I have not had any alternative schemes. The position is this. Our official advisers in this matter are the Office of Works. The Office of Works prepared, at the request of the Trustees, a scheme for their consideration and that is the scheme which is before us. I do not know whether it represents the last word of the Office of Works. Certainly the Trustees are in no way themselves committed to it, if an alternative scheme could be put up. Perhaps I might say more than that. There is one objection which I have felt to that scheme. It had many advantages in the way of giving us the space that was required and giving evidently greatly increased security against fire. On the other hand it involves the staff working always by artificial light, and that I thought might be rather depressing to the staff. At any rate one regards that as a drawback. If it is possible to get over that trouble while retaining the other advantages I should be very glad to do so.

746. A great part of the cost of the scheme proceeds from the fireproofing adaptations. I understand that similar institutions abroad, the Louvre and the Bibliothèque Nationale, and also the Bodleian are not fireproofed. I understand also that you have very efficient fire protection arrangements?—Yes, I think that is so.

747. Can you give any information as to the importance you attach to fireproofing arrangements?—It is rather difficult. You are asking me to take a rather serious responsibility, to suggest minimising the risk of fire, because the risk of fire, I think, is a matter that is at the back of the mind of every person responsible for collections of such value; therefore, when one is told officially that the building is in a dangerous state, naturally one is bound to attach considerable weight to the warning. On the other hand, it is true that we have elaborate precautions. There is a very full fire plant arranged for the Museum which is inspected periodically by the Metropolitan Fire Brigade. There are constant patrols who watch it, and in view of the fact that it is very difficult to start a fire and that a fire, once started, ought to be detected before it has gone very far, I hope that the risk of fire is, in fact, small, but I do not think I can say much more than that. The precautions have been effective, one may say, so far.

748. What would be your view of the alternative of dividing up the Museum into so many self-contained fireproof partitioned compartments?—It obviously has advantages. If a fire did start, it would be an advantage if it was confined to one section.

749. Turning to the question of Hendon, supposing it were possible greatly to extend Hendon where building is relatively very cheap, would it be possible or desirable to transfer certain blocks of literature to Hendon?—The most substantial transference that could be made would be to send out the whole newspaper department. That would involve not only providing accommodation for the newspapers at Hendon, but also providing a reading room and the necessary staff. That, of course, would give very material relief at Bloomsbury. I should wish to say that, from the point of view of efficiency, it would not be a gain, because it is a great advantage to have all one's materials on the spot, and, of course, in some cases people who are working at books also require newspapers; but if something of the kind had to be done, if it is not possible to keep everything at Bloomsbury, that is certainly the largest removal that could be made with the least interference with efficiency.

750. Modern novels, I understand, are not made available to the reader till five years after publication. Would it be possible to transfer them to Hendon and, if so, what quantity of shelf space would it set free at Bloomsbury?—It would not amount to a great deal. The shelving for the last five years amounts to 370 yards.

751. For the last how many years?—Five.

752. Can you apply a similar system to any other classes of literature, the system of removal?—No. You could, of course, weed out certain sections in each category. You might, for example, send a considerable number of books of eighteenth century theology; you could not send all of them, because some are often required. In the same way you could select obsolete books in the different categories, but if it is to be a serious relief in point of space, it means a very large number of books must be sent to Hendon, where they cannot be got at without considerable difficulty. All that subdivision weakens the efficiency of the library from the point of view of the student.

753. How is this problem dealt with by the great libraries abroad? Are they proceeding on the line of one great central repository, or are they decentralising into provincial or local museums?—As far as I know there is no large amount of decentralisation.

754. I pass now to the question of the ethnographical collections: is it the considered opinion of the Trustees that these collections should be housed in a separate museum?—The opinion of the Trustees was that it was a scheme that was well worth considering, provided that an adequate building could be found in a suitable locality, but otherwise, if either the locality was not suitable or there was not sufficient gain in space and in space reserved for future expansion, it would be better that they should remain at Bloomsbury until better times.

755. Would you consider South Kensington a suitable locality?—Oh, yes, if a site were available. The place they were considering at the time was on the outskirts of London, at Wembley, and supposing it had been possible, for instance, for the site of the Wembley Exhibition to be reserved as a public park and made into an attractive place for the public, then I think they were quite prepared to consider the establishment there of an ethnographical museum; but when it was clear that the prospects of that neighbourhood were doubtful and that the museum might be surrounded by ordinary residential buildings, they decided that it was not worth while following up that scheme.

756. I see from reply (7) to the Commission's Questionnaire that in 1862 the idea was put forward to include the ethnographical collections among those to be transferred with the natural history collections?—Yes.

757. Does that strike you as a convenient or suitable scientific arrangement?—The proposal was not to house ethnography with natural history. It was only that at the same time powers should be taken to move the ethnological collections elsewhere. A Committee of the Trustees sat upon it and reported. I have their Report here. They discuss the removal of the natural history collections and end up with the recommendation that all the natural history collections be speedily and simultaneously removed. Then they go on to say, "together with this the ethnological collection ought to be provided for elsewhere." They do not discuss the question whether it should go to the same museum as the natural history collection, simply that it should go to a habitation of its own outside Bloomsbury.

758. If ethnography were housed elsewhere, what use would you make of the space vacated?—I have not got a considered plan, but one obvious possibility would be, following up the policy of establishing storage rooms for the use of students and so getting more space for exhibition in the main exhibition galleries, to take the space now occupied by

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

the Assyriological collections in order to provide storage for the minor objects in the Egyptian collections, and then use part, at any rate, of the present ethnological accommodation for Assyriology. That is only one scheme. It is quite possible that if the thing became practical politics one might think of other possibilities, but that is one quite obvious alternative to consider.

759. You say in reply (7) to the Commission's Questionnaire that several other departments are in accommodation difficulties, namely, oriental printed books, ceramics and British and mediæval antiquities. I gather that the main need in those departments is storage space rather than exhibition space?—Yes. The oriental printed book department is requiring no more exhibition space; therefore there is no need to apply this principle of selection to that department. As in the rest of the library, it is already in operation. Most of its needs are for storage. The other departments mentioned require exhibition space, but they have got quite a fair amount now. One may say that the need there is not so specially pressing. They do require more storage space, but I think as soon as the reconstruction of the floors in the King Edward Building is completed it will be possible to arrange for increasing the storage space for both those departments. On the other hand, I have no doubt in future they will require more; one must look forward to their wanting more storage in course of time. The ceramic department is growing. In the British and mediæval department particularly the collection of pre-history is growing; the stone age, bronze age and iron age collections are growing and must continue to grow.

760. The new system of exhibition and reserve accommodation which you showed us in the Greek vase department the other day—is the idea to extend that to other departments?—It could be extended to all the antiquities departments if the proper accommodation were available, but of course the building was not planned from that point of view; therefore it is not quite easy to do.

761. Would structural modifications be necessary?—Yes, structural modifications and additions.

762. Can you form any idea of the cost?—No, I am afraid not. There, of course, one would have to ask the Office of Works for estimates. We are getting out a plan of structural alterations.

763. Where do you propose to put your proposed lecture theatre?—I think, probably, the best place would be in one of the angles of the square that is occupied by the Museum buildings, so that it would be possible to arrange for separate access from outside.

764. It has been proposed, I do not know whether this question has been put to you, but it has been proposed to increase the number of entrances to the British Museum? Has that question been under your consideration?—There is an entrance at the back which exists, but is not used. An entrance for the public, you mean?

765. Yes?—That was provided for when the King Edward Building was put up. It has not hitherto been used, simply because it means additional staff. You must have a hall staff, and we have not been able to afford it up to the present. I think it will become absolutely necessary when London University gets established to the north of us.

766. Could you give us at a later date an estimate of the additional cost of a new entrance?—Oh, yes, it would be merely a question of the salaries of the staff required for the hall.

767. Turning to the question of bequests, I gather from your memorandum that you think legislation to override conditions of bequests would be undesirable and dangerous?—Yes, I think it would probably do more harm than good. There is always the danger of frightening off possible donors. There is a case, perhaps I might quote it, which occurred

in America. The well-known Hoe Library, which was subsequently sold for £400,000; that had been bequeathed by the owner to New York, but during his lifetime three other collections which had been bequeathed to the State were amalgamated into the New York Public Library, and he disliked the idea of that and consequently cancelled his bequest, and the books eventually were sold. One does get cases of that sort where one hears that possible donors or testators give up their intention because they are not satisfied with the way in which their bequests are likely to be treated. I quote the case of Lord Fitzwilliam in my memorandum.

768. Has there been a marked difference since the war compared with the years immediately preceding the war in the matter of bequests?—I have not actually compared the figures. My impression is that we have got quite as many, if not more, small gifts from people since the war simply because the interest in museums has increased. With regard to the large gifts and bequests, there is certainly reason to fear that a good many people have been deterred by the heavy taxation. More than once people have said that they would have liked to give such and such a thing to the museum, but in view of the necessity of making provision for taxation, either immediate or eventual, they were not in a position to do it. I do not think there can be any doubt, therefore, that while taxation is as heavy as it is museums and similar institutions do suffer.

769. What do you say in regard to the exemption from death duties of objects of art bequeathed? Do you consider the present position satisfactory, or would you suggest any amendment?—I think the present law has done a great deal in that way. It has induced people to make bequests. Of course, it could be made more favourable to museums. I do not think it is practical politics, but supposing people could pay their death duties in objects of art, a good many of them would be tempted to do it; but I do not know what view the Chancellor of the Exchequer might take of it.

770. I have only one or two general questions. Taking the British Museum as existing, first for research and the advance of knowledge, secondly for the education and edification of the general public, and thirdly for the development of the æsthetic sense, do you consider that you are obtaining maximum results under present conditions?—No. From the point of view of scholars we are doing, probably, pretty nearly what they need. I think, however, we might do more on that side also. We should give better accommodation for students in the various departments, as I have suggested already. We might improve the service in the library, which would mean increased staff, in order to expedite the delivery of books; that is becoming an increasing difficulty. We could help libraries throughout the country in general by a system of central cataloguing, such as exists, for instance, in America in the Library of Congress. Those are the principal new ways in which I think we can help scholarship and research. As regards the general public, I think there are a great many things more that we can do. There are matters like increased lectures, the lecture theatre which has been already referred to, and, possibly, evening lectures; these would cost something in the way of light and staff, and some financial provision is necessary for that. We can do more in the way of output of photography, and in particular of casts. With a certain amount of capital expenditure that could be made a profitable industry of the national museums. We could help the public more, again if the space was available, by exhibiting objects more attractively and labelling them more attractively from the point of view of the public. It is what we have been aiming at for a long time, to make the museum more attractive and more useful to the general public, and I think we have succeeded to some extent, but I should be very sorry to say that we had arrived at the limit; I hope we shall be able to go on.

17 November, 1927.] Sir F. G. KENYON, G.B.E., K.O.B., Litt.D., D.Litt., LL.D.

[Continued.]

771. You have given us full figures of readers and visitors?—They are in the annual report. That gives the statistics as to visitors to the museum, including visitors to the separate departments.

772. How do those figures compare with those in foreign galleries of a similar character?—I have no statistics for them, I am afraid.

773. Would you advocate any more effective arrangements as regards publicity or advertisement generally?—Yes, I think so. We have made slight experiments in that way. We got leave from the Treasury lately to spend a small sum of money in advertising Museum publications. That has been done. It is too early to say whether it has had any effect upon the sales. On the other hand, we were asked to discontinue an advertisement that we had arranged for for the last year or two in some placards put up in all tube stations and hotels and places of that sort. They were mainly programmes. They contained a statement of the several exhibitions which were going on at the Museum. We have been asked to discontinue that and therefore that is coming to an end at the end of this year. I think it would be a good thing to do, certainly. A great deal of use is made of propaganda of that kind in America, and they seem to attach great importance to it. They think it has largely increased the visits of the public, and I think that is probably so; the more a thing is brought to people's notice the more likely they are to make use of it.

774. And by increasing the attendance of the public you increase your chance of financial support and benefactions?—I think so.

775. Was it on account of finance that this particular form of advertisement was discontinued?—Yes.

776. From the æsthetic and artistic standpoint, do you consider that your wonderful treasures are exhibited to their maximum advantage?—No, I do not think I can say that. I think we have often had to be content with the minimum rather than the maximum. Some of the galleries are quite good, but you cannot say they are sumptuous or luxurious. Money being no consideration, what one would like would be to be able to show the big pieces of the Museum in better surroundings. People attach more importance to them, and they are much more impressed by them if they see, we will say, a fine statue in a room by itself with its appropriate background than if they see it simply standing in a row against the wall, and they have to find it for themselves. I think we should gain a good deal in the impression we should make upon the public if we were able to have a little more style in the way in which the things are exhibited.

777. And better backgrounds?—Yes, backgrounds, and more space. One is too close up against them very often.

778. Supposing the scheme of building on the whole of the site acquired for the Museum in 1894 were carried into effect, that would greatly improve your exhibition facilities?—Yes. That would give us, as far as I can judge, ample space for exhibition and for storage for a considerable time. It would give us frontages on four sides.

779. You would then be an island site?—Yes.

780. In conclusion, how would you summarise the Museum's present needs?—Well, if I can put it in this way. The first and most urgent need, and this is really urgent, is accommodation for the library. That is an obligation which has got to be met and therefore we are entitled, I think, to look to the public to provide it. That is the most urgent. We are already behindhand with it and nothing can now be done which will save us from grave inconvenience for some years to come. It will be some time to come before any building can be put up. That is the thing I would press as being the most urgent and which I hope will be met with the least possible delay. After that, I think the next point is the increased utility to the public. That would be on the lines which I mentioned in an answer quite lately, increased publicity and extended service of

reproductions, both photography and casts, a lecture theatre and an increased service of lectures, and also an item which has not been mentioned so far, the development of the work done by the museum laboratory. That is work not only of very great value to the collections in the Museum itself, but also to museums and, in fact, private collectors throughout the country. It could be extended with quite a small increase of staff in the museum. Those I think are the first needs of the museum. Then if one may look a little further, and consider larger developments which very likely would be only possible with private help, and for which private help could quite legitimately be invited, there is provision for the ethnographical museum; that would be one large item. Then, apart from that, that ampler space for attractive exhibition which I was speaking of in my last answer to you. That is a short summary of our principal needs at the present time.

781. (Dr. Cowley): The main need then is the provision of space for the library?—Yes.

782. And we have your scheme in the memorandum. Is there any alternative scheme which would avoid having a building which needs artificial light and ventilation?—No scheme is at present before us. Of course, as you realise, it is important to have the books stacked as near as possible to the reading room. That is why we were in favour of a reconstruction of the existing library. There is no other way in which we can get it so close to the reading room. The absence of natural light arises out of the fire precautions entirely. At present we have light because the whole book stack is open and continuous, with open metal floors, so that the light comes through from the top and at the sides and artificial light is only partially necessary; but if the floors are all to be concrete fire-resisting floors and there are to be vertical divisions by walls also, then there is no means of getting natural light to it. That and the fire precautions hang together.

783. You say in your memorandum that the scheme would provide for the future needs of the library for 72 years, if I remember rightly. That is taking into account the increase that you have mentioned as having taken place in the last 25 years, for instance, reckoning that the same increase would continue I suppose?—Yes, the estimate was made by the Director of Works of the Office of Works on the information provided by our printed book department, that assuming present rate of progress the scheme would provide for 72 years.

784. The total percentage of increase I should gather is between 20 and 30 per cent. I was not quite sure whether I got your figures correctly?—I think it is about 20 per cent.

785. My calculations were made rather rapidly. At any rate, the important part of that is in the books and periodicals, I gather?—Yes, how far the figures I gave can be taken as sufficient basis I am not sure. I have only the statistics for those particular years.

786. That might be varied?—They might vary. One cannot say whether the rate of serials will go on at all like that.

787. One gathers you are not in any sense in favour of limiting the copyright privilege, but the copyright I gather has been rigidly enforced only since the time of Panizzi?—Yes, that is so.

788. Before that, do you think the museum lost a great deal through not claiming it?—I think it did, because we have had to fill up many gaps by purchase.

789. Do you now claim things which are not sent automatically or voluntarily by the publishers?—Yes, some of the staff keep an eye upon publication lists.

790. Even if it is what is generally called rubbish?—Not absolutely. For instance, I am told we do not get many diaries. We do not go out of our way to compel diary publishers to send.

791. The trivial publications you do receive I suppose you catalogue and reference in the usual way?—Sometimes rather summarily.

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

792. So that all that costs the museum a good deal?—Yes, it costs money.

793. Supposing any form of selection were attempted. There are two ways you might select either before the books come to you or you might select books which are already on the shelves to be destroyed. That I gather is not done at present ever?—No, it is not done at present.

794. That would in itself be a very expensive process?—Yes, any process of selection would mean a very large increase in the staff and especially in the senior members of the staff. Juniors could not undertake the work and heads of departments would have to spend considerable time daily in looking through books and summarily deciding which could be rejected at once and which should be preserved.

795. So the ultimate gain would be very little. Then only one other question. I wanted to ask about the idea of a central museum corresponding to the central library. You believe in the principle of the central library?—Yes, I do.

796. And you think that a central museum might be worked on the same principles?—I should have thought so. I have not had occasion to investigate the needs of provincial museums very much, but I should have thought it was conceivable and if so the nucleus already exists in South Kensington.

797. (Sir Robert Witt): If I might put one or two questions particularly from the point of view of some of the American museums to which you have referred mainly on the ground that I have just returned from seeing twelve of the largest American museums from cellar to roof, and I think it is interesting from that point of view, I am not speaking of course of their contents but merely of their organisation. I think you know that Boston has adopted or is trying to adopt a system of parallel collections, namely works of art in one room for exhibition to the general public and mass material in another room for students and research workers. Would you be in favour of accepting that principle in general, as a general principle, for the British Museum in so far as it was possible to do so?—Yes, certainly. I am very much in favour of that principle.

798. Would it be possible to adopt it, say, in addition to the Greek Vase Room (I was absent when the Commission visited it), for other departments beside the Greek Vase Room, for instance, the Egyptian with its thousands of Scarabs?—Certainly, we should be very glad to do that.

799. In principle you would be in favour of it. I think you mentioned the Oriental books, but apart from that there are not many departments in which it would be impossible or unsuitable?—I do not think it would be unsuitable in any department. The books and the prints and the manuscripts and the coins do not need it because they already have it. There none of the departments make any pretence of showing everything. They simply show selections. It is merely applying to the departments of antiquities and of ceramics (which is an off-shoot of them), the same principle as you apply to a collection of books, prints and manuscripts now.

800. And a study room would be a natural concomitant of any such organisation, where a student would have the material round him in a convenient way?—Yes.

801. I think in your report you mentioned that the Elgin Marbles Room was erected in 1831. Would you agree with the view that they are not adequately displayed or as well displayed as they might be according to modern ideas of lighting and arrangement?—I do not think they are badly shown. The student can see them, and they are not badly lighted; but, possibly, not so much is made of them as might be. Then there is the Demeter of Knidos, which has a small niche to herself. She deserves a room to herself. The Elgin Marbles are much better off as a result of the building of that room in 1831

than they were before. They were put in a temporary building when they arrived, and remained there for 15 years.

802. Would you be in favour of the rule which prevails in the Metropolitan Museum that all additions to the collection are exhibited for one month in a special room before being distributed to their proper galleries according to class and period, so that the public without having to ask or hunt can see what exactly has come into the Museum quite recently?—They can see it now in most departments. Most departments have a case of recent acquisitions and people can see them there, but there would be something to be said, if accommodation were available, for showing them all together. It rather encourages the people to look at the newest things though.

803. I gather you are in favour of extending the educational facilities, assuming that funds were available, and that you would be in favour of doing so not only to the student but to the general public?—Certainly.

804. As regards the student, do you see any objection to following again the system adopted by the Metropolitan Museum of arranging for advanced classes for students of the New York Universities in connection with that Museum; that is to say, especially with the development of the London University, might some scheme of that kind not link up the two on the advanced course system?—Yes. Of course, classes do come to the Museum now. We get both school classes and also architectural classes. The Architectural Association and the Architectural Department of London University do regularly send their students with their teachers to the Museum at certain times. All that kind of thing can be developed—again if you can have space for it so that they will not interfere too much with the public. You cannot have a lot of lectures and classes going on in the galleries through which the public are passing if it inconveniences the public.

805. Again, subject to that same limitation of not interfering with the public, classes for school children, story and study hours, those are some of the systems they have in America, what they call gallery talks on the popular side, would have your sympathy in so far as it did not interfere with the general use of the Museum?—Yes.

806. Just one question on the attendances. I think the figure I have just seen was 1,037,424. The Chairman has made reference to increased publicity. Do you think, perhaps, increased publicity would have the effect of increasing that attendance on something the same scale as prevails elsewhere? For instance, the Metropolitan Museum attendances alone for New York are larger than those of the British Museum, while that of Chicago is equal to that of the whole of the British Museum, though its contents are not comparable in any sense of the word at all. Those figures seem to me to indicate that much more might be done in increasing our attendance if some of the same methods as prevail in America were adopted here?—Yes, I think very likely. Of course, it does not depend merely upon the quality of the contents, provided the Museum is a good one. After all, if you are living in Chicago you must go to the Chicago Museum, that is the one within your reach, but I quite agree that the public do respond, I think in this country and probably still more in America, to advertisement; and if one could advertise without vulgarising the place I should be ready to do so.

807. And in the same spirit would you be in favour of evening opening, in so far again as it was a matter of staff and funds?—Yes. There have been experiments in that direction. Evening opening, I think, depends wholly on public support. It was tried for some years about 30 years ago, but the attendances dropped off considerably and finally it was decided it did not justify the expense involved.

808. You would be in favour of it in principle?—Yes.

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

809. Would you be in favour of departmental libraries?—We have departmental libraries at present.

810. In all departments?—Yes. Every department has its own departmental working library and those are generally available for the student, available as a matter of courtesy for the people working in the department.

811. You refer to labels. You do not do your own printing, I think, the printing of your own labels, or do you?—Only to a small extent and that has been severely discouraged lately.

812. Don't you think in some museums their labels are much better printed, much more tastefully arranged, better kinds of type, all due to the fact that they know what labels they want? Also that the arrangement of labels might be modified by providing in a case for a type label, so to speak, setting out roughly and in general terms the objects, the history and the interest of the object shown, and accompany them only with quite small labels under each object?—Yes. I think that must depend on the various departments and the sort of object you are dealing with.

813. Just one other point. Death duties were referred to. You suggested the Government was doing right in exempting from death duties objects bequeathed to the Museum?—Yes.

814. Don't you think it would be reasonable that if I present an object worth £1,000 to the British Museum and that object is free of death duties, it is equally reasonable if I have no object to present but I feel charitably disposed towards the Museum, and I give £1,000 to buy an object which they wish very much to have, that should equally be exempted and not have to pay death duties at the highest rate, namely, at 10 per cent. as to a stranger?—Yes, I think there is a case for it.

815. (*Sir Courtauld Thomson*): You have given us your reasons for not wishing to develop the policy of disposing of objects considered to be unfit. Can you give us an idea of the amount and value of the objects disposed of each year, whether hundreds or thousands?—Disposed of as unfit?

816. Yes?—The amount would be quite small. In most years none at all.

817. You have told us of the system of accepting bequests. Might I ask how you deal with a donor during his lifetime who notifies his desire to bequeath some object or objects? Do you definitely accept them during his lifetime or is he left in some doubt as to whether the bequest will be accepted?—Technically and legally it cannot be accepted until the offer is actually made to the Trustees, but in many cases we can give practically definite assurances to a donor and make it certain it will be accepted. We have not found any difficulty on that account, through doubts whether a gift would be accepted when the time came.

818. In regard to the newspapers, if it was decided that some other place should be found for them, such as Hendon or elsewhere, would you suggest their all being sent away or a portion, either prior to a certain date or geographically, or the least interesting ones?—At present Hendon in theory holds the provincial newspapers. That was the division that was intended, that all provincial newspapers should be there, while London and foreign newspapers should remain at Bloomsbury. The suggestion I threw out just now was that perhaps the whole of the newspapers should be sent to Hendon, both London and foreign newspapers, and then make provision for readers to have access to them there. At present a reader cannot, unless he makes out a very urgent case, see a newspaper he wants at Hendon; he has to wait for it to be sent up for him at Bloomsbury; but you might conceivably, if you are going to make any sub-division at all, transfer the whole of the newspapers to Hendon and let readers go and work there.

819. I see from the current estimates that a total sum of about £16,000 was allocated to the printing

of catalogues, £11,000 to the British Museum and £5,000 to the Natural History Museum. Approximately the same amounts were allocated to this object in the two preceding years. The estimated receipts from sales amounted to £9,000. Can you kindly explain why there should be such a gap between the expenditure and the cash receipts?—The largest part of expenditure on the printing and publication vote is for the catalogue of printed books. It is a thing which is quite essential to be made, otherwise you cannot use the library; but it is not a commercial proposition. It does not sell. That would account I should think for practically the whole of the discrepancy. At the same time there are a good number of other publications which do not pay their way, the more expensive catalogues which cannot be expected to return a commercial profit; but they are things which are an essential part of the museum's service.

820. This expenditure of £16,000 takes no account of the wages of the salesmen or the packers, which amount to £1,300 per annum. If you make the ordinary addition to cover overhead expenses, it looks as though you were disposing of your publications at something like half their cost unless you are carrying large stocks. Do you think in the circumstances the prices to the public should be reviewed or whether that would reduce the sales?—It depends on whether you regard the museum as an institution for making contributions to knowledge or for earning money. What we do is, broadly, as regards the more expensive publications, the scientific catalogues, to look on them as mainly a contribution to learning. The publications, which we have developed a great deal of late years, of cheap photographs, reproductions of various kinds and guide books, are expected to pay their way. At any rate postcards and cheaper publications do even more than pay their way, and that seems to me a legitimate principle to follow. The museum should do its best work as a contribution to science and this more popular work should justify itself by paying its way.

821. (*Sir Thomas Heath*): Just one question about the ethnographical department. You mention here that a building of the size of the Natural History Museum would not be too large. I suppose you would not say that the present building should be anything like that size?—What I do mean is it would have to be a museum of substantial size by itself, because my idea of the ethnographical museum is that each country or considerable part of a country should have a room to itself, so that a visitor there gets some idea of what the civilisation of, say, Nigeria is, without having half-a-dozen other countries or different continents in his eye at the same time. It was suggested when we were discussing the subject that it should be at least four times the present floor space, and that would be less than what I think is the ideal for the ethnographical museum. I think the museum should have rooms illustrated by maps and photographs and prints and so on of each country, so that people can get some sort of idea of what the civilisation is they are looking at and how people live there. So you would want—I do not know whether it would necessarily be the same size as the Natural History Museum to start off with, but quite a substantial building. In Belgium they have a separate museum standing in a separate park by itself just for the Belgian Congo. That is quite a substantial building with a large number of rooms and there you see the objects well put out and well illustrated, and that is what it seems to me in this country we ought to have for the British Empire.

822. For a building of that size you would have to go some way out. You could hardly have anything central?—It is improbable. There was of course the Foundling Hospital site. One may occasionally have an opportunity like that. Somebody suggested Chiswick Park. Otherwise you probably would have to

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

go out. If you went out to a place which was attractive otherwise, up at Ken Wood, say, then there would be an inducement for people to go and something for them to see when they got there.

823. (*Mr. Charteris*): I just want to ask one or two questions about the constitution. Have suggestions been made ever to make the election of trustees a less cumbersome procedure than it is at present?—It is not very cumbersome, is it?

824. It takes place every year, does it not?—No, only when there is a vacancy. Or do you mean the election of the Standing Committee?

825. The election of the Standing Committee?—That is very simple; that goes through almost as a matter of routine at one of the general meetings of the trustees.

826. It was altered as a result of the strictures, you say in your memorandum, of the Royal Commission?—The Standing Committee was established on a definite basis then. Before that there was no regular Standing Committee but apparently those trustees who were most within reach were summoned.

827. Then is the present constitution the result of the Royal Commission?—Yes.

828. What year was that, 1850?—Yes.

829. And it has not been changed since?—No.

830. Has it occurred to you it would be desirable to have two sets of trustees, one for the British Museum and one for the Natural History Museum?—That is rather a question for the trustees themselves. I think it is an arguable question whether the Natural History Museum should be separate from Bloomsbury. Some people have been in favour of it and some people have been against it.

831. But if the separation took place it would follow probably there would be separate trustees?—Yes, but I think that would tend to weaken the Natural History Museum. I am sure that was the view of the previous Directors there.

832. The separation?—Yes, the separation of the museums would weaken them.

833. How would it be anticipated that it would weaken them?—Simply because they would carry less weight with the public.

834. If they were a separate organisation?—Yes, a museum standing by itself.

835. You are rather in favour of retaining things as they are?—As I said to the Chairman, it would be a great relief to me personally, and, as I said, I think the argument as to whether it is desirable or not should come from the Natural History side. I do not think Bloomsbury would lose by separation except in sentiment. Whether the Natural History Museum would, I do not think it is for me to say. I only mention it because I know it to be an actual fact that recent Directors of the Natural History Department have attached value to the co-operation of the museums. We have worked very harmoniously together.

836. For the purpose of comparison with other museums what are your powers of sale? They seem to me to overlap. Under the various statutory powers at present you have power to sell duplicates and articles unfit to be preserved in the Museum?—Yes.

837. And you have power to give away duplicates?—Yes.

838. Then by the most recent Statute you have power to loan duplicates, have you not?—Yes.

839. Therefore you have really very wide powers?—I think we have ample powers for dealing with duplicates.

840. Powers of sale, giving away and loan?—Yes.

841. Of duplicates and articles unfit to be preserved?—Yes.

842. Then on the question of fusion between two departments. If I may take ceramics as an illustration. The justification for having two exhibitions of ceramics I take it would be, would it not, that they fulfil different functions, the South Kensington collection and the British Museum?—

Yes, partly, but as I think I said in my memorandum, one can emphasise that less in regard to ceramics than in regard to a good many other subjects.

843. I was thinking of dealing with ceramics for a moment. There is no function that is fulfilled by the two exhibitions separately that would not equally well be fulfilled by a fusion, is there?—No. I think that is true. I think that in the case of ceramics, the question for consideration is whether it is not an advantage to have in a town of the size of London two exhibitions. If you had them fused you could not show more than you show now at either of them, simply because there is as much at each as the public can comfortably see.

844. On the other hand, if you brought about the fusion, that would tend to make your exhibition as far as it went more complete?—Yes, but you would have to put most of the collection into storage.

845. It would strengthen your hand, would it not, for the purposes of loan to other institutions if you had a more complete collection in one place?—No, you would still have to keep them for students. Both Museums have only acquired articles that are required for students and it would not answer that purpose to have them scattered about all over the country.

846. If South Kensington were brought to the British Museum you would then have a more complete collection than you have at present at the British Museum?—Yes. It would mean some of the things we now exhibit would be put down into storage but it would not mean necessarily that they would therefore be available for loan away. They are still objects which students would expect to see.

847. It might result in your finding you had duplicates which you could either loan, sell or give away?—It might, but I do not think it would to any considerable extent.

848. And it would also enable you more effectively, would it not, to carry out the idea you were putting to the Chairman just now of storing a certain number and exhibiting fewer?—Yes, it would mean instead of having two exhibitions in different parts of London, each of them at present attractive to the public, you would have one exhibition in one part of London which was attractive, possibly even more attractive, to the public, and you would have a large students' collection put away in the store rooms.

849. For the purpose of exhibition you would have a more complete collection?—You would have a larger number, and the best things in the South Kensington Museum would have to take the place of some of the less good things we now have.

850. You were asked just now about the fire-proofing of the museum, of course, it is a difficult question for you to deal with I imagine. Would you have any suggestion as to any authority or tribunal or body of persons who could determine how far it was necessary to carry out fire proofing?—I do not see what body we could go to other than the Office of Works. They are our official advisers on that matter.

851. Do you think the responsibility for determining whether it had to be fireproofed or not should rest on the Office of Works?—Ultimately the Trustees must take the responsibility. The Office of Works state certain things about the risk and it is a question for the Trustees to say how far they are impressed by them.

852. The Office of Works do not deal with the means you provide in the museum for combating fire if it arises, do they?—No, they are aware of the existence of them, that is all.

853. And the extent?—Yes.

—854. (*Sir Richard Glazebrook*): Are we right in assuming you would not wish for any further powers for getting rid of old books?—No, I have indicated one or two small categories which we should be rather glad—

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

855. I am not speaking of individual categories, but the powers you have of dealing with such things, for instance, the powers which I believe exist in the case of the Record Office?—I do not want to establish a regular destruction committee such as they have at the Record Office.

856. One question in regard to the loaning of books abroad, did abroad include Dominions and Colonies?—Yes, overseas.

857. And then in regard to the possibility of alternatives in storage for library purposes. Are you able to form an opinion of the relative advantages of the Office of Works scheme and of some scheme which would mean putting up a building for making use, say, of the King Edward Building, in some way?—The advantage of the Office of Works scheme is that it establishes a book stack as close as it can be to the reading room. Every increase of distance means a serious increase in the time it takes to get the book to the reader.

858. Have you any kind of idea as to the amount of advantage involved, the sacrifice or the gain in money?—It is very difficult to put in statistical form. The time that it takes to deliver books to readers has increased within the last 20 or 30 years with the increase of the library, and every increase of distance does add to that quite materially. If we were to maintain the same service, having a considerable part of the books in, say, King Edward's Building, it would mean that we ought to increase the staff, so that each man would have to serve a smaller section of the library and therefore get the books to the reader more quickly.

859. (Sir George Macdonald): I think you said in reply to Sir Robert Witt that the plan of drawing a line between articles for exhibition and articles for study applied much more widely to the Antiquity Department?—Much more widely; to the Antiquity Departments in general.

860. Would you go so far as to say it applied to museums in general?—It applies everywhere where it does not already apply. In certain departments like the manuscripts and prints it does already apply.

861. Take the Natural History Museum?—Certainly, there it exists already, and there they have to a considerable extent accommodation for that purpose. It was designed, at any rate, partially to meet that end. You have the exhibition galleries and the study series. You could not put out all your animals, birds and things of that sort into the public galleries. You must have a study series.

862. We had rather a different view put before us a fortnight ago. That is why I asked the question.—I cannot conceive how anybody could wish to have all his fishes out on public view or all his birds.

863. In regard to duplicates, I understand the Natural History people give away a good many duplicates?—Yes.

864. Now, we have had brought before us complaints to the effect that the British Museum, in regard to coins, does not follow the example of the Natural History Museum, but sends them to Geneva for sale. If there is an answer, I want you to give it?—I think those coins were either bought with public money or presented to the British Museum. Normally they are bought, because we do not dispose of things that have been given unless the donor approves. If, then, they are to be disposed of it seems to me proper they should be replaced by other things for the museum. That is what the money was voted for. I do not know whether we should be entitled to use objects that have been bought with funds provided by Parliament for handing around all over the country, and I do not see that there is any obligation to do it. The duplicates given away by the Natural History Museum are objects of no commercial value. They are superfluous collections of all sorts of objects, and the commercial question does not arise. In many cases they are the surplus of large collections which have been acquired and of which the whole is not required

for the national collection. That happens much more at the Natural History Museum than with us, and I do not think the analogy with coins holds the least bit in the world.

865. So it is not such a very generous action on the part of the Natural History Museum after all?—I do not wish to discredit their motives.

866. Then you mentioned the power of loan which the museum now possesses to galleries and exhibitions under the control of public authorities in Great Britain. Have those been exercised to any extent?—Only in regard to prints.

867. Temporary loan?—We have now a loan collection of duplicate prints and that has been in fair request from various places about the country. They go away for three months or longer at a time and they are then returned.

868. If the University of Manchester were very anxious to see a manuscript, would you be prepared to send it for their particular use?—It would not be covered by the law. Loans must be for public exhibition in a gallery.

869. You speak of loans to local museums, and you draw a parallel with the central library idea. Of course, as I think you indicated in one of the replies you gave us, there is rather a difference between local museums and local libraries which might cause difficulty. What I mean is this. Museum objects require probably more skilled looking after than books, and you cannot always be so certain in a local museum that you will find the necessary appliances and persons qualified in a proper way to care for these objects; is not that so?—I think that is so, and the analogy is not a perfect one in any case, because museum objects are often more difficult of transmission. It is quite easy to send a book about the country. You send it by parcel post in the ordinary way, but the packing and care of these objects is a more delicate matter. If there was a central loan institution, it would be part of their duties to satisfy themselves that the place to which they sent them would look after them properly.

870. In fact, it might lead to a system of inspection of local museums by the central museum, I suppose. I think you have been rather severe on yourself in one of your observations in your memorandum, when you speak of the visits of staff to other museums. You say this practice is at present rather treated as a neglect of duty?—Yes. I never feel that I am free to go off and spend a morning looking round the Victoria and Albert Museum, but I think perhaps I ought to and members of the staff should do the same.

871. What I have in my mind is an arrangement I sanctioned five or six years ago in the Royal Scottish Museum which you agreed to very cordially at the time, under which part of the travelling grant is spent every year in attaching the junior members of the staff to the British or the Victoria and Albert Museum for a period of three weeks or a month. The whole expense is borne by the Royal Scottish Museum, but your people are extremely kind to them?—That is a more elaborate thing than I was thinking of. I was thinking of more or less casual visits.

872. You would approve of that?—Yes, by all means.

873. Then you make it very clear I think in your memorandum what the different functions in your view are of the Victoria and Albert Museum in regard to the departments where they overlap or compete with one another, but I gather from your replies to Mr. Charteris you feel the two functions might be equally well discharged if the two museums were under one control. Suppose the Trustees controlled the Victoria and Albert, and you had single departmental heads, the two functions could be equally well discharged?—The two museums could continue to preserve their own special needs and characteristics, even if they were under one governing body.

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.O.B., Litt.D., D.Litt., LL.D.

[Continued.]

874. Is it not possible that you might have, say, a single keeper of ceramics?—Yes, for the combined administration.

875. In that case, it would be perfectly certain that there would be nothing in the way of overlapping, that the same objects might be purchased over again?—I do not think it is for me to suggest—

876. No, but I am asking your view. You do agree that in certain circumstances there is a danger of overlapping? I remember some years ago a rumour that the National Gallery was going to start a collection of Oriental prints. You would not have thought that necessary, would you?—Only on the understanding that they did not get anything that we wanted.

877. I think that answers my question. You speak of inter-loan. This is a matter on which I am specially interested. You feel strongly, you say in your memorandum—and I think you emphasised it in your answers to the Chairman—that inter-loan should be strictly confined to the museums of London. How do you justify that?—Because I think that if a visitor comes to London expecting to find a given manuscript or print in the British Museum, he ought not to be told it has gone even, we will say, to Edinburgh. It is no hardship to say he will find it in South Kensington. Therefore the interests of the students do not seriously suffer by the possibility of loans to museums within one town.

878. You are speaking of unique objects, I take it?—Duplicates can be loaned already. I am thinking of things not duplicated.

879. Even objects which are not exactly duplicates?—Well, one has to consider what the interests of students require. My view is that a student expects to find the material, which he knows to be in a museum of the standing of the British Museum, to be there when he comes. Therefore it ought not to be out of reach.

880. I thought in your answer you went rather further than that, when you banned, let us say Edinburgh, altogether from the possibility of the loan of anything?—Not of duplicates or things which can be sent away without injury to the interests either of the public visiting the galleries or of the students.

881. I should rather have thought there might be an advantage to both sides in some system of loan. I am not speaking of temporary loan, I mean a more or less permanent loan. There may be objects in the National Museum at Edinburgh which will illustrate very well your collections and which are not required there?—I foresee very great reluctance on the part of Edinburgh to allow representation of Scottish—

882. We are coming to that. I want your opinion of the function of a National Museum, let us say, in Scotland, the National Museum of Antiquities. Clearly there must be some delimitation of function if there is to be a National Museum at Edinburgh at all? What should you say was the function of a National Museum at Edinburgh?—Unquestionably that they should have the collection of the principal antiquities of Scotland, and therefore anything that was essential for them they should have first claim to. After that, I think the British Museum, which, as we are sometimes reminded, is a North British as well as a South British Museum, might not improperly have some representation of North British Art in it.

883. I agree.—Where they can be spared. It is a question in each case whether the thing is so unique and special that it ought to be in the Scottish National Museum at Edinburgh.

884. I wanted to bring that out. I am entirely in agreement with you, I think it is very important that there should be here, as far as there can be without interference with the position of the Scottish Museum as a national collection, a thoroughly representative collection of Scottish objects. There have been difficulties, as you know, in the past?—I agree.

885. Now the question of purchase is happily settled, I understand. Is there any difficulty in regard to purchase now?—I do not think so. We have communication with the Librarian of the Scottish National Library, and if there is something in the market which he might conceivably want and which we might conceivably want, we have always been able to arrange the thing amicably.

886. I was thinking there was certain difficulty about certain antiquities?—I was speaking of libraries at the present moment. I am not familiar with the question of the Glen Lyon brooch.

887. When you come to gifts and bequests, it is a much more difficult matter to arrange?—Yes. I know people who were anxious to give things to the British Museum and who suffered severely for it.

888. I think some of your people were rather aggrieved when the Curator of the Edinburgh Museum in replying to the question what the function of the Scottish museum was, said it was to get everything Scottish and everything else he could lay his hands on?—That, I understand, is the North British attitude.

889. I am afraid anyone aggrieved by that reply forgot that humour is such a rare thing in Scotland that, when we find it, we have to keep it in a museum. Speaking of the library, has any consideration been given, do you know, to a scheme which a late colleague of yours referred to in the Press, that is to have the library built on the present ground of the museum, but away from the museum?—Do you mean rebuild the whole of the library?

890. Yes. The point which he made specially was that it was not essential that the library should be upon two or three stories, they could build it six, eight or even 12 stories high, if necessary, and in that way a great deal of space might be saved?—Yes, you can do that without moving it away from its present site. In fact, the scheme now before us does contemplate six stories.

891. That has not been considered?—No, because I do not think it is practical politics. On the remaining part of the site you could not build a library and reading room, and if you leave the reading room where it is it is moving the books that much further from it.

892. There is one further question which rather interests me from the point of view of the department of the museum in which I am specially interested. Do you think that the existing law of treasure trove works satisfactorily from the museum's point of view?—No. That Archaeological Joint Committee that I mentioned did put up some proposals to the Treasury some years ago for amendments in the law of treasure trove. I have not got them with me now, but it was to encourage people to yield treasure trove if they found things, and to arrange for national museums getting what they wanted from it. It does not work so badly now, but there might be certain improvements. I am afraid I have not refreshed my memory with the memorandum.

893. I suppose the feeling is not merely that it is desirable that the national museum should have a choice of these things, but positive harm is done and objects destroyed and lost simply through the rather unsatisfactory working at present?—Because there is not sufficient inducement to the finders to yield the find.

894. Or because they do not know what the inducement is?—Yes.

895. Can you let us have a copy of that memorandum of the Archaeological Joint Committee?—Certainly.

896. (Sir Henry Miers): Two questions relating to present and future occupation and needs. You mentioned that the method adopted in the Greek vase room might be extended to other departments. Would that include the ethnographical collection? Could it be applied there?—No. The ethnographical collection needs expansion, not selection, putting the objects representing different countries in a way which is more attractive and makes more impression

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

on the public. There always would be a certain number of objects which would be reserved; you do not want to have an indefinite number, we will say, of assegaïs in the part to show to the public, and therefore some of the individual objects at present shown in the ethnographical gallery might possibly be withdrawn, but most of those which can be spared I think are already withdrawn and in the store rooms downstairs, and most of the objects now in the ethnographical gallery want not withdrawal to students' rooms but expansion in exhibition rooms.

897. Withdrawal to space behind the cases for storage, not for students?—Yes.

898. The other question relates to the future. Do you think it desirable, in providing accommodation as time goes on, to sacrifice parts of the collections, for example, by setting out ethnography elsewhere, or by splitting up to any extent the library? Could, for example, the whole of the modern science periodicals go elsewhere without injuring the department of printed books?—It would be extremely inconvenient to students, because they want books and periodicals constantly together.

899. They might go to the Science Museum, for example?—You would have to send all the science books to them there, and you would get into inextricable difficulty as to the definition of science.

900. It has been suggested that the modern periodicals could be separated from the older ones?—No, I do not think that would meet the needs of students at all.

901. Or could the music library be transferred elsewhere, and would it make a large relief?—I do not think so. Music, no doubt, is a branch of study by itself, but people often want to study it in the museum in connection with other things. I think it would be a distinct disadvantage to scatter it.

902. In the distant future, when something will have to be done, even if the whole museum site is built over, it is difficult to say whether the policy to aim at is the separation of the whole library or the separation of certain of the departments?—It seems to me that it is possible to make provision on the existing site, and with the existing conditions, for quite as far in the future as we have any right to try and prophecy for. We cannot really say what the needs of a hundred years hence will be, but I think we can provide on the existing site for the needs of a period of something like that time.

903. You think it unnecessary to adopt a line of policy now which would lead to one definite conclusion or the other?—I do not think it is any use jumping fences until you come to them, and you cannot judge what the fence is going to be. By trying to estimate the needs of a hundred years hence we might make very grave mistakes, and for present purposes it certainly is advantageous to keep the museum as closely concentrated as possible. Any separation at present does affect the efficiency of the museum. It is only to be done, therefore, if you cannot help it.

904. (Sir Lionel Earle): You mentioned to Mr. Charteris that you strongly endorsed the trustee system. Have you any hereditary trustees?—There are families represented.

905. They go in families?—Yes.

906. Do you consider that desirable in these days?—It is not a thing to go on with now. I do not think it is a system that would be invented now. It is a survival.

907. It will not cease unless some action is taken to stop it?—There will be no new ones.

908. You do not suggest that the existing family trustees should be forcibly brought to an end?—The number would not increase. I should deprecate any new donor having that privilege given to him.

909. You would not wish to change the existing principle? Supposing you got a worthless heir in the future? Would it not be undesirable for the great position of trustee?—He would not be elected to the Standing Committee.

910. No, but he would be a trustee of the greatest museum in the world, probably.

911. (Mr. Charteris): And he would vote as well, would he not?—Yes, he would vote at the general meetings.

912. (Sir Lionel Earle): In reply (3) to the Commission's Questionnaire there are two passages which struck me as very interesting and, unless I misread them, rather conflicting. You say, "Fifty Greek vases or terracottas in a single museum may enable a student to make useful comparisons or classifications; but scattered over 20 or 30 museums they would be useless for this purpose and of little value for any other." Later on you say: "If all the national collections of pottery and porcelain were brought together in one place, the total would be much greater than could be exhibited without overwhelming the visitor. Two visits to two exhibitions of moderate size are much more profitable than one to a very large exhibition, or even than two, since the visitor, unless he is an expert, is likely to be crushed and discouraged by the quantity of objects offered to him." Is there some slight divergence of recommendation between those two passages?—I do not think much. It is a question of having one or two exhibitions in a town of the size of London, and that, I think, is defensible. I do not think that affects the question whether you should scatter practically the whole of your collections over 30, 40, 50 or a 100 different places with just one or two objects in each place. In the case of ceramics, which I am quoting, you could have two good collections in one town. If you scattered that material over 50 or a 100 places you would have no good collection at all. Students would not suffer materially if they had to do part of their work in Bloomsbury and part of their work at South Kensington, at any rate, they would not suffer much, but their work would not be possible if they had to travel all over the Kingdom.

913. Are you certain that the collections of all foreign newspapers taken into the British Museum are necessary and advisable?—We only take in those we think are necessary. It is a question of selection in buying them.

914. It is practically every principal newspaper in the world?—Oh yes.

915. You think that is desirable?—I think so, because after all there is so much information—true and otherwise—in newspapers which you could not get anywhere else, and therefore they are constantly wanted for research.

916. I believe you have been seriously warned by our Department about the condition of the hanging racks?—Yes.

917. They are practically saying the Museum authorities must remove them as soon as possible. I believe you have no possibility of doing that unless you get extra space, or what is the solution to that structural danger?—What is going to be done is that as soon as the repairs to the floors in the King Edward Building are completed we shall take the contents of at any rate a considerable number of those hanging cases and stack them on the floor. I hope they will stand it. It is obviously very inconvenient.

918. Would you be totally averse to an entirely new library on the Bedford Estate in close proximity to the Museum, properly constructed?—To take the whole library?

919. Yes, move it right away from the present Museum and build it in absolutely close proximity on a new site?—One would have to consider the scheme. The further away it is taken the greater the disadvantage. At present there is a great advantage in having the Library and the Departments of Antiquities in close proximity.

920. From the point of view of your own staff, or from the point of view of the public?—From the point of view of the staff, mainly.

921. It would be a hindrance to the working of your officers?—It would be a hindrance; I am not

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

entitled to say it is a prohibitive hindrance. It exists elsewhere. In Paris you have the Louvre in one place and the Bibliothèque Nationale in another. But it is a great advantage to the Museum as a whole to have the Library there in the centre. You can get all the books you want. Otherwise much larger departmental libraries would be necessary.

922. You told Lord D'Abernon that it might be possible, under certain disadvantages, to move certain books and newspapers to Hendon en bloc. Would that release at Bloomsbury comparable space for the Library or—?—If you moved the whole newspaper department?

923. Yes, and individual books?—Oh yes. It would clear the whole of the basement of the new King Edward Building.

924. That would be very useful for library purposes?—Yes.

925. Not too far away?—That is the drawback to it. Things would have to be fetched from some distance, and that would mean an increase of staff probably, if one was not to be impossibly slow in delivering books; but it would give us a very considerable amount of additional space.

926. You mentioned the King Edward Building doorway being closed on account of economies. I understood at the time that it was not only on account of economies, but that you and your staff were afraid of this passage way being used as a thoroughfare from north to south?—No. That was suggested, and it was also suggested that it is a very good thing, from the point of view of safety, to have only one doorway, as it is easier to watch and control people. I think that is so, but I do not think they are decisive objections.

927. If you had money, you would open it tomorrow?—Yes.

928. In connection with building operations, at the British Museum, I have heard complaints—I dare say totally unjustified—of various members of various departments not having been consulted. As regards those complaints, is there truth in that? For instance, the new King Edward Building?—I do not know about the earlier stages. I was not then Director. The plans in which I was concerned were rather those of fittings than structure, because the structure was embarked upon before I was Director. The plans of fittings were sent to the Keepers, and seen by them before they were passed.

929. In future you would be sure to consult the heads of sections?—Certainly. There was a good deal of change backwards and forwards as to the intention, as to how that building was to be used. Before the allocation was finally settled, the keepers concerned were consulted. That came within my time. The heads of the departments of prints and drawings and British and mediæval antiquities, were asked to submit memoranda on the use of that wing.

930. Can you give me any rough idea how the cost of administration has increased since 1914?—I have not the figures with me.

931. Can you let us have them?—Easily.

932. How much of that is due to increase of staff?—By far the greater part is due to the increase of the pay of the staff. First of all, there was the Civil Service Commission which sat just before the War, and whose recommendations came into force, as far as we were concerned, after the War, and which materially increased the pay of all parts of the staff, and then, in addition to that, there is the war bonus. Therefore, that is by far the largest part of the addition. There is no very large increase in the number of the staff.

933. Do you foresee any large increases in the future?—No, not large increases. There are a few needed. I think we can increase our efficiency sufficiently with quite a small number of additional staff, mostly of minor staff. I do not see any reason to expect a large increase of staff in the future.

934. If funds were available, would you increase the guide-lecturers?—I am not quite sure. The diffi-

culty at present is that if you had many more lecturers you would have the rooms crowded out. I would go slowly on that. At present, the two lecturers, with assistants to replace them when they are specially pressed, or when they are away, meet the demand. I think one had better wait until the demand increases.

935. *Chairman:* Sir Martin Conway has asked me to put a few questions. Would not a joint agent for purchases at auctions, through whom alone purchases would be made, automatically prevent undesirable competition between different museums?—Not automatically, because the agent would have to get his instructions from the different places, and we should still have to discuss with the other bodies concerned whether they or we were to have preference.

936. *Armour.* There is a small collection of pieces of armour in the British Museum. Should not those go to the Tower?—A committee sat not many years ago to consider the allocation of arms and armour between the various public galleries like the Tower, our Museum, Woolwich, and certain others, and a line of demarcation was arrived at. Ours is oriental armour.

937. Is it necessary to bind as many newspapers and minor publications as are now bound?—Yes. We ought to bind more. At present a number of them are kept tied up in parcels, which necessarily tends to their destruction. If we are going to keep them folded instead of bound, they will suffer in the course of time. We bind very much more cheaply than we used to, and we use much cheaper materials, but if a book is to be used it is essential for it to be bound.

938. Could not the number of advertisements kept be reduced?—That is rather difficult. Advertisements are things which are wanted. We had an enquiry only a month or two ago from someone who applied to send in quite a large staff of men to search for advertisements through a number of papers over a certain period. Whether we actually keep too many I cannot say.

939. Would you view with disfavour the imposition of a universal penny entrance fee at all museums and public galleries?—Yes. I am against any fees.

940. Cannot the labelling of exhibits, especially the approximate dating of them, be much increased?—Yes, I think it can. Labelling is a thing which has been developed very much within the last generation or two. I think it is a matter which wants constant watching. Parts of the Museum now, in my judgment, are inadequately labelled, but often the staff really have not time to deal with it, at any rate as promptly as is desirable.

941. Do you want funds for excavation?—Yes.

942. Would it not be better that the plates in the "Museum Quarterly" should not be printed on both sides?—I believe Sir Martin Conway likes to make collections of prints cut out of publications. I suggest to him that the proper remedy is that he should buy two copies and he could cut them up and arrange them as he likes.

943. There is one other question I should like to ask myself. I did not quite get your view as to the benefit to the general appearance and effectiveness of the Museum by occupying the two lateral sites now occupied by leased houses?—The benefit would come simply from having more space. We should be able to use those parts of the Museum mainly for storage and, therefore, give more room in the existing galleries for exhibition. Alternatively, of course, you might use some of the existing galleries as storage space and get better rooms in the proposed new building, but broadly it is this, that you would get a good deal of extra space and, therefore, could put out your things better.

944. You would get more enhancement of the exterior appearance of the museum?—Yes, supposing this programme were carried out, you would have a building occupying an island site with good

17 November, 1927.]

Sir F. G. KENYON, G.B.E., K.C.B., Litt.D., D.Litt., LL.D.

[Continued.]

architectural frontages on each side. There is the present façade on the south. On the west there would be a frontage towards Bedford Square which has its own amenities. On the north there is the present frontage of the King Edward Buildings, which would be extended, presumably, along the whole of that side and would be facing the future London University buildings to the north of us, which will presumably be dignified and suitable buildings. On the east the frontage would be Montagu Street; the houses on the opposite side there are nothing very specially dignified. That would be the least satisfactory side. Of course, if you could let yourself go in the matter of town planning you could improve the thing still more. You would clear away all the houses between the front of the museum and Oxford Street and thus get a really fine view of the façade. I remember at one time suggesting that if people had town-planned better we might have had a vista running up from Piccadilly Circus to the front of the museum in one direction and running down to Waterloo Bridge in the other. But that is town planning on a large scale. Apart from that, if the programme I have indicated were carried out, you would have a dignified building in the view of the public on a line which people go through constantly when they are going to any of the northern stations. You would have adjoining it London University, and a big educational quarter with University College and, possibly, other colleges coming there. I think the dignity of London would gain quite materially.

945. (*Sir Richard Glazebrook*): Sir Frederic Kenyon explained just now that an appreciable number of books would have to be removed because of the danger of the hanging bookcases. I understand also that there is a very large accumulation of books waiting for proper positions and there would be a larger accumulation still in the future. Would it be possible to give us any kind of figure which would indicate the total number of those books and the kind of proportion they bear to the whole library?—Those which are, so to speak, houseless?

946. Yes, and then some sort of statement as to what you think would be the expansion in 50 years? I do not mean now?—I have told you that. The actual plans produced will show what is regarded as necessary for a period rather longer than that; 72 years is the period named. We have given the general rate of increase. It is roughly about one mile of shelving per annum. That is in my memorandum. I could give, probably, some sort of indication as to the amount of the overflow, the things which would have to be housed upon the floor and so on. I will see if I can do that.

947. (*Sir George Macdonald*): You mentioned a laboratory. Is that under the control of the Trustees?—It is staffed by the Department of Scientific and Industrial Research.

948. You have some control over it?—It is housed in a building belonging to the Trustees in Montagu Street. It is under the control of the Trustees,

though the staff report to the Department of Scientific and Industrial Research.

949. How far have you control over the staff?—I have no control over their pay. I have control over their actions in a way. Of course I do not interfere with them scientifically, but for matters of discipline they are under my control. The laboratory is also used by the actual Trustees staff. The theory of the thing that we want to work up to is that research should be done by the scientific staff who at present are provided by the Department of Scientific and Industrial Research and that they should be training our staff, our assistants and attendants, to carry out the various operations which they certify as the proper ones. It is now under consideration whether the whole organisation, including the scientific staff, should not be transferred to the Trustees. That I have no doubt will happen eventually.

950. (*Sir Robert Witt*): Have you had any trouble such as has been experienced elsewhere in regard to the conservation and preservation of objects, especially in the anthropological side of it. In America they have had to arrange for very elaborate cold storage in which they keep all their carpets and all their perishable materials. They have formaldehyde fumes in poison chambers especially for keeping all kinds of things of that sort and altogether they have elaborated a very extensive and complex arrangement because they are afraid of the perishable things, furs, skins and so on. Have you had any difficulties of that kind in your ethnographical department?—Yes, it was to meet those difficulties that the laboratory was established. Of course we have had those kind of difficulties as long as the museum has existed. We had a considerable amount of rule of thumb knowledge as to the treatment of objects of all sorts included in the various departments and from time to time we had men with very considerable skill in dealing with them, but it was not until the laboratory was established that the work was put on a scientific basis. The men had no scientific training; they knew the actual procedure but could not give the scientific reason of it. It was not recorded and was not available for other people. Since the laboratory was started everything is on a scientific basis. All experiments and results are recorded and are available for the public as well as for ourselves. We have found, not only that they have been able to deal with a number of problems which we have put to them, but that they have themselves noticed things which needed to be put right and have called our attention to objects that were suffering and were perishing under existing conditions. They have done a great deal to secure the conservation of the objects in the museum and any problem of that sort that comes up is now referred to them.

(*Sir Richard Glazebrook*): I have seen a recent Report. I think perhaps it would be useful if one or two copies of that were obtained and circulated. It is quite small but very interesting.

(*Chairman*): We are greatly indebted to you for your evidence.

(*The Witness withdrew.*)

SIXTH DAY.

Friday, 18th November, 1927.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZE BROOK, K.C.B., LL.D.,
F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).Mr. J. R. CHAMBERS (*Assistant Secretary*).

Mr. LAURENCE VAIL COLEMAN, Director of the American Associations of Museums, called and examined.

951. (*Chairman*): You are the director of The American Association of Museums?—Yes.

952. Your Association, I take it, is representative of museums generally in the United States, the Federal museums, the State museums and the municipal or civic or privately endowed museums. Can you tell me roughly how many there are in each category, and how many of the total number are represented on your Association?—The Federal museums are in one group; they are located at Washington, D.C., and are administered by the Smithsonian Institution. I refer to the National Museum (devoted primarily to natural history but embracing the rudiments of a "National Museum of Industry" and a "National Museum of History") and to the National Gallery of Art with its sister-institution, the Freer Gallery of Art. These museums are represented in the Association by the Smithsonian Institution. About half of our States have State Museums, of which not more than half a dozen are well developed. There are five State Museums in the Association. The City museums have considerable moment. About 50 of them are in the large-museum class; 150 (including the 50) are active, and several hundred others are listed in our directory. The number of institutions enrolled in the Association is about equal to the total of those that are active. We also have college museums and private museums which make up a total of approximately 1,000 museums in the country. Also, I might add, our Association has over 700 individuals—mostly museum professionals or trustees—in its membership, besides the institutions I have mentioned. The body is truly representative of American museums.

953. Is it broadly true that, whereas in this country the foundation of the great museums and galleries has been undertaken by the State, in the United States the process has been the other way with the result that some of the greatest museums are not State institutions at all?—Yes. The National museums, to be sure, we conceive to be the potential leaders of the museums of the country, but our great city museums—mostly created by private enterprise—are more liberally supported and, therefore, are more active. The fundamental difference between the great museums of England and those of our country is in respect to control. Your museums are owned, controlled and supported by government, whereas—with exceptions—our greatest museums are institutions which have arisen at the instance of citizens, and are now having public support developed as a secondary feature.

954. Is it correct to say that a large proportion of the museums are supported mainly by private benefactions?—Yes. There are two sources of income

which most of the important museums enjoy: private and public. The private support overbalances the public. Private support is in the form of dues of members, in the form of other gifts and in the form of bequests. Public support is derived in some instances from the county as well as the city. I shall want to revert to this question in detail shortly.

955. Now, could you give us the main methods by which American museums obtain public support: for instance, is the director or curator among his other duties required himself to be a publicity expert, or are special persons allotted to his staff for that purpose. Is a great deal of money spent on advertisement? What sort of advertising methods are adopted, and is membership of a museum a fruitful source of income?—How do museums in America secure public support? I can answer that in three words—by public service. That is the key to the whole of museum development in America. I am not certain that we mean the same thing as you do by advertising. By that term we designate paid advertisements in newspapers and periodicals. If you mean that—no, museums do not advertise at all. If you mean the utilisation of channels for communicating with the public—the newspapers, magazines, the screen and the radio—yes, there is a great deal of use made of those, but the use of them is secondary to the public educational service which museums of all kinds render, and it is conceived to be solely the means of bringing to the attention of the people those facilities which museums offer. The director of a museum—especially of a larger museum—is usually a man of broad understanding and interest, one who knows the subject matter of his museum and is also an administrator. As part of his administrative duty he is supposed to supervise publicity and also to conduct the work of the museum in such a way that there is something to be brought to the attention of the public through publicity. In a small institution the director has greater duties of performance, and in that case he must necessarily have practical knowledge of the methods of publicity; but in a larger institution publicity activity is usually carried on by some member of the staff—either a part-time publicity expert or some curator or officer who has an instinct for publicity.

956. Now, is it the case that in the great majority of the American museums entrance fees are charged, and, if so, are they charged on all days, or are there certain free days in the week?—The consensus of opinion among American museums is wholly unfavourable to entrance fees. There are some museums which exact them, but as a rule they do so only on two or three days a week and not for securing revenue but for affording a certain degree of quiet to people who use the museums for serious study.

18 November, 1927.]

Mr. LAURENCE VAIL COLEMAN.

[Continued.]

957. You think that opinion is generally very hostile to charging fees?—Yes.

958. On what grounds?—On the ground that a museum is a public institution and should be used freely by the public.

959. In the larger museums are lectures a regular part of the curriculum, and, if so, are the lecturers supplied by the museum authorities or are they supplied by outside educational organisations?—Lectures are one portion of the educational programme of all active museums. All of the larger museums conduct lecture courses. Some of the lectures are for the public, some are for the members, some are for children, and some may be for the children of members. The lectures are conducted—depending upon the resources of the institution—either by paid lecturers (which is, of course, preferable) or by unpaid lecturers (which is possible) and always to a considerable extent by the members of museum staffs.

960. Are fees charged to those who attend the lectures?—To answer by categories: The lectures for the public—no. The lectures for members—the fees, if you like, are conceived to be included in the dues. The lectures for children—no. Some museums give courses of instruction for adults, and make charges, but this is another matter.

961. Then what about the contact of the museums with the primary and secondary schools? Have you been able to form any comparative impression in this respect between the museums of this country and those of the United States?—A strong impression. With us, educational work includes as an important element, the education of children—on the one hand children who come of their own volition, and on the other hand children at school who are reached through the agency of the teacher. The methods of school service have emerged from twenty years of experimentation. They embody an empirical technique which, of late, has been studied by pedagogues, and they are now well grounded in principle. They fall into two groups: the lending of museum material to schools (and that is done by the art museums as well as the science museums), and the teaching of classes at the museums. In a memorandum, which I hope to submit later, I shall try to bring out the exact nature of the work with schools. The point which I want especially to emphasise now is that the educational work of our museums has developed to a stage where it falls into definite grooves, not of standardisation but of sound practice. My impression is that such development is not found in Europe.

962. Taking your museums generally, upon what purposes and what relative order of importance do they mainly concentrate their energies, for instance, is exhibition and the cultivation of a sense of beauty the primary object, or popular education, or the encouragement of the research student, or the application of learning, science and art to practical life and to industry?—The functions of a museum are conceived to be two: the adding to knowledge, and the exerting of influence. The adding to knowledge is research. This function is discharged very much more extensively by science museums than by art museums, but all museums recognise it. The exerting of influence aims either to develop taste or to give knowledge. It is carried on through the channels of exhibition supplemented by the types of instruction to which I have made reference. Large museums divide their energies about equally between scholarship and mentorship, usually with a feeling that whatever happens the latter function must not be slighted. Small museums lean less to scholarship, but in general with us, you see, the use of material is stressed. However we realise that symmetry is just as important in museum work as in other activities of life.

963. Education with you and exhibition with us?—Yes.

964. How do you rate the relative urgency of further acquisition compared with better presenta-

tion of existing possessions for scientific study and artistic effect? In the United States is greater attention devoted to presentation than is apparent in this country and in continental Europe?—I believe (and I think I would be supported generally in the belief) that further acquisition, which is one of the life streams of scholarship on the one hand, and better presentation, which is the foundation of influence on the other hand, should go together. Those two functions are so closely related that the full development of either and the full life of the museum depends upon the symmetrical development of both.

965. Now, turning to the question of the salaries of directors and curators, can you give us any indication of the salaries paid, or the scale of salaries?—There is considerable diffidence on the part of museums in the matter of making known their salary scales, but I can give you a general reply. The large museums pay their directors from £1,000 to £3,000. There are not many men who are getting as much as £3,000, but the director of a large museum getting less than £1,000 would be considered to be underpaid. Curators receive from £400 to £1,200. The assistants of museums are rather poorly paid. In the smaller museums the directors get from £500 up to something less than £1,000.

966. You say the lower posts are very poorly paid?—In most instances they are poorly paid, for the reason that we are only just arriving at the point where the specific character of museum work as a profession is being recognised. Naturally the first man to be appreciated is the administrator—the director. In the case of the curator, appreciation lags. Lower posts have as yet hardly been affected.

967. What is the usual method of recruitment for museums posts, and what standard of qualification or scholarship is usually expected for appointment to the higher posts?—There is no definite method of recruitment, except in the case of the very few Government-controlled museums which are under civil service and which offer examinations. Experience outweighs scholarship for administrative posts, and vice versa for curatorships. We are approaching the stage at which university standing will be required in most cases.

968. There is no definite system of recruitment or training?—No. The vital importance of training for museum work is only coming to be realised. I can submit to you with my memorandum a curriculum of training for museum work which has been drawn up by several museums in co-operation and also some notes on courses which have been given, but as yet there is no recognised training for museum work.

969. Then what about facilities afforded for directors and curators to travel abroad, or to travel about in the States?—The directors and to some extent the curators of art museums travel very much more than do those of the science museums, I think, but there is no mechanism of instrumenting the travel of museum people. I do know that museums are quite generous in meeting the expenses of staff-members who desire to travel for the purpose of acquiring objects whether by purchase or by field work. In the case of the American Museum there are 30 or 40 expeditions in the field each year. The travel of museum people to meetings, and on visits to other museums is realised to be of importance, and there is considerable generosity in that respect.

970. What about overlapping? Are there any methodical arrangements for preventing overlapping between neighbouring museums, or preventing competition between museums for the acquisition of objects?—Only by what I might term "gentlemen's agreements." With the National museums there is no difficulty in that matter, because the administration by the Smithsonian Institution precludes the possibility of any undesirable overlapping. In the case of the other museums, the only possible

18 November, 1927.]

Mr. LAURENCE VAIL COLEMAN.

[Continued.]

means of preventing overlapping is by agreement between directors in the matter of bidding at auction or of exploring and division of finds. It is not a serious problem with us. Rarely does one hear of unfriendliness between institutions and frequently one learns of co-operative action. Co-operation can extend the usefulness of our museums greatly.

971. With so many museums, don't you find cases of competition between museums at auction?—No. However, this may be partly the outcome of the circumstances that our emphasis is upon educational performance rather than acquisition solely. We are not primarily seeking to set up huge collections and the other emphasis makes for competition in gloriousness of performance but not unduly in acquisitiveness.

972. Quite. That is very well put. What about interchange in the way of loans between the various museums, whether Federal, State or municipal?—In the field of art, there is a very systematic lending of material through the agency of travelling exhibits. The art museum directors of America have a club—the Art Museum Directors' Association. It is a round-table organisation, and through it, once a year, in the Spring, the Directors come together and plan their circulating exhibits for the year. This activity gives system to a large part of our lending of art objects among museums. Among the science museums there is nothing of the sort as yet, but there is a general feeling that there should be, and I think that some day there will be. As to lending of material for study, I should say that there is free but not formal give and take. Many museums give material to other museums nominally in exchange. The National Museum has given away 50,000 objects—largely of science material—to other museums, in the name of exchange but essentially as gifts, in the course of the last year.

973. Now, with regard to the question of congestion which figures very largely in this country, are you troubled by that?—Yes, we are very greatly.

974. How are you dealing with it? Is there any systematic dispersal of objects considered unworthy?—The problem of congestion is one which necessarily is troublesome to every museum. It is partly solved in several different ways: in the first place, by organisation of material into two series: (1) exhibition material and (2) study material. It has come to be a principle with us that a museum should devote at least one half of its floor area to housing of study collections. Of course, these are disposed very compactly. Space is saved in this way and selection of material for exhibition is induced. Museums among us discard material quite freely. There is a feeling that every museum of size owes an obligation of leadership to smaller museums. There is also a conviction that the National Museum owes a duty of leadership, perhaps through the larger museums, to all the museums of the country, and that it will ultimately rise to that position which at the present time, owing to financial stringency, it is unable to occupy. The idea of leadership of the small by the large is gaining ground, and is responsible for much giving and lending of material. That aids the solution of building problems, although, of course, the natural check upon the extension of buildings is the financial one which is always exerted, and without which might result huge museums beyond human comprehension and, some of us think, beyond any possible requirement.

975. You think there is a definite limit?—Very decidedly. I think that, in a large city, there are more than ample opportunities for the development of branches which will reach all the ramifications of the community's life. That is surely coming, but I cannot say that it exists at present. When it does come it will give outlet for material and will tend to make huge museums things of the past.

976. That would be one central museum?—With many branches. There are people in New York

City who are urging that the Metropolitan Museum have as many as 40 or 50 branches.

977. You think that would be a desirable development?—I think it is extremely desirable.

978. As giving opportunities to the public to study?—Yes. May I compare the situation with a commercial one? A great museum without branches is somewhat comparable to a great warehouse without retail distribution facilities. We conceive museum work to involve distribution of ideas and influences.

979. On the question of museum publications, are the selling prices so arranged as to cover the cost of production, or is this found to be impossible because the character of the publications is too technical and too little popular?—In the case of technical publications, the possibility of recovering the cost is generally conceded to be quite impossible. That is true, I think, in every field of technical effort. Scientific journals and other technical journals are never run at anything but a loss, as far as I know. In the case of popular publications, by which I mean guide leaflets, brochures and the like, there is an effort usually so to plan the size of editions, and so to fix the cost of copies, that by the time an edition is exhausted the cost of replacement may be met. But if that ideal does not quite work out in practice, the loss is charged to profit and loss.

980. (*Sir Lionel Earle*): I think you said that the Smithsonian had a sort of supervising control over all the Federal Museums?—Yes, that is so.

981. How many Federal Museums are there? They are all in Washington?—Yes.

982. How many are there there?—The National Museum with its departments of science, industry and history, and also the National Gallery of Art with its partner institution, the Freer Gallery of Art.

983. It has a controlling influence over the whole?—The Smithsonian is a private institution operated under an endowment, which administers these institutions. Except for the Freer Gallery, the Federal museums are financed by funds appropriated by the Federal Government.

984. (*Sir Henry Miers*): Could you make it clear how far this unity of aim and purpose of the States taken as a whole is of recent growth, and whether it is due to the activities of your Association?—I should not for a moment want to claim that it is due to the activities of the Association, it is the resultant of many years of gradual growth—accelerated, no doubt, by the meeting of museum people annually at our conventions, and by the interchange of ideas through publications of the Association, and somewhat at the present time by the researches of the Association which are put before the museums. I feel that the Association has been the body which, observing museum progress, has endeavoured to give it direction. I think the consensus of opinion among American museums as to method is due to the sheer logic of circumstances. All museums face the same problems and of necessity they have solved them in somewhat similar ways. The Association has endeavoured to take cognisance of progress and to set up channels of communication which will make further progress possible.

985. It is equally true of the large museums as of the smaller ones that their zeal is rather to render service, and to build up large connections, because the large museums here have a reputation for being extremely anxious to build up huge connections?—I should say it is even more true of the large than of the small museums; and even more true of the science than the art museums, perhaps; but it is essentially true of every one of what I have termed the 150 active museums.

986. National and State museums?—Yes. And local museums.

987. On the subject of research, does advanced higher research form a vital part of the activities

18 November, 1927.]

MR. LAURENCE VAIL COLEMAN.

[Continued.]

of many museums, in addition to the National and State and University museums?—That is principally determined by resources. In the larger museums—by which I mean museums having incomes of, say, £5,000 or more a year—research forms as a rule a very considerable element of work. But in some of the smaller institutions you would be surprised, I think, at the amount of research which goes forward. Much of the work has been entirely voluntary. The investigator goes to the museum, works on the museum collections and develops them; the museum publishes the results, and thus with almost no outlay even the small museum may be responsible for real additions to learning.

988. The small ones as well as the large?—Yes. The larger ones organise research; the smaller ones induce it when they can.

989. The small ones do attract a body of workers?—Yes, but only one or two at a time, usually.

990. I take it that official support comes mainly either from the State, the City or the County? In all cases is that given without demands for representation on the governing body?—The State museums are State-owned and State-operated, like your own. The City museums usually have on the Board two or three *ex-officio* trustees (perhaps the Mayor and the Superintendent of Schools, the Controller or some other public official). The function of *ex-officio* trustees, who are usually appointed by the Mayor or the Board of Aldermen, is to have a hand in the expenditure of city funds which are given either as a reward for service or in anticipation of service.

991. In the case of the smaller museums, it is equally true that if they obtain official support they must also include official representation?—Yes—of all.

992. Is it frequent in the States to find the museum associated with a library, as it is here, not only in the largest museums but in many of our smaller museums?—It is relatively unusual. The library is the cradle of many an American museum, but like the human cradle it should be outgrown as soon as possible. We recommend that a museum which cannot establish itself independently, by all means establish itself in a library, either under a separate Board or under a Committee of the Library Board—which committee may be conceived to be a Museum Board in embryo—and then that it get away from the association as soon as possible.

993. That happens to a large extent?—Yes. There are scarcely any that have long continued the relationship.

994. As regards the relation between the smaller museums and the National and State museums, do they claim, or have they recently claimed, assistance in various ways from the National and State museums?—The number of State museums sufficiently strong to render assistance is small, as I have indicated. The National museum receives not *claims* for assistance, but pleas for assistance, and it gives help as fully as it can. It conceives its duty to be the giving of as much assistance as it can possibly afford.

995. Is the membership system, which plays such an important part in certainly the smaller museums, equally the main support of the National museums and the larger museums?—The National museums have no members. They are supported primarily by Federal funds, and are administered by the Smithsonian Institution. The large City museums depend upon memberships not for their principal support, but for a large element of private support. The Art Institute of Chicago has, if I am not mistaken, some 13,000 members.

996. (Sir Robert Witt): It is more than 13,000.

997. (Sir George Macdonald): You mentioned, I think, £1,000 as the salary of a certain number of the Directors of Museums. How many are there

would you say roughly, on that footing?—I should estimate at least 30 and perhaps 40 or 50.

998. Do you arrive at the figure by converting dollars into pounds?—Yes.

999. You make no allowance for the difference in the cost of living?—No. But such an allowance should be made.

1000. Would it be fair to say that it corresponded to a salary of £500 in this country?—The cost of living in our larger cities where the larger salaries are paid is, I think, not quite double what it is here.

1001. It would be fair to say that there are at least 30 Directors in America who are getting an equivalent, say, of £500 to £600 a year here?—Yes, I think so.

1002. (Chairman): He said rather less than half?—Yes.

1003. (Sir George Macdonald): From where are those directors recruited? Are they drawn, when the appointments are made, from the lower-paid class of Curators, or are they brought in from outside?—Most of those men have come to their present positions through long experience in museum work. They have come up through the mill. Probably for some years to come appointments will be made from among those who have had only practical training in museum work. There is a feeling, however, that new material should be brought into the museum profession as near the top as possible, and specific training, when it becomes a reality, will facilitate this.

1004. You rather puzzled me by drawing a distinction between the financial and the moral support of museums. You do not think that finance and morality are mutually exclusive?—No. But I think museums feel that if they go after moral support the financial support will come on.

1005. Really the moral support is only a sort of indirect means for securing financial support—I mean by creating a public opinion?—By creating a public opinion.

1006. To take an interest in museums?—Exactly. And yet all financial support is conceived to be a means to an end, which is service.

1007. Not advertisement?—No, I should hardly say advertisement, I should say service unless the administrator has unusually selfish motives.

1008. You have been in this country for some little time now?—I have been in England less than two weeks, but in that time I have been about quite a bit.

1009. You have been to our museums?—I have visited a dozen or more of your provincial museums as well as the National museums.

1010. Have you any suggestions that you can offer the Commission for improvement?—I feel that, with my slender background of experience here, it would be unwise for me to offer suggestions for the development of your museums. I think that I might help more effectively by preparing a memorandum presenting to you those elements of our own experience which seem to me to be suggestive for the solution of your problems.

1011. Apart from making recommendations, did anything strike you—you are an observant person, of course—when you were going round, that seemed defective compared with your own museums?—(The Witness then mentioned three points of criticism which had occurred to him, and after having explained the third in more detail, continued): I have again and again asked myself how it can be possible, and whether it can be possible, that within one country there is other than the greatest solidarity between museums of all types. I am afraid I have not as yet focussed upon the nature of the difference of interest, if any, but I have

18 November, 1927.]

MR. LAURENCE VAIL COLEMAN.

[Continued.]

sensed a feeling that such disparity of interest does exist.

1012. You mean you had a feeling that the National Museums did not take sufficient interest in the provincial museums?—Yes, and also that some of the provincial museums on their part were taking an unfortunate attitude in regard to such help as they might receive.

1013. (*Sir George Macdonald*): You have the distinct impression that there was lack of co-operation between the two?—Yes.

1014. (*Sir Thomas Heath*): As regards the administration of museums, I understand that except for the national museums and the State museums, they are run by corporations. Are they quite independent, or are they subject to general legislation?—No. Those museums which are privately incorporated are organized under laws for educational corporations. They are therefore subject to general legislation, and ordinarily their public support is received under the provisions of State laws authorizing the use of city or county funds, or both, for museum purposes.

1015. (*Sir Robert Witt*): May I ask you, quite shortly, so as to get them on the notes, one or two points about your Museums Association? I think you have 924 members?—I think somewhat fewer than that, but the enrolment may have grown to that point since I have been away.

1016. Approximately 900 members as against 300 members of the English Museums Association?—Yes. However, four years ago we had few more than 300 members.

1017. I think your Association has received support from the Laura Spelman Rockefeller Memorial?—Yes.

1018. Which gave I think \$10,000 to your Association provided you raised \$20,000 elsewhere—and you found no difficulty in doing so?—That support has been given for nearly five years so far, and we are assured of somewhat modified support for another year.

1019. I think your museums support your Association generously by a sliding scale based on their income?—Yes. The scale is \$1 for each \$1,000 of museum operating income. About 80 per cent. of our Institution members have accepted that scale.

1020. I think also the Carnegie Corporation has subsidised a very interesting experiment in the form of an exploratory study of methods of display in Art Museums which was initiated by a Professor of Psychology at the Chicago University, assisted by an undergraduate of Harvard and Yale?—Yes; and also, if I am not anticipating other questions, the Carnegie Corporation and the General Education Board have financed many other special projects.

1021. So you find no difficulty in getting extensive public support from institutions of that kind for the work of your Association?—No. The endowments feel that an organization in good standing which has established administrative machinery is likely to be an effective channel of administration for studies and demonstrations, and therefore grants for special projects are not rare.

1022. I think you publish, among your publications, the "Museum News" and also a series of Publications of the American Association of Museums?—Yes.

1023. You publish both those, and I think your Association was responsible for what I may call an excellent book, the Manual for Small Museums, written by yourself, and that was published by your Association and deals with the particular problems of small museums?—The Association, as one of its special projects, financed the study on which the book is based, and assisted in publication.

1024. I think last year you held three very important regional meetings for those interested in museums, one in New England, one in the Middle West, and one in Southern States?—Yes. There is now a fourth group.

1025. You also have international relations with the English Museums Association, whose journal I have here, and with the International Office of Museums in Paris?—Yes. Those relations have been very close and pleasant.

1026. I think we may assume that you are very familiar with American museums. Have you also considerable experience of European museums?—I have a very small experience with the work of European museums; I am trying to overcome that limitation a little at the present time.

1027. A question which arises out of some other of your answers is this. Do you consider that the American public is naturally more interested in museums than the public, say, in this country, or have you made them more interested by your publicity, and by your propaganda? Have you any means of forming an opinion on that rather important question?—I should say that there is a trait in the make-up of the average person in America which induces him to grasp a little more eagerly at something for self-improvement—especially if it be new—than there is in the constitution of the average person in Europe. The growth of museums among us has been due, I think, to two things: on the one hand, aggressiveness of professional individuality, and on the other, eagerness of the man on the street.

1028. What methods have you used mainly in connection with this publicity and propaganda? Would it be fair to say that one of them, an important one, is your treatment of the other arts in connection with museums, as for instance, the prevalence in American museums of music and performances of music, organs, orchestras, and such like, in the museum itself or connected with it, and in the case of a thing like the Chicago Goodman Memorial Theatre the actual presence of a theatre and a school of drama in connection with the museum?—And in the fact that some museums—the Metropolitan Museum most notably—cater to makers and distributors of objects of industrial art, and feel that their duty is to educate public taste in other than the fine arts. That attitude, so far as art is concerned is crystallised in the expression, "Not art for art's sake, but art for the people's sake."

1029. In regard to your membership do you attribute a considerable part of its success and its numbers, its very large numbers—those of the Metropolitan are even larger than the Chicago figures you mentioned I think—to the privileges which are accorded to members?—I am disinclined to think so. I think there is a large willingness on the part of the American people to support institutions which they feel to be worthy. The fact that children are able to bring home to parents messages about what museums are doing in their lives is largely instrumental in interesting parents in museums. Large memberships are partly due to initiative in the use of the telephone. The most active museums are now recruiting almost entirely over the telephone.

1030. I believe I am right in saying that at Chicago they have eight full time individuals employed in doing nothing else but secure new members?—I believe so.

1031. And in one year at least one third of the total subscriptions, or as you call them, dues, from the public was expended on the salaries of those who secured them?—That I do not know exactly, but I should not be inclined to doubt the cost you indicate.

1032. That is to say in America it is considered good business to spend freely on increasing the interest and publicity even at some considerable cost to the institution which may be involved?—Yes.

1033. Just another point on the question on which you touched of the schools. I believe it is the case that in one important American city, the education authorities have, I do not know whether this is within your knowledge, I think it is very likely it may be, have decided in future no school, what you

18 November, 1927.]

Mr. LAURENCE VAIL COLEMAN.

[Continued.]

call a public school, shall be constructed without having on the top floor a well lighted gallery for the exhibition of works of art?—I have heard so, but I do not recall the city.

1034. It happens to be Chicago. Turning to another point, how far is your Association active, does it function as a clearing house between different museums either as regards sales or loans? Am I right in thinking it is only to the extent of publishing what is available in the "Museum News," or do you go further than that?—We have never gone further than that. We have had in mind that it might be desirable to assist with our own hands the redistribution of material, but we have not had the facilities and we have rather hoped that in time the National Museums would deal with the problem. At present we have had to content ourselves with publishing lists of needs and of things offered and we are informed that a great deal of material has changed hands. In that connection it is a matter of great interest to me as I go about within our own borders to notice the rapidity with which the Museum people all over the country keep abreast of museum progress, apparently through the agency of the "Museum News."

1035. As far as your Association is going on you would be glad to do more in that direction by acting as a clearing house for the museums?—We should be glad to do more, but in the hope that ultimately the National Museums might take over the handling of materials. Our Association deals in ideas, so to speak; not in materials.

1036. Subject to their taking it over from you?—Yes.

1037. Are you asked by museums all over the country for information, and do you supply it?—Yes, Sir. We have an information service. We draw upon our own accumulated experience and upon the data contained in our special library of publications and notes on museum work. The first class mail of our Association in one recent year totalled 10,000 letters, and the total output of mail was 100,000 items, including publications. Each day the correspondence includes a good number of letters answering requests for information of one kind or another.

1038. Turning to the question of overlapping, you indicated that you did not think there was a great deal of that; is it not the case that in a recent important purchase of a very valuable collection of glass from a German collection that the Metropolitan Museum and the Chicago Museum joined hands to acquire it and shared the collection between them?—I believe so, and I have heard of many instances of similar co-operation.

1039. In regard to the system of purchasing, is it not the case that in practically every instance the ultimate purchasing power lies with the Board of Trustees?—Yes.

1040. And that the Director, as a rule, cannot purchase anything without their consent?—Yes, but the purchases are usually made on the Director's recommendation and the procedure is essentially a safeguard.

1041. Do you not think, considering the distance of the American Museums from what is ultimately the ordinary source of supply, namely, Europe, these American Museums can do better by entrusting some of their purchasing power either to a Director travelling with full powers in Europe or to a trusted agent in Europe?—I do very decidedly.

1042. You have answered the Chairman, I think, when you dealt with the question of loan. Is there any museum in the United States which on principle is not ready and willing to lend away?—I have never heard of objection to the principle except in the case of some of the smaller historical societies which are totally unwilling to lend anything. That qualification of my statement does not seriously affect the principle, since such institutions are quite unimportant.

1043. You refer to the question of the importance of training a class of men able and willing to undertake the duties of museum directors?—Yes.

1044. That is being carried on at the Fogg Museum, in particular, I think?—Yes, and there are several other courses, as, for example, at the Newark Museum and Columbia University; there was one at the Los Angeles Museum some years ago. The Philadelphia Museum some years ago made efforts to train museum people. There has long been appreciation of the need reflected in these efforts. At present there is in contemplation a course under the auspices of the Association to be given at each of some ten museums which have promised to entertain a class for a period of from one to two months. The Fogg Museum, with its course of a very special nature is interested in this general scheme.

1045. A word on the hours of opening. I think in the case of every American museum the provision of artificial lighting goes without saying?—The provision of artificial light goes without saying. The question has not been whether or not there should be artificial light, but one of the exact method by which the light should be produced and distributed.

1046. In connection with that, the hours of opening are in many cases longer than in this country?—The hours of opening tend to be 9 a.m. to 5 p.m., which are the business hours, and Sunday afternoon.

1047. And also in many cases one or more evenings in the week?—In a limited number of cases.

1048. Would you say that was exceptional, or would you say it was quite common?—Openings in the evening are usually in connection with lectures—a portion of the museum, but not the whole, being opened. It is exceptional for a museum to be open in the evening, but I think it would be desirable.

1049. A reference was made to the connection with libraries. May I take it, it is considered common practice in America and the ordinary thing that every museum should be supplied with a library; an art library if it is an art museum, or a scientific library if a science museum, as part of the regular machinery of the museum?—A part of the equipment of every museum is a reference library.

1050. In regard to publications; that question has already been referred to. Do not photographs form an important and essential part of the machinery?—Yes, Sir.

1051. And are they supplied at a price which is not necessarily connected with the cost, that is, in the interests of the museum from an educational point of view?—Many times photographic prints are supplied gratis. In every instance they are provided at cost, the idea being to put resources into use rather than to make money.

1052. Does not every museum make a point of photographing every object that enters it, so that the photograph is available for everyone wishing it?—It desires to do so. There are practical difficulties, and all museums cannot be said to have lived up to their ideals, but the desire is to photograph all—at least all important—objects.

1053. I think many museums have a restaurant or a cafeteria in connection with them; that is almost usual?—Yes, with large museums.

1054. Do not many of them show an actual loss in working which is regarded as part of the ordinary museum expenses?—In some instances I believe so. In other instances the restaurant is a concession. I believe that there are cases of the loss being taken up by the museum.

1055. Reference was made yesterday to the provision of a lecture room for the British Museum. You are no doubt familiar with the Minneapolis Museum which was built only the other day, and I think I am right in saying when they built a museum, though it may not be for a very large city, they considered three lecture rooms were essential and built them accordingly for that one museum, one to hold the public, another to hold schools, and

18 November, 1927.]

MR. LAURENCE VAIL COLEMAN.

[Continued.]

another to hold small classes of special students?—Yes, and there are museums which have eight or nine classrooms, several of them being in use simultaneously.

1056. May I just conclude by asking you whether there are any other features that you can suggest in which the American museums—may I put it in this way, are there any other features which you think might be usefully adopted by European Museums from the experience of American and also the converse, whether there are any interesting features which our museums possess which are not in use in your country?—I think first of an administrative method which I can recommend very highly. It is coming to be standard practice among us that the instructors who are occupied in meeting school classes at the museum, be not under museum pay, but under the pay of the school department and that they be assigned to the museum to work under the direction of the museum director or the curator of education. They are specialised school teachers who conduct a specialised portion of school work. That arrangement is helpful to museums in meeting the exigencies of educational work. I feel there are features of museum work on either side of the ocean that might profitably be adopted on both sides. Some of these I have touched upon; others I shall want to elaborate in my memorandum. There is need of more intimate contact between museum people internationally, I feel, to bring about more general knowledge of localized methods.

1057. One other question. The Chairman asked you, I think, whether you thought more attention should be attached to the better presentation of the museum contents or to further acquisition. You took the words "better presentation," I think, in the educational sense. I do not know whether that was in the Chairman's mind, but I should like to ask it you from the point of view of better arrangement and display?—My answer contemplated the fact that with us installation is an integral part of education. Educational work, with adequate attention to the element of installation should expand as acquisition goes on. Increase of activity is stimulated by, and leans upon increase of equipment. An accession is educational equipment.

1058. (Dr. Cowley): I think most of the possible questions have already been asked, but one or two small points I should like to ask about. The appointment of directors and curators does not seem very clear to me. You said that in most cases directors were appointed after long years of service, I suppose, from curators?—In some instances from among curators; in other instances from the directors of smaller institutions.

1059. Then it becomes a very important question of how curators are appointed? Are they selected for special qualifications in connection with museum work?—They should be, but in practice they are very likely to be chosen for standing in some specialty of art, science or history.

1060. Or are they graduates of recognised universities necessarily?—Not necessarily; it depends upon the ability of the man rather than his academic training, but, in fact, most of the curators in our larger museums are university men, and we do lay stress upon the desirability of recruiting from university graduates.

1061. Are they appointed by examination or on recommendation?—By recommendation except in the case of the few museums which are under civil service.

1062. Then you spoke of libraries attached to museums for working purposes. Those would be practical libraries naturally. You were, however, very strong on the dissociation of museums from libraries. You are not perhaps interested in libraries yourself?—Somewhat.

1063. I would have liked to have asked about the copyright question, but I think it would carry us too far. You also mentioned the system of branch

museums was very much encouraged; that is to say, museums for special subjects or general museums on a smaller scale?—General museums on smaller scale, with very large emphasis upon the educational function and much use of temporary exhibits drawn from the headquarters museum. Such branch museums could be instruments for utilising the extensive resources of a large museum. They would reach the people where the people are.

1064. Bringing the material to the people instead of making them come to the material. Then you would exchange objects from the small museum to the central museum and vice versa, I suppose, as required?—If I were in charge of a museum capable of carrying out such a plan I should work out a definite program so that a sort of curriculum would co-ordinate the work of all branches. Branch museums, as I conceive them, would not be conventional museum buildings. Some might be mere holes in the wall, wherever the museum could get a footing near to the people; old dwellings, rooms in schools, stores and the like might serve.

1065. One other small question, you spoke of travelling for purposes of self-education of the staff and exploration as being functions of the museums. The funds for those are supplied, I suppose, in all cases except in the case of National Museums from the funds of the museum itself?—From private funds of the museum ordinarily. The idea is that money received from a public Treasury is to be expended for educational work—interpreted broadly—whereas money received from private sources is to be expended for the acquisition of materials and research. Travel falls near to the latter purpose in its intent.

1066. (Chairman): You talked about the very large membership of the different museums. In the memorandum you are going to be good enough to send us can you give the membership of some of the larger museums?—I shall be glad to.

1067. And can you give a classification of the different classes of membership with the pecuniary liability attached. You say the telephone is very largely used for publicity; can you give the Commission a kind of idea of the modus operandi of the publicity and telephone staff?—I have never heard one of these conversations, and I have never attempted one, but I can imagine. I suppose the telephone rings, and a young woman says, "Good morning, Mr. Smith. I am speaking from the Museum." (Having ascertained that Mr. Smith has a boy, she is safe in continuing:) "You know we have talks for children every Saturday morning, and we should be very glad to see your boy to-morrow. By the way let me send you a leaflet which gives a list of these talks. They are perfectly delightful. You know the work is supported largely by the dues of members. Perhaps I can interest you in membership." One thing leads to another, and soon Mr. Smith has acquiesced.

1068. You have told us about the school staff and you say the school staff works under the direction of the museum director. They are paid by whom?—Instructors, in museums where this plan is in force, are paid by the School Board like other teachers.

1069. These officials spend all their time at the museum?—They spend all their time at the museum. The administration is financed by the museum, but the instructors are paid by the School Board. (With us, most school teachers are women, and so it is with museum instructors.

1070. Do I gather that practically all your museums have one or more lecture halls attached?—Yes, even the smallest.

1071. And some of the largest have up to seven or eight?—If you include as lecture halls the small classrooms the size of this room in which we sit, or a little larger.

1072. A room suitable for oral instruction?—Yes, for groups of twenty or more.

18 November, 1927.]

MR. LAURENCE VAIL COLEMAN.

[Continued.]

1073. (*Sir Lionel Earle*): Can you tell me whether the Federal or National Museums are, according to the ideas of your Association, better or worse run than the great private museums?—The National Museums are more economically run I feel than any other museums in the country. They are not well supported, however, and their work is seriously limited.

1074. I was thinking more from the point of view of education?—The National Museums have been unable to develop extensive education work because of financial difficulties.

1075. Apart from that you think the administration, if they had the funds, would be as good as the City museums?—I assume so.

1076. (*Sir George Macdonald*): There is one other point that no one has touched on which you might give us information about. What is the practice in America in regard to insurance against fire risks in the case of museums?—The theory—if I may deal first with theory and then with practice—is that only replaceable equipment should be insured, the principle of insurance being one of replacement. It follows that while buildings and structural equipment should be fully insured, the bulk of collections should not be covered. In practice there is some protection of collections—especially objects which are borrowed and travelling exhibits which are under great risk and which could be replaced, in a sense, by proper compensation of the artist. There are being developed certain blanket policies to insure against all the various museum risks, and if the effort is well received we shall witness a considerable increase in coverage of permanent museum collections.

1077. That is what happens?—That is what happens.

1078. Do I understand that the buildings are insured?—The buildings should be and in most cases are.

1079. (*Sir Lionel Earle*): Is there insurance against theft as well as fire, all risks?—Yes, and breakage. However, as I say, policies are not yet satisfactory.

1080. (*Sir Robert Witt*): I think hoses are being given up as a protection against fire; that their place is being taken in the workshops below by sprinklers?—Precisely.

1081. And in the exhibition rooms above by extinguishers?—Yes. As a matter of fact, fires in museums do not start in exhibition halls. A fire starting in an exhibition hall would, doubtless, be extinguished promptly. Serious fires start in the storage and workshops.

1082. Should I be right in saying that in the case of the larger museums, at all events, the Directors of those museums are in many cases men selected for their administrative capacity, with a cultural background, and are not in any sense, and they would not claim to be in any sense, either art or scientific experts?—Yes, in some cases.

1083. That is to say, in some cases they have been business men before they had anything to do with the museum, and yet they occupy a place right at the head of an important institution?—There are

such cases. As a rule, however, it is felt that a man who has a background of educational endeavour rather than of business, and who has shown marked administrative ability, is of the best type.

1084. (*Sir Richard Glazebrook*): I am not quite clear about the branch museum to which you referred. Are the specimens that are sent to that duplicate specimens?—Branch museums, I tried to explain, scarcely exist at the present time except in the minds of people who advocate them.

1085. In your scheme would they be duplicate specimens?—In the field of art, which I believe you are thinking of—

1086. I am thinking of science.—In the case of science I should say they would be objects primarily of educational usefulness which could be replaced if damaged. A Science Museum with long series of objects could easily select very respectable series for outside use. Material necessary for scientific research would be kept at headquarters.

1087. That is the point I wanted to clear up. So that the fact that there were these branch museums would not interfere with the work of the students?—Not in the slightest degree.

1088. One other question. A good many years ago I was in America in a more or less official capacity at one of your big Exhibitions and I had to travel for a fortnight or three weeks pretty regularly between the city and the exhibition, which was outside. I was very much struck all the time by the fact that talk that went on in the tram in which I travelled was all about the novelties of the scientific work that were shown in the exhibition and practically nothing at all about the side shows and things of that sort. Was that due to the novelty of the things shown there, or may we take it that that is the usual kind of experience you meet with in the people visiting your large museums?—There was a word that I missed. You said the emphasis was upon the novelties of scientific work rather than upon—?

1089. The side shows. When we have exhibitions here there are a lot of side shows as well, and if you travelled much in trams you would hear a great deal of talk about them?—It seems to me that that is fairly typical. In America, science is regarded as a great witch-doctor and it stands high in the public interest. That varies, of course, from city to city. Boston, for example, quite lives up to its reputation, and there one hears discussions of philosophy and all sorts of abstrusities in trams. One hears such things in New York less frequently. On the whole, however, I think we get more blame for being bores than we deserve.

1090. That was my own impression. We may take it you might expect that kind of thing now-a-days and that it was not merely an outcome of the fact that the exhibition was a novelty?—I look upon it as fairly usual.

(*Chairman*): We are greatly indebted to you for your most interesting and valuable testimony. We count upon you for a memorandum. We will send you a proof of the evidence so that you can correct it in any way you think desirable.

(*The Witness withdrew.*)

SEVENTH DAY.

Friday, 2nd December, 1927.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.

Sir MARTIN CONWAY, M.P., Litt.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D.,
F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).Mr. J. R. CHAMBERS (*Assistant Secretary*).

Mr. A. O. CURLE, W.S., F.S.A. (Scot.), Director of the Royal Scottish Museum, called and examined.

The following Memorandum by Mr. A. O. Curle was submitted by the Scottish Education Department in reply to the Commission's Questionnaire (*see Appendix I*):—

1. The Museum was established in 1852 under the name of "The Industrial Museum of Scotland," Parliament having voted money for the acquisition of a site adjacent to the University, and the Town Council, then the governing body of the University, having passed a resolution to transfer the Natural History Museum of Edinburgh, which had been established in 1812, to the Department of Science and Art. The Natural History Museum thus formed the nucleus of the new Industrial Museum. It consisted of Zoological, Geological, and Mineralogical collections brought together chiefly by the exertions of Professor Jameson, who had been Regius Professor of Natural History and Keeper of the Museum for 50 years. Although originally connected with the University, it had received a Government grant of £100 a year, increased to £200 in 1831.

In 1857, the Industrial Museum was transferred, along with the Department of Science and Art, to the Committee of Council on Education, and in 1901 it was transferred to the Scottish Education Department, under whose control it still remains. The conditions of the original transfer of the Natural History Museum from the University are contained in letters addressed on 1st May, 1854, by Dr., afterwards Lord Playfair, to the Lord Provost of Edinburgh and to the Secretary of the Treasury, in the Resolution of the Senate on 4th April, 1854, and in a Deed of Transfer. They provide, *inter alia*, for Government control, and for free admission to members of the Senate and students in the Natural History Professor's classes at all times and to the public on certain days.

The buildings on the site intended for the Museum were transferred to the Board of Trade in 1855. The foundation stone of the new building was laid by the Prince Consort on 23rd October, 1861, and on 19th May, 1866, the first portion was opened by the Duke of Edinburgh. The second portion was completed in 1874, and thrown open to the public on the 14th January, 1875. The remainder, which formed the west wing of the building, was ready in 1888, and the several collections allotted to it were made accessible to the public, one after another as the necessary fittings were provided, the last section, that, namely, of Scottish Geology and Mineralogy, on

the 14th October, 1890. The title of the Museum was changed in 1864 from "The Industrial Museum" to "The Museum of Science and Art," and, in 1904, to "The Royal Scottish Museum."

The ideal of the first Director, over and above the teaching of Natural History, was the formation of an Industrial Museum designed to illustrate the whole of the various steps in manufacture from the raw material to the finished article. Owing to the vast number of specimens for which it would have been necessary to find accommodation this ideal soon proved impossible of fulfilment, and from 1860 onwards, the tendency was to concentrate upon objects illustrative of Science and Art. The Museum was, however, already encumbered with an immense amount of purely industrial material which hampered its development for many years.

It now consists of three departments, Art, Natural History, and Technology, presided over by keepers, with a section devoted to Geology and Mineralogy, which is under the care of an assistant-keeper. There is also a Library in charge of a librarian.

2. The experience of the present Director and, so far as he is aware, of his predecessors also, is entirely favourable to the system under which Government control is at present exercised. The affairs of the Museum have invariably been handled by the Scottish Education Department in a sympathetic manner, and negotiations with the Treasury and other Government offices have always been conducted with complete satisfaction to the Museum. Nor have any difficulties arisen out of the historical association of the Museum with the University. The relations between the two are most cordial, and the requirements of the Natural History department for loans of redundant specimens for class-purposes have always been readily met. Much use is made of the Museum by University students.

The administration is conducted under regulations, some of which are Treasury instructions, either specially directed to the Museum or applicable to the Civil Service as a whole, while others have been either framed or approved by the Scottish Education Department. The present code is contained in a volume of general instructions, which was printed in 1912. Time has shown that certain modifications are desirable with regard to exchanges, which are restricted to the Natural History department. Again,

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

the regulation, sanctioned by the Treasury in 1912, which provides that "the objects lent must be taken solely from the stock of surplus and discarded specimens that are unneeded for exhibition or are unfit for museum use" prevents the loan by the Museum of specimens of value to any similar institution. Such defects can be remedied by administrative action, and do not require legislation.

3. The question of loans to municipal, provincial and colonial galleries has seldom, if ever, arisen, but in one or two cases, specimens of models of machinery, which are replaceable, have been lent to an exhibition in the Colonies. On the whole, it is considered that the existing power of making loans to temporary exhibitions is sufficient for the needs of the Museum.

Freer intercourse with colonial and foreign galleries is highly desirable for the staff, the members of which have not the many advantages of intercourse with foreign students and collectors that are enjoyed at the National Museums in London. The difficulty with regard to such intercourse is mainly one of finance. As far as the travelling grant allows, the officers are encouraged to make themselves acquainted with the contents of the principal museums in England. In particular, there has for some years been an arrangement under which the two junior officers in the Art department go, almost annually, for a period of two or three weeks to study some particular section of one or other of the Government Museums in London, or of the University Museums of Oxford or Cambridge, they being temporarily attached to the staff of the particular museum selected for instruction. This has been found highly beneficial in improving the outlook of the staff, and in promoting friendly relations with the sister institutions. The establishment of a similar system in connection with certain of the foreign galleries would be most useful.

4. The relations between the staffs of the Royal Scottish Museum and of the other National Museums in the country are excellent. Great care is taken that in the matter of purchases there should be no competition in the acquisition of specimens. This is particularly true of the Victoria and Albert Museum, where the danger of counter-bidding is most obvious. The province of the Scottish National Museum of Antiquities is the illustration of Scottish history and archæology and its function is so clearly defined that there is little risk of overlapping there except, possibly, in the field of Comparative Archæology. Only, perhaps, in the case of furniture and textiles, has the Royal Scottish Museum encroached on what might be considered the field of the Museum of Antiquities. In the latter, however, there is no space for exhibits of this class, and it is a question for consideration whether Scottish furniture and textiles would not be of more value if shown with contemporaneous examples in a general collection than if kept by themselves in a purely Scottish one.

Occasions for overlapping with the National Gallery of Scotland have seldom occurred hitherto, since the National Gallery has confined itself almost entirely to the collecting of pictures. Within recent years, however, there has been a movement to add sculpture to the collections in the National Gallery.

5. No fees are charged at any time for entrance to the Museum. The visitors mainly belong to the artisan and labouring classes and include a large proportion of children. This is due in no small measure to the fact that the Museum is situated in the old town on the very edge of the populous slum area. The number of local visitors of the wealthier classes is relatively small. The following figures will furnish an idea of the daily attendance. The average week-day attendance during the month of January, 1927, was 713, while that for an average

Sunday in the same month was 4,794; in July, 1927, the average for a week-day numbered 1,640, and the average for a Sunday, 2,555.

While many of these are students, probably 10 per cent. are children under 10 years of age. Of the adults, it is believed that only a very small percentage would pay for admission on a day when a charge was made. Presuming that a charge of 6d. was made on one day a week, it would probably reduce the attendance on that day by 70 per cent. In 1899-1900, when a fee of 6d. was charged for entrance on three days a week the average drawings were only £250 a year, and there is no reason to suppose that there would be a larger attendance now when there are so many more counter-attractions in the city. Further, a restriction placed on entrance would interfere greatly with the attendance at the demonstrations, which are held every afternoon in the Museum and which are very largely attended.

6. Since 1922 the scientific staff has been recruited through a selection board, consisting of the Director, the Head of the Department for which the new officer is required, and a representative of the Civil Service Commission. The candidates are chosen from a short list drawn up by the Director and the Keeper of the Department. Notice of the vacancy is communicated to all the Scottish Universities and, if thought desirable, to individual professors specially interested; advertisements are also inserted in selected Scottish newspapers and in scientific journals. The technical staff is engaged by the Director, subject to his selection being approved by the Scottish Education Department.

The only higher administrative officer is the Director, who has no official deputy. In his absence, some of his functions, with the approval of the Department, are exercised by the senior Keeper. Each Keeper is responsible for the administration of his own department, and holds free and frequent consultations on matters of policy with the Director; the work of the department is allocated among the various officers, but in regard to general re-arrangements and developments, the Keepers take their staffs into consultation so that the members are familiar with what is in the minds of their superiors. In the absence of a Keeper, a department is under the charge of the senior officer.

7. By 1911-12 the congestion throughout the Museum had become considerable, and an extension was proposed, which should include additional accommodation for all departments. At that time the three departments of Art, Natural History, Technology, the section devoted to Geology and Mineralogy and the Library had each the following amount of floor space:—

	Sq. Feet.
Art and Ethnographical Department	49,202
Natural History Department	28,682
Technological Department	24,481
Geological Department	8,944
Library	3,875

The scheme contemplated the construction of various new halls and galleries, to be undertaken in three portions. A beginning was made in 1911-12, but owing to the War and the consequent financial restrictions, the first portion has only now been really completed, and even now the permanent casing has not been all erected. This first portion was mainly intended for the relief of the Natural History department, but a small part of it was for the use of the Art and Ethnographical department, 21,390 sq. feet of floor space being assigned to the Natural History department, and 7,440 sq. feet to the Art department. Of the Natural History section, it has been found necessary to allot temporarily one gallery each to the Technological department

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

and to the Geological section, thus reducing the contemplated accommodation by 3,790 sq. feet.

Part of the Natural History extension was necessary in order to afford more room for the existing exhibited collections, and therefore, in that part, provides no space for displaying more. But there are in the new buildings several galleries for which a much needed development of the educational aspects of zoology has been planned. The present arrangement follows that familiar in every museum—collections of animals arranged systematically, from Protozoa to Mammalia. It is proposed to devote the additional galleries to the illustration of the general principles of biology, such as evolution, heredity, variation, migration, and the like; and to the illustration of man's relations with the animal world, as shown by typical animals from which he derives benefits (furs, silk, leather, food, &c.) and by typical pests from which he and his goods and crops suffer. If the exhibits in the systematic and biological collections are rigidly selected and made to contain typical rather than detailed series, so that the public is not confused by multiplicity of material, the exhibition space of the Natural History department need not, in future, be extended beyond the limits allocated to it in the original plan of the finished Museum.

The simplification of the exhibited collections, however, goes hand in hand with the increase of the cabinet collections to which the staff and outside specialists must go for the comparison and identification of specimens. Greatly as the provision for the cabinet collections—an essential part of the department's equipment—has been improved in recent years, space and cabinet accommodation are still inadequate. They will be still more inadequate if the system of loan collections to schools, and the distribution of specimens to school museums, inaugurated in recent years, are to be continued and extended in the endeavour to meet the demands made by teachers and Education Authorities for such specimens.

Though the Art department has benefited to a small extent, yet in some sections, particularly that of Textiles, it is considerably overcrowded and has no room for expansion.

The Technological department is suffering seriously from congestion. Although the site has been secured, no part of the extension intended for the use of the department, especially for the accommodation of machinery, has been erected. Owing to lack of space, a large series of full-sized machines, formerly exhibited to illustrate the different periods of engineering history, has had to be removed to the collars, practically *en bloc*, while many gifts of valuable material have had to be declined. Steam-boat models, both passenger and cargo, are totally wanting, and naval vessels are represented only by a few models of obsolete craft. In view of the importance to Scotland of shipbuilding, this state of affairs is very unsatisfactory. It is to be attributed entirely to lack of space, for models could easily be obtained from Scottish builders if only there was room to exhibit them. In this connection it may be mentioned that, whereas in the Science Museum, London, there are from twenty to thirty full-sized aeroplanes, in Edinburgh there are only a few separate parts and no single complete machine.

In the Geological section, extra accommodation for the housing of the purely Scottish collections of the Geological Survey is urgently required.

The Library also is very much in need of more space and has obtained none. Some of the congestion here is caused by the steady influx of patent specifications, which are deposited in the Library by Act of Parliament. Accommodation for these might perhaps be found in the building of the Scottish National Library when it is erected.

As indicating the growth of the Museum the following table has been compiled to show the accessions to the various departments by donation, purchase, and loan, from 1919 to the end of 1926:—

	Donation.	Purchase.	Loan.
Art and Ethnography	3,889	2,572	1,556*
Natural History ...	11,777	4,793	
Technology ...	1,251	167†	
Geology ...	1,092	748	
Library ...	4,212‡	1,983	

* Of the purchases, 522 are coins.

† In addition, in the Museum workshops, 18 working models were constructed.

‡ Including the donation of 1,742 volumes of Patent Specifications.

This represents a total increase of 32,502 specimens and books to the permanent collections in seven years.

8. The production of catalogues, postcards, &c. is the work of H.M. Stationery Office, by whom the sale price is fixed. Expenses are borne by the Stationery Office and the proceeds of sales are remitted to that Office. It is doubtful whether this is the most profitable system that could be devised. There is no special stall for the sale of museum publications, as it is not considered that the volume of sales would justify the cost; the sales of catalogues and postcards at the door are effected by the patrol staff on duty and an account is kept of their intromissions. In the case of anyone requiring photographs, if there is already a plate illustrating the object in the Museum store, a charge is made only for the actual cost of the print, but where there is no negative, the photograph is taken by an outside tradesman and the purchaser pays the account direct to him. The Museum has no official photographer.

9. Throughout the Museum, every facility is given to students for the purpose of research according to their requirements in the various departments. In the Art department, much use is made of the collections by students from the College of Art, who do their work in the galleries, studying objects in the cases. In the Natural History department, very large numbers of students from the University and the Dental College are constantly at work in the galleries, especially in the Type Gallery. The opportunities which the Museum affords are also taken much advantage of by others interested in ornithology and entomology. A Students' Room has been allowed for in the portion of the Extension, which has been erected, but owing to the congestion of stores of specimens, &c. it has not yet been found possible to make it available.

The staff of the Natural History department is frequently called upon to advise the Scottish Office, the Scottish Board of Health, the Board of Agriculture for Scotland, the Scottish Fishery Board, the University, the East of Scotland College of Agriculture, the Corporation of Edinburgh, the Leith Dock Commissioners, and other public bodies, on Zoological matters.

The amount of routine work does not leave the staff much time for research, nor has the staff of the Museum conducted any excavations, although on rare occasions, individual members have been granted leave to visit sites in course of exploration, where Museum interests were concerned. A number of years ago one of the officers of the Art department, in view of the extension of the Egyptological collection, was attached to the staff of Professor Flindor Petrie in Egypt for two winters.

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

Other matters to which it is desired to draw attention.

Grant in Aid.

Notwithstanding the general increase of prices and, more particularly, the great rise in the value of works of art, the Purchase Grant of the Museum has remained stabilised at £2,600 since 1886. As this sum has to meet the needs of all the departments as well as of the library, it is not quite adequate. To buy works of art of the highest class, such as Italian marbles and bronzes, is altogether out of the question, with the result that Italian sculpture of the Renaissance is entirely unrepresented. Although a Museum of this size and importance should be in a position to acquire representative specimens of first class importance, it is becoming more and more difficult to purchase anything save objects of minor interest and secondary quality. Attention may be drawn to the fact that the financial position of the principal National Museums in London has, during the last forty years been much improved, although they also receive, by donation and bequest, valuable collections to an extent which is not to be expected outside of the capital.

Increase in Artisan Staff.

Owing to the large increase in exhibition space in the Museum, some increase in the artisan staff is desirable.

Increase of Staff in Natural History Department.

Although the extent of the space allotted to the Natural History department has been increased to the extent noted above, no addition has been made to the scientific staff in charge of it. It needs strengthening. Furthermore, besides the large collections of specimens given to, or purchased for, the Natural History department, there is a constant influx of birds and mammals in the flesh sent for identification or obtained for particular purposes. Many of these are of permanent value to the Museum, either because they are new records, or because they show stages of plumage or coloration imperfectly represented in the cases or cabinets. Such specimens, which have often spent much time in transit, must be dealt with at once, if they are not to be entirely lost. It is essential that there should be a taxidermist on the staff to deal with them on the spot.

Botanical Collections.

The position of the Royal Scottish Museum with regard to Botany requires to be somewhat fully explained.

There are within the Museum three collections of botanical material. The first and largest of these consists of a series of specimens illustrating economic botany. The second is a collection illustrating *Materia Medica*. This is a collection of choice specimens of pharmaceutical substances presented in 1875 by the Pharmaceutical Society. The third is a comparatively small scientific collection consisting of:—

- (1) Specimens illustrating the morphology and life history of plants.
- (2) Specimens illustrating every British natural order.
- (3) Specimens illustrating the common British forest trees.
- (4) A series of exhibits illustrating the natural enemies of plants.
- (5) A series of magazine microscopes with slides to show the morphology of plants, and
- (6) A British and general Herbarium.

The economic botany collection was largely brought together after the institution of the Museum in 1854 by the first Director, Dr. George Wilson, who was at the same time Professor of Technology in the

University, and who, as Director, devoted himself particularly to the formation of a collection of manufactured and commercial products. The basis of the economic botany collection consisted of raw and manufactured materials given by the Royal Commissioners of the 1851 Exhibition, while the Highland and Agricultural Society of Scotland contributed a collection of models of agricultural appliances. In 1913, on the ground that Botanical collections are the province of the Royal Botanic Garden and that the economic botany collection was occupying a space out of all proportion to the service it could possibly render to the very few persons who ever made use of it, the collection was practically withdrawn from exhibition. The bulk of the cases were masked with movable screens, which were utilised as a background for other exhibits, an arrangement being made whereby anyone who desired it could obtain access to the specimens by application to the attendant in charge. Since that date no fresh purchases of botanical material have been made for this collection. Moreover, the application for access proved to be so infrequent that its occupation of valuable casing, obviously, was not justified, and two years ago it was removed to the cellars, where it remains, with the exception of such specimens as were suitable for exhibition in the Technological department, chiefly models of agricultural implements. It should be added that many years ago, after the holding of a Forestry Exhibition in Edinburgh, a very considerable collection of valuable forestry specimens was deposited in the Museum, where the bulk of it lay in the stores. Most of it was recently lent to the University Forestry department with Departmental approval, assurances being given by the Principal of the University that students and visitors should have access to it at any time without payment.

The collection of scientific botany was brought together in 1900 as part of a series of skeleton scientific collections to be kept for the use of school teachers. Though this scheme never served the purpose for which it was intended, the scientific botany collection remained on exhibition in the school gallery, and along with other scientific collections is of interest to the general public. The scientific botany collection is made much use of by students of Botany from the University. It is understood that the Regius Professor of Botany would be quite willing to take this collection under his charge and to remove it to the Royal Botanic Garden if suitable accommodation were available. Previous to 1913, the whole of the botanical collections were under the charge of the Keeper of Technology.

It is no part of the qualifications of any officer in the Museum that he should have a knowledge of botany, and no funds have been expended on the botanical collection for many years except such as were necessary for the replenishing of the magazine microscopes and for keeping in order the small scientific collection.

Fire-proofing: Danger from Fire.

In 1924, a Report was made by H.M. Office of Works on the condition of the structure in the event of fire, and a copy was communicated to the Director. The Report, which will doubtless be available for the use of the Commission, indicated that the condition of the building was graver as to fire risk and danger to the occupants than that of any other building controlled by the Office of Works. A scheme of fire-proofing, including the provision of more satisfactory means of access and exit, was prepared and was given precedence, on account of extreme urgency, over the contemplated rebuilding of the Geological Museum in London. It was proposed that the work be taken in hand at once, and a substantial sum was placed upon the Vote for the purpose. Owing, however, to financial stringency, nothing whatever has yet been done.

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

EXAMINATION OF WITNESS.

1091. (Chairman): Am I correct in understanding that the Royal Scottish Museum is unhampered by statutory restrictions of any kind?—It is unhampered by statutory restrictions of any kind.

1092. For purposes of administration you come under the Scottish Education Department?—We do.

1093. Do you prefer that method of departmental supervision to supervision by trustees?—Certainly, in regard to our Scottish museums.

1094. Is your preference for the retention of the present system of control based on any general theory of wider application that the one system is more effective than the other or do you prefer it as a matter of experience?—It is a matter of facts and circumstances. For the Royal Scottish Museum I have no doubt that discussion between two men, if you have a capable departmental secretary, as we always have, and a competent director, is the ideal arrangement. There is no delay in getting any matter settled. One of the difficulties arises from the Royal Scottish Museum being a complex museum consisting really of four museums in one.

1095. Namely?—An Art Museum, a Technological Museum, a Natural History Museum and a Geological Museum. It is rather difficult to imagine a board which would represent all these different departments, composed of men with competent knowledge.

1096. Is there any methodical co-ordination (a) between the Scottish Institutions, (b) between the Scottish Institutions and the English Institutions?—By methodical I suppose you mean regularised, not statutory, but instituted co-ordination. There is co-ordination between the Royal Scottish Museum and the National Museum of Antiquities. It is only in regard to the purchase of Scottish coins that it is officially laid down by the department that there must be no overlapping, but there is recognised co-ordination between the two Museums of long standing. The Royal Scottish Museum recognises that the function of the National Museum of Antiquities is the collection of material illustrative of Scottish history and archaeology and never wilfully intrudes upon its province. Between the Royal Scottish Museum and the British Museum at Bloomsbury and the Victoria and Albert Museum there are very pleasant relations, which lead to fairly close co-ordination. If in the Royal Scottish Museum we desire to purchase anything in London that is likely to be sought for by that section of the British Museum or by the Victoria and Albert Museum we always write to the particular keeper concerned and act together. With the Science Museum and the Natural History section of the British Museum I do not know that there is any co-ordination really.

1097. Is there an elaborate system of loans between the institutions or not?—There is no system of loans between the institutions. In Scotland, the National Museum of Antiquities has lent on permanent loan to the Royal Scottish Museum certain objects which were more suitably placed in the latter and we in return have lent certain things to them. There is no established system of loans between the English museums. When the Royal Scottish Museum was under the Science and Art Department a very large number of loans were sent down from the South Kensington Museum. They remained on loan for thirty or forty years, and in 1922 they were all called back and only very few of them were returned to us permanently. That, of course, was very prejudicial to the Royal Scottish Museum because during all the years in which those objects were there on exhibit similar objects were not being bought, so when they came to be taken away we had lost the opportunity of buying them and during a period when prices were much lower, in consequence, we suffered very prejudicially. We have now nothing on loan from the Victoria and Albert Museum. I have looked at their circulation collections. While they will lend

specimens arranged in cases they do not lend individual specimens except, perhaps, specimens of furniture, and it is no use our having cases full of objects of which only one or two pieces would be of any use to us.

1098. At present you do not make any use of the lending department of the Victoria and Albert Museum?—None whatever, after our experience when all these objects were called back we did not think it was very desirable.

1099. What do you say to some advisory co-ordinating body being established either for the Edinburgh Institutions or for the State Institutions in Great Britain?—Personally I would rather rely on established relations between the officers of the museums than rely on any co-ordinating advisory body. It would rather put us back into the condition we were in under the Science and Art Department when we became practically a subordinate museum to the South Kensington Museum. During the interval we have been under the Scottish Education Department—

1100. Which is since when?—Since 1900. During this period the special national character of the Royal Scottish Museum has been maintained and recognised, and I think we have developed much more than we did when we were under the Science and Art Department.

1101. Then, referring again to loans and intercourse, you are governed by regulations made by the Scottish Education Department, in some cases with the sanction of the Treasury. In the case of the 1912 regulation mentioned in reply (2) to the Commission's questionnaire, confining loans to surplus stock and discarded specimens, was this regulation framed by the Department and approved by the Treasury, or does it represent a restriction of Treasury origin?—It was framed by the Department and approved by the Treasury.

1102. You said in reply (3) to the Commission's questionnaire that the question of loans to Municipal, Provincial and Colonial Galleries has seldom, if ever, arisen. Do I understand from that that contact between you and other Scottish Museums is not very close?—I think I did not express myself very well when I wrote what I did on the question of loans. I was forgetting that between the Natural History Department and certain Scottish museums there has been a very great deal of intercourse, chiefly with those connected with the Universities, and we have lent a great deal of surplus material, often in the form of permanent loan, to the Universities of St. Andrew's, Aberdeen and Edinburgh. We have lent also a certain amount to Scottish schools in cases where we were sure the material would be properly looked after, also to Provincial museums. What I had in mind in framing my note was particularly the Art Department, where we have nothing we can lend.

1103. Nothing you can lend?—Nothing we can lend. The Art Department suffered a great deal from the museum having been instituted as a Museum of Science and Art, in which there were to be illustrated steps in manufacture from the raw material to the finished article and a great deal of material was brought in which had to be weeded out and from an artistic point of view I do not think that it consists of specimens suitable to be sent to local museums.

1104. The fact that loans are not largely made is due to the 1912 Regulations or due to policy?—It is more due to lack of opportunity, our staff is rather too small to undertake the work involved. We do a certain amount of lending, but it would take a man to look after this work alone, if undertaken to any large extent. We have established, for instance, lately a very successful method of loaning to schools. A number of cases are sent round a district illustrating certain groups in natural history. They are quite small cases, and are taken out by the school teachers. We can only

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

extend that privilege to one county, Haddington, which is near home. No doubt these exhibits would be of use to other schools in Scotland, but we should have to have a man to look after the undertaking, if extended.

1105. It is a question of staff?—It is a question of staff largely.

1106. To what extent do you make these loans to temporary exhibitions?—Only to a small extent. We sent something to Wembley. We lent an engine to the Railway Exhibition. We have sent a model of an engine to New Zealand. We have lent things in Glasgow. There are not many temporary exhibitions in Scotland. We do not lend things in Edinburgh. There is no reason why people should see things at the foot of the "mound," where exhibitions are usually held, when they can see them at the other end of it.

1107. I gather you would desire a modification of the 1912 Regulation; what is the modification you desire?—I think it desirable that the privileges extended to the Natural History Department should also be extended to the Technological Department. We have, for instance, in that department many models of boats, some of which have become approximately duplicated, and we should like to have the power of exchanging these. I would be chary about extending it to the Art Department, though there might be specimens there which might be useful in another museum, and capable of being exchanged for others, which would fit better into our series. I think the power generally is too restricted.

1108. Would you extend your power of loan to foreign galleries, too?—I do not think it is desirable that we should lend to temporary exhibitions abroad. The risk of destruction of things going overseas I think is too great.

1109. In reply (3) to the Commission's questionnaire, you say that freer intercourse with foreign and colonial galleries is highly desirable for the staff. What facilities have your staff for visiting museums and galleries abroad?—It is entirely restricted by the amount of our grant.

1110. The travelling grant?—The travelling grant.

1111. What is your travelling grant?—Before the war it was £300 a year. It has been altered at various times since. Now it is only £200 a year. As our officers have to visit museums, attend sales, and make purchases in London it is not enough to permit them to go abroad, too.

1112. What figure would you suggest?—I think £300 a year would help. I would not send them for long, but I think it is an advantage for them to have the educational advantages of foreign museums. It has been a great advantage to send our younger officers to the Victoria and Albert Museum, both to get to know the officers better there and so improve our co-ordination, and also for widening their outlook.

1113. That practice prevails to a large extent?—Nearly every year I send one or more of the younger officers of the Art Department. Then there are other officers who come up more particularly with the object of naming specimens from the Natural History and Geological Departments.

1114. Turning to the question of overlapping, in reply (4) to the Commission's questionnaire you speak of possible overlapping with the Scottish Museum of Antiquities in the field of comparative archaeology and with the National Gallery, in the case of sculpture?—In regard to the Museum of Antiquities it is a trifling matter. We do overlap in regard to the exhibition of palæolithic objects. We use such objects to illustrate the stages of civilisation in our ethnographical collection, and they use them from an archaeological standpoint. In regard to the National Gallery I have in view future developments. That institution has always to a certain extent collected sculpture. When we

are in a better position to buy more freely we shall both be collecting sculpture. At present it is not a serious matter, but there seems a tendency on the part of the National Gallery to increase their sculpture collections.

1115. In regard to overlapping with English institutions you say that practice does not exist?—It must, in the nature of things. We wish to have as good a museum as we can possibly get, and so we must buy the same things.

1116. Therefore competition does exist?—I would not say competition exists unless you come to competition in Scotland. I would never buy anything in the London market without recognising the pre-eminent claims of the National, or I may call them, Imperial Institutions, so we never compete against them.

1117. Not even for objects affecting Scotland?—That question, of course, is one that relates more to the Museum of Antiquities than to us, and in that connection there is a Treasury Regulation that the British Museum is not to compete with the Scottish museum for a Scottish object.

1118. Outside the arrangements which exist now, do you see anything, any desirable modification which would diminish the danger or the chance of competition?—Yes, I think so. I think if the governing bodies of the Imperial Museums, i.e., the London Museums, were to lay it down as a fixed rule that things found in Scotland, or obtained in Scotland, should be recognised as being the province of the Scottish Museums there would be little trouble. There is very little friction between them. If these claims were recognised and an established ruling laid down I think it would be a good thing, because the Scottish Museums now are of sufficient importance to warrant such a course. Nobody can study Scottish fauna, Scottish Natural History, no serious student, I mean, without coming to the Royal Scottish Museum. As for the Museum of Antiquities, it would be impossible really to make a study of Scottish archaeology without going to that museum.

1119. Now, turning to the question of accommodation you say, in reply (7) to the Commission's questionnaire, that in 1911-12 the congestion throughout the Museum had become considerable and an extension was proposed, a part only of which has been carried out. Supposing the whole of the extensions then planned were now carried out, about what would the cost be?—That is a matter for the Office of Works. I understand it would be about £220,000 plus the expense of furnishing.

1120. That means a total of £260,000?—A quarter of a million I think, but I think a good deal of help might be given to the Museum in relieving congestion without completing the whole of that plan, if a little addition was made in the plan to the technological section, then that would give us a great deal of help. The Natural History Museum does not require any extension. The Art Department, I think, has enough really to keep it going for some years, but the technological department, especially where the machinery is housed, is very seriously in need of further room. We are losing a great many valuable things by not having accommodation. For instance, we have a very poor representation of steamships of any sort. We can get them for the asking in Scotland. They are sent to London, where they are shown. We cannot, we have no room whatever.

1121. What would be the total cost, instead of a quarter of a million, what would be the total cost of your reduced scheme?—I am afraid I cannot tell you.

1122. Can you form no estimate, what proportion of the £250,000?—Looking at the plan, in extent, I should say it would be about one-sixth, but that is very vague.

1123. Supposing the whole of the botanical collections to which you refer in your memorandum were transferred to the Royal Botanic Gardens, how much

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

space would be set free and to what extent would such a transference modify the present need for extension?—We would practically gain very little. We should have 70 feet of shallow wall casing at the disposal of the technological department and a certain amount of accommodation in the cellars.

1124. Apart from this possibility, is there any methodical system of weeding out unnecessary or unfit objects, or do you hold the theory that present weeding out is dangerous from the standpoint of posterity?—No, I think it should go on regularly in the Art Department. Since I went there we have systematically weeded out anything that was thought of inferior quality. The higher the quality of the exhibits in the museum the more people will take an interest in it. We have removed a great deal of stuff to cellars which, I think, artistically was very bad. In the Natural History section there is constantly weeding out going on. Specimens deteriorate with age. You get better examples. Also specimens are removed to the cabinet collections, not necessarily thrown away, but specimens may be taken away from exhibition and the skin retained for purposes of study. Dr. Ritchie, the keeper of the Natural History Department, considers that there is no need for a further extension of his department, and by reducing the number of the specimens, by showing types rather than whole series, quite enough room is available at present to last for many years.

1125. For the—?—Natural History Museum, but we have now in fact powers to appoint a Board to consider the disposal of superfluous material which is in our cellars, from any one of our departments, either to sell it, to use it in the museum, or to destroy it.

1126. You have full powers to sell?—We have full powers to sell, yes.

1127. Have you exercised those powers to any extent up to now?—To a considerable extent. The cellars were crowded with material. We had a great deal of material from the technological department which had come in in the old days. There were all sorts of things, perfectly useless most of them. For example, one object illustrated one of the uses of cast iron, a stand for fern pots. There were all sorts of enamelled and tin plates with names on them.

1128. I understand you make a constant revision of your exhibits, endeavouring to raise the standard?—We are constantly going over the collection. We may take away cracked specimens and put in a whole one. We get some examples which illustrate the type better, and we take away the indifferent ones.

1129. That gives you much additional space in the Natural History Museum particularly?—There is no great space, but it can be got. The keeper of the Natural History Department considers that he has enough space available to last him for many years to come.

1130. I should like to turn to the question of fire proofing and fire risks, which are dealt with in the last paragraph of your memorandum. What is your own personal view? Do you yourself regard fire proofing as a question of immediate urgency or a counsel of perfection?—I am afraid I must admit I consider it a question of immediate urgency. It is a very serious matter to the Museum and possibly means closing all the Museum, or parts of it, for many years to come. You have an open timber roof over a great deal of it, which incidentally makes the Museum one of the best lighted Museums in the whole kingdom, and the timbers are very dry. The structure has been up there in some cases for 60 years. The danger I think, arises from a conflagration in the neighbourhood and from burning brands falling on the glass. If light were set to the wood work the thing would go like tinder.

1131. Are the buildings in the neighbourhood contiguous?—They are very near, and to a great extent are a sort of half slum property. We are

very near the Fire Station, which is one consideration, but in a high wind, which we get only too frequently in Edinburgh, we might have a serious fire at any time.

1132. What is the width of the street separating?—The distance is not 20 feet, I should think, from the nearest occupied house and there is an Office of Works store almost contiguous. In Glasgow, where there was a tremendous fire in the Kelvin Hall, a Church was set on fire which was I think half a mile away, although I would not be certain of the distance.

1133. (Sir Richard Glazebrook): A quarter of a mile certainly.—And it was burnt out.

1134. (Chairman): Are your fire precaution arrangements effective?—Yes. We have a fire brigade of our own consisting of the artisans and attendants, our hoses are inspected every month, and a report of their condition is made to me. There is fire practice periodically. I see that this is done. The Office of Works also, I think, examine the hydrants and see that everything is all right, and I believe, as far as is humanly possible, our system is sound, but of course a fire might break out at night time.

1135. The fire proofing, you envisage, is replacing the roof with fire proof materials, or a complete rebuilding?—I am afraid it is a larger question than merely fire proofing, but that is a question for the Office of Works. I understand the structure is not sufficiently strong. In that respect I would like to say that our galleries are in all probability carrying a weight much greater than was ever contemplated. When the Museum was built the casing would be much lighter, the glass would probably be ordinary sheet glass, and a definite number of cases would be considered appropriate to the galleries. As the Museum became more and more congested we crowded case on case to the greatest possible limit, the finest plate glass has taken the place of the sheet glass; heavier fittings are probably used inside the cases, so that now the galleries are carrying a weight very much larger than was originally contemplated.

1136. On the question of money, we have spoken of an estimate of a quarter of a million. Does that include the fire proofing?—That is only the building of the contemplated extension.

1137. The fire proofing costs would come in excess?—Yes.

1138. What would be the cost of that?—Another quarter of a million.

(Sir Richard Glazebrook): £190,000 is the figure of the Office of Works.

1139. (Chairman): So you get up to something under half a million?—Yes.

1140. Has any fire occurred in the building actually?—Two outbreaks of fire have occurred, both in the year 1908. One was due to a fire which originated in the cellar through the breaking of a glass jar which contained two sticks of phosphorus. I believe the chemical had been discarded by the responsible officer and been put in a heap of rubbish or something of that sort. Workmen were working in the cellar on the drains, and then a stone struck the bottom and broke the jar and a fire originated. The Fire Brigade were in the building within four minutes after notice had been given to them, but it took 40 minutes to locate the fire owing to the dense smoke in the building. Nothing serious happened. The other fire occurred in the Autumn of the same year and was due to the fusing of electric lighting wire. It occurred at the roof of the Geological Gallery but it was put out before the Fire Brigade came. There was one other instance of the fusing of electric wire in 1910. That was discovered by one of the police patrols before any serious damage had occurred.

1141. What are your electric wires generally cased in?—They are looked after by the Office of Works.

(Sir Lionel Earle): They were re-done about three or four years ago. They were in tubing, were not they?

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

1142. (Mr. Paterson): They were re-tubed?—The danger spot is really in the basement.

1143. (Sir Lionel Earle): The Switch room?—That may be—in the basement.

1144. (Chairman): Why in the basement?—Because you have various heating arrangements there, domestic boilers, Bunsen burners where men work; you have a carpenters' shop. I understand that the basement can be fire proofed at a comparatively small cost.

1145. Can you give us a figure?—I have no figure.

(Sir Lionel Earle): There are so many other questions quite apart from fire. The structural one is a very serious one, there is no question of that.

1146. (Chairman): Suppose you had an unlimited sum available, to what would you apply it? This fire proofing first?—I think so.

1147. (Sir Richard Glazebrook): Fire proofing the whole?—That is complicated by this question of structure. I have only learnt within the last hour or two how dangerous the Office of Works consider the present condition of the structure.

1148. You would not fire proof parts of the building at present without the whole scheme?—No.

1149. (Chairman): In reply (2) to the Commission's questionnaire you say use is made of the Museum by University students. Would you say that your facilities for the research students are better than the facilities for the general public?—There is a great deal of material for the research students, but there is not much facility for studying it. I think the facilities for the public visiting the Museum are excellent.

1150. On the question of fees, you say that you object to fees as the latter would interfere with the attendance at the demonstrations which are held every afternoon in the Museum and which are very largely attended. By whom are these demonstrations conducted—by the staff?—No, they are conducted by two ladies. We had a grant of £300 a year which was used for giving demonstrations before I went there. One individual, who was a retired Museum officer of the Art Department, used to demonstrate on Art and Natural History, without, of course, naturally knowing very much about the latter. I obtained the services of two ladies—I think women are more sympathetic with children—and they demonstrate with marked success. Neither of them is on the staff and they are paid regularly for their demonstrations. One of them goes through a whole course of Natural History in six lectures, which occupies a fortnight. She was one of the two people who discovered the the Isle of Wight bee disease, and is really a very efficient zoologist. The lady that demonstrates in Art is very much appreciated and gets a very large number at her lectures, and she reads up the subject very intelligently.

1151. What pay do they get?—The £300 a year is divided between them. They get 10s. a demonstration, which covers, of course, all time occupied in preparation, &c.

1152. (Sir Martin Conway): What is the name of the lady?—The Art lady is Miss Chart. The Natural History demonstrator is Miss Harvey.

1153. (Chairman): Looking at your collection from the money standpoint, is it broadly true that you owe more to private benefactions than to State aid?—Certainly in the Art Department we owe more to State aid, also, I think, in the Natural History Department. In the Geological Section it is about 50 per cent. either way. Technology, certainly State aid.

1154. Do you consider that everything is now being done to enlist outside financial support, or have you any suggestions to make for improving the conditions?—The only thing is that we could do with a little more propaganda work, but the Staff have not the time. If more lectures were possible perhaps that might do good. I do not think there

is any system such as that adopted in America that we could follow, of getting a group of friends of the Museum. I do not think that is possible.

1155. Not possible?—I do not think so.

1156. You do not think that additional staff for propaganda purposes would be remunerative?—I think we are understaffed in the Natural History Department and if we had another officer I think we might be able to do more.

1157. You have no general recommendation to make with regard to increasing public interest in the Museum, or private financial support?—The public interest in the Museums is increasing very rapidly. Every year we go up many thousands.

1158. Can you give us the figures?—Yes, I can. Compared with the population of Edinburgh, we have now more than one person in the whole place visiting it in the course of the year. Our increase this year alone is nearly 14,000.

1159. Let us have the figures for the last four or five years.—I only have them for 1926. The visitors were 468,504; the population of Edinburgh is 420,264. That is 1.71 visitor to each unit of the population of Edinburgh. The Victoria and Albert Museum, compared with the population of London, do not make such a good show.

1160. I suppose if you take the visitors to the four Museums jointly—

(Sir Martin Conway): If you take all the museums in London, the total number of visitors is 7.8 million.

(Chairman): That again is about one visitor per inhabitant.

1161. (Sir Martin Conway): Yes.—There is a very gratifying increase in the number of our visitors.

1162. It would be useful if you would send us your figures.—Yes.* On Sundays it is especially noticeable. It is embarrassing now. We have sometimes over 5,000 in the Museum on Sunday afternoons between 2 and 5 o'clock.

1163. (Sir Lionel Earle): Referring to your reply (4) to the Commission's questionnaire, do you collect modern sculpture in your collection?—No.

1164. Not modern?—Only antique, we have a good many casts of antiques.

1165. Nothing above the last 100 years?—I think I can say no, except for a statue of Rob Roy.

1166. The Victoria and Albert are making over all their sculpture of the last 100 years to the Tate?—No, we have nothing like that.

1167. Have you any idea why the Victoria and Albert took back their loans? Was it on account of objection to dissemination in the country?—The original letter I have from the Director said it was

* NOTE.—The number of visitors during the period 1920-26 was as follows:—

ROYAL SCOTTISH MUSEUM.
Record of the Number of Visitors, 1920-26.

Year.	Total.	Sundays.	Evenings	Remarks.
1920	372,419	104,774	32,381	—
1921	408,235	129,587	39,839	—
1922	442,322	168,616	27,406	Closed during November and December in the evenings.
1923	440,714	175,703	8,823	Open in the evenings during summer-time only.
1924	454,269	185,660	10,212	do.
1925	459,182	184,667	16,015	Open in evenings from 1st April only.
1926	468,504	179,395	14,468	Closed three evenings on account of General Strike; closed one Sunday for same reason.

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

solely a matter of audit and identification of the objects of the loan. I think they found out they required them.

1168. Probably for the Circulation Department?—It may be that, but I think a good many things went into collections. There was a large red lac case which we had on loan for many years. It was taken back because there was another, and they wanted to show the pair.

1169. Have you considered the policy which we have found begun to be adopted in certain of the London museums as regards eliminating a large number of things on exhibition to the public and placing them in a room where students can examine them, and so show the things to the public better?—We have large natural history collections, cabinet collections, which are not exhibited except to students.

1170. Any pottery and that kind of thing?—We have a certain amount of textiles. The deprivation when the Victoria and Albert called back all their stuff left us with serious gaps in exhibited collections.

1171. The building of your Museum would not lend itself so easily for making rooms where students could go and study if you eliminated some of the less important things?—We have a few things, but in the Art Department not very much that the students want to study except in textiles. There is not very much.

1172. Are you in favour generally of that policy of eliminating from the point of view of the public?—Certainly.

1173. Keeping more in reserve for the students there to study?—Certainly. It is a very good thing sometimes to remove some of your exhibits for a few years and then let them out afresh again, from the point of view of the general public.

1174. The only other question I have to ask is this. You told the Chairman you had £300 before the War for travelling abroad for your officers. You say you think £300 would be sufficient now, but £300 now is not the same as £300 before the War?—No, but I do not think it would be a good thing to send them all travelling abroad at once. I should reserve it to one or two a year. A visit of a fortnight, say, to the museums of Paris would do a great deal of good.

1175. The £300 was probably excessive?—That was before my time. I do not know how much they did.

1176. (Sir Henry Miers): Can you state why loaning is limited to the Natural History Department?—Because it is only in that department that (as the Regulation says) "Redundant and obsolete specimens" occur.

1177. You think it would be welcomed in other departments?—I think it would be welcomed in other departments.

1178. You mentioned the existence of the Geological Survey Collection in the Museum. Does that involve Geological Survey work being done on the premises?—The Geological Survey officers have access to the cases, and they examine the specimens as they require. They collate them and we print the labels.

1179. There is inconvenience in that from the Survey point of view?—I do not think so.

1180. They do not regard it as necessary to do their work in the place where the collections are held?—I do not think so, I have not heard of any friction at all.

1181. Do I understand from the plans of the museum that there is no public exit at all on the South Side of the building?—There is no public exit on the South Side of the building.

1182. In case of fire the whole of that side would be cut off?—In case of fire the whole of the South Side would be cut off. The Office of Works contemplated putting special fire exits on the South Side, but nothing has been done.

1183. That is a source of very great danger now?—Something might be done at either end. There are doors East and West which are always locked. I think some precaution might be taken to make these doors more readily opened, then people could get out that way, but there is no access to the South Side.

1184. Persons trapped on the first and second floors might be entirely imprisoned?—No, they could get round to either end, I think. You have two staircases at either end. It is really in the Administrative Block that the danger would be.

1185. In the case of fire in the Northern portion of the building the exit might be entirely cut off from persons in the South?—It might. Except on Sunday there are never very big crowds.

1186. With regard to congestion, in which department is congestion more severe?—I should think in the Technological Department. We suffer a good deal from not being able to expand there.

1187. Have you objects stored that ought to be in that Department?—Certain objects are stored. They had to be taken away to give more accommodation.

1188. Have you adequate storage accommodation?—In that Department, yes. There is not too much storage in the Natural History Section.

1189. In the Museum as a whole the storage accommodation is—?—Is fairly good.

1190. (Sir George Macdonald): With regard to propaganda at the Museum, I suppose you do a good deal of propaganda yourself?—As much as I can. We use the Press as much as we can.

1191. You have been rather successful in getting a good many objects into the Museum?—We have got a great many very important things. I think the Museum is thoroughly recognised as a national Scottish Institution, and the Scottish people are very willing to lend their things. We have some very valuable things on loan which I hope may remain for many years.

1192. You were speaking of the danger from fire. I gather you think the main danger is from the roof?—I consider the main danger to be from external causes through the roof.

1193. Would it be any protection if it were possible to cover it with wire netting?—I have thought of that. I should think that is possible. On the other hand there might be a danger of it interfering with the lighting. But the matter is much complicated by this later statement that has been presented to you, relating to the condition of the structure.

1194. In referring to catalogues and post cards and so on, you say it is doubtful whether this is the most profitable system that could be devised. Have you any alternative to suggest?—We have taken unofficial estimates from an Edinburgh firm of publishers, and it seemed that we might be able to get our printing done more cheaply and with better results than through the Stationery Office.

1195. You do your own printing?—We print our own labels. There, again, we could do with a little more help. There is a good demand for labels from local museums which we are unable to satisfy.

1196. Is your own museum now up to date in regard to labels?—I never see a specimen without a label, or if I do it is immediately rectified, though, owing to re-arrangement in the Natural History Department, the labelling at present is not complete.

1197. The labels are fairly full?—The labels are fairly full, and I think they are all easily read and accurate. It has been a tradition in the Museum to have everything thoroughly labelled.

1198. You say the amount of the routine work does not leave the staff much time for research. Are the staff otherwise competent to undertake research?

Certainly. The Natural History staff, I think, is thoroughly competent to undertake research. At the present so much of their time has to be spent in setting out the exhibitions in the new galleries that there is no time left for research. A great deal of research was done by the Museum staff in the past.

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

Dr. Traquair had a European reputation. Dr. Eagle Clarke did a great deal of research work, and is one of the recognised authorities on bird migration, and I do not think the present staff is one whit less competent than those who have gone before to do research work.

1199. Am I right in thinking that your present Keeper, Dr. James Ritchie, was awarded a gold medal?—It was a silver medal, for his work in relation to the influence of man on animal life in Scotland.

1200. I gather you would welcome some more formal regulations which would possibly avoid competition in buying with other museums?—I think instead of having a board, the cultivation of friendly relationship with the officials of other museums, and some little direction from official sources, would put the matter on quite an easy footing.

1201. I suppose that in the case of the Natural History Museum and the Science Museum there is no competition, because it is Dives against Lazarus?—The Natural History Museum (the British Museum) is able to collect in Scotland, which seems rather hard on us because we have not the means to go to collect in our own country.

1202. When you come to the British Museum and the Museum of Antiquities—you were Director of the Museum of Antiquities, I think?—Yes.

1203. You say there is a regulation there?—I understand, from the Departmental Committee that sat in connection with the disposal of certain Irish Gold Ornament, after the purchase of the Glen Lyon brooch by the British Museum—

1204. What happened in connection with the Glen Lyon brooch?—That was a Scottish brooch of the 15th century which came up for sale in London, and the National Museums were very anxious to get it. The representatives of two museums bid against each other until at last the British Museum out-bid the other.

1205. I gather you got rid of the economic botany department altogether?—Most of that is in the cellar. There was a collection of wine which could perfectly well have been represented by a wine merchant's catalogue. I asked for permission to sell it, but it was eventually taken over by the Hospitality Branch of H.M. Office of Works. I was told the liqueurs were worth about £30.

(*Sir R. Glazebrook*): I have no question except with regard to the structure and fire prevention, but we shall hear more about that later perhaps.

1206. (*Sir Martin Conway*): You say there is no competition in regard to Scottish antiquities. How do you define "Scots"? Do you include Irish and Scotch?—No.

1207. A Celtic thing you do not take?—No, not if they are Irish.

1208. About the Traprain Law treasure, I have forgotten in which of those museums they are?—They were for a short time on view in the Royal Scottish Museum, because I got the loan of them while the other museum was still in the hands of the Office of Works, but they were returned to the Museum of Antiquities.

1209. Take that as an instance. Is there any students' room where a man can have them out of the case and study them?—In the National Museum of Antiquities?

1210. Yes.—They might have them in the Council Room.

1211. (*Mr. Charteris*): With reference to the sculptures, does your Museum buy sculpture?—We would do if we had the means.

1212. Do not you think it would be an advantage if there were some definite dividing line between you and the National Gallery?—Yes; of course, the National Gallery has always had certain pieces of sculpture, and it certainly adds to the pleasure of those going to the Gallery to have sculpture with the pictures, but if the thing is carried too far there may be competition.

1213. You do not think any rule would be an advantage as to epoch, or character or nationality?—I cannot quite see where it is to be applied. Renaissance works of Art are extremely valuable to us from the students' point of view, and we acquire classical works of art and plaster casts for use by the professors of the University.

1214. You have not any at present except the casts?—We have a certain amount of Renaissance sculpture in wood.

1215. You do not think it would be an advantage if your Museum were confined to casts, and the National Gallery?—The National Gallery have very little room compared to us. We have much.

1216. Apart from the room, apart from the accommodation, you do not think it would be desirable to keep to casts?—No, because you see an original is worth a great deal more than a cast. I should not like to have the National Museum of Scotland confined to a collection of plaster casts.

1217. Subject to means, the view you are advocating now really involves competition between two places, or may in the future?—It might in the future. I do not think it would be very serious, but still—

1218. If you both had an accession of means?—There again the matter might be settled by friendly intercourse between the directors of the two museums.

1219. But you would still be after the same objects?—I do not think they would bid against each other.

1220. Subject to arrangement?—Yes. As long as that intercourse is understood, it is the province of both, and you are not to overlap, because there are lots of examples of classical architecture and Renaissance work which would serve both.

1221. Do you collect furniture?—We collect furniture too.

1222. Is not there some overlapping in regard to that with some Museums in Edinburgh?—No, I do not think so. The National Museum of Antiquities may take occasionally pieces of furniture, but they have no room to develop it. My own view is that furniture ought to be, even though it is Scottish, the province of the Royal Scottish Museum. It serves a better purpose if it is a piece of Scottish furniture in a general collection of furniture of the period, rather than isolated.

1223. Therefore, in that case, do not you think it would be an advantage to have a definite rule laid down?—I think it might. As regards textiles also.

1224. As regards textiles and furniture, there should be a definite understanding, which might take the form of a rule, between yourself and the Museum of Antiquities.—Yes, that might be so. It might be advantageous.

1225. With regard to things found in Scotland, you were referring then only to Natural History objects, were you?—No. Of course, the objects found (not natural objects) do not affect us, because such objects found in Scotland will always go to the National Museum of Antiquities.

1226. What objects had you in mind when you said things found in Scotland?

1227. (*Sir Lionel Earle*): Whales?—Objects of antiquity. I was thinking for the moment of the National Museum of Antiquities with which I am very closely associated.

1228. (*Mr. Charteris*): You think, with regard to those, all antiquities?—All Scottish antiquities ought to be preserved in Scotland. Of course, there are cases where objects have wandered from Scotland and come into the market in England, and been there a long time. We desire to have them. But I think the possibility of a Scottish monument being removed to England for the purpose of being put into one of the London Museums is a thing that ought not to be allowed.

1229. In order to make the Museums in Edinburgh more complete you think they ought to be preserved

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

for Museums there, the Museums of Scotland?—I think the Scottish Museums are of sufficient importance for that ruling to be made.

1230. Would you say things relating to the historical development of Scotland?—I should go further; I should say also all pre-historic objects.

1231. All pre-historic objects too?

(*Sir George Macdonald*): I think the Commission might be interested to know of one object found in Scotland some years ago, the largest meteorite which ever dropped in the British Isles?—It came down somewhere in Perthshire and it was claimed as Treasure Trove. It is now in the Royal Scottish Museum.

1232. Was the claim disputed by London?—No.

1233. The London people have a small piece of it?—Still more wonderful it was not disputed by the man on whose ground it fell.

1234. That is one of the difficulties, the line of demarcation. You can make an arrangement about purchase, but you cannot about gifts and bequests.

1235. (*Mr. Charteris*): Is some of the weeding out done by selling?—No. The things we sell are things that we have usually accumulated in the cellar for a long time.

1236. Is your power to sell derived from Statute or from Regulation?—Treasury Regulation.

1237. Do they limit it to redundant and obsolete objects?—No.

1238. They give you a free hand to sell?—A free hand to sell.

1239. Redundant and obsolete only applies to exchange?—The Regulation which permits us to sell is subsequent to the General Regulations of 1912.

1240. What does redundant and obsolete relate to?—To objects that are going to be exchanged, I think.

1241. Would it not be an advantage to have the words widened, because they are words of rather strict limitation?—I should think "redundant" covers almost everything.

1242. If you are satisfied I have nothing more to say.

1243. With regard to bequests and gifts, does your regulation enable you to deal in that way with bequests and gifts as well?—There is no restriction about the sale of anything.

1244. Have you ever found it necessary to do that?—Not that I can think of, except some of these things we get rid of, gifts and manufactures of 50 years ago—we have no scruples about that.

1245. What steps do you take to advertise names of donors and testators?—I have a notice board at the door on which there are lists for each department which we keep up to date, and which show all recent acquisitions and gifts. I have had a series of panels put up in the wall, but I have not had the bronze letters of the names of the most notable donors put up until we know how we stand with regard to this fire-proofing scheme.

1246. (*Sir Courtauld Thomson*): I suppose that in disposing of the industrial material that was given you by manufacturers you have regard to their application to art and to science and do not get rid of anything from that point of view?—Yes.

1247. In reply (5) to the Commission's questionnaire you say that visitors mainly belong to the artisan and labouring classes and include a large proportion of children. You go on to say that the number of local visitors of the wealthier classes is relatively small. When you told the Chairman that there is a satisfactory increase in the number of visitors, can you form any opinion whether the wealthier classes, and those people who might be benefactors to the Museum, are increasing in number?—Of course, proportionately to the other classes they are naturally small. They are obviously a small number. I think it is very much increasing. We have used the local press very freely for the purpose of propaganda, and I think every month probably there are one or two articles on things in the Royal Scottish Museum which appear in the "Scotsman," the "Glasgow Herald" and the evening papers, and from my own experience I think

there are far more people of all classes coming to the Museum and much more interested in the Museum.

1248. With regard to the increased number of people who are using the Museums on Sundays, can you form any opinion whether there is a more general interest in the Museums, or whether those people are using the Museums merely as a shelter and for conversational purposes?—I think I can pretty well tell by the meteorological conditions what number of people will be in the Museum on a Sunday afternoon, and you may take it as pretty well an established fact now that if it is a fine afternoon you get up to 3,000 people there, which means that that must be about the number of people who will come seeking knowledge and information. Usually 5,000 come on a wet, showery day. A great many of them are young people who are really rather a nuisance, a lot of them, but I go up periodically myself and see, and I am surprised to see the number of people who are really looking at the things in the cases.

1249. (*Sir Robert Witt*): I think you deal with the question of foreign loans, and are not entirely in favour of it. Do you really think that considering the very small rates that are quoted for insurance the risk of sending objects abroad is a substantial one?—It depends on what sort of objects you have to send abroad. We have very little that we can send abroad. I do not think you could send Natural History specimens, nor in the Art Department have we new pictures or anything of that sort. I do not think there is very much that they would want, really.

1250. Your objection is really not so much in principle against loan abroad as that you might not have very much yourself?—I cannot think that there is anything very much that they would be likely to want.

1251. You also referred to the unfortunate results of a loan that had been made for a very long time from the Victoria and Albert Museum. That is not, as I gather, an objection to loans in principle; is not the unfortunate result rather due to the fact that it was outstanding, I think you said, for 42 years, and that if loans were made for short times and went backwards and forwards, that particular danger would have been avoided?—I think that is so, but there were many things among those that were taken away that we would be very glad to get back even for a short period. There was a particular case of a Staffordshire figure of a man with bagpipes which was peculiarly interesting to us. We would like him back very much if only we got him for a year or two.

1252. *Mr. Charteris* referred to the question of sculpture. Do you think it is essential in the interests of the Scottish Museum that your Museum and the National Gallery of Edinburgh should both collect sculpture?—Essential?

1253. In the general interest?—As long as there is no overlapping. The available space in the National Gallery will never really permit of collecting very much.

1254. Would not that be a reason for transferring it all to you?—It might, yes.

1255. But not necessarily for continuing the present system. I am not speaking of competition now, but really of whether it is desirable that one City should have two collections of one particular object?—I think it is desirable that it should be in the one place. In the general interests of the students it is, I think.

1256. (*Sir Lionel Earle*): Is not the National Gallery purely modern sculpture?—No, not at all.

1257. (*Sir Robert Witt*): In reply (7) to the Commission's questionnaire you refer to objects which are removed to the cellars. I take it that by cellars you mean cellars in the sense that they are mostly for storage and that there is no possible opportunity of using that place for students to work in?—No.

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

1258. There are not in any sense of the word storage rooms for students?—No. What I meant by cellars is the storage accommodation in the basement which is quite unsuited for students. We have a room built intended for the use of students, but so far we have not been able to put it to that use. All round it there are cases of natural history cabinet collections, which would be accessible to the students working on natural history there.

1259. But with the exception of the possible use of the Board room, which I think was referred to, there is at the present time no special accommodation for students, who have to do the best they can in the galleries?—The Board room is in the National Museum of Antiquities, not in my Museum. We do accommodate students occasionally in some of the new galleries which are not yet open to the public, but there is a lack of something of that sort at the present time.

1260. With regard to photographing, you tell us in your memorandum what the system is. Do not you think it is the duty of every museum, as far as possible, to have a photograph of every object?—To have a photograph of every object?

1261. To have a photograph available for the students of any object?—If they want them. I tried a system, but it has not had any result, of when a man wanted a photograph of any important thing letting him get it at half price and our keeping the negative and putting on the label of the object "Photograph obtainable," but I have not found that any visitor has applied for anything. There is very little asked for in the way of photographs.

1262. Is that perhaps because it is rather hopeless to do so?—No, I do not think so. They do not ask very much.

1263. It is expensive?—It is expensive; but it has not worked.

1264. If you had an official photographer, as so many museums have done, do you think that would encourage the use of them?—I do not think it necessary at all. At one time there was in the museum an official photographer, but I do not think it is necessary. There is not very much demand for photographs, and there is very little demand for postcards. Since the rate of postage was altered it killed the habit of sending postcards, I think, and the demand never recovered.

1265. On the question of fire, I think you said that in addition to danger from the roof there was, you thought, a substantial danger from fire in the basement where the heating apparatus was?—I would not say a substantial danger, I think it is the most dangerous spot, and that if there was an outbreak of fire it would in all probability arise there, but I do not think the danger is great.

1266. Have you ever thought of dealing with that by the use of sprinklers?—We have sprinklers and buckets of sand all over the place.

1267. A regular system of sprinklers?—Fire extinguishers are supplied by the Office of Works.

1268. I meant sprinklers in the sense of the ceiling being covered with a network?—No, we have nothing of that sort at all.

1269. Have you thought at all of the system of exhibiting your new acquisitions in a room by themselves before they go into their proper places?—We have two cases in the front hall just as you come in, with all our recent Art acquisitions in them. At the entrance to the Natural History Department there is the same arrangement, likewise, as far as possible, in the other sections.

1270. I think when Mr. Regan gave evidence before us he seemed to contemplate that the additions to the zoological collection would be very comprehensive. On the other hand, I rather gather you think Dr. Ritchie, your zoologist, takes a different view, and he did not anticipate a very large extension of the exhibits in future?—No.

1271. Can you reconcile those two points of view?—Well, Dr. Ritchie thinks it is not necessary to exhibit great series of examples of one particular animal or creature in its different stages of development, but that you may remove a great many specimens to the cabinet collections used by the students, whereas the public does not want to see all those, and only one representative specimen will do.

1272. The difference is not of acquisition, but of exhibition?—Of exhibition I think.

1273. (Dr. Cowley): You speak, in reply (7) of your memorandum, of congestion, and I was under the impression that there was congestion in all departments, but I gather from you that it is chiefly in the Department of Technology that your space is so limited?—There was a very large addition built to the museum during the War, and we are only getting into it now. It really was intended for the Natural History Department, so that they have ample accommodation there. I think the Art Department are fairly well off for some time to come, but the Technological and Geological Departments which are in the west wing are sadly in need of additional accommodation.

1274. You say also in reference to the Natural History Department that the accommodation for cabinets will be more inadequate if the system of loan collections to schools, and so on, is adopted. What does that really mean? Does the system of loan collections to schools and the distribution of specimens involve a good deal of space for manipulating them?—Yes, it means that, and gathering together more specimens in order that you may have them ready for distribution.

1275. Keeping a larger stock?—Yes, and then we should like to be able to show the school teachers when they come what we have got. We want a little more room.

1276. It is a matter of making the collections more useful on the spot?—Yes.

1277. Then I see there are lists given of the number of acquisitions, and donations are very much the larger section of your acquisitions. You say elsewhere too that the lack of space in the Technological Department at any rate has been the cause of declining gifts sometimes. Has that happened often?—Yes. In the Technological Department.

1278. Have you declined many?—Many. We have no models of merchant steam ships, of battleships one, one obsolete specimen. We cannot take them in. All the ship builders are extremely friendly to us, and I do not think there would be any difficulty in obtaining models if we had the accommodation.

1279. It is chiefly in the Technological Department?—I think at the present time it is chiefly there.

1280. In your memorandum you speak of the staff in the Natural History Department as being so insufficient. That you have explained to us. Is it the same in other departments?—I think it is there more particularly. It has grown very much and is a large department, and having all these additional halls into which they are going there is much more work to be done.

1281. So that they are very much more occupied than the other departments?—Yes.

1282. (Sir Henry Miers): You say something about the possibility of extending the Technological Department at any rate, if nothing else was done?—Yes.

1283. Would that involve moving the Technological Department from its present quarters?—No, it would be an extension to the south.

1284. The southern corner, and that would diminish the fire risk?—I think it would facilitate the handling of the specimens in the event of the reconstruction of the present hall.

1285. (Chairman): We are greatly indebted to you. —May I add one further point. I would like to say that our relations with all the museums in Scotland, municipal and otherwise, are as friendly

2 December, 1927.]

Mr. A. O. CURLE, W.S., F.S.A. (Scot.).

[Continued.]

as possible, and whenever they apply for help we render them all the help we possibly can, and I think they would welcome any further assistance we can give them.

1286. (Sir George Macdonald): You mentioned that you had a small scientific botany collection?—Yes.

1287. Would you welcome the removal of that to the Botanic Gardens?—I think it would be of great help to the Botanic Gardens. I think it would be of great help to them if they had a proper place to put it into. On the other hand, its proximity to the University makes it of great use to the students.

(The Witness withdrew.)

Mr. J. WILSON PATERSON, M.V.O., M.B.E., A.R.I.B.A., of H.M. Office of Works; called and examined.

1291. (Chairman): Can you give us very briefly any observations you have to make after hearing the evidence of Mr. Curle?—On the fire risks?

1292. On fire risks and construction?—In connection with the fire risks, I must say that they are such that the local authorities would not pass. In Scotland and elsewhere the local authorities set a definite standard with regard to fireproof construction and means of exit from public buildings, and my remarks naturally must be confined to comparing them with the standard both of the local authority and of our own Government department, and on such standard the building is far from being satisfactory, both as regards the means of exit and the construction from the fireproof point of view. Not only is the building unsatisfactory from a fireproof point of view, but its construction of cast iron columns is unsatisfactory. We have had a few calculations made out during the past week, and the columns are essentially weak.

1293. (Chairman): I think we need not have the whole of the details now: perhaps you will let us

(The Witness withdrew.)

Mr. CAMPBELL DODGSON, C.B.E., Keeper, Department of Prints and Drawings, British Museum; called and examined.

1298. (Chairman): Mr. Campbell Dodgson, I understand that water colours and drawings are now collected and exhibited by three different museums in London: the British Museum, the Victoria and Albert Museum, and the Tate Gallery?—That is so. There is a very large collection at the British Museum, a very large collection at the Victoria and Albert Museum, and only a small one at the Tate Gallery which is eked out by temporary loans.

1299. Loans from the other two collections?—No, not from the other two collections, but from private owners.

1300. Are there also three print room systems?—Only two: the British Museum students' room at the department of prints and drawings, the students' room at the department of engraving, illustration and design, which also contains water colours not exhibited, at the Victoria and Albert Museum. There is nothing of the kind at the Tate Gallery.

1301. Now, I understand the print room system is very expensive. Can you tell us why it is expensive, and what the inevitable expense is?—The expense, I suppose, would be chiefly occasioned by the large and skilled staff which it is necessary to have for the custody of the collections and particularly in making them accessible to students. Illustrating that by the print room I know best, we have in our print room 6 officials, 9 clerks and attendants of various grades in attendance whose duty it is to attend on the visitors, and 4 mounters and restorers of prints and drawings, who become a very essential element in the staff when that system is adopted. The drawings and prints require a great deal of preparation and mounting before they can

1288. As a practical matter you would find no difficulty in sending it to the Botanic Gardens?—I should like to see it there.

1289. You have spoken of a number of these collections obtained by purchase, and also you make a certain number of your own exhibits.—We make a number of exhibits in our workshop of working machines in the Technological Department.

1290. It is one of the most attractive parts of the exhibition, is it?—Very attractive, and a year or two ago the Science Museum sent one of their officers up to find out how we finished our models.

(Chairman): We are greatly indebted to you.

have a report. Your general view is that the condition of the structure is extremely dangerous?—Yes.

1294. (Sir Lionel Earle): You consider that one of the great dangers is the switch room?—Yes, the condition of the switch room at the main entrance is highly dangerous. The switches are enclosed by a light timbered frame partition, the passage way leading to the switch room is only two or three feet wide and is used as a store.

1295. (Chairman): Short of a general reconstruction, do you see any measures that would add to the safety without excessive expenditure?—No, not without excessive expenditure.

1296. (Sir Lionel Earle): The galleries are carrying a greater number of people than they were really constructed for.

1297. (Chairman): I think that is really important. Perhaps you will give us a copy of your report?—Yes.

(Chairman): Thank you, Mr. Paterson.

be safely made accessible to students. That further entails the next large item in the expense, the provision of mounts and of the necessary portfolios and boxes of various kinds in which the collection has to be stored. We spend at the present time about £700 a year on the provision of new mounts, new portfolios, and new solander cases, in which the drawings and the more valuable parts of the prints are stored. This is the annual addition which is constantly required to a very large stock of those materials and cases for storage which we have accumulated during many years. The stock of mounts, of course, is constantly being depleted by the acquisition of new specimens which have to be put on them; the increase of the collection naturally involves an extension of the number of portfolios and solander cases, &c., in which it is kept. The provision of furniture to contain portfolios and boxes is another large item. Those, I think, are the headings under which the expense of having a print room system can be divided.

1302. Is it desirable that there should be three separate authorities purchasing water colours and drawings in competition one with the other?—Certainly not in competition one with the other. I am not at all sure that it is undesirable that there should be two or even three authorities collecting water colours. Purchasing perhaps is a thing which requires careful consideration, but I do not think myself, as some people do, that it is undesirable in such an enormous city as London that there should be two or even three collections in which objects of this kind are accessible to the public. People get into the habit of going to one part of London

2 December, 1927.]

Mr. CAMPBELL DODGSON, C.B.E.

[Continued.]

rather than to another, the distances between the three galleries are very considerable, and I think there is a great deal to be said for the dispersion of objects of this kind in various places rather than an absolutely consistent centralisation of them in one place, partly for the reason that seeing an enormous quantity of similar objects in one place is exceedingly fatiguing, and I think that people profit more by seeing, or even being able to see only a moderate number in a single gallery.

1303. You would make a distinction between purchases and bequests?—Yes. The spending of public money, of course, throws a considerable responsibility upon the director or responsible authorities of various kinds of the different collections, and, of course, one perfectly understands that there are objections to their competing with one another in spending it. I do not think it happens that there is direct competition between the board of one museum and another in the sense that they do, or even could, compete against one another in the sale rooms. I have never known it occur in my experience.

1304. Then I understand you would leave the three different museums to receive, but you would allow only one of them to buy?—No, I do not mean that. I think it might be desirable to fix some sort of limits as to the class of things that they respectively should buy, but I think to prohibit any one of them from buying would be a very serious mistake.

1305. You suggest some kind of frontier or limitation between them as to either period or subject?—I think so.

1306. Can you suggest what kind of frontier or what kind of limit should be established?—I think it is very difficult to do at the present stage without more conference than has hitherto taken place between the authorities of the respective museums.

1307. You would advocate consultation and discussion on that point?—Yes.

1308. Between the directors?—Yes.

1309. And you anticipate that some measure of agreement might be reached?—Yes.

1310. How far is the system of loans put in practice between the three galleries in respect of water colours and drawings? Is any development of this possible or desirable?—So far as I am aware the system has at present not been introduced at all. The only case of it with which I am acquainted is that in the quite recently issued catalogue of water colour paintings in the Victoria and Albert Museum I find a certain number of Turners on loan from the National Gallery. The British Museum has never lent to the Tate Gallery or to the Victoria and Albert Museum. Its powers of lending at present are exceedingly restricted.

1311. By statute?—Yes.

1312. We will deal with that later on. Now, if it was considered desirable to concentrate buying in one hand, how would you propose to carry this out?—I do not see how concentration of buying in one hand could ever take place unless a previous exceedingly drastic rearrangement of the collections had already taken place. In that case, assuming it to have taken place, there would, of course, be one responsible director, or a director acting under one responsible body of trustees, to whom the buying would be entrusted, but I do not see how it would be possible for any single person to buy for more than one collection, because I do not think it is humanly possible for the director of any one of these collections to have sufficiently intimate knowledge of the contents of any other collection to buy wisely for it. He understands presumably his own, and I do not think he can be expected to have that intimate knowledge of any other collection to know what it lacks and what it is most desirable to have.

1313. A joint buying board would not be a feasible solution?—I have not very much faith in joint boards for buying. I think an individual under a central control is far more valuable.

1314. You have already said that some conference and consultation between directors might possibly lead to a plan to facilitate intercourse and future administration?—I think it ought to be possible for something of that kind to be done without any great difficulty.

1315. Now, I understand the Tate Gallery is ready to resign any claim to a grant of public money for the purchase of water colours and drawings in favour of the museums, provided that the British Museum and the Victoria and Albert Museum engage to lend them from time to time such water colours and drawings of first-rate quality as would secure the representations shown at Millbank being of equal quality to those shown at the British Museum and the Victoria and Albert? Is such an arrangement possible and desirable?—I think that such an arrangement is eminently desirable. It is not at present possible until the regulations controlling our systems of loans are very extensively revised. May I mention a particular instance? In the year 1915 we received a large legacy of water colours from the Rev. C. J. Sale. He had died as long ago as 1896, and his wife survived until 1915. There was a large number of finished water colours by Cox. We had already a large number of water colours by Cox. I have some figures here. We had 39 water colours by Cox from the Henderson bequest, eight from the Vaughan bequest, and three from the Salting bequest. Twenty-two additional water colours came in that year, in 1915, and among them was one which I take to be the masterpiece of Cox, certainly it must be one of his masterpieces, the "Vale of Clwyd," which Mr. Sale himself had bought for £2,415 at the Quilter sale in 1889. It was in a large gilt frame and was much more in the nature of a picture than a drawing suitable for our collection. In my report urging the acceptance of this collection only part of which was taken, while a considerable mass of drawings was left to the Worcester Museum (Victoria Art Gallery), those which we did not take, I strongly urged that this particular drawing at least should be ceded to the Tate Gallery. My suggestion was not accepted. I do not think it was even allowed to go before the Trustees, on the ground that this bequest was made to the British Museum and that the British Museum must either take it or leave it. If they had not taken it it would have gone to the Worcester Museum. I was in favour of it going to the Tate Gallery.

1316. Your proposal was vetoed on the ground of illegality, or on the ground of inexpediency?—Illegality, the bequest being made to the British Museum or failing that to the Worcester Museum. You can conceive from that that I should be myself in favour of lending drawings of that character at least, temporarily and not irrevocably, lending them so that the loan could be revoked, to the Tate Gallery, of course, under the condition that they should be guarded in such a way, as they would be in such a gallery, from undue exposure to light.

1317. You rather surprised me by saying it was illegal. I thought the 1924 Act gave you power to lend any object?—I have before me a copy of the terms of that Act which will enable me to answer that question exactly. The first section of the Act provides:—

"The Trustees of the British Museum shall have power at their discretion, and under such regulations as they may think fit from time to time to prescribe, to lend, for public exhibition in any gallery or museum under the control of a public authority or university in Great Britain, any duplicates of printed books, prints, medals, coins or of other objects comprised in the collections of the Museum, or any object, not being a duplicate, which in their opinion can be temporarily removed from the Museum without injury to the interests of students or of the public visiting the exhibition galleries of the Museum."

2 December, 1927.]

Mr. CAMPBELL DODGSON, C.B.E.

[Continued.]

That has been interpreted by the trustees in the sense that no object of first-class importance can ever be lent. The rules framed by the trustees in consequence of that Act are as follows:

"Under the powers conferred on them by the British Museum Act, 1924, the Trustees make the following regulations for the loan of objects forming part of the collections of the Museum:—

"1. Loans can only be made for the purpose of public exhibition in a gallery or museum under the control of a public authority or university in Great Britain.

"2. Loans will in general be confined to (a) duplicates, (b) objects not required for public exhibition, (c) objects for which there is little demand on the part of students, (d) objects the loss or damage of which would not seriously affect the completeness of the collections.

"3. No object that has been acquired by gift or bequest shall be lent, unless the donor has expressly signified his wish that it should be available for loan."

These regulations, as framed by the Trustees, as you see, preclude the loan of anything of first-class importance or anything the removal of which can be interpreted as impairing the completeness of the collections. Speaking of my own department, at any rate, the first case of objects being loaned under these new powers of lending things other than duplicates occurred in this last autumn, when I was asked, and obtained the sanction of the trustees to allow me to do so, to lend a certain number of drawings by the minor artists of the Norwich school for an exhibition in Norwich Castle Museum. We lent about 20 drawings for that purpose, the first drawings that had ever been lent outside the museum at all. I was obliged to request the curator of the museum to apply only for minor objects and not ask us to lend first-rate examples of any of these artists.

1318. I understand that you favour a modification of the interpretation applied under the 1924 Act?—Yes.

1319. To what extent would you favour modification?—I think I should limit it to London Museums. I should not wish any really important drawing to go outside London, as I think a foreign student who wished to see a particular drawing known to be in the museum would have a legitimate cause for complaint if he were told to go to Cambridge, Bristol or Liverpool, but if it went to the Tate Gallery or the Victoria and Albert I think he would have no cause for complaint.

1320. That would apply only to first-class examples, to be retained in London?—Yes, objects forming really an essential part of the collection.

1321. You propose to allow a wider latitude for objects of secondary importance to be lent to the provinces?—Yes.

1322. Would you lend them abroad?—That is absolutely precluded, and I think rightly. It is expressly prohibited by the Act of 1924.

1323. (Sir Robert Witt): You have just said that you would not be in favour of lending abroad, on the ground I suppose that the risk is too great. You are aware that nearly all foreign museums do lend abroad as far as they are concerned?—Yes.

1324. And they do not think the risk is too great, but you still do think so?—I do myself. At any rate, for a lengthy loan, such as presumably would be contemplated—I think for any loan—the risk is too great.

1325. You have had a good deal of experience in connection with recent exhibitions and loans of drawings. Have you ever known any case in which the drawing has been injured, and if so how many?—No, I have not known a case of their being injured. It might happen that war would break out.

1326. You are aware that at the time war did break out there were certain possessions of the Victoria and Albert Museum which were abroad at the time?—I did not know.

1327. I think so. At all events, if not, there were a great many things in a certain city which belonged to individuals in this country, and they have all returned safely in due course?—Yes.

(Sir Martin Conway): Not Holbein's portrait.

1328. Sir Robert Witt: You said you would be in favour of loans in London. On the question of overlapping, in 1915 the Committee of the National Gallery suggested that perhaps the best method of dealing with the water colours as between the different museums, the Tate Gallery, the Victoria and Albert, and the British Museum, would be to establish a gallery of water colours on the vacant ground in the neighbourhood of and belonging to the Tate Gallery?—Yes.

1329. Would you see any objection to that, provided of course proper precautions were taken as regards exposure to light?—No, I think not.

1330. You would be in favour in that case of lending freely from the British Museum water colours?—I should be unwilling to lend to any permanent collection. I think there should be definite restrictions as to period and that drawings should be lent for the purpose of temporary exhibitions arranged on some definite plan with a definite object for a definite period.

1331. Then if an independent gallery was built, if some public-spirited individual came forward and said, "You have abundant ground at the Tate Gallery site, I would like to present to the British nation a gallery in which to exhibit its chief characteristic in painting, namely, British water colours," would you be in favour or against lending some of the best things in the British Museum to such a gallery?—I think I should be in favour of lending some of the most highly finished things, such as the Cox which I mentioned just now, but in regard to lending things which I would call more definitely drawings rather than paintings, I should not be much in favour of lending to a special water colour gallery sketches, the slighter and more fugitive water colour sketches of the English masters which most of the things in our collection are, I regard them as drawings.

1332. You referred to the fact that the Tate Gallery collection of water colours was a comparatively small one. It does, however, probably contain the largest collection in the world of any one man's drawings, the Turners?—Yes.

1333. So in that way it is the largest collection probably that we have, I think eighteen thousand of them or something of that kind?—Twenty thousand.

1334. Could the point you made just now in regard to sketches and so on be met by the Tate Gallery, on the other hand, lending to the British Museum as many of the rough sketches and unfinished sketches of Turner that you might require?—I think we should have no objection to receiving them if we were given full powers to mount them in what we called a suitable way, the way in which our drawings in our own collection are mounted. I have not first-hand knowledge of the way in which the Turner drawings are stored in the Tate Gallery, but I understand from the description in the report of 1915 that a large number of them are kept loose in boxes and drawers. In that condition I think they are quite unfit to be shown to the public in any collection. I should certainly not be in favour of exhibiting them and making them accessible to the public except with proper provision for properly mounting them.

1335. I think that would obviously have to be. They have only not been mounted because of their number and the expense, that is the only reason?—Yes.

2 December, 1927.]

Mr. CAMPBELL DODGSON, C.B.E.

[Continued.]

1336. Just on that question of mounting, the practice of the British Museum has been, I think, to lay down every drawing?—Yes.

1337. Do you think it essential in the interests of the safety of the drawings from the point of view of theft, or being spoiled, that every drawing must be subject to that great disadvantage?—Yes.

1338. You admit it is a disadvantage?—It is a disadvantage, but I think it is essential.

1339. In regard to photographing, if I may pass to that question, you have recently promulgated or issued some modern regulations in regard to photographing. I have them here. Am I right in thinking, up to the time of these regulations, no record was kept in the British Museum of what drawings had been photographed?—No, that is not at all correct. Every object photographed is entered in a book and those books kept, therefore, the record is kept.

1340. You have no official photographer?—The photographs and negatives were not kept by the Museum.

1341. (*Chairman*): Were they kept by the photographer?—He kept them himself unofficially unless his client who ordered the photograph required the negative to be sent away. The photographers generally employed by the Museum in consequence have a very large store of negatives which really belong to the persons who ordered them and paid for them but which they did not take away.

1342. (*Sir Robert Witt*): Would you be in favour of following the practice of some other museums and having an official photographer for the print room?—There has been recently appointed an official photographer, not for the print room specially, but for the whole of the museum.

1342A. Does he photograph any of the drawings? If I order a photograph of a drawing in the British Museum would that order be handed to the official photographer or should I be told I must employ my own?—There is freedom given to choose between the two. I understand preference is, as a rule, given to the official photographer unless anybody expresses a preference for another, but it is not insisted on that the official photographer should be employed. He makes the same charges except for strictly official purposes that any ordinary photographer does. The Keeper of a department is now authorised to requisition, say, for the benefit of another museum, or a serious student abroad, who cannot afford to pay for it, a photograph at the charge of the British Museum. That has not until quite recently been done before.

1343. You are generally in favour then of the official photographer providing photographs as reasonably as possible and as freely as possible for the members of the public who wish to have anything photographed?—Yes.

1344. And you think the new regulations go far to carry that out?—Yes.

1345. On the point of the cataloguing of the drawings. Is there any important quantity of drawings in the British Museum which are not yet catalogued?—Yes, certainly, very important parts of it. The Italian drawings and the German drawings have not been in any definite sense catalogued, nor have the French. The Dutch are in process of being catalogued, the early Flemish are in process of being catalogued at the present time. The English drawings were catalogued down to 1907 by Mr. Laurence Binyon, but this catalogue has not up to the present time been methodically continued. There is room for a very large supplement to the catalogue of English drawings to which very numerous additions are made. The drawing of minor schools, such as the Spanish, Scandinavian, and so on, are not very serious items in the collection. They have also not been catalogued.

1346. If you had additional staff would you consider that a very important work that should be undertaken?—Certainly.

1347. If there was the staff available?—Yes. Sufficiently trained staff.

1348. Have you considered at all the possibility of getting work of that kind done by unpaid voluntary staff of sufficient skill and experience, for you to entrust them with it?—No, I can hardly say that I have. I think it is almost too much to expect anybody to do that kind of work unpaid.

1349. I think you have had unpaid assistants in the print room?—At the present time we have one. I have had it in my mind, I confess, that he should at some future time be invited to undertake a catalogue of the German drawings, for instance, for which I think he is eminently qualified, but I have never thought of asking him to do it without remuneration.

1350. But however unlikely it is that you would get the necessary skilled work unpaid, you would welcome it if it were forthcoming?—Yes.

1351. Just one or two other little points. Would you be in favour of opening the print room in the evening apart from the question of expense and staff as in the case of the Victoria and Albert Museum or part of it?—Not very much. I think it is very unlikely it would be used at that time of day.

1352. You do not think there are many people who are at work the whole day long who would only be too glad to come and work in the print room of an evening?—I rather doubt it. It is just possible that the habit might be developed if opportunity were given, but I rather doubt it.

1353. There are a great many visitors to the Victoria and Albert Museum when it is open?—I suppose there are. I have not had much experience with that.

1354. The lift to the print room, that is not used at all I believe?—It is used chiefly by members of the museum staff. That is on account of the extreme difficulty in getting to the bottom of it, which is a very essential thing to do if you wish to get up. It will never really be used, I think, by the public until the doorway on the north side is open to the public, which I think a highly desirable reform to be introduced. The difficulties attaching to it I understand are simply those of the expense of providing additional staff for the supervision of this doorway.

1355. If it were at work you think it would encourage the people who visit the print room?—Yes. It would be much easier for the people coming from the north side of London, Bloomsbury; people coming from the Slade school, for instance, would have much easier access to the print room if they could walk in at the King Edward VII gallery, arrive at the foot of the lift and go up, without going through the whole of the British Museum before getting there, and then having to go up some stairs and go down some stairs before they arrive at the lift.

1356. I think the Oriental section of the print room is a very important one under Mr. Binyon. Is there anything you would like to say in regard to that, or shall we have the privilege of hearing and seeing Mr. Binyon when he returns?—I hope you will, when he returns. I am sure he would like to see you on the subject. I would like to say that his department is in most urgent need of extension. It is tucked away in a corner of mine, and it is acquiring such a great importance that it is entitled to much better quarters than it has at present, but that cannot happen until some extension of the galleries takes place.

1357. (*Sir Courtauld Thomson*): With a view to stimulating the public, encouraging visitors and discouraging fatigue, do you think the temperature and the ventilation of the museum are ideal?—No. I think ventilation is defective and the temperature too hot. In the winter I always suffer from heat myself, and I think many of the visitors who come complain, and many more I think if they were asked

2 December, 1927.]

Mr. CAMPBELL DODGSON, C.B.E.

[Continued.]

would confess it was too hot. I consider the persons responsible for the general heating of this museum, of whom I am not one, do keep the temperature too hot. I also think that the method of ventilation originally introduced by the architect in the new building is defective and would have been still more so if my predecessor, Sir Sidney Colvin, at great opposition had not insisted on a certain number of windows which could be opened. The original intention of the architect was that there should be no windows that could open because if there were it would upset the perfection of his ventilation. Perhaps he would say the effect of our windows has been to upset the perfection of his ventilation.

1358. What is the dividing line in regard to your books, illustrated books, between artistic representation and educational representation. For instance, Mrs. Delany's paper flowers. If they represent botanical specimens you would regard them as a work of art?—Yes, I do not think it is the kind of thing the museum would have bought as a work of art if it had not been presented as a bequest. It is not what I should have considered appropriate to our collection if I were asked whether I would buy them or no.

1359. Are there any illustrated books which would more appropriately be exhibited at the Natural History Museum, books which are hardly works of art?—I should say very few. There was a case not long ago where I discovered—I forget the artist's name—but it was a volume of drawings of birds in South America by a not very well-known artist of about 1830. It had escaped being included in Mr. Binyon's catalogue of British drawings. I thought it was not very suitable to our department, and I wrote a recommendation to the Trustees that it should be transferred to the Natural History Museum. This recommendation of mine was turned down on the ground that the Trustees had no power to transfer a volume of drawings from Bloomsbury to South Kensington. I imagine they obtained powers to do that sort of thing at the time when the Natural History collection was transferred from the British Museum in Bloomsbury to South Kensington, but I suppose those powers were *ad hoc* for that particular purpose only and now can no longer be exercised. It was an unimportant case, but it is a case illustrating the difficulties attaching to moving a collection from one museum to another.

1360. (M. Charteris): Is not the position in regard to lending this, that Parliament—in 1924, was it?—gave fairly wide powers for lending and that the Regulations of the Trustees have cut those powers down?—Perhaps you are entitled to say that, but I do not think powers given by that Act were very wide.

1361. They are considerably wider than the regulations?—The Trustees are permitted to lend any object not being a duplicate which, in their opinion, can be temporarily removed from the museum without injury to the students or to the public visiting the exhibition galleries of the museum.

1362. At any rate the Regulations are in the direction of limiting that?—They limit that rather strictly, I agree.

1363. Under that section they might have made their regulations more liberal than the section does?—I think they attach importance to the words, "without injury to the interests of students."

1364. They take the line that the student is the first consideration of the museum?—The student is entitled to find in the museum any object which is known to be part of the permanent collection.

1365. What proportion of the water colours is exhibited?—That varies very much. We sometimes have special exhibitions consisting almost entirely of water colours. We had a few years ago an exhibition of Cotman and other painters of the Norwich school.

1366. Of the total number of water colours which the British Museum possesses, how many are exhibited? What proportion are exhibited?—As a

rule a very small proportion unless we have, as we do from time to time, a special water colour exhibition.

1367. Apart from that they are available to students?—They are available to students.

1368. They are in portfolios?—Yes, they are in portfolios.

1369. And the person who wishes to see the water colour has to go to the print room and fill in a form?—Yes, but I think they gain very much by not being on permanent exhibition; it saves damage.

1370. (Sir George Macdonald): I gather that you feel it to be an advantage that there is more than one place in London with water colours?—Yes.

1371. At the same time you feel there is undoubtedly in that arrangement a certain risk of overlapping and duplication?—Yes.

1372. But that might be avoided if there were some sort of co-ordinating board?—Yes.

1373. Would the risk not be still further reduced if there were a single Director for the two institutions?—A single Director for the two institutions?

1374. Set aside questions of higher administration and that sort of thing and suppose for a moment, if there were a single Director for the two different institutions, would that meet you in the matter of co-ordination?—Did you say two or three?

1375. Limit it to two. The Victoria and Albert Museum and the British Museum.—I think it is far more than any individual could undertake.

1376. One does not know what some individuals are willing to tackle. You feel you would not like to undertake the control of them both?—No. The contents of both are so vast that no person could be sufficiently acquainted with them.

1377. Then when you spoke of readiness or anxiety to let the Tate Gallery have that Cox, was it your idea that it should go there for a short time?—At that time I wished that it should go to the Tate Gallery permanently. It was not a drawing; it was a picture.

1378. What struck me in listening to the regulations was this: they are framed not so much to cover a case of that kind as to cover the case of temporary loans. I think it states very distinctly things temporarily lent from the museum without injury. Assuming that the Cox had gone to the Tate Gallery on permanent loan, a student would have gone there to find it. If it had been permanently loaned as you suggested, there would be no real hardship to the student?—No, I think not.

1379. So it really seems as if there were two systems of loan—(i) temporary loan, which apparently has been in the minds of the Trustees in framing these regulations, and (ii) a system of permanent loan where an object belonging to the British Museum might be better permanently housed in some other national institution?—I think so, yes.

1380. It rather looks as though there were room for two sets of regulations?—Yes.

1381. At all events, as though it were a pity to interpret or to rule out a permanent loan by applying temporary loan regulations?—Yes.

1382. (Sir Henry Miers): Do you consider the existing accommodation of the print room sufficient for the demand made on it by students?—I think it is more than sufficient. To tell you the truth, I think the attendance of students since the new building was opened in very much larger quarters than it had been before is a little disappointing, and it is difficult to account for. I thought the Commission might be interested in this subject, and I therefore have some figures prepared dealing with it. The maximum attendance of students in any one year we have ever had was in 1912, before the migration to the new building, that is in the old students' room. It reached the figure of 9,833. In the year 1910 and the following years down to the period of the war, the figures are for 1910, 9,343; for 1911, 9,649; for 1912, 9,833, followed by a big drop for 1913, which is accounted for by the fact that for

2 December, 1927.]

Mr. CAMPBELL DODGSON, C.B.E.

[Continued.]

several months the room was closed owing to the removal of the collection to the new building. The figure for 1913 was 7,064. During the war the attendance was extremely poor, but since the war it has never risen beyond 9,459, which is some four hundred less than the biggest pre-war figure, that was in 1912. Since then it has slightly fallen. The figures are as follows:—For 1923 it was 9,409; for 1924, 8,944; for 1925, 9,404, the same within five as the figure for 1923. For 1926 it was 8,746, rather a big drop, nearly 700 less than the year before. It is difficult to account for that. I can account for it partly in certain ways; firstly, the great distance of the print room from the main entrance, and the impossibility of getting in by the north door, which is near it; secondly, the fact that since the war we have had far smaller numbers than previously of foreign visitors, otherwise I think it is a little bit difficult to account for, and I think the attendance of students is disappointing. I think that considerable numbers go in and out of the exhibition room and see the exhibition, which is very much larger than before, contains a greater variety of objects, and excites more interest, but the number of people who enter the students' room and take serious pains to ask for the things they wish to see is disappointing.

1383. Do you know whether there has been a corresponding lack of increase in the number of students who attend the Victoria and Albert Museum?—I do not know what their figures are at all.

1384. (*Sir Lionel Earle*): You said you were in agreement generally as regards the proposed three collections. I think you also said you did not think everything at the British Museum to be available for students would be upset thereby. Would you be prepared to extend that to further museums if possible in London?—Lending to further museums in London?

1385. Your collections are so vast, would you be prepared to disseminate more within the town if respectable institutions were prepared to have them?—I think it would be a pity to do so, and to break up too much the integrity of the Museum collection.

1386. I thought you said it would not affect the students. Supposing other museums of a perfectly respectable nature wished to have drawings from the British Museum, that would apply to them.

1387. (*Sir Robert Witt*): Suppose the London Museum were to have an exhibition of drawings of London.—Yes.

1388. (*Sir Lionel Earle*): I thought you took the attitude that the thing is so vast people get rather bewildered, and you welcomed the idea of temporary dissemination from headquarters.—When I say the thing is too vast, I am referring of course to exhibitions, to galleries, things exhibited in galleries rather than things in storage. There I think it is desirable to have as much as possible accessible to give anybody who would ask for any possible thing, things you would not think of, the chance of seeing it. I think the print room should ideally contain every possible print that exists; not every drawing, but I think every print should be there.

1389. The only other question I have is this, you said you had recommended the Trustees to lend certain drawings to exhibition galleries, but now you confine it to London alone. I do not reconcile your two opinions on this.—I do not mean if a London museum actually applied for a loan of a certain drawing for a certain period, I should be opposed to that.

1390. Would you be opposed to provincial museums having them? I think you said you objected to their going out of London. Important things going out of London. On the other hand, you did recommend, although overruled by the Trustees, sending some more important drawings of Cox to Norwich?—It was not a question of Cox, he was not a Norwich

artist. No, I did not recommend that the more important drawings should be sent. I said under these regulations we could not lend the more important drawings. The Curator of the Norwich Castle Museum put down on his list the two best drawings we possess by Henry Bright. I said, "You cannot have both of them, you can only have one." I thought it was taking a risk the Trustees did not mean to be taken, of seriously impairing the collection.

1391. (*Chairman*): You said consultation between the directors of the three departments might lead to some arrangement. How do you propose to bring that about?—I have not thought in detail of how it should be brought about, but I think a conference between Mr. Aitken and Mr. Martin Hardie and myself at a somewhat later stage, when they might have some information as to what the recommendations of this Commission are, might lead to some very fruitful results.

1392. (*Chairman*): Would it not be preferable for the consultation to take place at a very early stage?—I think I would rather recommend a middle stage for the conference, when some progress has been made. I do not know whether the Commission has at present received evidence from Mr. Aitken or Mr. Martin Hardie on this subject, but I would suggest that when it has heard evidence from all three of us and we have had more experience than we have at present of the lines on which these inquiries are going, we could more fruitfully make some suggestions and meet the Commission again. Perhaps I might make that suggestion?

1393. (*Sir Robert Witt*): You expressed regret that the numbers of those visiting the print room do not increase. In fact, the number has actually diminished. I think the notice at the entrance to the print room is "Students only," is it not?—Yes.

1394. Do you think, if you substituted for that notice a notice such as is put outside some other print rooms, "Visitors welcome," that would possibly make a difference?—Undoubtedly it would.

1395. (*Sir George Macdonald*): On what basis do you reckon the 9,000? Is it 9,000 individuals?—Not 9,000 different individuals, no.

1396. That is what I meant.—Many of them would be the same persons coming again and again. It is a summary of the attendances entered in the book each day.

1397. I want to be quite sure I am clear on one question. I asked you with regard to a joint Directorship of the Victoria and Albert drawings and prints and the British Museum drawings and prints. It was only the print room I was thinking of, not the whole. Do you think that would be too vast an undertaking, or could you conceive one Keeper of Prints looking after both?—No. I think that is quite unsuitable. That does not seem to me a practicable suggestion at all.

1398. On what grounds do you think it is impossible or impracticable?—Both collections are so very large that it takes years of living among the objects which they respectively contain to become sufficiently familiar with them to know what there is and what there is not and what there ought to be. I do not think any person could do it for two of them, and I think, in addition to that, there are great differences in the system of control of the two museums which make that quite impossible.

1399. I was asking you to leave that out of mind. I merely wanted to know your point of view with regard to it. Assuming it were possible, from the side of control you understand, you do not think to that extent co-ordination is possible?—No, I do not think so.

1400. (*Mr. Charteris*): What is the total number of water colours?—I could not say.

1401. Approximately?—It is very large. I put down a few figures here on which I thought I might

2 December, 1927.]

Mr. CAMPBELL DODGSON, C.B.E.

[Continued.]

be asked questions. These relate to the number of water colours by some of the principal artists, but that does not apply at all to the very large number we have by artists who are not so well known to the public. I will take these in alphabetical order. May I be permitted to say that almost without exception these water colours by important artists have been either given or bequeathed, they have hardly ever been bought. Constable, about 30 water colours; many other drawings in other mediums, but about 30 water colours presented by Miss Constable. Cox I have already mentioned, about 65 in all from various gifts or bequests—in fact all from bequests. The one great exception to what I said just now about purchases is our collection of the Norwich school, which comes chiefly from the very important purchase made in 1902 of a great portion of the collection of Mr. James Reeve, of Norwich. That included 27 water colours and a very large number of other drawings, in pencil chiefly, by Cotman. They were purchased on that occasion. We have a few others which came from other sources. Girtin: 46 water colours presented by Mr. Chambers Hall in 1855, three bequeathed by Mr. Henderson. That accounts for practically all of our Girtin water colours. W. J. Müller: 72 bequeathed by Mr. Henderson; altogether 77 by him, of which only one was purchased. Paul Sandby: about 150 drawings, of which 80 are in water colours, almost all bequeathed by Mr. William Sandby in 1904. Of Turner, we have 18 water colours bequeathed by Mr. Salting, three bequeathed by Mr. Sale.

1402. (*Mr. Charteris*): You have foreign water colours also?—We have foreign water colours, of course. I have not been saying anything about them at present.

1403. They would run into hundreds?—Yes, but not many hundreds, because water colour has not been nearly so much employed at any period on the Continent as in England.

1404. Both foreign and English?—Many hundreds certainly.

1405. (*Sir Robert Witt*): Are not there some thousands?—I think it would probably not be an exaggeration to say thousands. If it is relevant I was wondering whether you would like to hear a few statements about our loans of prints. You have not asked anything about prints to-day. Does that interest you?

1406. (*Chairman*): Would you put a statement in?—Very briefly, as to the extent to which we have been lending prints, we have a collection of 284 prints arranged for loan, a very fine collection, illustrating all the different processes of engraving. This collection was overhauled and a printed catalogue was issued and circulated among the Curators of the principal provincial museums in the year 1922 when the Trustees had not yet discovered that they had really no power to lend. This collection has been in very active circulation ever since. I have a list, which I need hardly take up your time by reading, of all the museums which have had it from 1922 to the present time. It has been very largely circulated. In the last case, when the collection was loaned last summer to the Towner Gallery at Eastbourne, I was informed that 21,000 people had seen it, and it had given very great satisfaction.

1407. Perhaps you will put that in?—Yes.

(*Chairman*): We are greatly indebted to you for your evidence.

* NOTE.—List of Places to which Loan Exhibition of Collection of Prints have been Loaned.

1922.	Leicester ...	Museum and Art Gallery.
	York ...	Art Gallery and Museum.
	Sunderland ...	Museum and Art Gallery.
	Bootle ...	Central Public Library and Museum.
	Manchester ...	Whitworth Institute.
	Wolverhampton ...	Municipal Art Gallery and Museum.
1923.	Birkenhead ...	Museum and Art Gallery.
	Sunderland ...	Museum and Art Gallery.
	Newcastle ...	Laing Art Gallery.
	Bolton ...	Corporation Art Gallery.
	Swansea ...	Corporation Art Gallery.
1924.	Huddersfield ...	Public Art Gallery.
	Sheffield ...	Mappin Art Gallery.
	Halifax ...	Bankfield Art Gallery.
	Newcastle-on-Tyne ...	Laing Art Gallery.
	Swansea ...	Corporation Art Gallery.
1925.	Birmingham ...	Central School of Arts and Crafts. (April.)
	Bootle ...	Central Public Library and Museum.
	Birmingham ...	Central School of Arts and Crafts. (September.)
1926.	Northampton ...	Central Museum.
	Bootle ...	Central Public Library and Museum.
1927.	Eastbourne ...	Towner Gallery.

284 prints in the Collection.

(*The Witness withdrew.*)

EIGHTH DAY.

Wednesday, 14th December, 1927.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B. G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.

Sir MARTIN CONWAY, M.P., Litt.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).

Mr. J. R. CHAMBERS (*Assistant Secretary*).

Mr. MARTIN HARDIE, R.I., R.E., Keeper of the Department of Engraving, Illustration and Design, and of Paintings, Victoria and Albert Museum, called and examined.

1408. (*Chairman*): Do you think it desirable that water colours and drawings should be collected and exhibited by three different Museums in London, the British Museum, the Victoria and Albert and

the Tate Gallery?—(*Mr. Martin Hardie*): May I begin by saying that anything I say should be taken to a large extent as a personal opinion owing to the absence of my Director, and not as committing the

14th December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

Museum to any definite policy? [*The Chairman assented.*] I take it I have to answer fairly fully and not merely by "Yes" or "No"?

1409. Please say anything you wish to say.—I should say there were three main arguments for having Museums in different places—first, that the population of London is so vast and the geographical extent so enormous that a division of interest may be not only justifiable but advisable. I should say that it is as reasonable that we should have collections of Prints and Drawings in these three different places in London as that, for instance, Glasgow and Edinburgh, or Liverpool, Manchester and Birmingham should all have collections of drawings. The student, say, of Pre-Raphaelite drawings has, in any case, to go to Birmingham, to Manchester, to Cambridge, and therefore I do not think it is a hardship for him to have to go to one or two places in London. That is one argument. As the second argument, I should say that, largely owing to the vastness of London, each Museum has distinctly its own public and its own clientèle. I think there are, for instance, hundreds of people who come and give very careful study to all the paintings in the Victoria and Albert Museum who probably do not know that water-colours exist at the British Museum. We do cater for an entirely different public, and I think that will come perhaps partly under the next question which I understand you intend to ask. The third argument, which I think of importance, is that it is of great value, in the interest of the Nation, that two or more Museums in different places should each be attracting its own circle of friends. A Museum seems to me to have a very distinct personality. Some people like one Museum, and they distinctly dislike another. I think every Museum can give instances of that, of people who have come because they dislike the way they were treated somewhere else. That is not confined to us; a great many people may say they do not like the way they were treated at the Victoria and Albert, I know. I think you have this circle of friends, and I think that in every department of every Museum or Gallery the people on the higher staff are making far more than their salary each year by securing gifts to the nation by their personal advice and help and friendship and so on, and the greater extent to which that is spread I feel the better. Would you like me to give an example of the sort of thing that happens?

1410. Please.—For some years we have had a Mr. Stephenson, of Leicester, about whom we knew nothing, who, when he came to London, used to come to my department, and he brought drawings and so on. We were as helpful as we could be. Recently we heard he had died, and I was asked to go to Leicester. I found there a great many drawings, with notes, that I had completely forgotten about, which I had made years ago. I found also that he had left written instructions to his sister that we were to have anything we wanted of his collection of miniatures, plumbago drawings, prints, water colours, anything we liked for the Museum. That meant a gift of at least £2,000. I also found that he had left instructions that everything we did not want was to be sold, including the whole of his library, and that the whole proceeds were also to come to my Department, the income to be used in buying miniatures and particular plumbago drawings he was interested in. That, I think, is going on in every department of every Museum, and if you centralised you would lose the advantage of varying interests and a very wide contact with all sorts of members of the public from whom you have no reason to expect anything,

1411. As regards the purchase of water-colours and drawings, is any broad distinction drawn between your acquisitions and those of the British Museum and the Tate Gallery?—I should say, speaking broadly and subject of course to correction by Mr. Campbell Dodgson, that the British Museum buys

drawings, water-colours and black-and-white drawings, mainly for their fine draughtsmanship and in their relation to the whole history of drawing. I may say that the British Museum would give the same attention to a drawing by an Old Master, say, by Tintoretto, as they would to, say, a fairly modern drawing by Burne Jones, and we distinctly leave to the British Museum all the question of Old Master drawings. I mentioned Burne Jones: we should only think of buying a Burne Jones drawing if it were a definite study for a picture possibly in our collection or for some piece of decorative design. The British Museum buys very much for the student and the connoisseur, and I think my Museum buys water-colours and drawings far more for the art student and the practising artist, and particularly to illustrate the development of the British Water Colour School, which we have always considered our province. I think we aim, as the British Museum perhaps does not, at interesting and educating the very wide public who do not know how to penetrate the Students' Room. We buy water-colours to fill gaps in the history of British Water Colours, and I do not think the British Museum does that. I have been looking at our recent purchases. We bought, for instance, a Donnybrook Fair by Francis Wheatley, we bought a landscape by A. W. Hunt, we bought a landscape by Sir Ernest Waterlow, we bought a water-colour portrait by McEvoy, a landscape by W. MacTaggart, and I am quite certain that not one of those would have been bought by the British Museum.

1412. Or by the Tate?—The Tate, certainly, yes. I will come to the Tate later, if I may. The British Museum might buy a pencil drawing by Rossetti, but I do not think they would ever buy a finished water-colour drawing by Rossetti, and I do not think they would buy a Cox, what one might describe as a finished Cox, a finished Collier or De Wint—in fact, anything that demands a frame and exhibition. They draw a very definite line, I think, there.

1413. Regarding the distinction between your purchases and those of the Tate?—As far as the Tate Gallery is concerned, I cannot find a broad distinction as there is in the case of the British Museum. We have been buying since 1857, and we have spent £21,000 on water-colours. The Tate Gallery made no purchases at all up to 1911, they made a very few up to 1918, but since they appointed their new Board of Trustees in 1917 they have acquired water-colours fairly extensively. As far as I can see they are buying on very much the same lines as we are, and we do feel that the Tate Gallery has definitely begun to overlap.

1414. As far as gifts and bequests are concerned, is there no distinction between the British Museum and the Victoria and Albert?—I think I am right in saying that with regard to gifts and bequests as well as purchases, the distinction already indicated holds good to some extent. I think the British Museum would be much more selective on the lines I have indicated. I do not think the British Museum would accept a large water-colour that really required exhibition. For instance, within the last year or two we had a friend of the Victoria and Albert Museum who bought a very large Collier water-colour at Christie's for about £400 and sent it straight to us. I think if he had sent that to the British Museum they would have said they could not accept it.

1415. Does it occur that they accept bequests or gifts which they transfer to you as more appropriate, or that you do the same?—There is a good deal of give and take. We do pass on—I do not know so much in the case of gifts. In the possible purchases, we try and help each other far more.

1416. In the case of bequests, the case has not arisen?—It has not arisen in the case of bequests. I should rather doubt whether the British Museum does receive finished pictures in considerable numbers.

14th December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

1417. Can you give us any idea of the value and the number of the gifts and bequests you have received during the past few years?—Taking the last five years, and speaking now of water-colours, we have had 47 donors who have given 72 items, and we have had seven bequests consisting of 19 items. The total value is round about £3,000 for the last five years. That is apart from miniatures and drawings and designs. I refer merely to water-colours.

1418. What would be the value if you added the others you mention?—It would probably more than double the amount if we added other gifts and bequests.

1419. I understand you have ceased to purchase oil paintings?—We ceased to purchase oil paintings in 1887. I think it might be of interest to this Royal Commission if I said that before purchasing ceased we bought Crome's "Skirts of the Forest" for £280, Gainsborough's "Queen Charlotte" for £525, and a very fine Reynolds portrait for £175. Those three things alone are now worth about £30,000. I am putting that forward as an argument for purchasing in more than one place. May I say once more, as an argument for acceptance in more than one place, that two of the very finest De Wint landscapes, probably the two finest oil landscapes he painted, were refused by the National Gallery and were then accepted by us. That sort of thing may go on, and is a possible justification.

1420. If oil paintings are given or bequeathed to you now, what do you do?—We refuse the gifts and bequests unless in exceptional circumstances. If there is some special reason—for instance, we accepted a portrait of Headlam to hang in Bethnal Green in view of his association there—but we have refused practically all gifts of oil paintings and practically all bequests. We did, in 1921, accept two Raeburns—two very fine portraits of Mr. and Mrs. Hobson, bequeathed by a descendant—and also three oil landscapes by De Wint, which we accepted as a bequest from Miss Tatlock, the original donor of our collection of De Wint. We felt that those Raeburns would be lost to the nation, and so would the De Wints have been, and the De Wints supplemented the very fine collection which we had already. As an ordinary rule, we do not accept either gifts or bequests of oil paintings.

1421. In this case, do you ever accept and pass on to the National Gallery or the Tate Gallery?—I do not think we should feel that we had power in the case of a gift or bequest to pass it on.

1422. Even after the lapse of the period specified in the act of donation?—I do not know that that possibility has arisen.

1423. Supposing you started with a clean slate, would you be in favour of one central Museum or Gallery in London for water-colours and drawings? You have answered that already, I think.—I have answered a good deal of that. Even if legislation could give wide power, and if we could start with an enormous Gallery and enormous endowments and a fully equipped Students' Room, I think, for the reasons I have given, that any central Gallery would still have to lend pretty freely to, say, two other Galleries. You would lose all the difference of outlook and the widespread interest among patrons, and I think that water-colours, if they were simply accumulated, would make rather a heavy sort of surfeit. I think they ought to be seen in relation to oil paintings or some other form of art. On that point may I ask whether attention could possibly be given to an idea that was brought up by the National Gallery Committee, in their Report of 1915, for a sort of central inventory? I think a good deal of the apparent lack of centralisation could be cancelled by having a central inventory, which might be in quite brief form, of all the paintings and water-colours in public collections in the country. An official of any Museum would see at once where any Gallery would be very strong, and it would be very helpful to him and to all students also. If I may put this in (document

handed in), this is a rough idea of how that would work. I think, further on that point, as one very small argument, that if you centralise everything in the event of fire—this is unimportant possibly—or of air raids or earthquake or revolution, you do have all your eggs in one basket.

1424. Supposing it were proposed to centralise, would legislation be required to override the conditions attaching to a number of your gifts and bequests?—We have 29 gifts and bequests of paintings and drawings covering 10,600 paintings, water-colours and drawings subject to very definite restrictions, and those gifts and bequests include most of our outstanding pictures and drawings in the Museum, for instance the whole of the Sheepshanks, the Dyce, the Foster, the Ionides, and the Jones collections. A very rough valuation of those bequests, for the pictures only—I am not speaking of the prints and so on—would be at least £350,000, and for gifts £75,000. In many of those cases provision is made for interference by the Legislature. I suppose I need not quote that.

1425. Quite.—But besides that we have, for instance, one bequest with the condition that we have to hang all the pictures on the line: we have another bequest in the case of which we have to hang a curtain over all the pictures every Sunday, and so on. They are very tiresome.

1426. Supposing alternatively it were found impracticable or undesirable to centralise, would you be in favour of the introduction of a liberal system of loans between the London Museums? Could you give an outline of your scheme?—I think we might very well follow up the idea that arose in a letter from Mr. Aitken to myself and about which we have had a good deal of correspondence. His proposal, I think, was a thoroughly sound one, that the Tate Gallery should avoid the present appearance of overlapping by giving up purchases and the collection of water-colours, and that on the other hand the British Museum and the Victoria and Albert Museum should each contribute 50 picked water-colours, definitely half of the cream of our collection, so that the Tate Gallery would always have a room representing thoroughly chosen water-colours of the British School. My Director has given general approval of that as a basis for discussion, and if Mr. Campbell Dodgson, Mr. Aitken and myself, could meet and work that out, I feel sure we might arrive at a scheme which would be a solution of a good many of the present difficulties. The Tate Gallery would then have a very representative selection, but I do think that there ought to be a large mixed collection of water-colours at the Victoria and Albert Museum. I do not think that the Museum expert ought to say to the public, "I feel this is what you ought to look at, and you are to look at this and nothing else," I think the public ought to have a chance of seeing a very wide collection so that they can educate themselves, not merely in what we agree are brilliant and imaginative water-colours, but also in things that illustrate carefulness in accomplishment, of technique, and that the public ought to educate itself so that it would be in the position of the expert who can go round a Gallery and practically eliminate two-thirds of the pictures and say the remaining one-third are fine things.

1427. Do you think there would be advantage in regular methodical co-ordination such as, for instance, quarterly or monthly meetings between the Directors of the Tate Gallery, the Department of Prints and Drawings of the British Museum, and yourself, to discuss matters of general interest?—I think there would be advantages; I am not sure of the value of absolute regular meetings, because we do constantly correspond and discuss things. If there is any possibility of overlapping, I know that Mr. Campbell Dodgson and myself are always in communication, particularly in regard to the sale room; for many years there has been quite a good liaison between us, and we do avoid overlapping in the sale room in purchases.

14th December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

1428. Turning now to prints, what distinction is there between your collection and that of the British Museum?—I should say that again there was a broad distinction, as there is with drawings; that the British Museum is collecting masterpieces of engraving, etching and so on, in relation to the whole history of the graphic arts, and I think that the Victoria and Albert Museum is aiming at the special requirements of the Museum in relation to design for industrial art and the illustration of advances in technical progress. I mean that we, for instance, should never buy a valuable Dürer engraving, or a Rembrandt, or a fine Eighteenth Century mezzotint; we leave all that kind of thing entirely to the British Museum. We concentrate very largely on Engraved Ornament, and our collection of Engraved Ornament ranks among the four finest in the world, certainly with Paris and Berlin and Vienna; we do concentrate on that, and there is a certain danger of overlap, because the British Museum, for instance, may say that a print or Engraved Ornament by Schongauer or Aldegrever is a masterpiece of engraving, and we say it is an important example of Engraved Ornament. So there is a danger of overlapping, but I do not know, unless large sums are spent, that that matters more than having a very important book in the British Museum Library and in our Library.

1429. What proportion of your staff are allocated to the Print Department?—I have two assistants, one divided between the two departments—so that I have half of myself, one and a half assistants, a clerical officer, seven attendants, and, shared between the two departments, one shorthand-typist and one temporary woman clerk.

1430. As regards the relations between your department and the students of the Royal College of Art, is the department utilised to a large extent? Can you give figures as to the students?—It is very widely used by students of the Royal College of Art. Every day we have students from the Royal College of Art in our Galleries, and in our Students' Room, and we have a great many students from all sorts of other London Schools as well. We lend to the College constantly for the purpose of lectures; we lend, for instance, sets of prints to Professor Osborne who is the Head of the School of Engraving; we lend architectural drawings, drawings of wall paintings, and so on, for the purpose of lectures. We are in very close touch in that sort of way. It is difficult for me to separate figures of Royal College of Art students from other visitors, because every visitor, whether a student from the College or outside, merely signs his name in the book. The total figures show that 7,089 people came to the Students' Room last year, and that shows a steady increase, with the exception of the war, since 1910. The figures have gone steadily up. (*Statement handed in.*)

1431. What notice do you put up at the entrance to your Print Room?—There is a large notice as to the "Students' Room."

1432. "Open to Students only"?—Although I have seen it so often, I cannot recall the exact wording at the moment. There is a large notice on the door.

1433. To what extent do you make loans from your collection through the Circulation Department to the Provinces?—We make no loans at all from our permanent collection in the Museum. Our Circulation Department is a definite separate department. We do transfer a very large number of water-colours and prints every year to this Circulation Department. Anything that is in the nature of a duplicate we hand to them. If we get a gift that strengthens us very much in the work of one painter or one engraver, we hand over a corresponding print to Circulation, so that the Circulation Department every year grows in strength in that way. They have four large travelling collections of water-colours with about 100 water-colours in each collection, and those have been constantly on loan for 50 years to Provincial Museums. Those collections are always

being improved, and the Circulation Department also lends water-colours, drawings and prints to 500 Art Schools and Secondary Schools. We help them, as I say, by handing over duplicates, and we also help them by guiding their purchases under the fund which they have for purchase.

1434. Do you lend to other London Museums, the Tate or anywhere else?—No. We lend nothing out of our permanent collection.

1435. There is no exchange with abroad?—We have no system of exchange with abroad.

1436. Do you advocate any change in your system of loan, any extension of it?—I feel that that is so very much a question for my Director that I personally feel I ought not perhaps to answer. I think the present system is an extremely good one. I rather feel, from the personal point of view, that there is always a danger in removing from a permanent collection a picture or drawing of any real importance, partly because for years it has been referred to in all the Dictionaries of Art and Books of Reference, and if a visitor comes, particularly a visitor from abroad, and asks for something important in our collection, he may find it has gone.

1437. Do you think that your contact with the public is sufficiently close, or can you suggest any steps to improve it?—That is rather a difficult question. I think every officer in the Museum is in close contact with the public, with people who are constantly coming for the purpose of acquiring information, and I should think that every officer is associated with various societies and circles that touch on the kind of work he is doing in the Museum. They all serve on Committees in connection with their special work, and through all that sort of thing they do come into touch with the public. I think that something more, as you suggest, might be done, but I also feel that our Museum is so distinctly understaffed that all the higher officers in every department are overworking and are working overtime for most of the year, and it is practically impossible for them to do more than they do. I do not think, for instance, that they have time for the "education of the rich," to which you, Sir, referred in a recent speech; they cannot go and do missionary work of that nature. If the rich come to them they will try and educate them. One small suggestion about contact with outside that I should like to make is that, again from the personal point of view, I feel very strongly, after 30 years' experience, that much greater opportunity ought to be given to assistants in Museums for foreign travel, for travelling to foreign collections and getting to know the collections, and particularly getting to know the officials of those collections. I have found enormous value in the visits I have made, often at my own expense, and in being in personal touch with officials of foreign Museums.

1438. At present, you and your staff have neither time nor the travelling expenses allowed for foreign travel?—We should be allowed no travelling expenses unless we were sent on a very definite object, say, to attend a sale or something. It would be impossible for me to ask for my assistants or myself to travel for a month to see the principal Museums in Germany for instance.

1439. Are lectures regularly given in your department?—The official guide lecturers of the Museums are constantly lecturing on paintings, on water-colours, Japanese prints and other subjects connected with the department. There is a course of museum lectures held every winter, and officers of the department all help so far as they can. It is, again, rather a tax to give lectures, which are given free to the public in the evening, but we do all help.

1440. Would you favour a wider system of lecturing by the staff as well as by the official guides?—It would be utterly impossible for our assistants, under present conditions, to find time to prepare lectures and to give lectures, I think.

1441. You would attach value to those lectures if there was sufficient staff?—Certainly.

14th December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

1442. With regard to the value of your collection, have you formed any estimate of it?—The valuation is not quite complete, but in the case of Paintings it will amount to over £400,000, and in the case of Engraving, Illustration and Design to over £300,000.

1443. (*Dr. Cowley*): I gather that the congestion in your department is very considerable, and that there is need for further accommodation.—We need further accommodation very badly indeed. We have not anything like the space that the British Museum has, and we have very important collections that simply cannot be shown.

1444. Would it not be a solution of that difficulty if there was some central collection such as has been suggested from which permanent or irrevocable loans should be made to other collections?—The congestion of which I am speaking is not nearly so much in the Department of Paintings as in the Department of Engraving and Design. For paintings we have got a very good series of galleries, and we have quite good storage room. I do not find difficulty there. It is with the very large collection in the print room.

1445. Is it chiefly for keeping the prints, or is it lack of space for exhibiting them?—Well, I foresee that in, say, 20 years from now, there will be great difficulty with actual storage. There also is a great shortage of space for exhibition.

1446. Does the British Museum collection of prints make loans to other institutions away from London?—I am afraid I do not know.

1447. I was wondering whether that was any reason against transferring your collection to the British Museum, for instance.—I think the main reason is that the whole of our collection of prints at any rate may be taken as what may be described as a working library for every department in the Museum. I do not know how they would do without them. An officer from the Department of Textiles working on costumes wants to consult over a thousand portraits, and so with regard to every department. The Department of Metal Work has to go through the whole of those collections of engraved ornament and goldsmiths' designs, so our prints are really as essential as a working library of books.

1448. Do you find that in the case of loans from your loan collections you suffer much damage?—It is not my department, but I believe every care is taken; nothing is sent out except in frames, the frames are packed by our own packers, and the galleries where they are going are always inspected. I do not think there is very much damage.

1449. Damage or loss?—I do not think there is much damage or loss.

1450. The other point I gathered from you is that additional staff is one of your great needs?—It is a very great need. In my two Departments we have practically the same staff that was there in 1910, and the size of the collections and the volume of work have increased enormously, as is shown by the figures merely of attendance of students.

1451. (*Sir Robert Witt*): You have tried to indicate to us the different kinds of drawings and water-colours which are purchased by the British Museum and the Victoria and Albert Museum. I think as regards the water-colours you find it difficult to arrive at any basis, although you indicated to us as well as you could what it was. May I remind you that in the Memorandum from your Museum you say: "It seems impossible in practice to draw a line of demarcation between a sketch and a finished water-colour"?—That remark was made because in the Evidence to the National Gallery Committee there was a distinction made between a sketch and a finished work.

1452. Not a very scientific one?—Not scientific at all. Sir Sidney Colvin tried to make some sort of division. It is an arbitrary division—the kind of division we have been trying to make. It cannot be done exactly.

1453. With the result that there is inevitably a good deal of overlapping in regard to what you both

buy, not in the case of any particular object, but in the case—?—Of water-colours?

1454. Yes, and drawings?—I do not think there is very much. I think with water-colours, as I have tried to suggest, that probably nine-tenths of what we purchase every year would not be bought by the British Museum. For one thing we are trying to form and continue a historical collection of British water-colours, and we might buy a really good work by a somewhat good minor artist, if it illustrated some advance in technique, which would not be bought by the British Museum.

1455. With regard to Old Master drawings, there would be a definite competition?—Yes, but we would never buy an Old Master drawing unless it was a definite working design, as it were.

1456. May I quote to you the name of Jan de Bisschop, who is a well-known draughtsman of the 17th century, of whom you bought a very admirable specimen, I bought some others, and the British Museum have some others?—That is quite true. There are times when a drawing comes at a very small price and one is tempted to buy—and there you have me!

1457. How would this tentative scheme appeal to you? Dividing the problem of drawings and water-colours into three aspects, buying, accepting and exhibiting. Would you be in favour of the British Museum limiting their purchases to sketches—for rough purposes what I will call sketches; you limiting your purchase to decorative drawings and—again using this difficult word—finished water-colours; the Tate Gallery not buying anything except what they buy through the fund which has been given them by Sir Joseph Duveen of £200 a year which, therefore, does not come out of public money at all. That on the buying side. Then on the accepting side, you and the British Museum and the Tate Gallery continuing to accept what was given or bequeathed; and finally on the exhibiting side, you and the Tate Gallery and the British Museum continuing to exhibit as before, but lending freely to one another, so that for special exhibitions each could amplify and help the others. How would it appeal as a rough scheme?—I think the buying difference that you make, Sir Robert Witt, is very much what it is now. I think that the British Museum buys what may broadly be described as sketches, and we buy the decorative drawings and finished water-colours. The general difficulty I see is the trouble that apparently exists now. So long as the Tate Gallery continues to spend even £200 a year on water-colours and to accept water-colours as gifts and bequests, it means there will be in 20, 30 or 40 years another very large collection of water-colours there with I think an unnecessary rivalry, and although it is not public money it is duplication of expenditure. It would mean in the case of the Tate Gallery in the course of 20 or 30 years, especially if they go on collecting prints and drawings as well—black-and-white drawings—it would mean in a very short period they would have a separate, a third, Print Room at a very large expense.

1458. Would you be in favour, supposing a public benefactor came along and offered to have built on the site of the Tate Gallery a building specially for this very characteristic and important phase of English art, viz., water-colour painting, which I think you will agree is unique in the history of the world, a special gallery for that, would you be in favour of such a gallery with the idea that all collections should lend to that from time to time for special exhibition purposes?—I think there is a great attraction in the idea.

1459. I think I am right in saying that part of your water-colours are at Bethnal Green?—That is so.

1460. And would you be in favour of keeping in the East End a small collection of exhibited water-colour drawings for the benefit of the people who cannot come down as far as Kensington?—We always do that, and as a matter of fact the greater part of

14th December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

the Bethnal Green collection is a bequest, the Dixon Bequest, which was definitely made to Bethnal Green, and which contains very many very fine water-colours.

1461. Would you be in favour of a system by which, in view of the difficulties as between you and the British Museum, the difficulty of differentiating what belongs to each, that before purchasing there should be a consultation between the two directors in order to avoid that very difficulty, which is obviously a very real one, of saying what is or what is not the province of each?—If there is the least doubt I do consult Campbell Dodgson. I do not think there are many water-colours which come within their scope.

1462. Drawings and prints?—On the question of decorative design, we had a case recently where there was a large sale at Leipzig in which there were very many Schongauer prints. I knew the British Museum would be buying, and I consulted Campbell Dodgson as to the ornament designs in Schongauer's work. It is carried to that extent. We are very careful now.

1463. You referred to the idea of a central inventory of the water-colours and drawings belonging to the gallery, so that a student could find out whether he should go to you or the British Museum or the Tate. Have you yourself any catalogue of your material which is already available for that purpose, or are you in the same position as the British Museum in that you have not yet catalogued your material?—We could print it to-morrow if we had the money. We have a complete inventory of every drawing we have got. It would be very large and very expensive because our drawings, in the wide sense of drawings, are many times as large in number as our Water-Colour Catalogue, which you have in your hand.

1464. So you are more advanced than the British Museum?—The British Museum have published a very complete catalogue of their drawings in several volumes.

1465. Only some of them?—Only some.

1466. I am talking of a complete inventory.—For working use in the Students' Room we have a complete inventory, not in such detail as the Water-Colour Catalogue, but an inventory all the same.

1467. Would you be in favour of having photographs of all your drawings available for the use of the public in so far as it is possible to do so?—As far as it is possible. Our photographer is always months behind now.

1468. (Mr. Charteris): Could you give us any idea of the total number of water-colours there are at South Kensington?—Several thousands, but I am afraid I could not give you the figure straight away.

1469. At the present time only 400 are available for loan?—No. The Loan collection, the Circulation collection, is entirely a separate collection. It contains four travelling collections of about 400 in all, and also several hundred other water-colours. There are about 1,000 water-colours entirely free for loan apart from the main collection.

1470. They are taken out of the main collection?—They do not belong to the main collection.

1471. They are not altered?—They are permanently handed over to the Circulation Department.

1472. On what principle were they selected?—Some of them were bought years ago, as far back as 1874, for the purpose of sending out to the country. Others are things which we handed over. If we have a large number of one man's work, e.g., ten drawings by Cox, we would hand two or three to this department.

1473. Then with the exception of this 400 no loans are allowed?—No loans are made out of our permanent collection.

1474. Would legislation be required?—In many cases; not entirely.

1475. I suppose you could not give us an idea of how many out of the total number of water-colours are subject to particular conditions on bequest. If

you have not got the figure I will not trouble you for it.

1476. (Chairman): Perhaps you can give us the figure?—The figures are: 1,134 water-colour paintings, 8,641 other drawings.

1477. (Mr. Charteris): Of course, legislation would be required if that is to be got over?—Yes.

1478. What number of water-colours are on permanent exhibition in the galleries?—I cannot give you the exact figure.

1479. What sort of number would it be?—Round about 1,000. They constantly change.

1480. How long does a water-colour remain exposed?—I should think every water-colour is, or most of them are, changed every six months. We do that partly to give a chance of seeing everything that we have in our collection, and partly because we think it advisable that water-colours should not be continually exposed to the light.

1481. What is the length of time considered desirable to expose a water-colour?—If a water-colour is exposed permanently in a strong light, one may say its life is possibly 200 years; but if exposed only three months its life becomes 800 years.

1482. Then you spoke of some arrangement with the different galleries with regard to loans. How is the selection of the water-colours to be transferred periodically to the different galleries to be arrived at?—What I suggested in correspondence with Mr. Aitken was that in the case of every artist we should consider how many we have that are of supreme importance, and I took the case of Cotman, where we may say we have six very fine Cotmans and we should perhaps let them have three of those.

1483. To be selected by you?—Not necessarily; selected by agreement. Two would be landscape and two of a different character or period.

1484. Then with regard to another question altogether, viz., contact with the public, do you think it would be an advantage that communications should be made to the Press whenever you have a bequest or a gift or a new acquisition?—We do that, I think, in almost every case now.

1485. Do you think it could be done with more publicity?—We do all we can.

1486. You send a notice to the Press?—To the Press.

1487. Do you invite Pressmen to come and see the thing?—Yes. We have tried every method, and we are constantly having meetings to discuss the possibility of getting better publicity. That is one of the things we are always looking at.

1488. Of course, at the same time you give publicity to the donor or testator?—Always.

1489. That having once been done are any further steps taken to make the publicity more permanent in the gallery?—On every print or drawing given or bequeathed we have a printed statement, "Given or bequeathed by So-and-so."

1490. That, of course, is only visible to the student who goes to the students' room?—Yes, and on every exhibited water-colour.

1491. You do not have a list in the gallery of donors or testators?—No. It would be very large. We have the testator's or donor's name on every picture, and we also publish an annual volume—a "Review of Acquisitions"—in which every donor's and testator's name is given, sometimes with a full account of the gift or bequest.

1492. (Sir Martin Conway): Have you got a group of precious water-colours that under no circumstances are ever to be exhibited?—Your idea is, they are so fine that they ought never to be shown?—No.

1493. You do not set aside any water-colour for indefinite preservation in the dark?—No.

1494. Do you think you ought to?—Well, there is a great deal to be said for it and against it. I think if you put away your two finest Cotmans they probably would only be seen by a few very serious students who wanted to see them, and the public would never know they existed.

14 December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

1495. That is true, no doubt, but is not it one of the things you want to do, to cultivate a knowledge in the public that they can go to you and ask for a portfolio of drawings and can have the pleasure of sitting and looking at them with far greater enjoyment than they get standing in a gallery and walking about? If you made propaganda in that sense, would not it be possible for you to preserve them for ever or a long period of time? There are possibilities, but one has to remember that a precious drawing requires constant supervision. I never contemplate that a valuable print or drawing merely in a box or portfolio is perfectly safe. I always consider a precious drawing is more safe in its frame.

1496. Are you familiar with the Fitzwilliam Museum at Cambridge? There they are all framed and yet put away, so that they draw like books out of a shelf, and are permanently protected yet equally accessible to anyone that wants to see them. Do you contemplate students or intelligent persons as the people for whom you cater?—Well, we cater for students and for intelligent persons, and unintelligent persons.

1497. The people who go to the British Museum or the National Gallery, as I used to do as a young man, definitely as a student to read notes and rub the thing up, are one class of people, but as I go now I go as an intelligent person to enjoy. You would go to work differently with those two classes.—We try to do both. The gallery is open. I believe in a large exhibition gallery with lots of pictures for the intelligent person to look at. We also believe in the Students' Room, where we help the student.

1498. I want you to attract the intelligent person into the Students' Room.—We do a great deal. If an intelligent person becomes interested and asks whether we have more work, he is taken to the Students' Room. If you go to the galleries you will find we are starting a new system of exhibition with folding cases, where you get a considerable exhibition space, and where you can protect the valuable drawings from light inside the flaps.

1499. Whoever consults them has to be standing, whereas the pleasure of these things is to sit down?—Yes.

1500. Would you be in favour of an absolutely compulsory mutual exchange of information between different departments or museums as to contemplated purchases, so that there was no risk at all, and indeed that some impartial third person should be appointed by both to go and buy at an auction?—I think it would be impossible as a working scheme, because many things which are bought in an auction room have to be bought in a great hurry. Very often it is difficult enough for me to get hold of my Director to arrange to purchase a thing the next day.

1501. Failing that, in an auction that is advertised perhaps a month beforehand, would not you consider that you ought to have been consulted before buying?—We do. May I give a case which I think will illustrate what you mean? This year there were two volumes containing portraits, many of them by Cotman, including a portrait of Cotman. Those two volumes were of great importance in the history of British water-colour art. I felt they ought to come to us, and I felt the National Portrait Gallery might have some claim, and I thought the British Museum might have some claim. I rang up the National Portrait Gallery, and they said they had no money but implored us to buy them. The British Museum said they were of tremendous importance to the nation, and could we possibly buy them; and we bought those drawings. That is only one instance from among very many every year in the case of purchases.

1502. Assuming that there is general knowledge of a thing being for sale, and that one particular museum with the knowledge of the others determines to buy it and they stand aside, assuming

that, and assuming that method goes on for years, is there any objection to having three totally different collections of water-colours in different places? What objection is there to it?—The objection is merely of money. If money is no object, I would have six.

1503. There is no economy about it. It does not matter who buys it. It is the same if you are not competing against one another?—We are all buying water-colours.

1504. If they are not competing against one another, it does not matter who buys it. What objection is there to having three in different places?—None at all, if it is not a question of overlapping in the expenditure of funds. I would like to see more.

1505. That being easily effected, what objection is there to three collections. In case London was bombed, perhaps one would survive.

(Chairman): Mr. Hardie gave his evidence in favour of that, Sir Martin, before you came in.

1506. (Sir George Macdonald): I gather, Mr. Hardie, that you feel there is a certain amount of what one might call unavoidable and desirable overlapping between yourselves and the British Museum?—I think at the present moment any overlapping there may be is overlapping that costs very little, but I want to say we should never buy anything that would cost even £10 that was a definite overlap with the British Museum.

1507. Those two Museums have different ideals? Yes, I think we are working on different lines.

1508. The suggestion has been made to us, a rather bold suggestion at present, but it has been made to us in one of the documents I was reading this morning, that the British Museum might be put under the Board of Education. If that were done, do you think it would be conceivable that one Director should be appointed for both departments, both Bloomsbury and the Victoria and Albert, and administer both? Would that be a possible thing?—I think it would be quite impossible, for the reasons I have suggested already. Any keeper of a department now is completely overworked; it is difficult enough for him to know what the contents and traditions and needs of his own department are.

1509. I do not suggest that you should take over the British Museum in addition to your present work, but assuming that the staff were adequate for the purpose, is it conceivable that the existence of a single Director might be useful?—I think it would be too big a job for one man. I am sure it would be too big a job for any one man.

1510. I gather that with the Tate Gallery there is a certain amount of overlapping which you consider less necessary, less desirable, shall I say?—It is overlapping that has begun in the last 10 years. It did not exist before that, because the Tate Gallery had, I think, no water-colours, or perhaps two.

1511. You think that overlapping might be put an end to if the British Museum and the Victoria and Albert Museum were to combine to loan a certain number of water-colours to the Tate for exhibition?—That is the idea, yes.

1512. Could that loan be made without any change in the law?—Certain things could not be loaned by us to the Tate Gallery, and certain things probably could not be loaned by the Tate Gallery to us in return, owing to bequests.

1513. Restrictions on bequests?—Restrictions on bequests.

1514. Taking it quite generally, is there any positive restriction of your power of loan now?—I think that, with the consent of the President of the Board of Education, we could alter our present system and lend to the Tate Gallery.

1515. Now on the question of policy as regards loans, what is your view as to giving loans outside of London? I am not talking of the Circulation Department just now, but of more important objects?—I always feel, and I think I am speaking

14 December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

for my Director when I say this, that we should regret very much if important objects were removed from the Museum.

1516. Even more or less temporarily?—Even temporarily, yes, because people come from all over the world to see important things.

1517. Yes. Of course, there is another point of view; you recognise that Liverpool and Birmingham and Glasgow—you mentioned all those—have the right to have exhibitions of water-colours and drawings and paintings of their own, isn't that so? It is to the public advantage that they should be there?—Yes.

1518. Of course, the people in Birmingham and Liverpool and Glasgow have to maintain their own Collections at their own cost, and they have also to contribute to the upkeep of the London Collections. Is there not something to be said, from that point of view, in favour of loans to the provinces?—We in our Circulation Department—

1519. I am talking of something more than that. I am coming to the Circulation Department by and by. Do you think the provinces get an adequate return for their contribution to the National Institution through the Circulation Department?—I think possibly in comparison with the size of London they do. I think the provinces are doing extremely well on their own. The Whitworth Institute at Manchester is really forming a remarkable collection of water-colours for itself, which we shall want to borrow for London.

1520. And no doubt the Manchester people would say London was doing very well on its own, but they have to help to pay for the British Museum and the Victoria and Albert Museum?—I think we should be prepared to exchange a few water-colours with Manchester's water-colours now.

1521. Something of that kind would be extremely desirable; I think a less provincial policy on the part of the London people might not be a bad thing. About the Circulation Department, at present I am afraid the provinces have to depend largely upon your Circulation Department?—To supplement what they have themselves.

1522. I mean, so far as they get any share locally of the money they contribute towards the central institutions, it is the Circulation Department they depend upon?—Yes.

1523. Do you think you do all you can for them, or that might be done for them, through the Circulation Department?—In view of the funds at our disposal, I think we are doing extremely well as regards water-colours and drawings and prints.

1524. Has there been any reduction in the funds at your disposal recently in the Circulation Department?—Not to my knowledge. As I said before, I am speaking a little beyond what is my own department, but I think, on the whole, there has been more money spent within the last few years.

1525. Has there been any change of policy recently with regard to your Circulation Department, so far as you are aware?—I should say not an actual change of policy, but I should say it is very much more active and progressive than it was years ago.

1526. Then you would not agree with this statement which we have had made to us by a competent authority: "Loans of any works but those of very secondary importance in the Circulation Department have been discontinued by the Victoria and Albert Museum of recent years"?—No, I do not think that is a fair statement at all.

1527. It rather accords with my own experience, not in connection with water-colours and prints, but in connection with some other departments, but here it is made specifically with reference to water-colours and prints?—I do not think the circulation collection of water-colours and prints is as fine as that in our Museum, but they have plenty of very fine drawings.

1528. You see here there is a very distinct suggestion that the fine examples have been withdrawn.

"Loans of any works but those of very secondary importance in the Circulation Department have been discontinued by the Victoria and Albert Museum of recent years." Do you think there is any foundation for that?—I do not understand that. As I say, it is not my department, but from my knowledge I do not think it is a fair statement.

1529. We can only leave it at that. There is one matter you mentioned which interested me, that was what you said with regard to the great advantage it would be if your staff travelled abroad and were able to visit foreign galleries. I think you said it was quite impossible they should do so. Where is the barrier? Is it a financial barrier?—It is a financial barrier at present. I have known in the last few years one or two occasions when junior members of the staff have been sent abroad, but it always has been for some definite purpose. The Treasury would not allow—I think I am correct in saying this—the Treasury would not allow a recommendation of my Director that an assistant should go abroad for a month to visit Museums. That I think is absolutely barred now. If there was a definite piece of work to do, if there was a sale, for instance, he would be allowed to go. This year I have travelled abroad on two occasions in connection with big exhibitions of etchings and engravings, exhibitions which Mr. Campbell Dodgson and myself have organised, one at Stockholm and one in Paris, very important exhibitions. In both cases Mr. Campbell Dodgson and myself have got so many days' leave, but we have not got one penny; we have had to pay all our travelling expenses and so on out of our own pockets.

1530. So it is not really a question of the adequacy or inadequacy of the Government grant?—No; at the present moment I think it is a Treasury ruling.

1531. Only last week the Director of the Royal Scottish Museum was allowed to go abroad in order to visit a Museum?—I think if you said it was necessary for the Director of the Museum to visit a special temporary Exhibition and make a report about it, I think that might go through.

1532. Well, perhaps we had better not say too much about it. But at all events he was allowed.

1533. (Sir Lionel Earle): Have you ever found it the case, in purchasing drawings or prints, that the British Museum were after the same group as yourself?—I cannot say that. I should think it is practically certain that one or other has withdrawn. We have never competed, to my knowledge.

1534. In spite of the wide divergence of the objects of those two Museums which you have told us about, it is possible that you might both be after the same object?—It is quite possible in the case, we will say, of an ornament engraved by Aldegrevier which the British Museum wants to fill up their collection of Aldegrevier's work. It is possible we should also want it as having a place in our Engraved Ornaments section.

1535. But you have never got into 'competition'?—We have never, in my knowledge, actually competed.

1536. If the scheme which you put forward as regards the Tate fructified, would you suggest that the Tate should hand over their present water-colour collections to the Victoria and Albert, or to the Victoria and Albert and British Museums, where they are not restricted by bequests?—As I said in my correspondence, I should suggest that they should be pooled, that we should have the option at any rate of showing some of them for exhibition. I very much doubt whether the British Museum would want to take any. That is one of the things that might be discussed by the three of us. I do not think the British Museum would want any for exhibition purposes.

1537. Your suggestion is that what could be removed should be removed from the Tate, and then

14 December, 1927.]

Mr. MARTIN HARDIE, R.I., R.E.

[Continued.]

you in return should loan fine things, you and the British Museum should loan fine things to make that exhibition complete?—The Tate should exhibit fine things from both Museums and such things as were definitely tied down to the Tate Gallery.

1538. You referred to congestion in the Print Rooms at the Victoria and Albert Museum: how can that be met for the future? Does it mean building?—It must mean building. There was a very definite scheme in hand before the war. The Government bought that island site opposite the Museum, which was to be the new quarters of the Royal College of Art. If the war had not come that would have been done, and the Museum would have extended into the present College of Art.

1539. And that would have given you relief?—It was part of that idea that our Print Room then should have much more space; that our Print Room and our Library together should move into what is the present College of Art, but there is no present prospect of that.

1540. I would not quite go so far as to say that. It is a question partly of finance and partly of the two or three years more that the Institut Français have got, but we are able, I think, in 1928 to give them notice. It is a question of money really, but the plans more or less have been prepared.—It would be an enormous help to the Museum if that took place, not only to my department but to all the other departments.

1541. As regards the loan collections of the Victoria and Albert Museum—I am not only talking of the drawings, but generally—I suppose really, to be quite honest, they are of rather a second-class nature?—I am afraid, quite honestly, that is entirely outside my knowledge because I have never had to do with the Circulation Department except in regard to drawings and prints.

1542. I suppose even as regards those, except where you have got duplicates, you would distinctly put them into the second class?—No, I would not go so far as to say that, that they were all second-class. I think their first two travelling collections of water-colours are really fine collections of water-colours.

1543. As regards better publicity which was spoken about just now, do not you believe it would pay the Museum, as they do I know in some rather modern Museums, to have a room in which every gift and acquisition for the last six months of the year should be shown to the public by itself? Would not that help enormously?—For the last year or more, two years, I think, that has been done. All our important recent purchases and gifts and bequests are exhibited in the Central Court of the Museum.

1544. Even your drawings?—Important drawings.

1545. And that is notified in the Press, that recent bequests and gifts and purchases are now on exhibition?—We could not notify that in the Press

without payment I am afraid, but there is a large notice outside stating that. It has become, I think, generally known.

1546. (Chairman): In the Curzon Report it recommended that the oil paintings at the Victoria and Albert Museum should be transferred to the National Gallery or the Tate; what is your view about that?—I think that again depends very much on the restrictions on the gifts and bequests. Practically all our oil paintings and so on of any value are under very close restriction.

1547. They might be handed to the National Gallery at Millbank or might be on long loan?—They are tied down by restrictions to the Victoria and Albert; by statements in wills that in the case of interference by the Legislature they should go to the Fitzwilliam Museum and so on; they are very tied down.

1548. But in those cases where those restrictions do not apply, or do not apply permanently?—As far as oil paintings go, restrictions cover a good deal of our best oil paintings. I may say again about the Sheepshanks Collection, Lord Curzon, in the National Gallery Committee's Report, said:—

"It may indeed safely be said that except for the stipulations against management by a body of trustees, and against sale and exchange, the Tate Gallery is the place that exactly corresponds, while the Victoria and Albert Museum emphatically does not, to Mr. Sheepshanks' original intention, and, that if he were making the bequest now it would be to Millbank that the pictures would almost certainly go."

I submit that is not only an unsafe but an unfair statement, because Mr. Sheepshanks who made the gift said that "the primary object" of his gift was that his pictures and drawings should be used "for reference and instruction in Schools of Art now or hereafter placed under the superintendence of the said Department." He wished for the strengthening of the chief Schools of Art and he wished the gallery always to be attached to the Schools of Art. We are in a great deal of our work tied up with the Royal College of Art: its new building will be just over the road, but we shall still be in very close touch with them.

1549. You attach great importance to donations and bequests. I should like to know what measures you take to stimulate those?—Only by friendly encouragement; by giving all the help we can to visitors. The man who has a collection nearly always drifts into one or other of the Museums or Galleries to get some sort of help or information; we do all we can to make friends with such people, often with very profitable results.

1550. Do you have any list of possessors, or buyers or collectors?—No, I know of no written list.

(Chairman): We are greatly indebted to you for giving us your time.

(The witness withdrew.)

Mr. CHARLES AITKEN, Director and Keeper of the National Gallery of British Art, called and examined.

The following Memorandum was submitted by Mr. C. Aitken on behalf of the Trustees in reply to the Commission's Questionnaire (see Appendix I):—

1. The National Gallery, Millbank, otherwise known from the name of its founder as the Tate Gallery, is a section of the National Gallery, Trafalgar Square, and was controlled by the Board of the National Gallery with a separate Keeper until 1917, when a separate Board was constituted for the administration of its affairs and the acquisition of works of British Art of the last hundred years, and the Keeper became Director.

The statutes, charters and constitution governing the National Gallery, Trafalgar Square, apply also, generally speaking, to the National Gallery, Millbank.

A Treasury Minute of March 24, 1917, constituted a separate Board for the Gallery at Millbank with authority to acquire British paintings produced within a limit of 100 years before the date of acquisition, as well as British drawings and sculpture of any period, and to control the management, administration and discipline of the Gallery at Millbank, subject in financial matters to the control of the Accounting Officer for the National Gallery Vote.

The tenure of office of the Trustees at Millbank is the same as that laid down in the Treasury Minute of August, 1916, for the National Gallery Board at Trafalgar Square, namely, seven years, and a Trustee on retiring not to be eligible for re-appointment until one vacancy has occurred.

14 December, 1927.]

MR. CHARLES AITKEN.

[Continued.]

By Treasury Minute of July 6th, 1920, four Artist Trustees were added to the Board; the appointments being in a personal and not an official or representative capacity.

The Board of the National Gallery, Millbank, has so far administered the Modern Foreign Gallery, opened in 1926, which was erected as a gift from Sir Joseph Duveen, Bart., on the vacant site at Millbank behind the galleries given by Sir Henry Tate, Bart., in 1897 for British Art, and the Turner galleries given by Sir Joseph Duveen (sen.) in 1910.

2. The restrictions in regard to sale or exchange of works in regard to lending at Millbank are the same as those at Trafalgar Square.

The most pressing need for reform is that the National Gallery Loan Act does not permit loans overseas, and this should be amended, as many works could be usefully sent to the Dominions and interchanges by means of loan with the continental galleries, and, possibly, with America, could be arranged with advantage to the collections at Millbank.

The powers in regard to the exchange and sale of works not required for exhibition might well be extended, as far as the past is concerned, to examples of an artist which are too numerous for exhibition or loan, and as regards the future, on the lines of the Courtauld Fund Trust under which the Trustees of the Trust have power to dispose of works, if better or too numerous examples of the same artist's work are acquired.

The chief difficulty in regard to organisation at Millbank in the past has been that the only endowment for purchases has been the Chantrey Fund—about £2,000 a year—which has been administered by an outside body, the Council of the Royal Academy, and the Board, which was responsible for the exhibition of the Chantrey purchases, had no vote in their selection.

Since 1922, when four artist Trustees were added to the Board, an experimental plan of co-operation with the Board has been sanctioned by the Council of the Royal Academy, by which purchases under the terms of the Chantrey Fund are made through recommendation to the Council by a Committee consisting of three members of the Council and two members of the Board.

This experiment worked satisfactorily for some years, while the Council gave effect to the recommendation made, but recently, owing to the Council rejecting the recommendations "en bloc" on two occasions and declining, before final rejection in cases where it disapproved of the works recommended, to refer the matter back for joint discussion between the two "high contracting" parties, i.e., the Council itself and the Board at Millbank, there has been friction which tend to result in an "impasse."

In any case, and particularly in view of the terms of the Chantrey Bequest, an independent grant from the Government of £2,000 a year for the Board at Millbank is highly desirable, as it should not have to depend entirely upon begging, as in most cases this takes time, and very desirable acquisitions are apt to be lost.

Restrictions as to collections given or bequeathed being exhibited together as a whole (such as the Jones, Tonides and Mond Gifts), or as to exhibition on Sundays (such as Sheepshanks Collection) have fortunately scarcely affected Millbank, as Sir Henry and Lady Tate did not insist on this point, and the Chantrey Trustees have been satisfied with such of their acquisitions as are exhibited being hung in one building, the fact that their acquisitions are available for loan after 15 years making it clearly impossible that they should always be exhibited together.

3. Within Great Britain the Trustees have extensive powers of loan to public galleries provided that any profits are devoted to the promotion of science

and art. The chief restrictions are that gifts and bequests must not be lent until the expiration of 15 years from the date of acquisition, or 25 years in certain cases, where conditions as to works being kept together were made.

Statistics as to loans actually made from Millbank during the last five years show that loans are much in demand and are freely made and greatly appreciated, especially by provincial galleries.

Several municipal galleries have lent pictures for special loan exhibitions at Millbank, but an extension of the system of loans and exchanges between the British and Foreign and Colonial Galleries is much to be desired with a view to filling gaps in the collections at Millbank and also with a view to making fuller use of portions of the collections which are not always required for exhibition there.

Greater freedom of lending powers would also help to make British Art better known and appreciated outside England. At present British painters are far too little known and appreciated abroad, chiefly because they are so little seen.

4. The National Gallery, Millbank, is, of course, in close relation with Trafalgar Square, but the Dulwich Gallery, the Diploma Gallery and the Wallace Collection do not lend at all, and loans of any works but those of very secondary importance in the Circulation Department have been discontinued by the Victoria and Albert Museum of recent years and the British Museum has only had power to lend since 1924.

It is desirable that very occasionally, for special exhibitions such as those of the complete work of Cotman and of Wilson held at Millbank in 1922 and 1923 loans between the Galleries should be possible.

The sphere of the Millbank Gallery is chiefly that of oil paintings and sculpture, both British and Foreign of the last hundred years, though earlier British paintings and sculpture are not excluded, and within that field it would seem to be desirable that it should have a free field in order to arouse interest and make further acquisitions ultimately for the National collection both at Trafalgar Square and at Millbank.

At present a large number of British and some Foreign paintings are exhibited at the Victoria and Albert Museum, and Sir Cecil Harcourt Smith, the late Director in the Report of the Victoria and Albert Museum, 1908, expressed the opinion that these might suitably be transferred to Millbank. (*Vide* Report of Lord Curzon's Committee, Recommendation XV, p. 39.)

The Modern Foreign Gallery at Millbank cannot exclude Modern Foreign Sculpture and, to avoid overlapping in this case, Mr. Eric Maclagan, the present Director at South Kensington, with the approval of the Board of Education, has agreed to a proposal to transfer such works of Modern Foreign Sculpture, particularly those by Rodin and Mestrovic, at present exhibited at the Victoria and Albert Museum under not entirely suitable conditions, to Millbank.

The question as to the most satisfactory dividing line between the Modern paintings, British and Foreign, to be exhibited at Trafalgar Square and at Millbank is a matter that is at present under discussion between the Boards of the two galleries.

In regard to water-colours and drawings there is at present a tendency to overlap.

Both the Victoria and Albert Museum and the British Museum, which have print rooms, collect, and the Victoria and Albert Museum purchases Modern drawings and not merely of the nature of applied art. (*Vide* Report of Lord Curzon's Committee, Recommendation XVI, p. 39.)

The Gallery at Millbank has no print room, and so far has not aimed at forming a large collection, but it does require a limited collection of representative drawings by the best artists for exhibition purposes, so as to give variety and change from the oil paintings and also to do justice to some of the chief

14 December, 1927.]

MR. CHARLES AITKEN.

[Continued.]

glories of the British School, such as, for instance, the early water-colour school of painters, Cozens, Girtin and Cotman.

The limited requirements of Millbank could be met in the future by changing temporary loans from the Print Room Collections at the British Museum and South Kensington and further overlapping avoided, but as long as such loans are impossible, it seems necessary to try to meet the requirements of the Gallery in regard to water-colours and drawings by acquiring them by purchase as well as gift or bequest, at any rate up to the limit of a minimum representation of the most important draughtsmen.

It may, however, reasonably be contended that Modern Water-colours and Drawings of primarily æsthetic qualities, as opposed those for craft purposes, justify a separate Print Room system and in that case Millbank would seem to be indicated as the most suitable locality, if it is considered desirable to create a third Print Room system in addition to that existing at the British Museum, which is primarily for Old Masters, and to that at Kensington, which is primarily for drawings connected with applied art.

As a result of a joint conference between the Boards of the National Gallery, Trafalgar Square and the National Gallery, Millbank, on October 26th, 1927, the following resolution was agreed to in regard to the dividing line between modern paintings, British and foreign, to be exhibited at Trafalgar Square and at Millbank.

"In considering the location and distribution of pictures between the galleries, the normal rule should be that British pictures painted after 1850 and foreign pictures painted after 1870 should, *prima facie*, be exhibited at the National Gallery, Millbank. This decision to be subject to the right of the Trustees of the National Gallery to exhibit at Trafalgar Square such picked examples as they consider desirable.

5. An admission fee of sixpence is charged at Millbank on the two Students' Days—Tuesdays and Wednesdays—and for three years, 1921-1924, the fee was raised to one shilling.

The reason for charging a fee, originally, was probably due to the wish to secure quiet for the copyists of Old Masters, who were more numerous at Trafalgar Square, but this scarcely applies at Millbank, where the copyists are fewer and have less claim to consideration as students, copies of modern works being made chiefly for commercial purposes.

The effect of an entrance fee upon the attendance is disastrous, as not only does it lower the attendance on Students' Days, but, as few can remember which are free days, many people are discouraged on other days from coming to an already somewhat remote Gallery.

The average daily attendance on Free Days at Millbank was 800 in 1911. It had risen by one-half to 1,200 in 1926. The attendance on Paying Days was 393 in 1926 or only one-third of the attendance on Free Days.

The British Museum and Victoria and Albert Museum are open free every day, and as the admission fees at Millbank only produce £1,000 a year and as at least £10,000 is being spent on the annual maintenance of the Gallery, it would seem to be bad economy to sacrifice an attendance of 80,000 annually, when the total attendance is 384,560, for so comparatively small a sum.

6. The regulations in regard to the appointment of junior assistants at Millbank are the same as at Trafalgar Square.

Applicants for such posts are made to the Keeper of the National Gallery, and the authorities recommend suitable candidates to the Civil Service Commissioners for examination as to their qualifications, after which they go before a selection Board for final selection.

It would seem to be very desirable that a small number, say 10 or 12 temporary posts with a living wage—say £300 per annum—should be created to form a small art branch of the Civil Service, by means of which specially suitable applicants from the Universities or Art Schools could be retained and trained at the various galleries and museums with a view to providing a better class of candidate for the higher permanent posts, particularly outside London.

At present young men from the Universities or Art Schools who appear to be very suitable candidates, cannot be retained and often they have not the means to work without some modest remuneration and drift away into other callings, so that when a vacancy does occur, there are scarcely any suitable candidates.

7. There are in all 36 galleries at Millbank:

British School:

- 11 for Oil Paintings.
- 2 for Sculpture.
- 4 for Water-colours and Drawings.
- 1 Balcony for Black and White.

Turner Wing:

- 2 for Oil Paintings.
- 3 for Water-colours.
- 1 for Liber Studiorum.

Sargent Gallery:

- 1 for Oil Paintings.

Modern Foreign Gallery:

- 3 for Oil Paintings.

In addition there are eight basement galleries for Modern Foreign Painting, Loan Exhibitions and varying purposes, but chiefly for water-colours and drawings.

The present system of arrangement is fully described in the "Ten Years Record" 1927.

Sir Joseph Duveen has now agreed to provide a large gallery with balconies for Modern Foreign Sculpture. This will connect the various portions of the existing buildings more closely and also the Main Floor and Ground Floor Galleries.

One quarter of the site at Millbank reserved for extensions will still remain unbuilt upon, and in time this space will afford room (1) for additional galleries for contemporary paintings which are already beginning to be needed, and (2) for a gallery for loan exhibitions to obviate the unhangings of pictures which is necessary at present to provide space for loan exhibitions.

A Gallery where pictures, offered as gift or available for gift, might be hung, temporarily, with a view to testing their ultimate suitability for acceptance, would also be convenient, and a Lecture Theatre where the Guide Lecturers could lecture with lantern slides is also desirable.

8. The financial arrangements in connection with the sale of publications is for all practical purposes administered from the National Gallery at Trafalgar Square under a Trust Fund, and the profits are allocated to this Gallery for the purchase of pictures.

There are on sale a number of Official Catalogues—photographs and postcards of the pictures in the Gallery together with some coloured reproductions of the more popular pictures.

There is some demand for slides of the pictures from lecturers, and the formation of a stock of slides for sale is desirable.

A list of publications issued by the Gallery is given below.

In addition to these, Catalogues of Temporary Loan Exhibitions are frequently published during such exhibitions.

9. In the case of a Modern Gallery, such as that at Millbank, there is less material for research than in the institutions concerned with the art of the past. Facilities for copying are provided for artists and students on Students' Days.

The general public has the benefit of the Official Guide's two daily lectures, and special lectures are arranged by request at other times.

Schools pay frequent visits, and can obtain the services of the Official Guide.

There is no Print Room at Millbank, and the creation of one, in view of those already existing at the British Museum and South Kensington, would be, perhaps, an unjustifiable expense; at the same time, the Turner Portfolios, containing nearly 20,000 sketches, mostly slight, are housed at Millbank, and the fairly frequent demand on the part of students to examine them presents some difficulties, in view of the fact that there is no provision for supervision as regards staff, and such supervision imposes an undue burden on the small staff provided for other purposes, and it is possible that the custody of the Turner Portfolios might more suitably be transferred to one of the existing Print Rooms.

The Library at Millbank is as yet inadequate, the annual grant of £20 not sufficient for the acquisition of all the works on Modern Foreign as well as British Art desirable.

EXAMINATION OF WITNESS.

1551. (*Chairman*): Assuming that the Tate Gallery resigned its claim to a grant of public money for the purchase of water colours, drawings and prints, would you outline your scheme for reciprocal loans of works of first-rate quality as between the three Institutions?—Of course, I think the ideal and logical plan would be for there to be three galleries for drawings and water-colours and three Print Rooms. That was rather envisaged in the recommendations of the Report of Lord Curzon's Commission in 1916 and 1917, but, in view of the circumstances that have grown up, that the South Kensington Museum has this very important Print Room, and, of course, the British Museum has one, I think perhaps it would be unnecessary duplication to start a Print Room at Millbank. It is an extremely expensive thing, with the fittings and so on. Our great requirement, of course, is a thoroughly representative collection for exhibition, and if that need can be met, personally I do not think there is any need to insist on the Print Room, or even on the grant for purchasing water-colours.

1552. That is to say, if you get adequate loans from the other two collections for exhibition you can forgo purchase?—I think so, yes. I should suggest that for that purpose the whole of the national collections, at any rate, in the British Museum, South Kensington and the Tate, should be treated as one unit, and it should be recognised that the Tate had a claim to one-third of the best work, up to its capacity to exhibit. We at present require about one thousand drawings and prints for exhibition purposes, apart from the Turner, Blake and Alfred Stevens collections, to which special Galleries are devoted. I think our own collection might be used to supply that requirement, as far as

it will, but, unfortunately, there never has been a grant and the collection is very inadequate; also there are a good many second or third-rate things in it. I do not think there would be very much point in transferring these. I think it would be better if the arrangement were prospective and not retrospective. The few good things we possess have mostly been given by living people, who wish to see the things exhibited, and if they felt they were straight away going to be transferred to other Museums or put away in portfolios, it might rather discourage them from making gifts.

1553. Do you think you could prepare a scheme jointly with the British Museum and the Victoria and Albert Museum which would meet the requirements of all three Institutions?—I think so, yes. From conversations I have had with Mr. Martin Hardie and Mr. Campbell Dodgson I think we should be able to arrange a scheme.

1554. Do you think there would be an advantage in regular methodical co-ordination between the Directors of the Departments of Prints and Drawings at the British Museum and at the Victoria and Albert Museum with you?—I think it would be very useful perhaps once a quarter to meet in an informal way and discuss our difficulties, especially in regard to the exchange of water-colours which are very subject to damage.

1555. So far as the Tate Gallery is concerned, are there any restrictions on lending any of the water-colours which have come to you by bequest?—I do not think there are any legal restrictions. It is simply a matter of personal feeling. Lady Weston probably would be unwilling that the Müller water-colours in the Sir Joseph Weston gift should be permanently transferred to another Museum, because they were given with a view to exhibition at Millbank.

1556. That would not apply to temporary loan?—No, I do not think it would apply to temporary loan. Of course, there is this point; we have a certain number of water-colours in the Chantrey collection; they are not of great importance, but I do not think they could be put away in another Museum.

1557. It has been suggested that, on account of the great extent and population of London, centralisation in one Museum is not desirable. Can you give your views on that question from the point of view of the student and from the standpoint of the public?—It seems to me from the point of view of the students centralisation is a great convenience. They know where to go and look for things without wasting time, but, of course, the object of works of art is mainly to be seen and, therefore, for exhibition purposes, from the point of view of the general public, the more widely distributed they can be the better. At the British Museum the amount of space for showing them is extremely limited, and I think the more they can be shown at the various public galleries the better.

1558. In your memorandum it appears that the Tate Gallery loans a good deal both to permanent provincial Galleries and to temporary exhibitions. Do you in return receive loans from the larger provincial Galleries?—Yes; they have been extremely good; for instance, Liverpool, Glasgow, Edinburgh, Nottingham, Norwich and Manchester; whenever we have made a definite petition for anything they have tried to meet our wishes.

1559. So that loaning between you and provincial Galleries is going on to a large extent and on satisfactory terms?—They are constantly coming to us. In the last four years about five hundred pictures have been loaned to provincial Galleries; some in groups of 10 or 20 and some separately. We have always met the wishes of special Exhibitions like the Crome Exhibition at Norwich and the Sargent Exhibition at Liverpool. There has been a slight falling off in the requests for loans on the part of the smaller Galleries owing to the restricted

14 December, 1927.]

MR. CHARLES AITKEN.

[Continued.]

funds for carriage and insurance since the war; otherwise, I think it is going as fully and satisfactorily as the collection allows. I think we could, especially if we extended loans to the Dominions and the Continent, accept many more pictures on a (B) footing, i.e., for occasional exhibition and for loan. That has happened in several cases. Mr. Wood offered us a number of Mark Fishers: we already had three very good ones and the Board felt it was scarcely worth while accepting more; if it was clearly established that those pictures could go outside of England, the Board would have been justified in accepting them.

1560. You would favour that as a definite extension of your present powers?—Very much.

1561. You would expect to receive loans in exchange?—Yes; in fact, I think a number of foreign Galleries have loaned to England already. The policy of lending overseas would make British artists much more widely known abroad; artists like John and Steer—I notice among the foreigners visiting the Gallery they are not really known. On the other hand, of course, there are the older artists; one or two really good Turners could be loaned to the Louvre. It would be extremely valuable, I think, for everybody.

1562. Have you legal powers to loan those Turners?—There is nothing which makes it impossible, apart from the National Gallery Loan Act.

1563. There is nothing in the Turner Bequest which prevents your doing it?—No, I do not think there is.

1564. It would merely be a matter of legislation?—Yes.

1565. As regards loaning between the provinces and the Tate, you are satisfied with the present conditions?—Yes, I think so.

1566. Now turning to this question of recent expenditure, what has been the amount of recent expenditure on building as compared with expenditure on acquisitions? Has this expenditure justified itself by an increased public interest?—I think certainly it has justified itself. The increase in the attendance has been 50 per cent. in about the last 10 years and that, I think, is largely due to the new buildings and the additions. Of course, very little money has been directly spent on the collections. The only fund available has been a private bequest, the Clarke Fund, of £560 a year, which was assigned to Millbank by the National Gallery, but, of course, gifts have been received, such as Mr. Courtauld's, of about the same amount as the sum Sir Joseph Duveen spent on the Foreign and Sargent Galleries.

1567. What is the amount in each case?—About £70,000. I think one thing which would help us very much would be a better system of lighting. I happened to be at the gallery on Sunday afternoon. It was crowded with people and they were groping about by the aid of two pilot lamps on brackets. The basement where the drawings and the refreshment room are is well lighted, but upstairs it was pathetic on Sunday afternoon to see all these people groping about in the dark.

1568. What would be the cost of doing that?—I suppose about £2,000. It only requires wiring; iron pipes for the wiring exist.

1569. You would strongly advocate that?—Most strongly; during one-third of the year people cannot see the pictures properly after 2 or 3 o'clock.

(Sir Lionel Earle): It is merely a question of getting money from the Treasury for it.

1570. (Chairman): What are your views as to how public interest could be further developed, particularly the interest of further donors and patrons?—I think the loan exhibitions have aroused a great amount of interest and the opening of the new galleries. It is impossible to mention names, but we have information that there will be bequests of valuable collections and large sums of money. We have heard of one lady who sold her diamond neck-

lace in order to purchase a Renoir to leave to the Tate. There is Mr. Anderson who spends the whole of his surplus income on buying pictures for public galleries. He contributed £1,000 to the purchase of the Carpenter's Shop. I think the active policy of the Board in the matter of loan exhibitions, etc., has created a considerable interest resulting in both gifts and bequests of pictures and money.

1571. Have you any definite lists of owners of pictures and possible donors?—Well, we have an invitation list of about six hundred people which consists largely of our benefactors, either past or prospective, and I have records which I keep for my own purposes of collectors and owners of pictures, which would be desirable additions to the National Collection.

1571A. You definitely take the initiative by getting into touch with possible donors?—Oh yes, as far as possible.

1572. Now about the Whitechapel Gallery, what are your views on making use of that gallery for the exhibition of pictures for which there is no room at Millbank?—We have a number of large popular pictures which scarcely justify permanent exhibition at Millbank and I think they would be very much appreciated; some of them are quite good works, if they could be shown. I do not think there is a great advantage in extending the gallery unduly; it would become rather wearisome if too large.

1573. Which gallery do you mean?—Millbank. Instead of extending indefinitely at Millbank it seems to me it would be a good thing if a gallery like the Whitechapel Gallery, in another part of London, could be utilised. It would be in the same relation to the Tate Gallery as the Bethnal Green Museum is to South Kensington for applied arts. I am not absolutely certain that the Whitechapel Gallery could be acquired. It was erected by Canon Barnett with the intention of filling it with changing exhibits, but the Trustees are finding this increasingly difficult. This suitable building is in existence and it seems to me if from one hundred to two hundred of our pictures could be exhibited there people in another part of London could see them easily instead of their being stored in our vaults or only on occasional exhibition.

1574. You would be against an indefinite extension of the Millbank Galleries?—I think so. I think it becomes wearisome if the building is too large.

1575. And your present size you consider about the maximum for human consumption?—I think it is quite big enough at present. Of course, there is a quarter of the reserved site unbuilt upon as yet. I suppose as the collection increases it may be necessary to extend the buildings, but as far as the human being goes I think it is large enough.

1576. (Sir Henry Miers): I gather you are strongly in favour of loans to provinces and foreign countries?—Yes. I think British art is surprisingly little known abroad. It is partly because there has been so little effort to show it.

1577. You do not fear an outcry from people who go to the Tate Gallery and do not find what they expect to find there; that has not happened?—At present we cannot exhibit all our collection. There is always a small number of people who complain. I do not think it would be very serious. We should not lend our best pictures as a rule.

1578. And you attach great importance to the acquisition of a gallery which you can use for loan purposes and for temporary exhibition of pictures?—It would be a very great saving of trouble. Whenever we have an exhibition now we have to unhang a gallery, and this causes a great deal of additional work.

1579. That and the lecture theatre are the two great needs?—Certainly. The Official Guide is always urging a lecture theatre, where he can show slides in relation to pictures exhibited in the gallery.

14 December, 1927.]

MR. CHARLES AITKEN.

1580. (*Sir George Macdonald*): There is only one point I should like to ask about. Perhaps you will be good enough to develop part of your first paragraph. You say:—

"Loans of any works but those of very secondary importance in the Circulation Department have been discontinued."

Has there been a change of policy?—I think there has been; partly perhaps this is due to a more systematic arrangement of the collections. In earlier years when I was in Whitechapel, soon after 1900, first-rate things and in considerable numbers were lent from South Kensington, but in the later years it was very difficult to obtain at all first-class exhibits and in one or two cases recently in the case of special exhibitions at Millbank I was told they were not lending except from the Circulation Department.

1581. I should think in the Circulation Department you do not find works of first-rate quality as a rule?—No, I do not think as a rule you do. Besides there may be special things of which there are only one or two in the collection, so that none are in the Circulation Department. There was one case of some Pre-Raphaelite furniture.

1582. Even where there is enough, one sometimes hears the complaint, and I cannot say whether justifiable or not, that everything of interest is not within the Circulation Department?—I think those in charge feel a little nervous about lending first rate examples because in some of the provincial galleries, unless watched constantly, precautions to guard against the sunlight on objects are insufficient. There is naturally, therefore, some hesitation in lending perishable things and anything that will suffer.

1583. You think that has weighed with the authorities at the Victoria and Albert Museum in determining what should go in?—Yes, and I think rightly to a certain extent.

1584. Obviously, if they were not satisfied with the conditions under which the things were exhibited, but do you think that idea coloured at all the general policy towards the Circulation Department?—I have not had very much experience of seeing the things that are out on loan. I rather think they might be made a little more interesting, a more personal selection and possibly rather more variety in the things included.

1585. Well, might I take it that is a very diplomatic way of putting the criticism I have sometimes heard that they put nothing but "junk" into the Circulation Department?—Of course, it wants a great deal of personal attention. I suppose these things are put into the Circulation Department, and say a hundred allotted to a gallery. It means a great deal bigger staff if you are going to take a personal interest in the circulation collections.

1586. At all events, you think the Circulation Department might be improved?—Speaking purely from the outside and without much study, I think it is possible, but it would need a much larger staff.

1587. Perhaps with that answer one might look at your sentence again, which I think goes a good deal further:—

"Loans of any works but those of very secondary importance in the Circulation Department have been discontinued."

Does that go further than you intended or are you prepared to stand by that?—At the Tate, when we have a special exhibition we rather want A.1 objects. I was rather disappointed once or twice not to get A.1 things. I think what they would lend would be very interesting for a provincial gallery, but they were not prepared to lend one or two of their best things.

1588. I see you have the same idea of the provinces as some other witnesses have had.

1589. (*Sir Martin Conway*): You are familiar, of course, with the Birmingham Gallery and Museum?—Yes.

1590. Do you agree that a great deal of their prosperity has been due to the fact that they have

no income at all?—No, I do not think I do. I think it is rather humiliating to be constantly begging. I think they should have a small reserve to fall back on.

1591. You do not agree that as a matter of fact they have got more in the way of gifts than they would have got if they had had an endowment or a municipal income to fall back upon, and that they would not have got as far as they have?—I do not think so. I think if there is a keen spirit about a gallery people will come forward and help it whether there is a small endowment or not and you must remember that many gifts to galleries are not what are most wanted. You do depend too much on other people's taste, unless there is an independent grant for purchases.

1592. I take it from what you said that it is rather your opinion that the more things shown the better, do you mean that supposing we have in the three collections in London several thousands of drawings, would it be your policy to show as many of those as possible or prevent as many as possible of those from being shown in order that they may last longer?—I think with certain water-colours you must take special precautions, say only show them for three months in the year, but with the drawings there is not the same objection. It is rather tiresome to waste time getting a thing out of the print room if you can enjoy it on the walls in a good light. It seems to me that is really what is wanted for the public.

1593. The question is not the public, but the preservation of the object. Of course, everytime it is exhibited for three months it deteriorates to a certain extent?—Would that apply to drawings?

1594. To water-colours?—With water-colours you have to be very careful. Many things would only be exhibited during the winter months.

1595. You do not think you would form a group of first rate things which would never be exhibited in the ordinary way?—In Edinburgh they only exhibit the Turners for two months, anyway for a very short time. I should think in the English climate a considerable amount of exhibition is safe, but I think it is a matter for the directors to decide. Apart from injuring the object, the more that can be seen easily and pleasantly the better.

1596. The question is whether a thing can be pleasantly seen when you are standing on your tired feet or whether it would be pleasanter to look at it sitting at a table with it in your hand?—The British Museum has a comparatively small gallery, and even South Kensington has only limited space. We have only four or five galleries. It would only be showing a few thousands out of the innumerable thousands.

1597. I am merely referring to the best five hundred pictures there are in the national possession, whether you ought not to set those aside and never have them exhibited?—I think that is a thing that should be decided by expert opinion in the case of a very limited number of things.

1598. (*Mr. Charteris*): Just one question on the matter of duplicating and overlapping. At present the National Gallery buys contemporary pictures now and then?—In Trafalgar Square?

1599. Trafalgar Square.—Well, I do not think they buy; they have not bought quite contemporary pictures.

1600. Did they not, in 1918, begin to buy pictures painted since 1850?—They transferred them.

1601. I am talking of foreign pictures, that is the case?—Yes.

1602. That was one of the questions which was considered by Lord Curzon's Committee?—It was rather an exceptional case on that occasion—the Degas Sale in 1918.

1603. As I read the report of the Committee, it deals specially with this topic. This is in Part I:

"Thus we were brought to consider the existing distribution of oil paintings between the various galleries that collectively make up the

14 December, 1927.]

Mr. CHARLES AITKEN.

[Continued.]

National Collections and the duplication or overlapping that is the inevitable result of the present lack of system."

That is one of the matters they had for their special consideration. I do not want to call attention to all the passages which bear out that view, but you have read the findings presumably?—Yes.

1604. Now here is one of the specific findings on page 39:

"That the formation of a gallery of modern foreign pictures and sculpture including in such terms works produced since 1850 is a matter of urgent importance."

That is what the Tate Gallery is now in a position to do?—Yes, it is.

1605. It has a gallery for that very purpose?—Yes.

1606. Then it goes on:

"That the nucleus of such a gallery be provided by the pictures and sculptures in the National Gallery and in the Victoria and Albert Museum respectively."

It suggests there that the pictures then at the time this report was made in the National Gallery should be moved to the Tate.

(Sir Robert Witt): Will you read the last paragraph of paragraph 20?

1607. (Mr. Charteris): I was coming to that:

"On the other hand there should be transferred from time to time from the Tate Gallery to the National Gallery such pictures as have won recognition as masterpieces."

But my point now is that as things stand at present both galleries can buy; you from your limited funds in the Tate Gallery, the National Gallery from their more ample funds are both in the market for buying foreign pictures?—I suppose there is a possibility of overlapping there.

1608. Do not you think it would be desirable that the rule or the recommendation which I venture to say is quite definite in Lord Curzon's report should be given practical expression to as between Trafalgar Square and the Tate Gallery?—Yes, I think so. Our period of acquisition is the last hundred years; I think it is better there should not be competition within that period.

1609. That would enable, would it not, the Tate Gallery to give a complete exhibition of foreign art since 1850 if that recommendation was given effect to?—Only, of course, at present we have not a grant.

1610. You have no grant?—The only grant we have is a private fund, the Clarke Fund, from the National Gallery.

1611. Assuming funds were available you would be buying modern pictures, and the National Gallery confining their attention to the old Masters?—I should think that would be the best arrangement.

1612. The Tate would be subject to periodic revision, and if a hypothetical period was taken as 25 years, at the end of 25 years the pictures could be moved up to the National Gallery at Trafalgar Square?—Yes.

1613. But it would enable, would it not, the Tate Gallery by that means to have a more complete and satisfactory collection of modern foreign art?—Yes, I think it would be better for the period of exhibition to correspond with the period of acquisition; whatever date is fixed; say 1870, for the two to correspond.

1614. And Trafalgar Square in those circumstances would hesitate to buy a picture by a Master for itself whose work was already sufficiently represented in the Tate knowing that the Tate Gallery pictures would ultimately come to Trafalgar Square?—Yes.

1615. (Sir Lionel Earle): Is not that the position which exists between the Louvre and the Luxembourg? There is a national grant for buying pictures, and the pictures are placed either in the provinces or the Luxembourg until the man has been dead 10 years, and then they are available for the Louvre.

(Sir Lionel Earle): If considered a sufficient masterpiece.

1616. (Mr. Charteris): A resolution has been come to supplementary to your statement which is apparently intended to act as a guide rather than a definite rule?—Yes. You see the property is vested in the Trustees of the National Gallery, therefore this was a friendly arrangement as to what the division line should be between the two.

1617. Then if that friendly arrangement was made a definite rule it would bring about the results which we have been discussing?—Yes.

1618. And of course if you had a more complete representation of modern foreign art you would be in a better position to lend to other galleries would you not?—Yes, in many cases we have as yet insufficient ourselves; we have not sufficient to spare any to other galleries.

1619. Do you think the Tate Gallery should be the recipient of a special grant in order to make the representation of modern British and modern foreign art more representative?—Certainly, I think it is most important it should have a grant. It is very unusual for an important National Gallery not to have any grant at all.

1620. That would make the gallery more attractive and the more attractive the gallery is I take it the more likely you are to get bequests; as the gallery grows and develops you find bequests and gifts tend to increase?—Certainly, very much.

1621. (Sir Lionel Earle): Won't that mean doubling the size of your building or increasing it very considerably?—One could weed out a great many.

1622. (Mr. Charteris): That is looking ahead. A lot of your exhibits are on loan are they not?—Yes, one-third of the foreign exhibits are lent to Millbank.

1623. If the loans for some reason were called in the Tate Gallery would be very deficient?—Oh, very.

1624. Very deficient in modern foreign art?—Yes.

1625. Do you think it would tend to encourage modern foreign art, I do not mean the development of modern foreign art, but the exhibition of modern foreign art in London if that rule or rather if that resolution which has apparently been come to between the two galleries was made a definite rule? Would it be better to have it concentrated in one gallery than to have it partially distributed in two?—I think personally it is a question of space. If there were space in Trafalgar Square to give adequate representation up to date I think there would be a good reason for having the pictures there, but it seems to me, merely from want of space, you can only really carry the representation of British and foreign art at Trafalgar Square up to a certain date.

1626. I think you are definitely against fees from your statement?—Yes, I think they are an entire mistake. They produce comparatively little and they certainly check the attendance. On a paying day we have four hundred people; on a free day twelve hundred.

1627. (Sir Martin Conway): Would you object to a penny fee?—Like Kew? I think a penny fee at Millbank would be ludicrous.

1628. For all galleries?—It seems to work very well at Kew. If it were done universally I suppose there would be something to be said for it.

1629. (Mr. Charteris): Have you had any profits from publications?—Yes, we are now getting a certain amount. We get the profits of the sale of postcards and a percentage on any outside publication sold at the stall.

1630. And that goes to the funds of the Tate Gallery?—Yes, during the last two years.

1631. Then you make some suggestion in your statement about the education of people for filling the posts in the gallery?—There have been several provincial galleries at times wanting people to fill posts and there has not been always anyone specially to recommend. Just recently we have had an enquiry from Cardiff for a promising post of £300 a year and I think if there were a kind of art civil

14 December, 1927.]

Mr. CHARLES AITKEN.

[Continued.]

service in London of young men who could help at the various museums, in such work for instance as is wanted in the Circulation Department at South Kensington for making the individual collections more interesting, these assistants would get a certain amount of experience and training, and when a vacancy in the provincial galleries occurred they could be recommended for such posts with confidence and, if they proved satisfactory there, they could later on come back to more important work in London.

1632. (*Sir Robert Witt*): I understand we are directing our attention to-day particularly to the water-colours and the overlapping at the Victoria and Albert Museum. Just in regard to the water-colours and drawings which have been discussed also by Mr. Martin Hardie before you came, would you be in favour generally speaking of pooling the drawings and water-colours as between the three museums that accept them and receive them now leaving the matter of exhibition to be arranged by loans between the three museums; that is to say, if anyone wished to exhibit any particular class that each would lend to the other what they could spare?—Yes, I think so.

1633. Would you be prepared then to divest yourselves temporarily of even your special strength such as Turner, Müller and Alfred Stevens in the interests of a working arrangement between all the museums?—The difficulty in the case of the Müllers would be that they were specially given for exhibition at the Tate by Lady Weston and I do not know whether she would be satisfied by their being put in portfolios at other museums. If they were intended for exhibition at South Kensington I should certainly be in favour of lending them.

1634. At any rate, in regard to exhibition you would be in favour of lending them?—Yes.

1635. Then as regards the purchase?—We already have about 50 Turner water-colours on loan to South Kensington, and a certain number of De Wints.

1636. As regards purchasing, as long as the Tate Gallery purchased, would you be prepared to disclose to the other museums what you proposed to purchase before doing so, if in return they were prepared to act in the same way, in so far as it was possible within the limits of speedy action, if necessary?—Yes, I should be prepared to give them the option of purchasing a drawing, but I should not be prepared entirely to drop the matter if they would not purchase. Supposing a public grant were only given to one museum—South Kensington has a grant now—if they refused to purchase, I think it is essential for us to be able to purchase anything we think important out of our private funds.

1637. Then it would be a question of spending private, and not public, money?—Yes, but I do not quite understand what is contemplated. I understood that the Print Room would go with the grant for buying water-colours.

1638. I do not quite follow that.—I understood that the claim to a Print Room and the claim to a grant for buying drawings and water-colours would go together.

1639. Therefore we would be left at Millbank with the Duveen fund alone as a purchasing fund for modern water-colours?—Yes.

1640. In regard to Whitechapel, I gather you think it desirable that some attempt should be made to connect the Whitechapel Gallery with the Tate Gallery. That being so, it can be done either by the Government taking over the Whitechapel Gallery, assuming it were possible to do that, or by an arrangement between Whitechapel and the Tate Gallery, under which the Tate Gallery had the duty or the privilege of exhibiting some of their works either permanently or temporarily at Whitechapel?—Well, I think the first would be the better if it were possible, but the difficulty in the second case is that the Whitechapel Gallery is not open all the year round, and to keep it open and heat it would mean considerable extra cost, and I do not

think the trustees there would be able to bear that cost and exhibit the pictures, except occasionally just for six weeks. If the pictures are more or less permanently on loan there, it would be necessary for them to have some assistance from the point of view of keeping up the heating and staff.

1641. But if the Government decided that, in order to preserve and make use of practically the one suitable exhibition gallery for the whole of the East End of London, and it was decided to provide the necessary heating for the exhibition building, then you would be in favour of lending liberally, and making some arrangement of that kind for the use of our pictures and for our using their gallery?—Yes, I am entirely in favour of that, and of the other, if it were possible, taking the gallery over as a definite East End national gallery.

1642. Yes, you would prefer to take it over altogether if it could be arranged?—It would be simpler if it could be arranged.

1643. And we should have ample supplies of pictures to keep it going?—Yes.

1644. Just on the question of lending, would you be in favour of lending not only more generously but more rapidly, i.e., a constant outflow and incoming of pictures in all directions, influx continually, going from one gallery to another?—Well, they are doing that. It is almost the case already. Twenty pictures came back yesterday to the gallery from loan.

1645. Will the same 20 pictures go out somewhere else to-morrow?—Well, almost. Frequent loan is going on, and if you carry that beyond a certain point you get a great deal of staff work necessary in packing. I think that with what is now going on we have almost reached the limits with our present staff.

1646. In regard to the question of publicity, do you think that the provision of a lecture gallery for a constant series of lectures, one or two a week in the evenings or possibly in the afternoons, would add enormously to the attractions of the gallery?—Yes, I am entirely in agreement. I think people would go.

1647. Would you be in favour of adding an organ to the gallery and providing music as well?—I should very much like to provide music. I have not thought of an organ. It is a little like the cinema.

1648. Would not it be a good thing if it were like the cinema in that it draws thousands and thousands of people?—I think chamber music would be desirable. In fact, we considered it some years ago. The difficulty is to keep up the supply of really good quality that the thing demands. I think to have a concert of chamber music for about an hour on Sunday afternoons would be the ideal thing. People need not listen if they do not wish to.

1649. I take it you are not really opposed to an organ if it is a really good organ?—If it is a really good organ.

1650. Just one point on the relations of the National Gallery and the Tate Gallery which has been referred to. Am I right in thinking that as far as the British school is concerned, it is clearly understood that the Tate Gallery is not a gallery of modern British art, but was intended to act as a national gallery of British art?—Yes, I think that is quite understood.

1651. And it was only the accident of the Tate bequest of pictures being modern pictures, being modern academic pictures, that the popular connotation of the Tate Gallery with modern art has arisen?—Well, I should have to verify that. I am not quite sure what Sir Henry Tate's wording was. Modern British art I think it was.

1652. My recollection is that it does not occur at all.

(*Mr. Charteris*): I think it occurs in the Treasury minute.

1653. (*Sir Robert Witt*): The National Gallery, in point of fact, has handed over the whole of the British school, ancient and modern, except in so far

14 December, 1927.]

MR. CHARLES AITKEN.

[Continued.]

as they have retained what they consider to be the best examples for the National Gallery?—Yes.

1654. And it is only as regards the foreign galleries that we are definitely committed to the exhibition of modern foreign art as opposed to old foreign art?—Yes.

1655. (*Dr. Cowley*): If I understood you rightly, Mr. Aitken, you said that you considered that the Tate Gallery was large enough for the purposes for which it is intended. Did I understand you rightly?

—Well, I meant, I think, that if buildings get too large they become rather wearisome and oppressive, and it is a fairly large building now. I do not think it requires very much extension immediately beyond the Modern Foreign Sculpture gallery, which is already being planned.

1656. It is a question we have had before us, and I was interested in hearing your statement. The question of space is not a problem at the present time?—No, I think it would be better to weed out slightly for the present.

1657. By weeding out do you mean sending back the objects which are on loan, or do you mean discharging pictures that are unworthy of a place in the gallery?—I think it could be improved possibly by not exhibiting quite so many of each person. In some cases there are a number of works by one artist. I think perhaps rather fewer might be exhibited in some cases.

1658. What would you do with the others?—Put them into these loans. There are constant demands for loans.

1659. Then you contemplate at some time a certain extension by building over that corner?—Yes, I think at a future time, as the collections grow, they will require more space.

1660. What do you suppose will be the cost of that building? Have you any idea?—The other corner? I should say it would be about what the foreign gallery cost, about £50,000 to £70,000.

1661. Then the only question that at the moment is really very urgent with you is the question of

lighting?—I think that is in a way the most pressing, and the question of a fund for the purchase of pictures.

(*Dr. Cowley*): Well, that, of course, we all want.

1662. (*Chairman*): With regard to publicity, do you see any possibility of making the annual report less arid?—I think if we could each year have an illustrated Bulletin of the most important acquisitions together with a published list of all the additions, given quite shortly, it would be an advantage.

1663. It would be supplementary to the present list?—Yes, and make a more attractive and illustrative report.

1664. You see no difficulty in doing that?—I cannot see it myself.

1665. You think it might have a beneficial effect on stimulating interest?—Yes, I think so certainly. The Americans publish such bulletins and records each year.

(*Mr. Charteris*): Something in the nature of the Report of the National Art Collections Fund.

1666. (*Chairman*): Yes.—Which is always very interesting.

(*Sir Robert Witt*): It is only a question of expense. The report costs about £250 a year roughly.

(*Chairman*): Some of which you might get back from selling?

1667. (*Sir Robert Witt*): Surely, and of course by advertisements if it was sanctioned as it has been in the case of the British Museum Quarterly?—Most of the matter contained in the present report need only be recorded in a permanent register at the Gallery. It could be boiled down to a list in the Report.

1668. (*Chairman*): Your suggestion is that the present list should be merely recorded at the Gallery?—Yes, I should think if it is kept at the Gallery that is all that is required, a sort of register. I do not think it is necessary to send that out.

(*Chairman*): We are greatly indebted to you, Mr. Aitken.

(*The Witness withdrew.*)

NINTH DAY.

Thursday, 1st March, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.O.B., G.C.M.G., LL.D.

Sir MARTIN CONWAY, M.P., Litt.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).

Mr. J. R. CHAMBERS (*Assistant Secretary*).

Sir ARTHUR KEITH, F.R.S., LL.D., D.Sc., on behalf of the Royal Society, called and examined.

The following memorandum was submitted by the Royal Society in reply to a Questionnaire from the Royal Commission (*see Appendix 3*).

1. RESEARCH FACILITIES.

In considering the present position and efficiency of the Scientific Museums from the standpoint of research facilities, we gave our attention principally to the research facilities at the Natural History Museum. In the case of the Geological Survey

Museum the question is necessarily bound up with that of the urgent need for its rehousing, with which we deal separately. In the case of the Science Museum facilities for research must, in the nature of the case, be less important, since research in the departments of science with which it deals—Engineering, Physics, Chemistry—is such as can seldom be carried out with museum specimens and hardly ever in a museum. The functions of the Science Museum are mainly historical and educational, with

1 March, 1928.]

Sir ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

the latter of which we deal separately. The function of the Natural History Museum, on the other hand, is not merely to display such representative specimens of its collections as will attract and educate the interest of the public visitor, but to house safely, to classify, to identify and to investigate the vast and growing mass of specimens which provide the standard for national and imperial reference on all questions of systematic biology. We regarded the question of research facilities in the Natural History Museum as one in which the Royal Society had special interest, and on which the Royal Commission, having no biologist among its own members, would specially desire to hear the Royal Society's opinion.

THE NATURAL HISTORY MUSEUM.

Research facilities in a museum such as the Natural History Museum naturally fall under different headings.

(a) *Research facilities for the regular staff of the Museum.*

If the collections of the Museum are to be adequately used as a source of new knowledge, it is of the first importance that the members of the Museum staff should be afforded time and facilities for original research, as distinguished from routine work, whether technical or administrative. Our enquiries have satisfied us that the facilities at present available to the staff of the Natural History Museum are not adequate in either respect. As regards time, the difficulty is due to the deficiency in numerical strength, which in certain departments is barely sufficient for the routine duties, so that research with a view to original contributions to science must be undertaken, if at all, outside official working hours. Under such conditions, there is obviously no margin to allow for the grant of occasional leave to a member engaged in a particular investigation, for the visits to foreign collections which are essential to some kinds of systematic research, or for such occasional participation in collecting and exploring expeditions as is likely to be of great value to the work of the Museum as a whole.

As regards other facilities, the principal lack is of adequate working room. The Museum, when built, was planned principally to afford opportunity for displaying to the public specimens suitable for that purpose. Research has had to be housed largely in rooms and passages constructed with other aims. We understand that at least one room designed for and really needed for public exhibition has had to be taken for staff work, and that in some departments large and important collections of specimens remain unclassified and not readily accessible for scientific use on account of the lack of space for their investigation.

We have learned that in one department (Entomology) increased facilities are shortly to be provided with the aid of a grant from the Empire Marketing Board. We desire that the attention of the Royal Commission should be drawn to the need for increase in the financial provision made for the Museum as a whole, so that other Departments, the work of which may not make an appeal of so immediately practical a nature, may be given such increase of working room and of scientific staff as will enable the nation's treasury of systematic biology to be used to its full scientific value.

(b) *Facilities for other research workers.*

Such workers include professional systematic biologists and others, such as medical or agricultural experts from the tropics, and palaeontologists from all parts of the world, who need to use the resources of the Museum in connection with some aspects of their own investigations.

We have heard on all hands expressions of the warmest appreciation of the readiness of the Museum

staff to assist the work of such visitors, and to place at their disposal such facilities as the Museum can offer. These, however, necessarily suffer from the limitations of the space suitable for research, mentioned above.

(c) *Facilities for students and amateur collectors.*

The information before us suggests that these are relatively good, and we have no measures to suggest for their improvement.

2. THE SCIENCE MUSEUM.

We consider that "the steps now being taken to provide in the Science Museum suitable accommodation for the collections, and fuller opportunities for students," greatly increase the value of the collection to the public and the general student, and are adequate for this purpose.

The information furnished by explanatory labelling of exhibits, by the staff available to answer questions, and by the guide-lecturers, seems to meet the needs of a large proportion of those using the Museum. In two directions, however, we believe that the educational value of the Museum could be increased at relatively small cost.

(i) We believe that a system of more formal lecture-demonstrations dealing with limited parts of the collection, held in a room set apart for the purpose and addressed to students of a more advanced type than those for whom the guide-lecturers are provided, would have real educational value.

(ii) After the close of the Wembley Exhibition, the Committee which had there organised the scientific exhibit on behalf of the Royal Society presented a report to the Society's Council, containing the following recommendation:—

"It has become evident, from the experience at Wembley, that a periodical epitome of scientific progress, in the form of an exhibition, of an authoritative nature such as arrangement under the guidance of the Royal Society ensures, would be welcomed by a large section of the scientific and general public.

"The Director of the Science Museum has already proposed, and it is hoped to make arrangement for, the transfer of some of the experiments and apparatus from Wembley to the Museum, to serve as the nucleus there of a permanent exhibit of experimental science.

"The establishment of such an exhibit is a step of great importance. It cannot, however, serve the same purpose as a periodical exhibition drawing its material from the whole field of science and arranged to give, on each occasion, a record of the best that has been thought and done in science up to that time.

"The British Empire Exhibition Committee unanimously desires, therefore, in reporting the conclusion of its work, to ask the consideration of the Council as to the desirability of steps being taken with a view to the organisation of such a periodical exhibition."

The Council, in adopting the above report of the Wembley Committee, expressed their sense of the great importance of this suggestion, and it may be assumed that the Royal Society would be glad to give its co-operation for the furtherance of any such scheme. The Science Museum seems to be in every way the appropriate centre for such periodical exhibits, dealing with recent discoveries and developments.

We recommend that the Royal Commission should be asked to give careful consideration to the possibility of increasing the educational influence of the Science Museum in these two directions. We have had the opportunity of consultation with the Director, who informs us that he believes that provision could be made for both by an addition to the annual grant to the Museum of about £1,500 per annum.

1 March, 1928.]

Sir ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

3. PROPOSED TRANSFER OF THE BOTANICAL COLLECTION TO KEW.

We have considered the recommendations of the Botanical Works Committee (1901) for the transfer to Kew of the Botanical Collection of the Natural History Museum, from the point of view of its effect on the convenience of research workers and students. We suggest that the following considerations be submitted to the Royal Commission.

(a) The Natural History Museum is at present the National Museum for all the systematic Biological Sciences. It includes in addition a mineralogical collection, which, if pressure for space should necessitate the separate housing of part of the collection, would presumably come first under discussion for removal, leaving a still complete biological collection. If further separation should become necessary, the natural course would be to move the botanical collection, and Kew would appear to be the most appropriate place for its reception. Till that necessity arises, however, there is much to be said for preserving the character of the present Museum as a complete Museum of Natural History, and not changing it into a Museum of Zoology alone.

(b) From the point of view of the botanist alone there is some advantage in having a herbarium of recent plants in proximity to the collection of fossil plants at South Kensington, and another in proximity to the collection of living plants at Kew.

(c) From the point of view of workers in other biological sciences, there is advantage in having a herbarium of recent plants available for immediate consultation, in connection with the study of the insects and other animals which feed on plants, or are otherwise associated with them in living nature.

(d) It has been suggested to us that the existence of two independent herbaria is advantageous as a security against irreparable loss by fire. It appears to us that the argument might be used with almost equal force as a reason for similarly duplicating other parts of the collection in different places. In any case, fire-proof housing of duplicate collections at Kew would appear to meet equally well any need for such precaution.

(e) We are informed that there is no practical possibility of amalgamating the two collections, the methods of mounting adopted being so different that separate cases would be required. No economy in the space required by the two collections would, therefore, be affected by the removal.

None of these considerations appears to us so strong as to have decisive appeal by itself, or even to weigh seriously against a strong reason for transfer of the Kensington Herbarium to Kew, if such exists. We are not aware of any scientific interest which would be directly served by such removal. On the other hand we are not convinced that, with the present and future facilities for travelling the relatively short distance, the removal would cause a serious hindrance to research or study. The existence of the two collections has not been determined by scientific necessity, but is the result of historical accident. We believe that it has favoured, rather than hindered, scientific progress, presumably at some additional cost of administration. We suggest, therefore, that the removal, which would obviously involve the building of a new Botanical Museum at Kew, should be considered chiefly in connection with the general necessity for increased accommodation at South Kensington.

4. MUSEUM OF PRACTICAL GEOLOGY.

We are of the opinion that the close association of the Geological and Mineralogical Departments of the Natural History Museum with the Museum of

Practical Geology, which would be brought about by the proposed removal of the latter to South Kensington, would be advantageous to students. Both geological collections, however, are essential; they differ fundamentally in scope and purpose, and consequently in arrangement.

The palaeontological collections of the Natural History Museum are biologically arranged so as to illustrate the evolution of all forms of life on the globe. For example, fossil fishes of all ages are placed in one series. In the Museum of Practical Geology the fossils (which are mainly British) are so grouped as to show the forms of life existing in and characteristic of each successive geological period, the arrangement therefore being stratigraphical. Thus grouped the fossils present the evidence on which geological maps of Britain are founded and the basis of the grouping and correlation of geological strata generally. It would be difficult for the student to find out from the biologically arranged collection the fauna characteristic of any one geological formation, or to realise from the other the place occupied by a specimen in the process of evolution.

The nearest approach to an overlap occurs in the mineralogical sections of the two museums; but here again the object of the Natural History Museum is to show types of minerals from any part of the world, and of the Jermyn Street Museum mainly to show those characteristic of the British geological formations and rocks and ores of economic value. There are, however, two points in this connection on which we desire that the Royal Society should give its opinion to the Royal Commission.

(a) It is generally agreed that the existing accommodation of the Geological Survey collection is inadequate, unsafe and in every way unworthy of its importance.

(b) The existing plans for its removal to a site between the Natural History Museum and the Science Museum are attractive from the opportunities which they seem to offer, of co-operation with the mining section of the Science Museum on the one hand, and the Palaeontological and Mineralogical Sections of the Natural History Museum on the other. This would seem a favourable site for an institution which deals with every branch of applied Geology. We would strongly urge, however, that, in considering the desirability of proceeding with these plans, the Royal Commission should have in view the effect of thus filling this site on the possibilities for future necessary expansion of the Natural History Museum.

The urgent necessity for re-housing the Jermyn Street collection being admitted, and the necessity, at some future date, of moving the mineralogical collection from the Natural History Museum being foreseen, we suggest that the possibility of providing for both on some suitable site might now be considered.

The South Kensington Site.

We realise that we are here making recommendations concerning one item only of a much larger problem. We do not doubt that the Royal Commission have in view the desirability of carefully resurveying the whole of the vacant land on the South Kensington site, in order to ensure that it is used to its optimum value from the point of view of future requirements. We would venture strongly to urge that such a survey be undertaken before any further part of the site is definitely allotted.

5. CO-ORDINATION.

On the question of co-ordination, we assume that the Commission have in view measures to promote co-ordinated action between existing Authorities, and not the constitution of a new co-ordinating Authority. We have no doubt that problems concerning the division of functions among museums

1 March, 1928.]

Sir ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

will arise, and that some provision for regular meetings between the different governing bodies, and between the administrative staffs of the different museums would be valuable. We suggest, however, that the Royal Society cannot usefully make specific suggestions concerning a matter which affects the administration and control of museums rather than their use for research.

EXAMINATION OF WITNESS.

1669. (*Chairman*): We are obliged to you for coming; would you kindly give us the benefit of your own experience in the control and management of a museum and the application of that experience at the Natural History Museum?—I thank you for the opportunity of making such a statement, because there is no doubt that the condition of affairs at South Kensington Natural History Museum is very urgent, and in order to acquaint you with how that condition has come about it will be necessary for me to make this statement. The Museum, as you know, was designed by Sir Richard Owen. He was trained in the Museum of the College of Surgeons, and it was from that Institution he drew all his experience about the needs of a museum. With the College museum I have been familiar for 20 years past, and also with Sir Richard Owen's ideas there. Now, at the College of Surgeons every specimen had to be shown. The whole Museum space was an exhibition space, but I should also tell you that it was not the general public that he was catering for, but special students in surgery and medicine. When he went to South Kensington after being at Bloomsbury for fully 20 years he built South Kensington Natural History Museum on exactly the same plan—that the whole space should be for exhibition. He had not the public needs in his mind then, but rather needs of the professional students of Zoology, but every specimen was to be shown, and, therefore, the greater part of the Museum was designed for exhibition space. Specimens came in abundantly, and there was soon no room in the galleries for them. Besides, there was no need to show them because they were primarily for the use of students. Therefore, the method of keeping specimens in drawers and cupboards was used more and more, and these drawers and cupboards had to be put up in the galleries. Then, as at the College of Surgeons, the staff was expected to work in the galleries, and no, or only slight, provision was made for it at South Kensington. The staff thus came to be housed really in the show places of the Museum—in temporary rooms erected in the galleries. This system has been going on for over 40 years, so that the exhibition galleries have been largely absorbed, not for the showing of specimens, but for museum staff and store cupboards. Such is the position of affairs now. The space is so crowded that something must be done. I should add two things more. At the time, even as late as the eighties, when the Museum of Natural History was being designed, there was still in the minds of Owen and his colleagues something of the ancient idea of the smallness of the world of life. Seeing that all the animals of the world could be put into the Ark, it was thought quite possible that they could be put into a limited Museum. They had not then caught the almost inexhaustible richness of Nature's treasures. Owen had not conceived that the British Empire would grow as it has grown, and that his successors would be called upon to house the enormous number of specimens that the world can show to-day. Another thing he made no provision for. He had not foreseen that with the growth of knowledge there would be a growth of specialisation, and that instead of having six special men to handle Zoology it would require a staff of fifty or more. He had made no accommodation for such a staff. Since South Kensington Museum was built the number of specific forms of life has increased twenty fold; our knowledge of living things has

grown equally; where one specialist was sufficient ten are now needed. Staff and stores have had to keep pace with the growth of knowledge. All these circumstances put together have led to the gallery space of South Kensington being used for purposes they were never designed for, and for purposes for which they are absolutely unsuitable. This means that the staff has now to work under most trying conditions. It seems to me that you will have to devise some big gradual policy to restore the Museum to what it should be, and at the same time give accommodation for staff and storage. That is my conception of how the present condition of South Kensington Museum has come about.

1670. You think a large modification is very urgent?—Yes, absolutely.

1671. The Royal Society memorandum presses for increase both of accommodation and of scientific staff "to enable the Nation's treasury of systematic biology to be used to its full scientific value."—Yes, that is why I begged to make the statement I have made, because it explains to you briefly why I think something has to be done to provide for the Museum staff. They are housed in the galleries which they should not be, as these are needed for exhibition.

1672. So that exhibition has suffered very considerably?—Very greatly.

1673. Now, the Natural History Museum concerns both the functions of research and exhibition. Do you consider that the exhibition side of the Museum is unduly subordinated to the research side?—No, I do not, but the one is accessory to the other. I take it the Natural History Museum has to serve three very great purposes. The first one is to the public, to exhibit the living world to the public, to make them interested, and show them what life is in all its different forms. That is the duty to the public. The second duty is to science itself, the growth of science. It is growing so enormous that our knowledge has to be systematised and, therefore, you must provide the material and the men. No University, no single body can do that; only the Government can do it. That is a very big and important function, but the exhibition part of it comes out of that. If you ask me which is the main function of the Museum I should say for science; the proper registration and collection of materials is the most important function for the growth of knowledge, but the public must get something out of it, its share comes out of it naturally. I take it that the people who have to arrange and study the specimens have as a first duty to show the public the best that they have at their disposal.

1674. So that expenditure is required for improving the research facilities and the exhibition facilities?—If you put to me what should be done, I should say you must restore the galleries of the Museums to their proper purposes, that of exhibiting and instruction of the public, and to do that you have to provide new accommodation for the staff and for storage—I should put it the other way, storage and staff, and when I say "storage" I mean storage not in the sense that you are putting things in a store for dis-use, but storage to be available for special students just as books are available. This new accommodation has to be provided.

1675. Have you any suggestions for improving the general educational facilities for the general public?—Yes, there are many I think. My point is that the educational facilities have to be developed first of course by the Director. He must be made responsible for the proper exhibition of specimens and he must be held responsible for the proper exhibition of specimens, and the organisation of his staff for the exhibition of those specimens, but I do think that in each department of the Museum—I need not go into the number of departments—there must be one or two men who are keen on education and will devote themselves to the exhibition of their particular part of the Museum. I go further and say that it is absolutely the duty of each department of

1 March, 1928.]

SIR ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

the Museum to have on its staff one or two men who are not only good at demonstrating and illustrating the things they have but who at the same time will serve as demonstrators when the need arises. I think the tendency at the present time to call in what I would call men who can talk, who acquire the knowledge second hand, is a retrograde step. You have as it were to lay down a policy that the staff of the Museum has to educate and teach as well as to research. There is a tendency I think for Museum servants to forget they are public servants. It is not confined to Museum men—to believe that their post is purely a research post, that is, a post really created for their particular need and wish to increase knowledge. I think it is absolutely essential that every Museum servant should remember that he is a public servant and that his duty is as much towards public instruction as to the progress of science. That is the spirit which ought to be inculcated and which prevails in the Museum now.

1676. That is to say facilities for exhibition should be one of the conditions?—In the way I have outlined I think the Museum could be developed not only for the preservation and investigation of material but also for the instruction of the public.

1677. It has been suggested as possible that ultimately botany and mineralogy would have to go, leaving a purely zoological Museum with palaeontology?—The matter on which I have been speaking is one on which I am more or less of an expert, because it is my business to deal with such matters, but now you ask me my opinion upon a matter which I really have no expert knowledge to speak on, but I should say, supposing you did require more space in South Kensington and had to get rid of a department, then I think that it is mineralogy that should go first.

1678. Sooner than botany?—Much sooner, but there is room for a difference of opinion.

1679. Would you give your reasons?—South Kensington is a Biological Museum dealing with life, exemplifying life in all its forms, and mineralogy has not any real connection with life and its processes of any kind. It seems to me mineralogy could very well go into the Geological Museum attached to the Geological Survey, whatever you determine to do with that. I should really be sorry to see botany separated from South Kensington. The lower you go down in the scale of life, the nearer and nearer you find the animal side and the plant side becoming as it were one, and I should think it would be a pity for many reasons besides to separate botany, because after all the palaeontologist requires modern plants in the identification of forms as much as he does the forms of animals. I think it would be a pity to separate botany altogether.

1680. The argument that it would be desirable to concentrate everything at Kew does not appeal to you?—Except it became a very urgent matter of space, and then I should say that the proposal of transference should be considered. For the growth of science I do not believe the transference would be a great disadvantage.

1681. Do you consider that there is a risk of the accumulation of multitudes of duplicates or almost duplicate specimens, and do you see any practical way of limiting multiplication of biological specimens?—Absolutely no way of limiting. Our attitude to this problem is another of the matters which have altered since Owen's time. In Owen's time Darwin's teaching was just beginning to be felt and he had not realised how necessary it would be to illustrate the various forms which a species may exhibit. When all is said and done such variations provide the most instructive of all enquiries. I went to South Kensington the other day and took the opportunity of going to the Bird Department. It was quite by chance that one of the assistant keepers happened to open two or three drawers, and I said, "You have about fifty birds there of the same species." He said, "Yes, exactly," but when

he turned them over he showed me that between extreme types there was a most marvellous grading series. The group as a whole was most instructive, and you could not take out one of those specimens without injuring the total collection. The need for multiple representation runs right through the world of living things. Can we tackle such a big undertaking as complete representation? I think we must if we are going to get on at all. Besides it is quite wonderful the great number of specimens which can be put away in cupboards without occupying much space.

1682. Regarding the Trustee System of controlling Museums, have you any views on that?—Yes, I have. I have a good deal to do with administration of different institutions, and my belief is, unless we can devise some co-ordinating system for the various Museums in South Kensington, that there will be difficulties in working any scheme out towards a common end. What form of organisation I would propose for that purpose is not one which I would care to be very dogmatic about, but my belief is that you cannot manage any Museum without fulfilling two conditions at least: One is that you have got to trust your Director; you have got to give the Director more power than he has—financial powers—limit them as much as you like. You have to give him powers of purchase, because often a purchase comes along when one gets the chance of it only for a day or two. You have also got to give him powers to send men away to investigate matters of urgency. Take the last example I have noticed. A certain school of whales stranded in a bay in Sutherland. There was no University, no School, that could utilise such an opportunity except the Natural History Museum. I do not know how the Director managed it, whether he summoned a special Committee or not, but he should have such powers that the minute he saw the announcement he could take immediate action.

(Sir George Macdonald): He sent up three as a matter of fact.—Did he? Well, I am glad of that. Another matter which requires consideration in the constitution of a governing body of Museums is the provision of expert members—of men who have a special knowledge of the branch of knowledge with which the Museum is concerned. This is a great difficulty because most of the men who know are not only poor but very busy, and I do not think you can expect such men to serve unless you provide for bringing them from different parts of the country. The governing body I propose would consist of half a-dozen experts, and to them I would add six or more representatives of the intelligent laity, a bigger representation of them—of business men or men who are interested in public affairs. If all the various Museums are to be under one great committee, then each Museum should have a special sub-committee, one constituted as I have outlined, and there should be a combined committee made up of the collective sub-committees. The collective committee need meet only on such occasions as when problems of co-ordination have arisen.

1683. (Chairman): That is to say that you consider that greater co-ordination is desirable? Desirable, but that is looking forward. I do not know that any overlapping has occurred yet. I do not think it has, but I can see that, as things grow, it will occur, and the question of co-ordination will come up, and I do not see any way of doing it except by lumping together all the individual Committees who look after these different Museums.

1684. (Sir Martin Conway): Cutting off Bloomsbury?—Absolutely. I have no hesitation in giving my opinion on that subject because the interests of Bloomsbury and of South Kensington are really diverse and the men who are competent to give an opinion on the management of one are not competent to give an opinion on the management of the other. That is my idea. You must give the Director extended powers, and all the Committee should do

1 March, 1928.]

Sir ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

is to consult with him and give or withhold its consent, as the case may be.

1685. (*Chairman*): As I understand it your Board of Trustees will be composed half of experts and half of non-experts?—Perhaps a bigger proportion of non-experts. I would give them the preponderating vote always.

1686. Are there any further suggestions you would like to make regarding this Commission's inquiry?—There are one or two points I should like to draw your attention to in case someone has not done so. There is first the recruiting of the Museum staff, an extremely important matter. I think we have to go to the university for the greater part of our Museum staff, but I have seen so often men who are trained perhaps as clerks or as artisans develop a very great knowledge and keenness, and I do think it is extremely important that men who would be willing to devote their life most whole-heartedly to this subject should somehow or other be brought into our Museum service. This is not a new idea; it is being done; but it is an avenue of recruitment which you should encourage.

1687. Recruitment from non-university sources?—From non-university sources, men who are perhaps rather handicapped in obtaining recognition of native ability and of an inborn interest: They may be 25 or 30 and are rather old to begin service in a museum, but I do not think they are. They are very useful men to have because their whole heart is in their work. One other point I should like to develop and it is this. I hold that every man on a Museum staff should be engaged in research. He has his duty to the public and he has also his duty to science. I would certainly give the Director facilities for sending members of his staff to examine collections in any other Museum in Europe or in America. It is often necessary and I think important, both for the Museum and for science, that the Director should have power to say to a member of his staff: go over and see the collection at so and so and report on it. That amount of power I would give him and I would give him all the accommodation for investigation by his staff, but I would not in any circumstances make pure research posts for the Museum staff. I do not know if I am really giving the opinion of my colleagues in the Royal Society in saying so, but that is at any rate my own opinion. That does not mean that I would not give every encouragement to research. A Museum can never do any lasting good unless every man on its staff has an instinct for research. That is quite true; it is one thing to encourage research, but it is a different thing to give a man the belief that he is on the staff purely to do research work.

1688. You want to increase his contact with the public?—The staff has got to serve above everyone the amateur expert. Every day to my Museum and to the South Kensington Museum there come men who are carrying out investigations in their spare time; they ask us to identify specimens for them and to advise them. That should not be called routine work. It is not routine work. It is research work. One should not call the identification of a new animal routine work. It is not, it is research work, it is a pure piece of research. There is one other thing I should like to say which I think is important. I do not think Museums ought to be encouraged to issue special publications for researches done in the Museums. All researches done in a Museum ought to be published by the Society or particular body concerned in the corresponding branch of knowledge, and I would say it is the duty of the Government to help in publication. Where a Museum servant has done a piece of good work, one which will be costly to publish, and when the Society admits that it is a very good piece of work, but that it cannot afford to publish, then, in such cases, the Director should have power to say the Museum will give you aid in publishing.

1689. There is one other point you alluded to, namely, increased travelling facilities, you consider

increased travelling facilities and allowances are a necessity?—Absolutely. May I give my experience of some 40 years ago, when I came home from the East and I had accumulated a great many specimens and a great deal of knowledge of a particular kind in the Malay Peninsula? I might have handed over the specimens and everything to South Kensington and left it to work out my material, such is a wrong policy to encourage. A man should work out his own things. I came home and settled down to work. South Kensington Museum did me an enormous service then. I went to South Kensington and they said there is the material you want to complete your researches in these cupboards and drawers. I was given every facility. That is a kind of duty which must be kept in mind. These young inquirers are the men who are going to be our leaders in the next generation and we have got to keep their needs in mind. It is a very important duty. I was only one of many thus served. I am giving you my past personal experience of South Kensington and of the British Museum in Bloomsbury to exemplify one of the chief services rendered by public Museums and libraries.

1690. (*Sir Lionel Earle*): I think in the opening remarks you made you put the first consideration as regards Museums as the public. Do you consider that the Natural History Museum as at present installed caters in the best possible way for the public?—I would not say the best way, but I would say absolutely as much as is possible under the present conditions.

1691. You would not say that more exhibits ought to be put into cabinets and more space free not so much shown to the actual public?—What is needed is exhibition space. The technique, the actual things that are shown, I think are very good.

1692. I am not thinking of the animals so much but take the mineralogy section, hundreds of thousands of tiny little specimens, are they of interest to the ordinary public?—Very little if at all.

1693. You would clear many of them away into drawers?—That is my view. There are many of the specimens now exhibited in cases in the Museums which should not be exhibited at all. They are not meant for the edification of the general public.

1694. (*Sir Henry Miers*): You emphasised the fact that routine work is really research work in itself if properly carried out and you drew attention to the fact that there should be more attention paid to the needs of the public. Do you think it is often the case that the man who is a good systematic worker has also a taste for exhibiting things for public education?—No, often they are not combined, unfortunately. That is why I said amongst the men of a section (each section has perhaps five or six or sometimes ten or twelve men), there are, or ought to be, some who have a real aptitude for "dressing the window"; a good museum man is a good "window dresser."

1695. My question leads to another one, do you think there should be any separation of the staff?—No, I do not think so. I would not divide the staff into show hands and systematic students but I would compel them to provide "exhibitors" from amongst themselves.

1696. You would necessarily have the exhibition collections in any one department mainly designed by the chief of that department?—Yes, make him responsible for it.

1697. He would always be a man who has the public interest in mind as well as the interest of science?—Yes, I would also give the director the final responsibility of seeing that such things were rightly done. There is also another difficulty I did not touch upon. There are general exhibits which fall in no special section of the Museum. Sir William Flower had developed them and then afterwards Sir Ray Lankester helped and the late Director also helped in extending them. Of course, they do not belong to any special section of the

1 March, 1928.]

Sir ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

Museum, but the Director can pick from his staff, or should have at his disposal, a man who can fit up such exhibits. I would make the Director responsible for the organisation of the general exhibits.

1698. Would you approve of there being certain sections in the Museum devoted to educational purposes as apart from research purposes?—No. I would recognise two parts of the Museum, the one part where exhibits are shown and the other part, the students part, where specimens are investigated and preserved.

1699. You would not in the exhibits part recognise two divisions, one for public educational purposes and the other for scientific purposes?—No, I would not divide the scientific side from the public educational side in the Museum galleries.

1700. You would make them intelligible to the ordinary uninstructed person?—Yes. To the intelligent man who has no special training.

(Chairman): If they are only of interest to the expert they should be kept in drawers and that would give more space.

1701. (Sir Henry Miers): You have suggested that there will have to be a division and that obviously the first thing to go if it is to be a Biological Museum would be the Mineralogy Department, and you said it should go to the Geological Museum?—Failing a better place.

1702. The point is, that would not arise until this available site is mainly occupied?—If we could get enough exhibition space the Mineralogy Department might be retained.

1703. Until the site which is available for the Museum was used?—Yes.

1704. No doubt you realise that the Geological Museum is itself coming down to the British Museum site?—Adjacent to it.

1704A. And therefore the transfer of the Mineralogical Collection would not free any portion of the Museum site; it would only be shifted from one part of the site to the other?—That would be so. It would be simply a transference as it were.

1705. But it would be a transference to another body?—Another body which would have to provide space, and then space now occupied by Mineralogy would be available for more particularly biological exhibits.

1706. Then another point is that in that case you would transfer the Mineralogy Department to a body which is chiefly concerned with Geological survey work in Great Britain, whereas the Mineralogy Collection is, like the other collection at the British Museum, a world wide collection?—That is so.

1707. From that point of view there might be an objection to transferring it?—That is so, it might become British instead of being cosmopolitan.

1708. Do you think much more should be done either with a view to relieving the pressure or improving the educational work of the British Museum in circulating specimens to other Museums on loan?—Not in the Natural History Museum. I know of no specimen in the Natural History Museum which there would be any advantage in circulating.

1709. The reason why I ask is that great claims are made by local museums that they should be favoured to a large extent by temporary loans?—That could not be so in Zoology I think.

1710. (Sir George Macdonald): I gather you think there is not sufficient accommodation for the staff?—Nothing like sufficient. It is absolutely wrong to retain the conditions under which the staff is now working.

1711. You also think the staff is not sufficient in number?—That is a point I am not quite certain of. I can see that it can never be stationary, but how big it should be I am not really in a position to give you a final opinion on.

1712. I was really taking that from the memorandum of the Royal Society, perhaps it was rather unfair to take it as your own point of view?—I

accepted the present Director's assurance on the point. No one can give an opinion on that so well as the Director.

1713. I wanted to bring that out because it assumes a double demand for extra accommodation?—I can assure you of this, that whatever the staff may be now, it cannot remain there, especially with the increase of specialisation which is unavoidable. If you have specialisation, you must have specialists.

1714. You are very reluctant, I gather, to see the Botanical Department of the South Kensington Museum go to Kew?—I am rather. I do not think the Royal Society takes any serious view of the removal, nor do I, but I think it would be advantageous to keep it at South Kensington if you could.

1715. Of course you have got the existence of Kew, but you would rather bring Kew to South Kensington than the other way round?—That cannot be done and, after all, a living plant is better than a dead one if you can keep it alive.

1716. You were very emphatic about duplicates?—Not duplicates.

1717. It depends upon what duplicates are. Are there such things as duplicates in biology at all?—There you have trapped me; there are not two identical things in nature, but there are variations of degree, more than what one would call individual variations. The bigger variations run on to varieties. Those of greater degree I think must be preserved.

1718. I put the question because we find that the Natural History Museum is acquiring a great reputation for liberality as contrasted with Bloomsbury on account of the open-handedness with which they distribute duplicates. Do you not approve of that policy?—I do approve of their getting rid of everything that is really a duplicate.

1719. But you do not believe that there are duplicates?—Not in my experience. I go there to study say anthropoid apes and other related forms, human things too, but none of them are quite alike and it is just that difference which is the instructive part of collections. The question is often put to me why we have in our Museum seven thousand human skulls. The answer is that there are not two alike.

1720. I was very interested in what you said about the system of government. I gather you do not think Bloomsbury and South Kensington have so much in common that they should have the same Governing Body for both?—I think for both their sakes they would be better separated.

1721. Do you contemplate a separate Body of Trustees for the other Museums at South Kensington, for example, a separate Body for the Science Museum?—I would put it under a Sub-Committee of the greater Museum Committee, Sir. A general Committee for all the Museums with Sub-Committees for each particular one.

1722. You would think it important that the Natural History Museum was under the general Committee, the same general Committee as the Science Museum and the Mineralogy Museum?—Simply to get rid of the multitude of Committees. The Science Museum really is a separate thing. It might almost as well go with the Victoria and Albert Museum.

1723. I suppose you feel there is more kinship between geology and natural history than there is between Bloomsbury and Natural History?—I do, and there is also a certain amount of kinship between the Science Museum and the Natural History Museum I think.

1724. What kind of organisation do you contemplate? You speak of a Body of Trustees?—Of course it is a matter for this Committee rather than for me to form an opinion on.

1725. You are here to give opinions?—My conception is that the Minister of Education ought

1 March, 1928.]

Sir ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

to be responsible for all Museums and the Committees ought to be subject to him.

1726. That suggestion has been made already. I do not know how far everybody would welcome it but it has been made. Then you would have him as it were in immediate communication with the Treasury. Is that your idea?—Yes, that is so.

1727. How far would he be expected to interfere with the Trustees in the discharge of their duties?—To limit them in finance only.

1728. Only in finance?—Only in finance.

1729. What about, as an alternative to the Ministry of Education, a Body like the Department of Scientific and Industrial Research?—Under the Treasury?

1730. Yes.—Like a Government Grants Committee?

1731. Yes.—Yes, that could be done, but why I suggest the Minister of Education is because it seems to me primarily it is an educational matter, science which lies within the purview of the Minister of Education.

1732. There is no Machiavellian idea at the back of your mind about it being a large vote? We all know the eagerness to get into a large vote rather than a small one?—No.

1733. (*Sir Richard Glazebrook*): Do you think the botany exhibit at South Kensington should be divided into two parts, one herbaria, and the other a department for the botanical specimens shown to the public. Would you make any distinction between those two if there was removal to Kew?—No, I do not think I would. The impression I took away with me from South Kensington was that at the present time the Botanical Department of the Natural History Museum is run more for what I call experts in botany than for the public. Botany seems to me to have continued the old tradition more than the other parts of the Museum in thinking very little of public needs and more of the special students' needs.

1734. Would it be at all possible to arrange an exhibition in South Kensington for the public and make more space by removing the herbaria to Kew?—I should not like the idea of separating the show collection from the scientific side of it. I should not like that. I do not think it would be good in its results.

1735. One other question: you have not referred at all to any co-ordination of research as between Museum staff and the Universities?—No. I am glad you reminded me of that, because I have the suspicion that there are men on the staff of our Museum, the Natural History Museum, who have the idea rather of making it into a great research institution purely for the increase and propagation of knowledge rather than for the enlightenment of the general public. Now I hold that such is not the primary duty of a Museum. The duty of a Museum is secondary to the Universities, to provide the Universities and University men with opportunities, not to regard itself as a primary organ of research. A Museum is not a University nor a pure research institution. Its primary object is to provide the means of research for Universities in particular and for the amateur in general.

1736. (*Sir Robert Witt*): I gather you attach a great deal of importance to the educational side of Museums from the point of view of the public?—Yes.

1737. Do you not think that possibly that might be increased and made still more effective by some rather better organisation in the way of labelling, for instance?—Yes.

1738. And also in the matter of lectures. In regard to labels, don't you think, though they are excellent in many ways, they might be developed?—I think so. Of course, Museum technique is developing now, especially the exhibition side of it. I think South Kensington is alive to that, and in my

time it has improved enormously. Some of the exhibits are unrivalled. I am pretty well acquainted with American Museums. To my way of thinking the American Museum has been most extravagant and has done things in a magnificent way, yet the exhibits in our Great Hall at South Kensington are better from a scientific and educational point of view than theirs. Ours are not so dramatic, but they are better for their final purpose. I do think I should mislead you altogether if I gave you the impression that I conceived the Natural History Museum at South Kensington as failing in its duty to the public in that way. It is very difficult to make that hall into a good exhibition hall. You have to make the best of it, and I think they are making as good a job of it as is possible.

1739. They might extend it in other departments more?—If I might develop the point. I wanted to say I have seen the plan which I think is before you, and that to me is a solution of the present difficulties. You have to organise a systematic scheme which is not to be done in a year but which can be added to every decade. It is not to add exhibition space at all. It is to free your present exhibition space by giving the men more comfortable and convenient quarters—not luxurious, but suitable quarters to work in and accommodation for the incoming tide of specimens. The scheme I saw was, I thought, a very good one. I went over the spirit room, and came to the conclusion it is a roughish building even for a Government one; it is done on too cheap and rough a scale and inartistic, but it is the right idea, and it is that idea I understand which has been put before you and which commends itself to me as a solution of the present difficulties. If you can start a scheme of extension which will give accommodation for the staff to do their work in and also accommodation for the storage of specimens, you will free the galleries for public use, and I think that is the scheme you have to adopt.

1740. There is just the other point of lectures. Don't you think a great deal more could be done to interest the public?—I think so; there was one point I wanted to stress—not to call in outside lecturers, but to develop the talent in the present staff, to make almost a compulsory levy on the staff. I would say to this member or that you must demonstrate on a certain date and on a given subject, either in the Museum itself or perhaps in a lecture room. I do think you should insist on the staff itself providing the teachers and the demonstrators.

1741. May it not be possible that a man admirably qualified in many ways as a scientific man to direct a particular department may not have the peculiar qualities which are required on the publicity side, on the popularising side?—I know it is usually supposed there is such a defect, but there are many men who are labelled impossible teachers who prove to be good teachers when they are put to it, and I would be rather inclined to apply some degree of compulsion. At least, I should give every man his chance. If the public won't listen to him, then you must take him off, but I would make him do it at first, anyhow.

1742. I was rather suggesting that a publicity department might be developed and the advertising side of it?—I should not do that. Honest education has to go by itself without any sort of bush at all. I would not use any kind of publicity for the Natural History Museum beyond its own intrinsic merits. It has to be a good and sound business which draws customers of its own. I would not give way to any sort of exhibition or advertisement to draw people there.

1743. (*Dr. Cowley*): Just one question about the principle of government by trustees. You were saying you thought it would be advisable to have half or nearly half the trustees drawn from experts in various parts of the country. How would you manage in the case of the Natural History Museum where there are several departments? You would

1 March, 1928.]

SIR ARTHUR KEITH, F.R.S., LL.D., D.Sc.

[Continued.]

have a number of experts on different subjects who would have very little in common?—No, I think that is really not so. You do not want a man to be an entomologist only. You will find through the country a great number of men who have sampled generally most departments of living matter and who are quite competent to pass an opinion on a question relating to any section.

1744. You do not think they would be as dissimilar a body as lots of business men?—They ought not to be.

1745. I am always afraid of experts and afraid you might find them very difficult to run one with another?—By an expert I mean a man whose business it is to investigate living things to teach what he knows concerning them.

1746. Then your trustees, supposing you put the ultimate government of the Museum under the Ministry, whether of Education or another, the trustees would become a body with very little power or importance, would they not?—Oh no, I should not think so.

1747. They would really be a Board of Management of the Museum?—They would be responsible for the Museum, and the Director would be responsible to them, and they would be as it were the public's trustees for the Museum, seeing that its interests were looked after.

1748. But always with reference to the Ministry?—Always with reference to the Ministry. I think you have got to have, as it were, the public represented on committees of management. You have to link public and Government together somehow. You must have a representative of the public, and in that public you must also have level-headed men of wide experience but with no special knowledge of biology and others who have special knowledge of biology.

1749. (Sir George Macdonald): I am still not quite clear what you have in your mind about the system of government. At present the Board of Education is responsible for the Science Museum. In what respect would you have that arrangement modified?—Is there a body of trustees?

1750. No, no trustee. There is a Director of the Science Museum.—And he is responsible to the President of the Board of Education?

1751. Yes.—I think it is a pity to have a Minister directly responsible for the management of a body like that. I think there should be a body between the Minister and the Museum.

1752. You want to multiply the machinery?—It is not a multiplication. It is to make quite sure the public will be safeguarded.

1753. It is an addition to the machinery?—That is so. It is a clumsy addition because it would mean many meetings for busy men. I do not know how often they would have to meet, possibly monthly, at least ten times a year. It would mean bringing perhaps a dozen people up ten times a year from different parts of the country. I admit that is a drawback.

1754. What amount of responsibility in connection with the administration of the Museum would you allow to the Board of Education. Anything but finance?—Finance purely. That would be the only check I would give it.

1755. Why not the Treasury straightaway, if it is only finance?—That is quite a good point. It is because the Minister of Education is responsible for education in all its forms and the Museums have to be combined into the general scheme of education.

1756. But he is responsible in other departments of education for a good deal more than finance?—Yes. I do not know that I would allow the Minister of Education to go down and tell the Director of a Museum what he should do.

(Sir George Macdonald): I am afraid you might some day find you had caught a Tartar.

(Sir Richard Glazebrook): I understand you do not tie yourself down to the Minister of Education.

1757. (Chairman): You want some superior and co-ordinating body?—Yes, and it struck me it fell more naturally under the Board of Education than any other Department of Government. I think you are quite wrong in putting it under the Treasury. The special Departments of Government concerned should have the chief say as to how finance should be administered.

1758. (Dr. Cowley): Would it not be better if the body were not a body of trustees, but simply an Advisory Committee?—I think so. It is a matter of name really.

1759. You want to give the Director considerable power and independence?—Perhaps Committee would be a better name for the body which sanctions his administration.

1760. (Sir Richard Glazebrook): Might it not be the Lord President of the Council rather than the Minister of Education?—You won't get the money so well. I think it is quite unfair to put any department directly under the Treasury. It gives it an unfair advantage.

1761. (Sir George Macdonald): So far as money goes, all departments are under the Treasury.—Ultimately, but I think it is a good thing to have a buffer between the department and the Treasury.

1762. (Sir Henry Miers): You were saying the members of the staff should give lectures or demonstrate as part of their duty. Do you think that should be extended to giving lectures to schoolchildren. There is a great demand for that and the American Museum of Natural History caters very largely for schoolchildren.—I had not thought of schoolchildren. I had thought of having a demonstration for the public generally and those interested coming to them. I should think twice before throwing the onus of educating the children on the Natural History Museum. I do not think I would. That is going too far. It is going beyond what we can expect of a Natural History Museum. I should say no; they should not have to educate schoolchildren.

(Chairman): We are greatly indebted to you for your valuable evidence.

(The Witness withdrew.)

TENTH DAY.

Friday, 2nd March, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.
 Sir MARTIN CONWAY, M.P., Litt.D.
 A. E. COWLEY, Esq., D.Litt., F.B.A.
 Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.
 Sir RICHARD GLAZEBROOK, K.C.B., LL.D.,
 F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.
 Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.
 Sir HENRY MIERS, D.Sc., F.R.S.
 Col. Sir COURTAULD THOMSON, K.B.E., C.B.
 Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).Mr. J. R. CHAMBERS (*Assistant Secretary*).

The Right Hon. The Earl of CRAWFORD AND BALCARRES, K.T., F.R.S., LL.D., called and examined.

1763. (*Chairman*): We are greatly indebted to you, Lord Crawford, for the answers in précis you have given. I propose to go through the questions again, as you probably would like to add something further to what you have written. The first question was: on pages 4 and 5 of the memorandum submitted by the Trustees of the National Gallery,* various legal difficulties or restrictions are summarised; would you say which of those legal restrictions you would like to see removed?—In the first place, Lord D'Abernon, in some of these replies I have given my personal views, because my colleagues on the Trustees' Board at Trafalgar Square have not laid down their lines of policy, and my evidence *pro tanto* must be subject to reservation. I should point out that the legal difficulties to which I refer in this memorandum apply equally to the Tate Gallery, which, through its organisation and objective, is no doubt analogous to the National Gallery, but in its methods entirely different. Yet the Tate Gallery, owing to the suzerainty of the National Gallery, is subject to all these restrictions, which I am quite confident would never have applied to that gallery had it started on its own independent career. With regard to the removal of difficulties, we should like greater elasticity. At the present moment we may not lend gifts until 15 years have elapsed; we should like that reduced, and where the donor himself is in favour of loaning his gifts, that loans should be allowed forthwith. Again, we should like to reduce the period by which bequests and gifts is limited. Thirdly, as regards sales, that is a very controversial point. We have rights of sale under the Act of 1856, but they are quite out of date. You have to sell by auction, you have to advertise six weeks in advance, and a variety of conditions which are inapplicable to the modern system of sales where promptitude and secrecy are often essential. I do not know what the views of my colleagues are about the removal of the restrictions upon sale, but they know that Lord Curzon's Committee was against the extension of our powers of sale; they know also that when we proposed it in 1916 they were met with very violent—surprisingly violent—opposition in the House of Lords, giving a foretaste of what that opposition might be developed into elsewhere and in the House of Commons. We certainly on paper can show a very good case for sales, because certain

Masters in our Galleries are unrepresented or poorly represented, whilst others are over represented. We have 21 Ruisdael, 16 Van der Velde, 14 Canaletto, 20 Rembrandt, 12 Cuyt and 10 Morone. You must recall, however, that of all these pictures a large number have been gifts or bequests, and as such are not *prima facie* suitable for sale; 15 of the Ruisdaels are gifts or bequests, as are 9 out of the 16 Van der Veldes. The first point I mentioned on page 1 is about loans overseas. I know that some of my colleagues are most anxious for liberal extension of our powers which are now very seriously restricted; on the other hand, it is a controversial question. Sir Charles Holroyd was very strongly opposed to sending pictures overseas on loan. He not only said that he did not think that a panel picture ought to go, but he went so far as to say that he would be reluctant to send a late Turner on canvas. The Belgians themselves are beginning to be a little alarmed about sending their things abroad, and I hand in the bulletin of the Section of Fine Art of the Belgium Royal Academy of last August, which they unanimously accepted, acting upon a Report of MM. Vanzype, Hulin de Loo and Bergmans:

"Académie Royale de Belgique.

Bulletin de la Classe des Beaux-Arts.

4/8/1927.

Envoi à l'étranger d'anciennes œuvres de l'art national.

"La Classe, après avoir entendu le rapport de MM. Vanzype, Hulin de Loo et Bergmans, sur cet objet, se rallie à la proposition des rapporteurs et adopte, à l'unanimité, la résolution suivante qu'elle décide de transmettre au Ministre des Sciences et des Arts:—

"Considérant qu'en dehors des risques inhérents à tout déplacement et transport, les tableaux sont très exposés à des dommages qui résultent presque inévitablement des changements de température et de conditions hygrométriques, danger qui existe surtout pour les peintures sur bois,

La Classe des Beaux-Arts de l'Académie royale de Belgique émet l'avis qu'il y a quelques œuvres d'une importance artistique et d'une signification historique telles qu'elles ne devraient être

* See Minutes of Evidence—Thirteenth Day.

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

déplacées en aucun cas; une liste devrait en être dressée après consultation des autorités compétentes.

"Quant aux autres œuvres d'art de nos Musées et monuments publics, il est souhaitable qu'elles ne soient déplacées qu'après un examen rigoureux de leur état, et seulement en vue d'un intérêt sérieux, spécifié pour chaque œuvre dont le prêt est demandé".

That shows that certain anxiety exists as to how far this policy should be adopted. On the other hand, we should very much like, I am sure all of us, to be able to do greater justice to English pictures abroad—Turner, for instance, who is scarcely known, and also, I think, if we possibly could, to send pictures to the Dominions Galleries; but I do not think we should want to send our best pictures, and I am not at all sure that our great Dominion capitals would desire to have anything except our best pictures. I cannot conceive of Sydney or Ottawa saying they would be glad to have second or third best pictures, and I think we ought to be as strong as the Belgian Committee and to insist that certain things at any rate should never be removed from the walls of the National Gallery, or at any rate out of the country.

1764. What do you say of overlapping?—As regards overlapping, I do not think I want to add to what is in my memorandum, except to say this. The question of overlapping and fusion has been discussed as long as Museums have existed. In 1856 it was proposed to concentrate the British Museum and the National Gallery to prevent overlapping and so on, but the final conclusion was that it would be unreasonable. Again, a few years ago it was proposed that the water-colour collections should be co-ordinated and that we should send water-colours from the Tate Gallery, the National Gallery, the British Museum, Print and Drawings Department, and the Victoria and Albert Museum to make a central collection of water-colour drawings. The fact is that London is a very big place, and that overlapping must not only be considered from a departmental but also from a geographical point of view. I do not think anybody says that London overlaps with Edinburgh, for instance, the distance is so great that different publics are served. When you come to consider the huge population of London, if our pictures are, so to speak, duplicated in two parts of London it does not necessarily mean that there is a waste of effort or administration, or indeed in money either.

1765. About fee days. What is your opinion generally as to the desirability or otherwise of fees?—Fees, as such, the Board of Trustees thoroughly dislike. They do not look upon fees as a source of income as it is negligible. Last year it was £1,730, but we always have considered that the copyists deserve an element of protection which admission fees offer. Up to 1881 the copyists had the Gallery to themselves, the public were not admitted on copying days. It was only after then that the public were admitted at all, and then 6d. was imposed in order to protect the copyist from the crowd, which it does entirely; you have only to look at the figures to see how great the drop of visitors is on copying days as compared with the free days. But here the 6d. excludes a great number of people not because the sum in itself is prohibitive but because there is a certain resentment in the mind of the public at being charged admission to a public national building. A friend of mine told me only last night he was going in—he is a member of the National Art Collection and was handing in his ticket which admits him on Thursday or Friday—and two or three well-dressed people were surprised on being asked to pay, and turned round and left the place. How far are we justified in keeping the public out on days reserved for those copyists? They may be student copyists but they are people actually painting

pictures. The student of painting as such who is not copying can come in any day. I have often wondered how we could conciliate the two. The attendance of copyists, as I say, is falling remarkably. In 1890 there were 24,000 attendances; in 1891 25,000; in 1892 24,000; 1926, 8,600; in 1925 8,700; in 1924 7,800—one-third. Now, Mr. Collins Baker, the keeper, tells me that he thinks the people who copy are more of the student type than used to be the case before. I constantly go round on Thursdays and Fridays but I have not convinced myself on that point yet and if any of the scientific members of your body would go next Thursday or next Friday they would be able to get some useful guidance on that point. Certainly the whole tradition of the pictures copied has shown that they are commercial, not pictures which an art master would instruct his pupils to copy. Landseer has been by far the most popular person copied and no art master would instruct his pupils to copy Landseer, accomplished painter as he was, because his pictures are not likely to give useful instruction to the student. Landseer has been more copied than any other painter in the Gallery, and that, I think, began in the year 1873 when he immediately sprung into popularity. In 1874, this is a record of the copies made: "The Spaniels," 20; "The Hunted Stag," 12; "Dignity and Impudence," 12; "Shoeing," 12; "Sleeping Bloodhound," 11; "Diogenes," 10; and others 9, 9 and 8. That compares with Velazquez, 3; Rubens, 6; Rembrandt, 11. If you go through the list you will find that Landseer has been copied more often than great painters. "Dignity and Impudence" in 25 years has been copied 175 times, "The Spaniels" 173 times. Turner does not approach those figures, the whole of Turners put together. Many are bad copies of bad pictures and the late sentimental things are far more popular than those which give a valuable study in the technique of pigment: the purpose is obviously commercial. I have often wondered how this could be met. If one said that the public attend free all day long on Thursday and Friday, there would be a great outcry from those who would claim that their livelihood was being impaired. It might be possible to have one afternoon free. Then you might have two afternoons or perhaps better still, as the Gallery is extended, it might be possible to have a copyist's room—I am not talking about the commercial copyists—and under those conditions the student copyists could copy for six days a week. I think a solution might be found on those lines, but it is a lamentable thing to go into the Gallery this morning and only to find 100 people at their easels and the public absent.

1766. On the matter of accommodation, what have you to say about the restriction of the size of the Gallery? Do you not consider that the Gallery gains by a limitation of its size?—I do. Our size is small as compared with most Galleries. Our simplicity is very remarkable. It is a great palace and there are very few National Galleries of which that may be said. In my opinion the great thing about our structure is that we have got no cabinets. There are 40 at Vienna, as many at Dresden, 23 at Munich and the Salle Rubens is surrounded by 14, the Ryks Museum has 375 rooms, and Nuremburg 85. These cabinets are small rooms, you can call them bits of rooms, and the result is that when you look down the passage off which these cabinets run you can see the public ellipsing down, looking in and then feverishly hurrying on to the next. A cabinet is ostensibly intended to show small pictures to advantage. In practice, the cabinet generally contains much too large pictures and often it is made the excuse for exhibiting small and bad pictures. We are very fortunate in not having to resort to cabinets and moreover they are objectionable in departmental ways.

1767. Ought not constant elimination and improvement to be the aim?—Of course that is so, but I do not want the Gallery to be too limited to our

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

finest things. I do not want us to concentrate too much on individual masters or schools. I do not like the single Rembrandt room at Amsterdam. I think Fra Angelico is ruined by being concentrated in San Marco. I dislike the Star system at the Prado. We are overcrowded still and we have pictures that ought to have better placing. In the Venetian Room VI we have 100 pictures, which is too many, and yet very few of those pictures ought to be put downstairs.

1768. Regarding the question as to the exhibition of absolutely first rate pictures. Should not the second rate pictures be dealt with as a reference section for students?—I cannot divide pictures into two classes. I can divide them into five or six classes; the first rate pictures, I think; then the second and third rate, with probably the fourth, fifth and sixth thereafter. If we exhibited only the first rate pictures, say the great masterpieces in the country, our collection would be relatively empty, much too empty.

1769. Regarding the question of a more extensive system of loans to provincial galleries?—Well, we are quite ready to do it, but we think that the standard of the loan should be pretty high. I do not think it is much good sending loans round which are of very indifferent pictures; but I am surprised myself how seldom we get applications for these loans from provincial galleries. They all know perfectly well that we are prepared to send good pictures, and of course we do so. Recently the Trustees settled the sending of a collection of pictures worth £30,000; we are quite prepared to do that, but the local authorities seem reluctant to meet the expense, so that the applications are few. We are quite sympathetic to it and can do it quite easily.

1770. What measures of reconstruction would be necessary to permit of better exhibition?—Well, reconstruction means treatment of existing buildings. We have our central dome room, off which are four galleries. In these five rooms we have got the finest series of large-scale Italian paintings in the world. No single gallery in my opinion in Italy has got quite such a representative series. All those five galleries are scandalously dark. They are the most empty in the whole of the National Gallery: you see out in various directions into light rooms so that the tendency of the public is to get into the brighter rooms. There is a magnificent collection of pictures round the dome and if the lighting could be improved it would be an enormous help to the Gallery. On the east side of the Gallery there are the two Dutch rooms which are very dark too, and on the north side of the Gallery two Venetian rooms which require reconstruction. Those are the measures of reconstruction which I think are really necessary.

1771. Would you advocate any reconstruction with a view to affording better facilities for students?—Yes, very much so. I hope that some day we shall have an extension of the gallery up to the north. Of course, that land belongs to us and there is room on that to finish our rectangle and to add 120 or 130 yards run of Gallery. I should hope when that time comes we would be able to do a great deal there not only for students, i.e., critics and scholars, but for the copyists. I believe the Office of Works could so design a low level Gallery—you know that our Gallery is, I think, many feet above the street level—that the copyists could be concentrated down there which would be of enormous assistance to everybody. It would give them complete freedom from the public. There are many other things relating to students which I am sure could be carefully thought out. I do not think much of our existing Gallery on the ground floor has ever been studied so as to give us the maximum light. It seems to have been designed to raise us up to the level of the existing galleries, but I think with a little care we can make a great deal more of the ground floor.

1772. Are you prepared to deal with the question of closer contact with the public?—I have no more to say than what I have put on the paper, such as lectures, and making the galleries comfortable which has been done in late years by the Office of Works. The Public react very closely to that. The catalogues are too expensive and we hope to bring them down. We have lectures going on but there are not nearly as many as at the Louvre. Here is a list of last Monday's lectures at the Louvre. They had 17.

1773. Compared with what number in our corresponding galleries?—Two at the British Museum two at the National Gallery and two or three at the Victoria and Albert.

(Chairman): Less than half.

1774. (Sir Lionel Earle): A day?—A day. I do not think they have lectures on Saturday, so do not take this as a complete statement of the difference between the two galleries. We attach great importance to that. Lecturers do not get a very large salary you understand and they are very quickly tempted away. Ours gets £265 a year.

1775. (Chairman): Is that all you give your lecturers?—Yes, that is all. The British Museum give them rather more.

1776. Do you suggest that better salaries be given them?—Not at present. I should like a better salary, but the Treasury met us on that point 12 months ago, and I think it would be indelicate to approach them again at once, but the salary is of course low. The British Museum figure is £320, plus bonus.

1777. (Sir Lionel Earle): For exactly the same services?—In those two respects. They can earn extra in each case for outside and extra parties.

1778. When I applied for a guide lecturer they said "you cannot exceed the scale which is universal in museums."

1779. (Chairman): What do you say about more active intercourse with other galleries in London, the provinces and abroad?—I should like more active intercourse with the foreign museums and directors, but it is no good pretending that our London keepers and directors would benefit by more active association with the provincial museums.

1780. It might be the other way?—Entirely. I am more for it the other way, but I should very much like to send our National Gallery people abroad more than we can do.

1781. You are precluded from doing that now owing to the absence of money?—Not quite that, we have at our disposal the Lewis Fund of £500 a year, which we can use entirely on sending our officials abroad, but we cannot afford the time, we cannot let them go.

1782. (Sir Lionel Earle): What is the solution, more staff?—More staff in moderation.

1783. (Chairman): In your address to the Society of Antiquaries in 1927 you drew attention to the necessity of Museums keeping in touch with educational ideals. How far do you consider that ideal is now realised?—I feel this, Lord D'Abernon, that we are dropping behind in giving training to the curator, the students and the critics. I compare our position with that of Paris or Harvard or Berlin. The Fogg Museum has to-day 25 young men and women going through their course whose profession is curatorship of museums and galleries. The Ecole du Louvre is a very powerful organisation, and best of all is Friedländer's system at Berlin. There he has people—you remember that all those museums are wonderfully concentrated there—he has people who put in two years' work as honorary attachés, unpaid in every case. They have four periods of six months in any four departments they may choose, and he is quite prepared to take in people who are going to be dealers as well as critics. He says that it is good that the German dealers should be in intimate relationship with the German Museum. We do nothing at all. We have just begun at the National Gallery the system of

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

honorary attachés, but so recently that we cannot say that we have yet done as much as we should like. The British Museum people have developed the honorary attaché system very well, and Mr. Cockerell, too, the head of the Fitzwilliam Museum at Cambridge; I believe the whole of his keepers are honorary. We feel we ought to do something more than we are now doing at the National Gallery, and I think myself that all our Museums should make a point of giving educational facilities wherever they can. As our collection develops here we shall have ample physical scope for the enterprise. I would just add this that the work done by such students and such candidates for curatorships of our Museums and Galleries elsewhere would be done largely at the initiative of the men themselves. Each would look after himself. Very little supervision would be required. At the National Gallery he would be instructed to visit the sale rooms daily and in effect he would train himself in the practical problems we have to solve. He would be there constantly realising how a catalogue has to be prepared, watching the work of the official repairs, the work of revarnishing pictures, and he would have the gallery at his disposal. We have done what we can in that direction in the National Gallery, but as I say there can be a great further development.

1784-5. (Dr. Cowley): Would you say what your views are about Trustee appointments?—I think that the greatest care and caution should be exercised in making appointments. I agree that at one stage you may appoint an expert, at another a man of business, or a third person connected with public life; but I would not like to say in so many words that you ought to appoint this, that, or the other type.

1786. I am very much interested in another point of a different kind. You were speaking about honorary attachés to the staff of museums. The difficulty it seems to me there is in the shortness of staff. If you have these people, you must give them a certain amount of instruction. We tried to do that in Oxford at the Bodleian, it must take a considerable time or at any rate some time of the staff, and I suppose if it were attempted here you would require an additional staff to do it, would you not?—At the present moment we could at the National Gallery, assuming space to be available, give valuable instruction to at least half a dozen honorary attachés, perhaps more.

1787. With the existing staff?—With our existing staff, because the instruction perhaps that would be given would be "look at a particular picture well for a morning." That is not an instruction that could be easily given at the Bodleian Library—

1788. You would have to look after him?—Yes. At the British Museum a great deal of such instruction is given, say, by Dr. Hill in the numismatic department. He sends for his honorary attaché and hands over to him a bag containing 10,000 coins picked up at Richborough. That man is working all the time, but I do not suppose Dr. Hill gives him more than a few minutes every morning. It works out all right in Berlin, which is a place I would prefer to copy of the three examples.

1789. One other small point. I did not know that they had so much of a system of lectures at the Louvre. Are those lectures given by members of the staff or are they given by men appointed *ad hoc*?—Both, and very good lectures indeed they are. It is very interesting, but it is rather a curious system at the Louvre. They have these lectures by distinguished men, the course extending over three years. At the end of the first and second years, they have *viva voce* examination for "eliminary" purposes. Then after that, in the third year, they have *viva voce*, written, and thesis; and finally they give a diploma. I do not think it is as good as the German system, which is the one I recommend to be adopted

here. The French object is wider spread than what I have indicated. It is in order to create a personnel capable of being employed in French Museums or upon scholarly missions, which, of course, means the work of research on which the French very much depend for their archaeological reputation.

1790. (Sir Robert Witt): On the question of these students' days, I have before me a letter from one of these commercial copyists offering me copies of famous National Gallery pictures for prices varying from £5 to £35. Would you be of opinion from your observation and from what you know that by far the greatest amount of the copying is purely commercial?—Yes.

1791. And that the number of copyists who are students sent from Art Schools to study technique is really so small as to be almost negligible?—There were 102 copyists in the National Gallery this morning and 98 yesterday. Of those perhaps one-third one might assume to be student copyists. I should meet that case by allowing the student copyists to have a room for themselves for the whole of the week, copying pictures which we would select for them or the Art masters would select from our reserve, if I had got the space; but we cannot give a top lighted Gallery which we are using now.

1792. As the result of our present system I think the figures are that the average on a non-student day is 2,136, which is reduced to 673 on a students' day?—There is a tremendous reduction.

1793. So that a very large proportion of the public is kept out merely for the sake of a comparatively few professional copyists and a still fewer number of student copyists?—That is so.

1794. Just a word in regard to the loans overseas. You are of opinion, I think—I gather that you are of opinion—that the greatest possible care should be taken of pictures sent abroad, and you emphasised, very properly I thought, the case of panel pictures, but I think it is a fact, is it not, that especially we have found in connection with these recent exhibitions that very wealthy Americans who have bought panel pictures for enormous sums—at all events in the case of the Flemish school—are quite willing to send them to London for exhibition there, and would be willing to take the risk of sending there and back across the ocean merely because they were asked to do so and wish to show them at an important exhibition. I only mention that as having some bearing on the risk involved?—That is the case; and, moreover, the care in packing the old panel pictures has improved, with the result that I should think you could insure a picture across the Atlantic at a lower rate to-day than 20 years ago. Is not that so?

1795. I think so?—But none the less I am always frightened, especially where the Equator comes into play.

1796. You also refer to the fact that our great Dominions would not want us to lend them pictures other than the best. Is it not fair to say that the best in a matter of that kind is relative, and that they would not expect us ever to lend the great Masterpieces which should always be on our walls, but yet would be very glad indeed to see the pictures some of which even hang downstairs and are never seen by the public, and according to their standard would be so nearly the best as would give them infinite pleasure?—I think that is a very reasonable criticism; in other words, that if the best is *pro tanto* better than their best, they would be satisfied, and that what comes within that category need not impinge upon our great Masters. If that recommendation is made, I hope that it will be laid down from the outset that the really greatest things shall never be sent. Otherwise they will press us for them.

1797. Might it not be possible, in a case, to make some such rule as the British Museum has made as regards their loans, namely, that they should be of a certain class or of certain cases where we had amply sufficient of the school or artist to be able to

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

spare them? That would perhaps meet it, would it not?—Yes, that would certainly go far to meet my fears.

1798. And the very large number of pictures which I think you will agree are not shown to the public at all, because we have no space to hang them on our walls upstairs, I should be right in saying I think that they run to some hundreds?—Quite—400 at least, I should think.

1799. I think the Trustees of the National Gallery are trying to meet that unfortunate situation by a special exhibition room in which will be shown from time to time pictures moving up into that room and down again to give place to others?—That is so. Room 28, in which we show some water colours, also loans, recent acquisitions, and a series of pictures from the basement and ground floor to which the Trustees attach great importance.

1800. You refer to having a special room in which students could study pictures and copy them if necessary. Would you be in favour of adopting the system which is prevalent in America of having racks on which many pictures could hang and which can be pulled forward so that a student can examine them most carefully under the best possible light and from every point of view? It seems to have worked well in America, and with our ample basement accommodation to which you refer, do you think it would be possible for some such system to be adopted here?—I am afraid I should not hazard an answer to that. I have not seen it and cannot offer an opinion, but if light and safety are safeguarded I am sure the Trustees would consider it in a friendly way.

1801. Are the Trustees anxious to improve in some ways the framing and the hanging of the pictures, and are they taking every possible step in their power to improve the appearance of the Galleries from this point of view?—Yes, it is a matter of, I think, constant study amongst the Trustees and the staff to improve the appearance of the Gallery by more becoming and more scientific hanging. We should also like to be able to do a considerable amount of reframing. We have still many frames which are not creditable to the Gallery, and I wish we could have funds or gifts enabling us to substitute a better class of frames for many of those which unfortunately we have to tolerate. A great deal can be done in that direction still.

1802. Occasionally, applications have I believe been made to the Trustees to extend the hours during which the Gallery is open, and in particular that the Gallery should be open in the evenings, which would of course involve lighting, and in the long summer days until comparatively late in the evening, so that people who are working all day long should have an opportunity of going there. Would the Trustees be in favour of that, except in so far as the matter involved expense, that is to say, would they view it sympathetically if it were not a question of Treasury consent to the additional expense?—I cannot conceive my colleagues on the Board viewing it in any way but sympathetically, subject to this one qualification. I should ask them to consider whether the money so spent would not be better expended in improving the day lighting of our Galleries rather than extending it to the night. On the whole, I think perhaps we want to improve the day light more than prolong the hours. It is a very interesting problem, but we should be quite sympathetic, of course, and should consider it in the most friendly way.

1803. In dealing with the system of Trustees, and of the best way of buying, is it not the fact that until quite recently, ever since 1855 the appointment of a Director was for a limited period of five years, which was subject to extension?—That is the case.

1804. And only quite recently was the change made making the Director a life appointment, a Civil Service life appointment?—Not a life appointment—a Civil Service appointment.

1805. I do not know whether you are in a position to give an opinion as to whether you think that was an advantage or otherwise?—It depends so much upon the personalities involved. If there were a great outsider available, the National Gallery ought to take him on any terms, because the importance of that appointment is so great. If, on the other hand, we proceeded *via* the ordinary Civil Service Rules of choosing a man, we will say, who is already working in the National Gallery or the Victoria and Albert Museum or the Print and Drawings Department of the Museum, we must take him on Civil Service terms. In that case, if he is appointed at 40 to the National Gallery he would have 20 years' service in front of him. But the old system gave a certain elasticity. They were all appointed for five years, and Burton was appointed for four periods of five years. It gave a certain flexibility of change.

1806. (Sir Lionel Earle): Was there pension in those days?—No, he was not a Civil Servant, he was not pensionable except *ex gratia*. This time he is a Civil Servant.

1807. (Sir Robert Witt): Do you agree that that system of five years' appointment of a non-Civil Servant worked very well indeed? The system which existed from 1855 to 1920 odd was a five years' appointment?—It worked quite well. I do not think it was desirable during that period that the powers and duties of the Trustees should have been so much curtailed as they were, but I think the five years' system worked quite satisfactorily.

1808. (Sir Courtauld Thomson): Are the lectures, of which you spoke, ambulatory, or guide lectures, or are they more formal lectures?—In every case ambulatory, the guide lecture. There is no facility either at the British Museum or the National Gallery or the Tate Gallery for such lectures as are given at the Victoria and Albert Museum.

1809. The public have an opportunity of knowing beforehand when those lectures take place?—Yes. There is a publication which comes out every month advertising them in advance.

1810. (Mr. Charteris): Have the powers of sale been exercised?—Yes.

1811. On how many occasions?—The Kruger case is a very curious one and not very encouraging. In 1856 our Statute was passed at the instance of the Board authorising the sale of pictures which were unfit for or not required in the collection. You had to give notice to the Treasury and get their consent, and the sales had to be by public auction, with six months' notice to Parliament. We had bought a collection of Kruger pictures—Kruger was a German collector—and we sold 37 of them under the terms mentioned for £230. The fact is that the advice given to us by Eastlake was perhaps wrong. He thought, "Buy a big collection and scrap the remainder, sell them out." The effect was that some of these Kruger pictures which were not at all bad were very much discredited by this process, questions being asked about the scandal of having bought bad pictures, so that nothing was fetched and we have never sold any pictures since.

1812. I gather that you are not in favour of extension of the powers?—No. If we have pictures to spare I would rather distribute them elsewhere.

1813. By way of exchange?—Yes. To-morrow I would exchange a Turner for a Raeburn with Edinburgh, if they agreed.

1814. You would like to see the powers of exchange enlarged?—Yes, I would, certainly.

1815. At present there is no power of exchange, is there?—No—only permanent loan, which is unsatisfactory.

1816. You would like an out and out exchange to be effected?—Yes, I would not mind that at all.

(Sir Robert Witt): Permanent loan only inside this country.

(Mr. Charteris): Yes.

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

1817. (*Sir Lionel Earle*): You would not like the existing rules modified about the Treasury and so on?—I am afraid of having the right to sell. I do not want the Trustees to cover up their tracks if they make a mistake.

1818. (*Mr. Charteris*): If the powers of exchange were enlarged, would you extend them to foreign countries as well as to England?—Yes.

1819. Did it get as far as the form of a Bill in 1916?—Yes. It was discussed in the House of Lords.

1820. What were the terms approximately, without going into details?—To amend the Acts of 1856 and 1883, extending the powers of sale. It recites that the 1856 powers shall be changed, that it shall extend to pictures which have been bequeathed or given after the expiration of 25 years, with Treasury sanction: the Trustees and Director shall have power to exchange pictures or works of art under their care for any other pictures or works of art, and any money, etc., to be paid shall be applied, etc. Finally, it largely extended the power of loan to any Gallery situated inside the United Kingdom.

1821. I take it, eliminating the powers of sale from that Bill, you would like to see that very Bill re-introduced?—Yes—powers of exchange and extension of powers of lending.

1822. The purpose of it?—Yes.

1823. In 1916 it was the view of the National Gallery that they should have the power of sale?—It was. I do not know quite why, because the Curzon Committee was against it three years before.

1824. You spoke of sending pictures abroad, and in answer to Sir Robert Witt you amplified that. Would you limit the pictures to be sent to the Dominions to English pictures?—No, I should not have a limitation, if powers at all were conferred.

1825. You spoke of it being done by foreign countries for the purposes of propaganda. Would it not be equally advisable that we in this country should have the power of sending to foreign countries English pictures?—Yes.

1826. If it were limited to English pictures?—Oh, I had not contemplated propaganda.

1827. You drew a distinction, if I remember aright, and said the foreign countries you referred to would probably be more reluctant to send pictures that had not a purpose of—?—No.

1828. I understood you to say that pictures other than the pictures painted in the country and sent on loan here, would have been sent here with greater reluctance than the native product?—Yes.

1829. *Per contra*, do you not think it would be a good thing to take power here at any rate to send English pictures for that very purpose?—I quite agree. It is lamentable how little our British school is known abroad, but we are precluded from sending them abroad.

1830. Take the Turners. Recent events have informed the public that there are something like 16,000 Turner drawings in the Tate Gallery. How many people do you suppose have seen them during the course of the last 20 years?—There is a circulation of Turner drawings in the Provinces. We are constantly sending them about—a very fine collection.

1831. That reservoir?—Yes.

1832. There are 19,049 drawings by Turner?—100 finished, 182 unfinished, and 19,000 drawings and water colours.

1833. (*Mr. Charteris*): How many of those, roughly, have been circulated in the last few years?—Not 10 per cent. of them.

(*Sir Robert Witt*): Under 500, I should think.

1834. (*Mr. Charteris*): There is a case where it would be desirable, surely, that power to lend them abroad should be obtained?—I think it would be a very good thing indeed. He was a consummate artist, but thousands of these drawings are not suitable for public exhibition.

1835. (*Mr. Charteris*): Sir Robert Witt asked you some questions about attendance. In the memorandum provided by the Director it appears that you have alternated since 1913 between two days and four days—three years four days, the other years two days. In the years when you had four days, namely, from 1st April, 1921, to 31st March, 1924, those two extra days brought in £6,076 10s. That sum is not to be despised, is it?—No.

1836. As far as the effect on the total attendance is concerned I find it is almost negligible?—Yes.

1837. May I call your attention to the figures on page 7. In 1913 there were two pay days, and the attendance was 617,892 persons. In 1922 there were four pay days and the attendance was 629,243, so more people attended when there were four pay days than when there were two pay days, but, of course, to take individual years like that is, I suppose, of very little guidance. Take the two years together and I take the following year 1923. I see you got an attendance of 582,807. Comparing that with 1919 you get 511,785 when there were two days. So that the attendance on those figures does not appear to be very materially affected?—Attendance is a very mysterious thing. It depends largely upon extraneous things like Wembley or the weather. On the last Bank Holiday in August the attendance was, I should think, 8,000 or 9,000 bigger than the August Bank Holiday the previous year. It depends very much on trade. When trade is good, more people will attend the National Gallery on four pay days a week than, when trade is bad, on two pay days a week; but I say this, in 1922 when we had four pay days the attendance would have been enormously increased if there had been only two pay days. Trade was good in those years.

1838. It would have been enormously increased with two pay days?—I am sure it would.

1839. Therefore, in spite of the extra money which is brought in by the extra two days, you are against them?—We do not think it is justifiable for the sake of, how much is it?—£1,750 last year.

1840. Between 1st April, 1921, and March, 1924, the two extra days produced £6,076?—That is in three years.

1841. And the proceeds of the two normal pay days from January, 1921, to December, 1924, was £7,775, so those two sums together give you nearly £14,000?—I quite acknowledge that is a year's purchase grant.

1842. One year the two days. In three years you get?—Still, we feel that the exclusion of the public has got to be justified.

1843. With regard to the copyist, do I gather you are against the commercial copying?—I feel that the number of commercial copyists is falling so quickly and showing so little sign of revival that it becomes more and more difficult to justify the relative exclusion of the public on those days.

1844. In itself such copying is not an undesirable thing?—No, certainly, I cannot say it is undesirable.

1845. It is more to be encouraged than discouraged?—Yes, perhaps.

1846. Then there is a rather wider question of overlapping. There is at present what I may describe, may I not, as a working rule with regard to the Tate and the National Galleries?—Yes.

1847. Do not you think, in view of the Report of the Curzon Committee, it might be desirable if that was crystallized into a more definite Regulation and laid down as the exact method on which the two Galleries should proceed?—At the present moment I think I am right in saying that it is understood between the two Galleries that 1850 is the datum line for British schools.

1848. It is a working rule?—Yes, which can be varied by, I suppose, circumstances—I do not know. That is the existing working rule.

1849. You do not think it would tend to prevent overlapping if the Report of the Curzon Committee was followed and that working rule was made some-

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

thing more definite and precise?—But does it produce overlapping now?

1850. For instance, the National Gallery purchases, does it not, modern French pictures?—Yes. In 1918 we purchased a number of relatively modern French pictures.

1851. That does conflict with the working rule?—That was at a time when there was no foreign modern gallery.

1852. (Mr. Charteris): The Curzon Report contemplates, as I read it, that as soon as there is a locality for a foreign picture, the modern foreign pictures in the National Gallery would be transferred to that locality where it is established?—I think it is not unreasonable that certain examples of modern continental paintings should be on view in Trafalgar Square. There are I suppose at Trafalgar Square—I have not the figures before me—six modern continental paintings under 50 years old, not more.

1853. It must obviously then always remain an incomplete exhibition of modern French art?—Yes.

1854. Is it not better to concentrate and let it be understood that the concentration does take place at the Tate Gallery from the public point of view, and also from the students' point of view? Is it not desirable to have one complete collection rather than a semi-complete collection?—No, I cannot acknowledge that the collection at Millbank is rendered seriously incomplete by the presence of six modern pictures at Trafalgar Square—six only—painted in the last 50 years.

1855. Is it the idea of the National Gallery to limit itself to so small an exhibition of modern French pictures as that?—The matter has really never been contemplated from that point of view.

1856. I was rather going on the Curzon Report?—I do not quite recall the terms of it.

1857. (Sir Richard Glazebrook): Arising out of your evidence, did not you mention the fact that one Body of Trustees controls the British Museum and the Natural History Museum? It has been suggested that it might be desirable to separate the Trustees connected with those two Institutions, and to have a separate Body of Trustees controlling or looking after the Natural History Museum, not being the same Trustees as those of the British Museum. Has that matter attracted your attention or been discussed?—I do not think it has ever been discussed by the Trustees of the British Museum. I do not know that either Museum would gain by it—paradoxical as that may sound. In other words, people who, *prima facie* as men of science, would be attributable to South Kensington, are extremely useful at Bloomsbury—extremely useful.

1858. The suggestion would be that there should be one Body of Trustees for the Science Museums as a whole?—As a whole?

1859. There are three Science Museums at South Kensington at the moment, and the suggestion has been made that a Body of Trustees dealing with those three Science Museums would be advantageous to the sciences?—What is the third Science Museum?

1860. The Geological Museum at Jermyn Street?—That is a matter for the scientist to advise upon. I hesitate whether the natural sciences at South Kensington Museum would combine very easily with the mechanical sciences in the North, as a single administrative unit. The Science Museum is admirable, one of the best Science Museums in the world.

1861. (Sir Lionel Earle): Do you think it well that Sir Frederic Kenyon should be Accounting Officer for the Natural History Museum?—I do not know whether that does produce inconveniences or not.

1862. He gave evidence that he would have been very glad to get rid of it, because he knows nothing about natural history?—If he would like to get rid of it, I am sure, if the Treasury agree, there is no reason why he should be Accounting Officer; but I do not think the Treasury likes one Department to have two Accounting Officers, all the same.

1863. (Mr. Charteris): This is the passage I had in mind on page 26 of the Curzon Committee's Report, "In these circumstances it was suggested to us that as there is ample space at present available in the rear of the Tate Gallery, a part of this space should be utilised for the erection of a new wing, and that this wing should be used to house, as a separate collection, those modern pictures of the foreign school which at present are exhibited in the National Gallery, together with such others from the Victoria and Albert Museum as it might be found possible to transfer." The recommendation is on page 39, that "the formation of a Gallery of modern foreign pictures and sculptures, including in such term works produced since 1850, is a matter of urgent importance." Next "that the nucleus of such a Gallery be provided by the pictures and sculptures in the National Gallery and in the Victoria and Albert Museums respectively." I was going to ask your view whether, having regard to those recommendations, you did not think it would be advisable that there should be laid down a definite rule rather than that it should be left to a mere understanding as it is at present, but that the rule should divide the respective spheres of the two Galleries?—I should regret a rule which would preclude the National Gallery from having anything modern in it. That particular collection, the Degas collection of 14 pictures and some drawings, I think, was acquired by our getting a special grant from the Treasury during the latter part of the War in 1918. Some of those important pictures are at the Tate Gallery, and I think the few really important French pictures we have in Trafalgar Square are extremely useful, so to speak, bringing our collection up to recent times. I should myself regret to see the great Manet picture "The Execution of the Emperor Maximilian" removed to the Tate Gallery. I would rather it remained where it is.

1864. You do not think it would very much enhance the value of the Tate Gallery without impinging very much on the National Gallery?—I think it would do more harm to the National Gallery than good to the Tate Gallery.

(Sir Robert Witt): That recommendation has in effect been carried out subject only to the National Gallery retaining just a very few in its rooms, otherwise it has been carried out.

1865. (Mr. Charteris): That is the case with the present Board, and no doubt that would go on. With regard to what you describe as the Friedländer School, that would be in Berlin?—Yes.

1866. Would you like to see something of the same kind here? Would it be possible for us to be furnished with a detailed statement as to what the Friedländer School is and how it works?—I went to Berlin to ask him about it last Easter. Broadly speaking, he and a few of his colleagues consider applications from young men and women to go through a course. He pays the selected candidates nothing. He insists that they shall work for two years, and during those two years, subject to their convenience, he passes them through four different departments, it may be ceramics, prints and drawings, pictures, or else the oriental or classical side. He lays down rules for their work and discipline. As a rule, he will not allow them to work for more than two years or in less than four departments, and then he says goodbye to them. They have no diploma as they get in Paris—in Paris they get a diploma—but they have a statement that they have just passed through examination—a statement that they have passed through these courses—and no doubt when there is a vacancy at Cassel, Stettin or Hamburg, the recommendation by Dr. Friedländer has tremendous weight.

1867. He admits people whose ultimate intention is to constitute themselves dealers?—Yes.

1868. (Sir Lionel Earle): Do those people develop into budding keepers?—Yes.

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

1869. (*Sir Henry Miers*): With regard to copyists, the 8,600 in 1926 means attendances, not individuals?—Attendances.

1870. Is it known how many individuals those attendances represent?—They are registered.

1871. (*Sir Robert Witt*): I have the average daily attendance of copyists—for May, June, July, August and September, 1927, 89, that being the number of new students admitted; in the year 1926 89 students were admitted; in the previous year 118 new students, in 1924 112 new students. There remain large numbers of elderly persons. I cannot tell you how many there are because there are a number of old ladies and gentlemen too who have their names on the books like readers in the Museum.

1872. (*Sir Henry Miers*): That is the point. There are a large number who go on from year to year?—Yes.

1873. It is not exactly known how many there are of those as compared with those who come as serious students?—No. It is very difficult indeed actually to know how many students do attend to-day, for instance, because yesterday so-and-so would say to the messenger, who would ask "Are you coming to-morrow?" when he put his easel away, and the man replies "Yes." The easel is put out and the man does not come. It is only by looking at the paint boxes and so on that you can tell whether the student has been or not. If you go round to-day, you see many pictures on easels but the students are not there.

1874. In addition to the number of attendances, it could be stated how many people have their names on the books?—Yes, and I can give you the numbers of new students. There were 89 new students in 1926, 118 in 1925, 112 in 1924. Beginning with 1892 there were 311; in 1893, 262; in 1894, 272.

1875. (*Chairman*): To what do you attribute that considerable diminution?—I have not a doubt that it is partly due to the admission of the public. I think that, first done in 1881, certainly reduced the number. Secondly, the advance of photography has affected the numbers.

(*Sir Robert Witt*): You buy a big photograph for £5 instead of paying £50 for a copy.

1876. (*Sir Henry Miers*): Do you exclude professional copyists from that?—A new student is a new copyist. It does not mean he is a young man at an art school.

1877. With regard to page 3, the making of the Galleries more attractive to the public, has the provision of a really good refreshment or tea room been seriously considered?—I do not think we have ever considered that.

1878. In Manchester and Glasgow the greatest possible importance is attached to the existence of a really good tea room. At the new Colonial Museum in Amsterdam they also attribute the greatest possible importance to a good tea room?—I will talk to my Trustees about that.

1879. (*Mr. Charteris*): Is it supposed to be a paying proposition at the British Museum?—I am quite certain it is not.

(*Sir Robert Witt*): We have one at the Tate Gallery, and it just pays.

1880. (*Mr. Charteris*): Now that it is decorated, it may pay better?—It may.

1881. (*Sir Henry Miers*): The question is not one of getting money to make it self-supporting, but of having the greatest possible effect in getting the right people to come to the Museum and to keep them there?—I will remember that, because we are discussing the question of extension at the National Gallery now.

1882. (*Sir Lionel Earle*): On the subject of commercial copyists, do I understand you are absolutely in favour of the abolition of all fees, and of providing future accommodation for the students?—I put it a little less decisively than that. I would say we feel a certain responsibility towards these

people who have had this privilege for 50 years, some of whom presumably depend upon its exercise. At the same time, I myself am very uneasy at a handful—I call it a handful—of copyists excluding a large number of the public. I should like, in considering our extensions of building, to see how far we could give sufficient lighting in a New Gallery to permit the students to copy pictures from the reserve on six days a week instead of copying pictures in the public Gallery on two days only a week, and to do so in such privacy as would ensure far greater comfort than they can even now have on pay days.

1883. If you had that permission, would you abolish fees?—Oh, of course.

1884. (*Mr. Charteris*): Is it only the pictures from the reserve that you would allow them to copy?—Yes. I hope they are good enough for the students.

1885. Sargent always used to recommend people to go to the National Gallery to copy individual pictures which he named?—I know.

1886. That puts an end to that. He was always telling people to copy a particular Franz Hals in the National Gallery as a start?—I am afraid that is impossible. You could not take a picture out of the Gallery and put it in a special Gallery for copying.

1887. (*Sir Lionel Earle*): It would merely mean that either the student or the commercial copyist would be working under less favourable conditions now than on free days. You would not prohibit a person copying in the Gallery at all?—I had not thought of permitting copying when the public is present.

1888. That is impossible?—It is very difficult indeed.

1889. It means the abolition of copying in the Galleries altogether?—I think it would. It is the fact that there is no fee at the British Museum that is eliminating the copyists from the Museum, otherwise there would be people copying the Elgin Marbles all day long—students.

1890. (*Chairman*): You mean they are hustled by the public?—Yes—they stand round and talk.

1891. (*Mr. Charteris*): What happens abroad? There there are fees all the time? There is no distinction between a students' day and other days?—At the Academia the fee is 8 lire, at the Uffizzi, 12.

1892. (*Sir Lionel Earle*): You spoke of the very serious effect of light. Is not that due in the old Gallery largely to decoration?—Yes.

1893. The covings are in my opinion unduly high. The higher you go the less light you get. You see that in the Mond room which is lower than the Gallery to which it is adjacent, and I still think personally that is unduly high. You could get more light, and I do not think you would suffer much architecturally by lowering it slightly in a small room like that. I was there the other day and it struck me that the chief effect is due to the monstrous decoration of those great high rooms. If the brown covings alone were lightened I think you would get an enormous addition of light?—I am quite satisfied that that is true.

1894. I think it might be improved in other ways, but I am sure that the decoration has a great deal to do with the defective light in those rooms?—Very true.

1895. The re-construction of those rooms would be a very expensive business, but I believe you would get certainly 25 per cent. more light if you decorated them in a different way; and other things might be done as well—perhaps by providing different glass. We had an illustration in Edinburgh the other day of a great increase of light produced by a certain form of glass.

1896. Then I do not quite understand your answer on page 2 when you talk about what you hope as regards the extra galleries. That does not correspond with the designs we got out a few years ago for the National Gallery as to what Sir Charles Holroyd would like to do?—It does, on the whole.

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

1897. Does not it conflict rather with your answer on the first page that the one great distinction of the National Gallery is its compactness and comparatively speaking its modest scale. If all those galleries were built it would almost double its size?—No.

1898. By a third?—Not a fifth but by 120 yards. (Plan produced).

1899. The whole of that mauve part?—Yes.

1900. You go so far as to recommend all that?—Yes, not now, Sir Lionel, but I think that is the logical completion of the Gallery. I do not think, considering the overcrowding there is already and our expectations in the next 50 years, that is too much.

1901. If you had those Galleries, would you exhibit any of the 400 pictures in your vaults already, the lot or any of them, or would you sell them or would they be worth selling?—There is a great number of those pictures which would on no account come up stairs, permanently.

1902. If that is so, could not they be more freely loaned?—A certain number of those which will not be hung upstairs are not good enough to be lent.

1903. But the others are worthy of being lent?—There are certainly some that are not worthy to be lent. They are doing no harm down below. We shall get no money for them and we should get no equivalent.

1904. They could be used for decorating Embassies or Government offices. That would be far better than keeping them in the vaults where they cannot be seen. There is the Admiralty building or the Prime Minister's house where they could be shown?—Let us be quite clear. There is a considerable number on our ground floor of important pictures which ought to be shown upstairs and which in time will be shown in Room 28, or elsewhere. Secondly, there is a group down below which we allocate to Provincial Exhibition, which we send round and round. We never refuse an application for loans, providing we are protected and satisfied as to the custody, insurance and fire protection. Thirdly, there is a group of interesting, curious, amusing pictures which are worth keeping for the sake of the specialised student. Finally, there is a little group of pictures which are of no use to us, for which we would get nothing if we sold them, and they are not good enough to send to places like Glasgow. There are about 50 pictures of this category.

1905. The other question as regards the National Gallery that I wanted to ask was, are you satisfied with the method of appointment of the Trustees? It is done by the Prime Minister, as you say, but would it not be a good thing to do rather like the Fine Arts Commission, that the Board of Trustees alone should recommend to the Prime Minister whom they think would be the most qualified man to be appointed, rather like the Fine Art Commission in America. You do that in your own Fine Arts Commission here. Could not the Chairman write to the Prime Minister and say that Mr. Snooks is the most prominent man in our opinion and so prevent any political manœuvring whereby you might get undesirable Trustees?—I am sure that the Chairman of the Trustees at the British Museum or elsewhere, if he thought fit, could make such representations. There is nothing to prevent it being done now.

1906. We have all known cases where individuals have been appointed—we have known cases where there were perhaps political influences at work?—It would be very unfortunate if it occurs.

1907. My object is to try and stop that and help the Trustees to get suitable people?—I limit myself to replying that if such a view were taken it might be the duty of the responsible Trustees to make representations of that character.

1908. The other question about the National Gallery is this. Should the hanging of the National

Gallery be left to the Director or the Trustees?—I think it is laid down that the hanging of the Galleries is the duty of the Director. The Director, however, is a Trustee himself and any representation made by his colleagues on the Board of Trustees would no doubt receive attention.

1909. Now, as regards the British Museum Standing Committee, a Body for which I have the highest respect and admiration, when it has a vacancy does it fill that vacancy itself?—Yes, by Statute.

1910. Not the whole Body of Trustees?—The Standing Committee under Statute, Section 4, fills it. At one time an effort was made by the Prime Minister, not the present Prime Minister, to appoint to the Standing Committee, but that was resisted successfully as under Statute the duty of the Standing Committee is to fill vacancies.

1911. (Chairman): From the general Body of Trustees?—Yes.

1912. (Sir Lionel Earle): It must be from the general Body of Trustees? They cannot bring in an outside man?—No. My impression is they can only bring an outside man in on to the Sub-Committees. Yes, that is so.

1913. (Sir Henry Miers): It has to be confirmed by a general meeting?—Yes, that is so.

1914. (Sir Lionel Earle): You would like the Body of Trustees at the British Museum to be altered as regards hereditary Trustees and so on?—No hereditary Trustee serves on the Standing Committee as such.

1915. No, but you might get a disreputable fellow as an hereditary Trustee?—There are disreputable men in the House of Lords, where he has a vote, but in the British Museum he is quite innocuous.

1916. You would hardly say it is up to date?—Not at all. No, our tastes are archaic. "Il n'y a rien de plus respectable qu'un ancien abus," as Voltaire said, but we manage to work very well.

1917. I am not talking of the British Museum now, but would not a co-ordinating Body make some difference between the rival claims? From my departmental point of view I attach great importance to that because I may get various claims, one man demanding 1,500 cases and another man 3,000 or 4,000, and I can never have independent opinion as to how far the very exacting demands are really justifiable. I am not only taking that material point of view, but the question is whether you would not get an advantage in general administration by having a small Body drawn from the various Trustees to co-ordinate on questions of every kind.

(Sir Robert Witt): Co-ordinate all the Museums together—a super Body.

1918. (Sir Lionel Earle): A small senate to whom special questions affecting Museums could be referred, a standing Commission if you like?—Well, it depends on what they have got to do. If the Government care to appoint half a dozen gentlemen representing these different interests to whom specific problems will be referred by the Office of Works for the Government, they clearly can do so; but if you are going to have a body of super Trustees they would have to be whole-time people if they are really to control the development of these Museums. The work is gigantic.

1919. I think you are very much opposed to the Minister of Education being above the National Gallery. Is the Secretary of the Treasury the best man to represent you? If you had a person like the Lord President of the Council, would not he be a better person to fight your claims as regards any Museums rather than dealing direct with the Treasury?—Ah, that is a very difficult question. You would think that if that were the case the British Museum, with its 17 Ministers, would be a pretty strong Body.

1920. They never go there, you say?—We find they are most unhelpful people. I would rather fight my battles for the British Museum on the strength of

2 March, 1928.]

The Right Hon. THE EARL OF CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

the Standing Committee than on the help of our 17 Ministers, who are of no real use to us.

1921. On questions of Finance and matters of that sort you would go directly to the Cabinet?—Directly to the Cabinet; or, as recently, to the Prime Minister.

1922. We have had lots of cases that the Chancellor of the Exchequer has turned down?—Yes. The Trustees of the National Gallery, if necessary, could get an interview with Mr. Baldwin next week—such is their status.

1923. (*Sir Robert Witt*): In regard to the question raised by Sir Lionel Earle, you said any super Body would have to be whole-time people. Would that apply to a body of men, perhaps delegates from all the different Boards, that would merely sit as a kind of Board of Reference on any particular

subject to whom the rival claims or difficult questions arising between the various museums would be referred?—You would have to organise it very carefully. You must not, either in the interests of the Museum itself or the Staff, have a Court of Appeal unless it is a really responsible Body, otherwise we shall always be referring things to the Central Body of Trustees. If, on the other hand, your idea is to have a central Body of 6, 7 or 8 or 10 persons representing all these different groups to whom specific questions could be referred by the Government or the Treasury, then clearly the duties become much less onerous; but that would not be a Body really exercising control over all these Museums. I think it is a whole-time job, if it is to be permanent and continuous.

(*Chairman*): We are greatly indebted, Lord Crawford, to you for your very valuable assistance.

(*The Witness withdrew.*)

Note.—See also the further evidence given by Lord Crawford on the Eighteenth Day.

ELEVENTH DAY.

Thursday, 15th March, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

Sir MARTIN CONWAY, M.P., Litt.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).

Mr. J. R. CHAMBERS (*Assistant Secretary*).

Sir FRANCIS G. OGILVIE, C.B., LL.D. (*President*), Dr. HERBERT BOLTON, Dr. E. E. LOWE, Mr. T. SHEPPARD, and Dr. J. J. SIMPSON (*Secretary*), on behalf of the Museums Association, called and examined.

The following memorandum was submitted by the Museums Association at the request of the Royal Commission:—

The Museums Association welcomes the opportunity of replying to the questions put to it by the Royal Commission on National Museums and Galleries, for it appears to the Association to be essential for the well-being of Provincial Museums that there should be closer co-operation between them and the National Museums.

For many years there have been close relations between members of the staffs of the National Museums and those of the Provincial Museums. These relations have afforded valued stimulus to the officials of Provincial Museums and have greatly assisted in the development of Provincial Museums along lines that would not otherwise have been possible.

While paying warm tribute to the officials of the National Museums, the Museums Association feels that such relations—which have hitherto been essentially personal—should be definitely recognised and encouraged by the controlling bodies of the National Museums.

The Association has noted with satisfaction the growing co-operation between the National Museums of this country and other Central Museums throughout the Empire.

It feels that even closer connections are necessary within this country, and that not until such a relationship has been established will the museum movement fulfil its proper function as an instrument of education in the country and in the Empire.

QUESTION 1: LOANS.

The question of Loans from the National Museums to Provincial Museums is one of paramount importance.

It is now sufficiently well established that Museum Collections consist of two, if not three, definite divisions:—

- (1) Exhibition.
- (2) Reserve or Research.
- (3) Redundant.

Divisions (1) and (2) constitute the Museum proper, and Division (3) undoubtedly exists in all institutions which receive heterogeneous donations or purchases.

The Museums Association would press for loans of original objects from Division (2), and would urge that the National Museums should be empowered to dispose of, either by gift or sale, surplus material in Division (3) to such Provincial Museums as would be in a position to make really good use of them.

The Museums Association realises the great value of the Circulation Department of the Victoria and Albert Museum, and would like to see the range of Museum objects available for circulation extended to Physical and Natural Science, Archaeology, etc. It would also like to press that the "loans" made available under the existing scheme should include, as far as possible, "originals" instead of "reproductions". This could be done without hampering the work or value of the central institutions and would effect an economy in their storage accommodation.

15 March, 1928.]

Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

These suggestions for utilising surplus material in the possession of National Museums find illustration—on other planes of Museum work—in arrangements between the several museums of a district for mutual assistance in the development of sections of their collections; and again, in the policy of cities where sectional or branch museum collections are exhibited at outlying centres within the city areas.

QUESTION 2: FEES.

The great majority of Provincial Museums are Municipal, and in these the preponderance of free admission is overwhelming. The Museums Association is unanimous in considering that this practice should continue.

Fees for admission are charged in certain museums which are owned by private societies. Such charges are called for as a means of raising revenue towards the cost of maintaining the museums. In the opinion of the Association they are a serious drawback to the usefulness of these museums as factors in promoting the education or enlightenment of the community. Actual receipts from admission fees do not, in any case, go far towards the cost of maintaining a museum, and the museums here in view are nearly always in a state of financial embarrassment—so they are very seldom progressive.

QUESTION 3: PUBLIC INTEREST.

"A": The steps taken to stimulate public interest in Provincial Museums are sporadic and depend chiefly on the activities of the Curators or of the Committees of the individual museums. Action takes different forms in different towns; but the means employed are usually some of the following:—

Public lectures, articles in the Press, school loan collections, conducted tours in the museums, special lectures or demonstrations in the museums, broadcasting, co-operation with Scientific Societies.

"B": No organised propaganda of a National character exists for encouraging gifts or benefactions. This again depends on local effort.

In some towns there are associations known as Societies of "Friends of the Museum", whose members subscribe to the Museum funds for the purchase of specimens, but in most towns such support of the Museum turns upon personal contact between the Committee or Curator with individuals.

Where a general appeal is being made the local Press assists materially in furthering it.

There are two other points which the Museums Association would like to put before the Royal Commission, namely:—

(1) Grants in aid.

(2) Assistance from the staffs of the National Museums.

(1) GRANTS IN AID.

The Museums Association is of the opinion that the system of "Grants in Aid to Provincial Museums" does not operate satisfactorily, and would ask that the system be reviewed in order that it would meet the requirements of small, as well as large, museums. At present it is only museums with sufficient funds to make purchases that can hope to benefit by the "Grant in Aid".

(2) ASSISTANCE FROM THE STAFFS OF THE NATIONAL MUSEUMS.

In the National Museums, with their larger and more technical staffs, experiments and advances are continually being carried out in matters of technique. Some system might be devised whereby the results of such researches might be made available to the Provincial Curator. Further, expert guidance by specialists in the National Museums might be extended to non-specialists in Provincial Museums. The Museums Association fully appreciates that the

individual members of the staffs of the National Museums are most willing to help in either of these directions, but official recognition of such help would greatly facilitate action. If it were systematised there would be less duplication of effort and a saving of expense and time.

* * *

It may not be too much to hope—or indeed to expect—that the closer association between National and Local Museums in such directions as are indicated in this note, would result in an increase of opportunities for Local Museums and their officers to afford real help to the interests of the National Museums.

EXAMINATION OF WITNESSES.

1924. (Chairman): Sir Francis, we are greatly indebted to you for your valuable Memorandum. I think the most convenient method of taking the evidence is to call upon individual members to put forward their views on particular points?—(Sir Francis Ogilvie.) I think that will be convenient, my Lord. Might I say just before you begin, that it has fallen to me as President for the year to make arrangements for the giving of evidence on behalf of the Association. In accordance with what I understand will be most useful for your Commission, I have associated with myself and the Secretary to-day three of the ex-Presidents of the Association, each of whom has had considerable successful experience of responsibility in provincial museums and galleries. I want to say that the Association includes a large number of relatively small institutions and that in the evidence to be placed before you the conditions and needs of these have had prominent consideration. We are very fully alive to their requirements and we want to make sure that we feel we are speaking in the interests of the small museums as well as in those of the larger ones. The Association is deeply concerned in the welfare and prospects of those museums; and in the representations we are to make to you, matters which concern those in any special way or degree have received careful attention. In support of the points set forth in the Memorandum which we have submitted, the several witnesses will tender evidence which we believe to represent the views and desires generally accepted by the Museums Association. They may also, of course, where you ask them, state their own individual views.

1925. (Chairman): Then we will ask Dr. Bolton to give us his evidence.—(Dr. Bolton.) I have been asked to speak on behalf of the Association first of all upon Loans from National Museums, Circulation of Museum Specimens, and also Grants-in-Aid.

In regard to loans, we think that the national museums must of necessity have large masses of material of great importance to us and of comparatively little importance to them. We consider, sir, as a result of our experience that the national museums must have divided the bulk of their collections into (I) exhibition series, specimens which must be exhibited, and (II) essential reserves which are held for replacement, for reference and for research, and which must always be kept for that purpose. But on the other hand there remains, we think (III) a residue of collections which cannot be used in either of those two ways and these therefore are of secondary importance or perhaps even not essentially of national importance; yet for country museums they would be of the greatest possible value because the opportunities which these smaller museums have of affording specimens are more restricted than those of the national museums. We would therefore like to urge that the national museums should be empowered to distribute these non-essential specimens to those provincial museums which can show that they can make good use of them and apply them to education. That is so far as regards loans,

15 March, 1928.]

SIR FRANCIS G. OGILVIE, C.B., I.L.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

In regard to circulation, the value of the present method of circulation of the limited series of specimens from the Victoria and Albert Museum has been demonstrated to us over a very long period of years. It has been shown to the provincial curators and to the public in various towns that there are certain objects which touch human life in part and human development of which we had no previous knowledge except through isolated specimens. The sending out of definite groups illustrating this, that and the other, from the Victoria and Albert Museum has educated both the curators and the public in these directions, and they want more; they are asking for more. In addition to that, these collections have had a very practical value in the development of art and elementary and secondary education in all the cities and towns where they have been exhibited. They now supply a very real want and one which is growing very rapidly. That I think will give you some idea of our circulation.

Now more especially must I speak of loans or gifts. In regard to those, a great need now exists in provincial museums for material illustrative of ancient history, Greece, Rome, Egypt, and so on, and the ethnographical material of the native races, and more especially of British Colonies. We find that people intending to go, or thinking of going abroad desire to gain information about the concrete characters of the native people of those places; and we cannot illustrate the history of those people, their characters, habits and customs; we cannot illustrate as we ought—to people wishing to emigrate—what each Colony or Dominion has to offer, or what is the general development of each. We want to be able to do that, and I believe that there is in this country much material which could be brought into such service. We also desire to utilise the residual material held by the national museums, obtained by such expeditions as those to the Arctic Regions by Scott, Shackleton, etc., or the material brought home after the opening up of new tracts of country in Africa and elsewhere. Our visitors are clamant for information of such types, and we want to be able to help them there. Many collections of these categories are offered to the British Museum, and they must have a good duplication of much of this material, because it has come to them over and over again from the same localities over a great period of years. We believe it may happen that such collections are offered to the British Museum and refused because they do not want them. We would like to have some machinery by which they could be diverted to provincial museums. That perhaps will serve you for a general statement.

(Dr. Lowe): I have been asked to speak with special reference to the circulation loans of the Victoria and Albert Museum, especially with regard to their possible extension in scope. I should like first to follow Dr. Bolton by expressing hearty appreciation on behalf of the Museums Association and its constituent members of the vast help which that Department has given to the museums of the country during a large number of years. Unfortunately, the Leicester Museum has not been able to take advantage of that help to the extent which some institutions have been able to do, for reasons of lack of space and other difficulties which I need not enter into. So perhaps I am not in the position I might have been to make suggestions with regard to the Circulation Department from the provincial curator's point of view, but I would like to say that I feel, and the members of the Association feel, that the objects included in it should be as far as possible originals, and that the stock of originals should be added to rather than that the stock of reproductions should be increased. I am afraid that once it is realised that an object is only a reproduction, a great deal of its interest for the public and for the curator vanishes. I would emphasise, too, the special value of those groups of objects which are accompanied by descriptive pamphlets setting out, in outline at any rate, the

principles of the subject which the group illustrates. I would instance the series of tools and plates and prints illustrating the art of engraving, prepared and circulated by the Victoria and Albert Museum, as being a particularly excellent example. I would emphasise the importance of originals too, from the point of view of influencing the public. I think often in the past collections have been sent out with the idea of influencing the art work and the craftsmanship of a given area; but we have to remember that the public come in large numbers to the museum and it is of equal importance to influence their taste and so to secure purchasers for the improved work which these collections are directed towards inspiring. I think it is very important that Museums which devote themselves in any way to matters artistic should direct themselves towards developing public taste and to cultivating an impatience with the ugliness which we see around us to far too great an extent.

Further, I am particularly asked to press for the extension of the Circulation Collections to the fine arts. They are largely composed at present of objects and collections illustrating applied art and I would urge that the fine arts, painting, drawing and engraving, be included to a much greater extent than at present. In the matter of modern examples of the fine arts, it is becoming easier for museums and galleries to help themselves, because there are two or three organisations, including the Museums Association itself, which are forming temporary collections of modern work to be sent out on circulation to museums and galleries; but it is not easy for them to help themselves in the matter of work of former periods, and I do suggest, assuming Dr. Bolton's classification may be accepted, that many paintings and other works might be taken from those non-essential reserves he has spoken of, or even from reserves of a higher class, and gathered together to build up circulation collections. Collections to illustrate schools of painting, for instance, Spanish or Italian art would be very valuable. Or definite subjects might be illustrated—for example a collection of portraits would be extremely interesting to many of us in the provinces. I suggest, too, that, as far as possible, such collections should be accompanied by explanatory notes or pamphlets. I think that collections of this kind would be even more useful and appreciated than those dealing with decorative art because they are easier to handle and to house. From the technical point of view it is easier to hang a collection of paintings than to accommodate a number of cases of objects, and I think it would be found that provincial museums would be extremely ready to avail themselves of these collections if they were available. The British Museum has a very fine collection of engravings which it circulates and which many of us have been privileged to borrow; the Tate Gallery and the Victoria and Albert Museum have water colours; and there are others. We do urge that these collections of works of fine art should be greatly extended.

We would ask a similar extension with regard to the other subjects. We do not see any reason for limiting the collections to applied and fine art and we suggest that they might be extended to embrace science and archaeology, and in fact all the subjects with which museums deal. I could instance many scientific collections which one would have been glad to borrow, but I reserve them in case you may desire, Mr. Chairman, to ask for them afterwards.

With regard to the means by which this should be attained, perhaps it may not be for the Association to suggest those means, but we have thought it might be possible to form out of the existing Circulation Department some sort of Central National Circulation Department to which non-essential objects from the various national museums might be contributed in order that such an enlarged system of collections for circulation as I have been suggesting might be organised. It cannot be imagined that museums, either national or provincial, can continue

15 March, 1928.]

Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

to accumulate material indefinitely within their walls. It would seem that some extended use must be made of it, and I think the national museums could make use of their material to help the provincial museums in this way; then the provincial museums for their part might set to work more extensively than they have done to help the regions immediately surrounding them.

If a National Circulation Department were established I hope that it might form a recognised channel through which provincial curators should, so to speak, have the right to appeal for assistance in any of those matters with which they find they have difficulty.

1926. (*Chairman*): You mean technical advice?—Technical advice and expert advice. That, however, is a matter which is to be dealt with later by Dr. Simpson. I would like to say finally, as entirely my own view and not in any sense as the Museums Association's, though that body has discussed the matter, that I have ardently hoped that in connection with such a far-reaching Department it might be possible to find official Headquarters for the Museums Association and to bring about, or help to bring about, the intimate association between the national and provincial museums we all wish to see.

(*Chairman*): Perhaps before proceeding with Mr. Sheppard's evidence on the other point Members of the Commission would like to ask questions of Dr. Bolton and Dr. Lowe.

1927. (*Sir Lionel Earle*): In the evidence we have had before us by directors of the great museums in London when discussing this question of circulation a good number of the directors, I think, have shown nervousness, inasmuch as they have stated that several of the local museums are so deficient as regards proper housing of valuable exhibits and also as regards supervision as to make the directors hesitate in sending them better articles from the great storehouses in London. I do not know whether that is the view of the Association or not or whether there is any sound ground for the statement, but certainly we have had it on more than one occasion.

—(*Sir Francis Ogilvie*): My suggestion is that where that is the case it is very important that it should be put to the authorities concerned, because this might be a most effective and desirable means of getting them to improve their accommodation and management and government and security.

1928. But from your experience as an Association you think there is probably some truth in the statement as regards certain localities?—The Association includes a very large number of museums of greatly varying standards of efficiency. Those to which it would not be really justifiable to send such objects must be, although considerable in number, relatively small museums. To many of these a central circulation authority would, no doubt, have to say: "Your museum accommodation is not up to the standard that is required for the custody of the materials that you would like to have on loan, and until you put yourself right in that respect we cannot consider your application." The mere fact that such a museum authority had to respond to this effect would go far to secure the required improvements in accommodation.

1929. It is not only, I understand, as regards buildings alone, but also as regards supervision?—And deficiency of that sort pointed out to a museum by an authoritative official whose opinion was of definite value would have a very satisfactory effect. We quite recognise that there are such museums and we think that that matter should be put right.

1930. (*Sir Henry Miers*): I should like to press Sir Lionel Earle's question a little farther. It is suggested that there should be some machinery by which it could be known which museums would be capable, either from having sufficient space or having proper supervision, of housing loans satisfactorily. Has any suggestion been made as to how that machinery can be constituted? Would it have to

be a sort of Advisory Council that would know all about the museums?—At the present moment the only control of collections is through the Circulation Department of the Victoria and Albert Museum. There is no authority for supervising the museums. The Museums Association does not exercise any authority; it does not even criticise individual museums. Its functions are rather aimed at affording museums an opportunity, by comparing notes and discussing affairs of importance generally, to get at a definite, regular and continuous improvement both in the nature of the accommodation and supervision and in the standard of exhibits which are shown.

1931. (*Chairman*): There is no classification, then, at all in the museums?—No official classification. I have no doubt that the Circulation Department of the Victoria and Albert Museum in relation to their own particular connection with museums have a list of museums which are satisfactory in those respects, and they may have a list of those who have applied for circulation objects but have been turned down because of those defects.

1932. (*Sir Henry Miers*): The point of my question was, if the Association became more widely representative it might execute that function itself or whether some system of affiliation such as prevails in Wales would be contemplated. There the National Museum has affiliated to it almost all the Welsh local museums, and it does exercise that sort of supervision.—The seed of voluntary organisation for joint supervision has been sown, but it has not emerged in the form of a reputable plant except in one or two areas. Naturally, professional opinion inside the Association goes a long way towards improvement in this respect, but it is difficult to secure the necessary action in many smaller towns where public opinion is not yet sufficiently educated in the matter. I think if it is left entirely to voluntary effort it would take necessarily some time, because voluntary effort even on the part of a strong Association must go very slowly where it is dealing with public authorities. That is the real difficulty of intervention.

1933. What I mean is that any given national museum would find it very difficult to know to which of the smaller museums in the country it could properly lend without being able to appeal to some advisory board or body?—Of course, the proposed expansion or the relative permanency of loans on circulation (definite groups of objects sent from a particular centre in London to a number of different places all over the country, as conducted from the Victoria and Albert Museum), is coincident with inspection of the buildings and examination as to their security. Any expansion of the circulation system would necessarily involve a corresponding expansion of the lists of museums that were inspected; so that with the expansion of the circulation of loans system you would have a concurrent expansion of supervision and advice, correction and instigation in this matter.

1934. It would seem that each national museum should have something like a circulation department such as is possessed by the Victoria and Albert Museum?—That would be a matter of organisation which the Museums Association has not tackled. My own personal view would be that it is the sort of thing that might grow. We have at present several centres of circulation. Supposing the National Museums and Galleries as a group, were to say "We will do what we can," it might be arranged as a matter of convenience that all correspondence relating to circulation would go through an established centre, say at South Kensington. In the case of anything concerned with loans to be made available from other national museums or galleries, the initiative would come from the museum concerned working through one of its officers with the corresponding officer at the Circulation Department. I think it would be desirable to have the distribution of loans

15 March, 1928.]

Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON.
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

on circulation conducted at least with the knowledge of registration in a single office.

1935. I take it that it is held to be very desirable that there should be no expense in which the museum receiving loans would be involved, but the smaller museums have no funds by means of which they can obtain loans from the Victoria and Albert Museum?—That is so. This is a matter really of far greater importance in the smaller museums than in the larger ones. The museums represented by my colleagues here are not really much dependent upon the existing circulation loans, but the smaller museums are, and the usefulness of those loans is in proportion very much greater in the smaller museums. It is just there and through that sort of activity that it is possible for the influence of the standards set up by larger museums to be adopted more widely.

1936. (Sir Lionel Earle): It is the small museums which I think are really of importance and for which you are specially pleading; but from what I understand from the museums it is not so much a question of increasing the number of things they send but they hesitate to increase the quality or value of them on account of the kind of conditions in which they know they will find themselves, not only as to defective buildings but still more, inadequate supervision?—Yes. Perhaps I might say personally that the Victoria and Albert Circulation Department was under my charge at one period; I was an officer of the Department under the Board of Education; and that question really was an important factor. When the officers in charge of the circulation of those objects had the applications before them and had in front of them also the list of things they were prepared to send out, the accommodation and supervision possible in the various places were definite items in the consideration of the allocation of the loans. We were dealing with an attempt to improve and perhaps co-ordinate a very large national service which is practically voluntary; that is to say it is a service voluntary to each institution; most of these are municipal in one form or another; but the initiation is voluntary on the part of the governing body of the museum whatever it may be, and there it is not possible to make more rapid progress simply by the setting up of a code of rules and regulations without having something in the nature of a personal contact which will show the application of that code to the precise conditions in each museum. That is the sort of idea that must dominate it.

1937. (Sir George Macdonald): I think I understood Dr. Bolton to divide the contents of the national museums into three categories?—Might I say that we should be very glad if you would allow Dr. Bolton to change the short description of the headings he gave in the first instance. Perhaps he would read it again because it is rather important. —(Dr. Bolton.) It reads now as follows: "Character of Museum Collections." I. "Exhibition Series." II. "Essential Reserves held for Replacement, Reference and Research." These two groups constitute the permanent collections of constant value. Then III. "Collections, and Residues of Collections which are of Secondary Importance or Non-essential and consist of material which the Staff find unnecessary or unsuitable for the purposes of the Museum but which is retained because of its value if rightly placed." If such collections, or parts of collections, cannot be rightly placed by the National Museums, they could be distributed to provincial museums as loans of a permanent or non-permanent character. We are taking the loans now in the wider scope which has been outlined.

1938. In your Memorandum you appear to suggest that loans might be given from category II as well as from category III, but in your evidence you seem to suggest category III only. I wanted to be quite clear as to what your point was?—There is a little difficulty there. Perhaps I could explain it by giving an instance. With regard to the collections brought home from one of the Antarctic expeditions, the sweep of the deep-sea trawl brought up large

quantities of crustaceans. These were held in the British Museum to be essential for research, and certain selected specimens were put on exhibition, whilst others were retained for Group II. The remainder, equally good and of precisely the same character, came into category III, although they could equally have gone into category II.

1939. Is that the sort of thing you had in view when you were drawing up the type-written statement that was submitted?—Yes, because that constantly happens.

1940. If I follow you correctly, from what you say with regard to those specimens the third class would no longer be in category II but would be in category III?—That is, those they could not possibly use, however perfect they might be.

1941. Yes, but here you say the Museums Association would press for loans of original objects in division II?—This view I discarded as not practicable.

1942. Then there has been a great deal said about the necessity for care in looking after these things. I gather that Sir Francis Ogilvie thinks that it would be sufficient if before lending the objects the Central Authority took precautions to satisfy themselves that the arrangements made for them were adequate?—The South Kensington Authorities always make that a very strong point, and it has this very good result that it does impress upon the Local Committees in a way that they would never understand otherwise the importance of taking adequate care of their own collections, and they readily accept any advice of that sort.

1943. I am sure that would apply to such a Committee as you represent and a great many others; but are there not a great number of small museums which fall more or less into a state of neglect and decay after an interval or after a particular set of individuals passes away?—That subject is really put down under another head: that is "Assistance from the Staffs of National Museums." The personal view that I took was this—that in the case of the smaller museums, it might be possible for the larger provincial museums to give whatever help was required just as easily as the National Museums could, and that the curators of such larger museums could exercise oversight over their own loan specimens in the smaller museums.

1944. Then you would look after them?—Yes.

1945. Does not that point to some system of inspection?—That would come naturally from ourselves.

1946. Do not you think it would require to come first—an arrangement of that kind? If loans were to be made to very small museums, there is no guarantee of effective protection or of safeguarding or looking after those objects. Should loans not be accompanied by some system of inspection?—Naturally. (Sir Francis Ogilvie.) Loans would not be made if the provisions for protection were not at least sufficient.

1947. That is all right so far as the moment at which the loan is made is concerned, but what is in my mind is what frequently happens. I have seen over and over again a small local museum in admirable condition for a long number of years and then fall into absolute neglect and decay because the persons interested in it have passed away. I have seen a series of valuable objects raked out of a municipal cellar after 50 years, and most of them ruined. They had been in the museum at the time when there was someone to look after them, but they were ruined. Do not you think that sort of thing ought to be prevented?—(Dr. Bolton.) That sort of thing ought to be prevented; but it is not so bad as it was.

1948. Do not you think that some system of continuous inspection would be essential?—Yes.

1949. Then you have spoken, and very rightly, a great deal about loans and so on. What is the scope of a local museum, in your view? Should it be a reproduction of the National Museum?—I think the first thing you have to consider is what are the local needs in education generally, and then those of the public at large, and to try to make the museum

15 March, 1928.] Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

serve as many groups of public life as it possibly can within the scope which is offered to it. Each must have its character and colour determined by the conditions which obtain in the particular locality and not attempt to imitate any other.

1950. You would not restrict a local museum in any way in the character of its exhibits? You would give it as wide a scope as the British Museum?—No.

1951. How would you limit it?—For example, an agitation has been commenced by very small bodies for an architectural section in some of our museums. I do not see how we could possibly develop it; we could not put up anything of the character. If we did it would only serve a comparatively few architects and the great bulk of the people would not be held by it. I am told by Sir Reginald Blomfield that to put architectural objects in museums is to take them out of their environment and out of their scale and students would go wrong because they would get wrong ideas of proportion. Therefore I oppose the formation of an architectural section. I do not think it is suitable.

1952. One thing that struck me in reading your own Memorandum was the absence of any reference to what seems to me the peculiar function of a local museum that of being a local museum above all things. You spoke of getting the loan of exhibits from elsewhere and so on, but I should have thought that, like charity, the function of the local museum begins at home and that the value of a series of local collections all over England which were local collections in the strict sense of the term, would be immense and would be something that no national museum could give?—Yes.

1953. But I rather feel—perhaps it is because you are putting this forward as a thing that you feel would help you greatly in other ways—that the suggestion here is that these should be really national museums in small or in miniature?—No, I do not mean that. When I speak of a geological collection in a provincial museum I mean primarily a geological collection which most emphasises the local conditions but is sufficiently general to place the local one on its proper footing. We at Bristol give an epitome of the various divisions and formations until we come to those in the Bristol area, and then the collections open out and are dealt with very thoroughly, with an enormous number of reserves behind, and a large geological map, on a scale of 3 inches to 1 mile, and representing an area of 771 square miles of the Bristol coalfield, by the side. When we get outside those we narrow down till we get to the time of man—then we extend our collections again to illustrate the West of England caves and ancient man. (Sir Francis Ogilvie.) The consideration of this question would give us the greatest pleasure, because there is nothing upon which the Association is more keen than on the point Sir George has just put; but our Memorandum was applied to specific inquiries and we have limited it to that. We are not attempting to present our thesis, so to speak, upon museum development, and I should like you to be assured on this point. I think there is nothing more marked in museums in this country in recent years than the progress they have made in precisely this aspect. I have myself the greatest possible delight in such a visit. I had an hour to wait in Huddersfield and I thought I would look up the signs of museum life. I found a new museum, but an admirable one, and it is in the first instance a local museum.

1954. I know all about Huddersfield, and I wanted to know how far anything of that kind is done elsewhere. What are in my mind are not places like Huddersfield, Leicester and Bristol but the great number of small museums all over the country. I take it you represent them as well as the larger ones?—(Dr Bolton.) I think we do feel as an Association that if we can get that organic connection with the national museums we can go to the assistance of the smaller museums with much greater power than we can at present.

1955. Then with regard to the Circulation Department, Dr. Lowe, I gather that you are satisfied with the working of the Victoria and Albert Museum at present?—(Dr. Lowe.) Sir, as I explained, my experience of the Victoria and Albert Museum is not as wide as that of some of my colleagues, but I myself have been very well satisfied indeed with the way in which they have helped me in the directions that I have desired, with loans of objects of decorative art relating to the industries of Leicester, and to the interests of the Leicester people, but I again express the hope that the number of original objects will be greatly increased. I would like to say with regard to your question as to the utilisation of objects from the three groups defined by Dr. Bolton for circulation purposes, that the objects should not be limited to those available under Group 3. I am speaking of the fine arts particularly. When a collection is advertised in the provinces as having been lent by one of the National Museums, a very high standard is naturally expected, and I should not like to think that only the unessential reserves, which I take it would be of lower quality than the higher grades, would be utilised. I would appeal for objects from, at least, Group 2. I think it is quite conceivable that, if the scheme developed, the National Museums might accept objects of a high class which they at present refuse because they are not required for their own purposes. They might accept them specially for a loan scheme such as I have outlined; and may I say that the loans we ask are loans not for a long period, but for a comparatively short period, and that if inspection were made in the beginning and made from time to time, as it is now, by the Victoria and Albert Museum, all risks of the kind you have suggested would be avoided.

1956. What would the difference be between loans and circulation?—I am thinking only of loans for periods of 12 months, or, indeed, for shorter periods.

1957. For how long do the Circulation Department let you have things?—For 12 or 18 months.

1958. Of course, what Dr. Bolton was discussing was loans more or less on a permanent basis?—Yes.

1959. When I was asking about category 2, it was not fine art that was so much in my mind as objects for research. What I want to get at is: how far do you consider that research in science and so on, should be part of the function of the provincial museum?—In the matter of research I think it would be directed largely to research into local problems; that I should consider the provincial museum's special function. Of course most museums have discussed the question as to whether they should be purely local in the way you have suggested, or whether they should have a wider scope. I was asked to advise my Committee on this point in early days, and took the view that we must treat the local aspect fully, but, as probably the great majority of the Leicester people see only one museum, our museum, over a period of very many years, that one museum should attempt to teach them something of the world at large, and not merely limit its scope to purely local matters.

1960. What do you do in Leicester, for instance, with regard to Roman remains?—We specially pride ourselves on what we call the "Leicester History Room," in which we have arranged roughly in chronological order, the whole of the antiquities discovered in Leicester and Leicestershire, beginning with the pre-historic, going on to Roman, Saxon, and mediæval relics and ending with recent "by-gones." That is one of our most attractive departments.

1961. But I gather that you have not observed recently any change in the policy of the Victoria and Albert Museum with regard to circulation?—Personally, no.

1962. Then you hold a very strong view with regard to originals as against reproductions?—That is partly curatorial instinct perhaps. Those who collect pottery or anything else will realise the difference between a reproduction and the real thing.

15 March, 1928.]

Sir FRANCIS G. OGILVIE, O.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

1963. Take an Italian medal, for instance. Have you any objection to an electro of the original?—I should much prefer the original.

1964. Could you tell the difference if they were put in front of you?—Probably not.

1965. Very few people could. I doubt whether anybody could, unless they were allowed to handle it?—I am glad to be able to acknowledge the value of the cases of reproductions of medals sent out by the British Museum, but if I were asked whether I should prefer a case of originals or a case of reproductions. I should prefer the originals.

1966. But you would rather have reproductions than nothing at all?—I should not like to answer that question with an unqualified yes.

1967. Then one point that was made to us by some of the curators of the National Museums with regard to archaeological objects was that it was extremely risky moving them about from one place to another. Have you any view about that?—There would be certainly a greater risk in moving archaeological objects than some other things, but still, many of the objects circulated by the Circulation Department are fairly delicate, are they not? I do not think their experience has been particularly unfortunate, has it?

1968. No, because you have not had the objects which the curators whom we have had here were alluding to which could not be duplicated. You think there would be no danger in that way?—I do not think there would be no danger, but they could be protected.

1969. Then you said that you felt there were a great many surplus objects which were sometimes got, which might be put to some better use. The British Museum sell some of their duplicates in order to buy other objects. Would that meet with your approval?—Well, if the British Museum really needs to do that in order to provide itself with money to buy other objects, I think we must approve.

1970. (Sir Richard Glazebrook): Dr. Bolton said that other circulation besides that of the Victoria and Albert Museum, would be valuable. Would you give some sort of illustration of that?—(Dr. Bolton.) In the British Museum there is one collection of stone implements which runs into many thousands (Dr. Allen Sturge Collection), but I am afraid it is bound down by the testator's wishes. It cannot possibly ever be exhibited as a whole, and many of the specimens really have a local provenance. Some of them are so important from their local connection that they ought to be retained in some museum near the place of their occurrence. It is specimens such as these that I had in mind which it might be to the advantage of the local museum to receive. The supervision of such collections lent by the National Museums could be secured from the Curator of the nearest large museum.

1971. May we take it as the opinion of the Museums Association, that some general centralising circulating body would be thought important?—(Sir Francis Ogilvie.) That is the idea; that it would be simpler to work if it were centralised, even if only because of those questions of supervision which have emerged in the discussion to-day. If one office were acting for the different museums, then that office would take all such precautions as would be necessary in the general interest.

1972. There was some reference to the larger local museums undertaking some kind of supervision for their own districts. Has anything of that sort been attempted up to the present? Is there any kind of federation of local museums anywhere?—There has been. That particular form of union has been worked out. The latest case is that of the Lancashire and Cheshire institutions. Perhaps you might ask Dr. Simpson about that.

1973. Is it part of his evidence generally?—No, it is not mentioned in the evidence. (Dr. Simpson.) My idea was on the same lines as we were discussing this afternoon. There has recently been formed a Federation called the Federation of Lancashire and

Cheshire Museums. It had its origin as follows: In the Liverpool museums there is a lot of redundant material. The Curators of nearly all the museums in Lancashire and Cheshire met in Liverpool, and a Federation was formed for mutual co-operation. I may say that the Liverpool Museum has sent out collections of specimens to about 12 museums in Cheshire, and we also, in return for that, got material which was very important for our Liverpool Museum. In Warrington, for instance, there was an old Liverpool ship bowl which had no connection at all with Warrington, and we have now got that in exchange to enhance our local collection in the Liverpool Museum. As to supervision, I am afraid that is impossible, because each museum is under its own Corporation, and I do not think one Corporation would like interference on the part of another. As far as co-operation between the Committees and the Curators is concerned, there is a very strong bond of union.

1974. You think that the supervision of the larger museums in a district over the work of the smaller museums would cause difficulties?—I do not think there is any question of supervision being necessary. I think the spirit of emulation between the different Curators will insure that each one will do his best for his own museum.

1975. (Sir Henry Miers): Are these exchanges or are they deposits on permanent loans?—They are for the most part loans, but exchanges have also been made.

1976. (Sir Martin Conway): You would say that the question of the efficiency of the supervision of museums depends very largely upon the efficiency of the Curator. The Curator is almost in every case appointed by the Arts Committee, or Museums Committee of the town or City Council. Is it not in your experience the fact that as a rule the first question they ask is: "Is there not a local man whom we can appoint?"—(Dr. Bolton.) I think they have got away from that very largely in recent years.

1977. Would it not be of enormous assistance to the local museums if there was a regular course of education to prepare men to become Curators?—It would be an enormous gain if you could get it.

1978. Do you think that the museums of City Councils would prefer such men?—Undoubtedly. At present a new man comes into the museum and learns the subject at their expense. If he had had the training before he could go right into the work.

1979. Is the pay of museum Curators sufficient? I am rather thinking of the smaller places?—It is not sufficient in any case.

1980. It certainly is not in the smaller museums, to encourage a man to take it up as a career?—A man can take a degree in an ordinary University and get a salary at once for which he would have to wait 10 to 15 years in a museum, so we cannot get the men.

1981. How do you propose to alter that?—We must find some means of altering the position.

1982. You would be very glad to exhibit a drawing by Raphael, Dr. Lowe, would you not, or an engraving by Dürer?—(Dr. Lowe.) Are you speaking of single drawings, or the associated groups of drawings?

1983. Supposing they came from the British Museum, you would be glad to have them?—We should, particularly if it were an associated group of drawings. I do not think we should be so keen on individual things.

1984. I want to return to the point that you put about reproductions. You can get reproductions that are so good that they require most careful inspection in order to prevent them from being taken for originals by experts. You can get the whole of Dürer's engravings for £5, so reproduced that you cannot tell that they are not originals. Do you suppose that any museum in the country buys such things, or subscribes, for instance, for them?—Yes, I know of them.

15 March, 1928.] Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

1985. Do they make a kind of Print Room, or a group of historical works representing the art of the ancients?—I do not know that I can quote instances, but I feel quite sure that the pictorial reproductions are bought, more for portfolio use than for exhibition.

1986. You spoke of architecture. The architecture of the world can very well be represented by photography. Is that done?—Yes; for instance, in the museum of Winchester School the history of architecture is illustrated by photographs.

1987. But is there in the smaller museums of the country any systematic attempt to form such a collection? They cannot form a collection of originals of any importance, but they can represent quite sufficiently for the education of their people by reproduction of one kind and another, all the art of the world in photography?—There are spasmodic efforts in various directions, but I do not know of any comprehensive effort myself; I cannot recall one.

1988. At Liverpool you have got some valuable ivories. Do you try to attempt to illustrate the history of ivories by photography?—(Dr. Simpson.) No, but we have several reproductions: we however do not specialise in ivories.

1989. What you have in the Liverpool Museum is a remarkable reproduction, and being grouped together as they are in your museum, they are of more use for study than the originals scattered about the place?—Yes.

1990. Is not that a line on which local museums ought to specialise, rather than scattered originals? Is not that a line which the local museums rather neglect?—(Dr. Bolton.) Yes, that is a line they neglect for this reason, that it is very difficult for Curators of small museums to get into touch with that knowledge, and we need to devise some means of bringing knowledge to the men and men to the knowledge.

1991. Now take Maidstone Museum, which is a museum I know. There they have one branch of photographs of every object of interest in the neighbourhood. I think that is the case in some other museums is it not?—Yes.

1992. A local collection of objects of interest. Is not that done elsewhere?—(Dr. Lowe.) I should point out that when I was speaking of reproductions, I was speaking not so much of photographs of, say, masterpieces of architecture, but of actual facsimile reproductions of objects, and I can never reconcile myself to the idea that my museum should be given up to the exhibition of such reproductions. I have seen one or two museums in which reproductions are extensively used which do not inspire me in the least.

1993. I am talking about collections of photographs in boxes. The one you mentioned in Liverpool is of enormous interest?—Yes.

1994. Then one other question about the Maidstone Museum. They possess a very valuable set of gold ornaments, but they dare not exhibit them; they have to keep them in the Bank; they do keep them in the Bank; and there is one valuable exhibit at Liverpool which one can only see by getting three Aldermen with three keys to show it to you. I mean on the question of taking care of these objects, if Liverpool is going to lend a valuable exhibit of that kind to Leicester, you are going to ask a great many questions about the care that is to be taken of it. Is not the British Museum going to ask questions all round, and if the thing is of really great value, is it possible to protect it in one of these museums?—(Dr. Simpson.) One of our objects is in the Victoria and Albert Museum.

1995. (Sir Martin Conway): Would you lend it to Maidstone?—No; not without definite guarantees.

1996. (Sir Robert Witt): I think reference has been made to the need of the provincial museums being in close touch with the London and Metropolitan museums and all you gentlemen feel strongly on that point. Do you think that that which seems to me a very desirable state of things could be improved

and increased if there were periodical meetings between the Museums Association and the Heads, or at all events the Departmental Heads of the Metropolitan Museums?—(Dr. Bolton): There can be no question about the value of meetings of that character. We would simply welcome it. The provincial man is really thirsting for knowledge; he wants to get into touch with the London men. Some of us have been in close touch with the London men for years, and others want to get it, and we do not know how to get it. If some means for bringing that about could be devised I am certain it would give such an impulse to increased effort on the part of the provincial men that the result would be remarkable.

1997. Would it not assist that very much if the Museums Association had a local habitation and a home in some London Museum just as a *pied-à-terre* where they could have an address?—Very much. (Dr. Lowe.) That is the suggestion I wound up with in my remarks on Circulation.

1998. Only as regards the Circulation Department it was a more ambitious scheme you had in mind, which would involve a good deal of space and a good deal of organisation. What I was suggesting was something on a more modest scale which might be put into operation almost at once?—Quite.

1999. On the question of loans circulating and other loans to which you attach so much importance, those in London who are in favour of increased loans to the provincial galleries are sometimes met by opponents who say, "It is no good our lending to the provincial galleries anything that we are able and willing to lend because the provincial galleries would consider what we lend as of insufficiently good quality or importance." Have you had any instances where loans that have been made from the Metropolitan museums have been criticised because they were inferior and of little interest, or has your experience been rather that anything that has been lent has been really made use of?—I can only speak from my own experience, and say that we are very glad to hold at present two important Turner pictures from the National Gallery. I believe that at the same time the National Gallery lent us three or four other pictures which were by no means so important, so good or so interesting, and in the course of the last twenty years those other pictures have been gradually returned to the National Gallery by my Committee, on the score of our requiring room for more interesting works which we ourselves had acquired. That is the only instance I can give of pictures not being, in a sense, appreciated; but I repeat that the two Turners are of very great value indeed. If pictures were sent out in groups in the way I have suggested, associated one with another, I think they would be very much more welcomed than individual pictures.

2000. Would you agree that the applications for loans from the various provincial museums to the London museums have been on the whole very few in number—as opposed to our offering things to you, your applications to us to lend?—I am afraid I have no knowledge of the number of applications. You are speaking of the fine arts?

2001. I am speaking particularly of the fine arts, yes?—Many of my colleagues have told me that they have applied for and tried to get pictures on loan which they have not always managed to secure, but I can say nothing as to the number of applications.

2002. Would you agree that it would be desirable that the provinces should apply more liberally, more gradually, if you like to put it so?—I think it is desirable that they should, and they certainly would if collections were available. Where it involves a provincial curator making a special application as a kind of favour to one of the directors of one of the national museums, I think that fact causes the provincial curator rather to hesitate. I am quite sure that if the collections existed they would be

DR. E. E. LOWE, MR. T. SHEPPARD and DR. J. J. SIMPSON.

[Continued.]

borrowed, and, I should hope, not only by provincial museums but, if the experience of the Museums Association is anything to go by, by the Dominions and Colonies.

2003. Are the expenses involved in the case of each borrowing gallery, particularly in respect of insurance, a serious hindrance to application for loans?—I do not think so. The insurance charges are not very high. The carriage charges are perhaps more serious.

2004. I mean perhaps carriage charges. Are those expenses a real hindrance?—Speaking for myself, no, not for the collection that one desires to have. I can understand that small museums at great distances from the metropolis may find themselves rather in difficulties when it comes to paying rail charges, from London to the North of Scotland shall we say.

2005. Are some of the smaller galleries kept rather short of money by their Museum Committees or whatever Committees are responsible for local museums?—I think every museum is short of money. In the case of the smaller museums situated in small municipalities where the amount obtainable by a rate-levy is very small, the income is totally inadequate and every difficulty is correspondingly increased.

2006. Is it the case that the responsible Committees on the various Corporations very often consist of gentlemen, however eminent in other walks of life, who have no particular experience and interest in museums?—That very often happens with regard to the Council members of the Committee. The Committee is frequently constituted of so many members of the City Council and so many co-opted members, and the City Council members rarely have any real interest in any museum or art gallery subject; but the co-opted members, invariably, I should say, are chosen for their knowledge and experience. The proportion in my own Committee is half Council members and half co-opted members.

2007. Is there anything you could suggest which would make for a greater amount of experience in the provincial authorities, with the result that it would enhance the standard of care, supervision and administration of their galleries?—It is difficult to see how it can be arranged as long as art museums and art galleries are financed as they are. As long as the municipality provides the money, the Council will, I take it, insist on appointing their own members to the Committee.

2008. Could anything be done by the London museums in connection with the policy, assuming they were willing to adopt it, of making wider loans, in raising the standard of the provincial museums administration by imposing conditions or making suggestions, or otherwise?—I think it would be a little difficult; but the refusal of loans by the National Authorities until a certain standard of administration had been attained would no doubt help to stimulate backward institutions.

2009. Would the Museums Association be in favour of the extension of the principles of the National Galleries Loans Act, which gives us leave to lend any case of gifts and bequests which have come to us, coupled with the prohibition that they may not be lent until after 25 years—I mean museums like the British Museum, the Victoria and Albert Museum, and the National Portrait Gallery?—We have already suggested that available material should be allocated through a central department, so that the scope of circulation might be extended. I think we feel that all kinds of material coming within the scope of museums should be available for circulation, and it would be by some extension such as you have suggested that such material would become available, would it not?

2010. Just so; and you would also be in favour even at the risk of increasing the computation of making loans to Metropolitan museums and the Dominions and Colonies?—Yes, I should.

2011. Would it represent the opinion of the Museums Association also?—(Dr. Bolton.) Yes, I should say so.

2012. (Sir Martin Conway): Can a co-opted member be Chairman of the Museums Committee?—I heard of one case where a co-opted member was chairman for a great many years. (Dr. Simpson.) In our Council it could not be so.

2013. (Sir Martin Conway): It was. The Rev. H. H. Higgins was Chairman of the Committee in the eighties?—It cannot be the case now.

2014. Why not?—Because the chairman has to be a member of the Finance Committee.

2015. What is the constitution? Can the staffs of the London museums be members?—I think they can individually, but they are not sent as members from the various national museums.

2016. But individually they could be?—It has been begun, but it is not the regular thing. Each member of the staff can become an associate member, but the museum as a whole cannot be a member of the Museums Association; every year, however, at the annual conference, the Secretary of the Conference sends an invitation to all the London museums to send a delegate to the conference.

2017. (Sir Francis Ogilvie): Can you say whether any London museum has not sent a representative?—(Dr. Simpson): I think practically every London museum was represented last year and the year before. (Dr. Lowe): There is nothing to preclude the museums from membership; it is only that they do not send a representative. From the point of view of the Museums Association there is no reason why they should not.

2018. So that the Museums Association might be a sort of nucleus of the arrangement that was talked of?—Certainly. We always have three or four members present.

(Sir Robert Witt): As well as a number of people and trustees connected with the museums.

2019. (Dr. Cowley): I want to ask a question about the statement on page 1 of the Memorandum. You speak of the question of closer co-operation between the National and Provincial museums. You have already said that if it were possible to have a local habitation for the Museums Association, that would be very helpful. Are there any other means that you can suggest by which that could be brought about?—Sir Robert Witt has already made suggestions of various kinds in connection with that matter. I do not know in what other way it could be done.

2020. It seems to me a very important point that should be kept in view by the Museums Association if possible. You refer to it again just below, where you say "Such closer connections are necessary," and so on. So you are aware of the importance of it?—(Dr. Simpson): That point will come up under the heading of "Assistance from the Staffs."

2021. It does seem to me to be a very important point. Then also I was going to ask whether some other contact between the various museums as has been suggested could not be established to some extent through the publications of the Museums Association. The technical progress and so on, which would be registered in that way, might be of very great value I think to provincial museums. Could not that be extended?—(Dr. Lowe.) Of course the Museums Association is always anxious to publish in its Journal anything it can obtain of that kind; there have been numerous contributions by officers of the national museums. In fact one officer of the British Museum is doing a very great deal for us at the present moment.

With regard to the question of the headquarters for the Association, I was in some measure influenced by the plight of a kindred Association (the Library Association) and the discussions that are going on within it. A Central Library for Students has been formed as a circulating department to serve the municipal libraries and students throughout the country and I know that by some it was thought possible that the Library Association might find a

Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

home within its walls. It did seem to me that this Circulation Department we have spoken of is to do a more or less kindred work for the museums, and that the Museums Association might very appropriately find a headquarters in connection with it; but if the headquarters could come first in some such way as Sir Robert Witt suggested, it would be an admirable thing.

2022. You spoke with some feeling of reproductions. I can quite appreciate your point of view. They are horrible. But do not you think that for the ordinary person, not for you, say, the reproductions of sculpture, are most important—I mean casts of sculpture, and a good many other copies are very educational?—I do not deny it, sir, and in some cases of course one must depend upon reproductions if one is to see anything at all, in the special cases that Sir Martin Conway mentioned for instance. But in many cases I think the space taken up by reproductions might be better used for some other purpose.

2023. I am only meaning that there is a case for reproductions?—There are, of course, exceptions to every rule, and reproductions do, at times, perform a valuable service in filling up gaps.

(Sir Martin Conway): I referred to reproductions, by photographic processes, for keeping in portfolios. It does not take an inch of your exhibition space.

2024. (Chairman): Dr. Bolton, I think you spoke about the desirability of an organic connection between the Association and the national and provincial museums?—Yes.

2025. Have you any scheme in your mind?—Yes. What I have had in mind was that from time to time various members of the staffs might run down to the various museums where there is material touching upon their own personal studies, and take advantage of it; to know the staff, how they work, and advise them to come to the national museum and see what is being done there.

2026. (Chairman): I think the Commission would like now to hear the evidence of Mr. Sheppard on the stimulation of public interest and on fees?—(Mr. Sheppard): If our galleries and museums are educational, surely every possible facility should be given for their unrestricted use. To charge a fee means that certain people who might benefit are kept out, and admission fees should therefore be abolished. If, as in some cases, it is desirable to allow students to copy works of art or of science, and for this purpose the public should not be admitted, I would suggest that these students be accommodated by setting aside certain rooms on certain days, from which the public could be wholly or partially excluded. That is all I have to say on the question of fees.

2027. Have you anything further to say on the stimulation of public interest?—Yes. At Hull, as with most other places, lectures to scholars are given almost daily in one or other of the museums. Talks on museum work are regularly given. These are printed in the local press and eventually appear in a museum publication. One of the local papers allows a weekly column of "museum notes," which contains items bearing upon the work of the different museums, records of gifts, etc. We have many generous helpers. It rarely happens that anything of vital importance in connection with museum work is passed by for the sake of funds which it may not be possible for the Corporation Committee to provide. The regular appearance of museum hand-books describing the additions to the collections, and their distribution in likely quarters, considerably assists us in this work. Of these at Hull, over 150 have been issued, several of which have been re-printed, in some cases seven or eight times. In addition the Director regularly broadcasts talks on art, architecture, archaeology, geology, history, etc. These addresses are given in extenso in the local press and are eventually re-printed in the museums' publications and distributed among the teachers. Those are the lines upon which the provincial museums feel they can popularise their work,

and those who are inclined to do it seem to be the most successful. I take off my hat to nobody for the publicity of the work we do. We have just obtained our seventh museum, and I put that down very largely to the press propaganda that has been going on during the past 30 years in the district.

2028. (Chairman): Then perhaps Dr. Simpson will make a statement on the question of the relations with the assistants from the staffs of the national museums?—(Dr. Simpson.) This is not one of the specific questions put to us, but we thought it was one on which we might say something. I would like to express on behalf of the Museums Association and museum curators generally our warm appreciation of the help that has been given in the past by officials of the national museums. This help has, to a great extent, been given in their spare time or during their vacation. We would like help of this kind to have official sanction. It is well known that in a small town where there is only one Curator, he may have six or even more branches in his museum, and he cannot be a specialist in each of these branches. What we would like is that a member of the staff of one of the national museums who is a specialist in a particular branch should, on request and if circumstances warranted, visit a town and give assistance with the collection in that museum. A mutual benefit would ensue. He would acquire a knowledge of the material which is in the provincial museums which could not but be at least helpful in relation to his work on the national collections and might indeed occasionally prove of very high value in that connection. I do not think this requires further amplification.

2029. (Chairman): I think on the question of grants-in-aid, Dr. Bolton will send in a written statement?—(Dr. Bolton.) The statement, which has been sent in, is as follows: "The system of grants-in-aid has been and still is of the greatest possible value. Its stimulating effect in 'waking-up' provincial museums has been great. (1) In the first case grants of this character have resulted in the formation of useful collections in provincial museums, which could not have been obtained by any other means." If you wish, I can give you examples of that. "(2) The grants frequently exercise a stimulus upon local giving. (3) Frequently the fact that a grant-in-aid was obtainable has enabled a Curator to fill gaps in his collections, which otherwise would have remained for years as a serious hindrance to systematic study. (4) The grant-in-aid has rendered most excellent service to those provincial museums that have undertaken the formation of type series of former local industries and art. This has been especially the case with local ceramic and silverware collections. (5) Local Committees are encouraged to proceed with improvements when they know their plans are approved for grants-in-aid." Speaking from experience, I may say that over and over again proposals I have put forward would have been utter failures were it not that I could show that the Victoria and Albert Museum were prepared to make a grant of some amount towards the objects required. For example, when I went to Bristol in 1898, I found just one example of Bristol delft. I proceeded to acquire others very slowly until I succeeded in getting a grant from the Department, and since that time we have got together about 400 specimens of Bristol delft, of which 63 have been given. It is now the best collection of Bristol pottery and porcelain I know of in the country. So good was it that it gave impetus to the late Mr. W. J. Pountney to write what is now the standard book on Bristol Pottery. Bristol Museum has the best collection of Bristol tiles, again grant-aided, but two-thirds given as the result of the purchase of the one-third. We commenced with Bristol pewter only a few years ago, again by means of a grant-in-aid; we have now 130 specimens, 48 given, and they illustrate the work of 19 of the chief Bristol pewterers. We commenced the purchase of silver-ware only three or four years ago; we have now 53 specimens, 8 given; 33 electros,

15 March, 1928.]

SIR FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

12 purchases and also 18 loans. We have found that Bristol must have had at one time an Assay Office, because four objects have been discovered bearing a Bristol Assay mark.

Several years ago the grant-in-aid for Natural History specimens was extended, in the case of the Bristol Museum, to aid in the purchase of a series of small cases containing specimens and preparations illustrating the life history of insects injurious to allotments and market garden produce, forest trees, etc. The museum now possesses over 100 of these cases. I may say they fall under categories illustrating disease in agricultural allotments, and agricultural produce generally, and disease in forestry. I wrote to Mr. Bastin of Reading, who first made these for me, and asked how much work had been done in this connection by means of these cases, and he said this: "Some 20 years ago you commissioned me to prepare certain Economic Insect Groups, in glass-topped cases with printed descriptive labels, for exhibition in Bristol Museum. That these groups gave you satisfaction, and proved effective as an aid to education, was evidenced by the fact that you not only commissioned me to extend the series, but recommended my services to other Museums. In this way was initiated a demand for these and similar groups which has never since ceased. To the original Insect Groups other series have been added, e.g., Beneficial Insects in Agriculture; Bacterial, Fungoid and other Diseases of Plants; Bees in Relation to Gardening; Models illustrating the structure of flowers, Cross-pollination, and the Morphology of Insects and Plants—all of which are supplied, if desired, in handy uniform glass-topped cases with descriptive labels complete and ready for immediate exhibition. Besides these cases, several series of enlarged models of insects (House-fly, etc.) and plants have been instituted, and have been in considerable demand. Care has been exercised to secure expert criticism and advice in the preparation of models, labels, etc., with the result that these have become a great power for good in Museum work, both on its more popular side, and in its relation to Education and Agriculture generally. With very few exceptions (e.g., several University Museums and Public Schools) the growth of this enterprise would have been impossible without the Grants-in-Aid made by the Board of Education. Over and over again, I have had conclusive evidence that this is so. I have been frequently advised in the past by Curators that I shall be instructed to supply such-and-such preparations, 'provided that a grant-in-aid can be obtained.' In fine, if grants-in-aid were to be withdrawn, I imagine that three-quarters of my present work for Museums would come to an abrupt termination." During the War period we concentrated on these matters, so that allotment growers would know how to protect the food supplies they were growing for the Nation, from disease and insect pests under the special conditions, and the work proved of the greatest importance. He gives there a list of Museums which have received these collections by grants-in-aid, namely: "Aberdeen, Birmingham, Cambridge, Chester, Dublin, Exeter, Godalming, Keighley, Liverpool, Norwich, Plymouth, Shrewsbury, Tonbridge, Warwick, Batley, Bolton, Cardiff, Chingford, Edinburgh, Folkestone, Huddersfield, Leeds, London County Council, Oxford, Reading, Stoke-upon-Trent, Truro, Worcester, Belfast, Bristol, Carlisle, Derby, Eton, Glasgow, Hull, Leicester, Manchester, Penzance, Sheffield, Sunderland, Warrington."

That, I think, Sir, is evidence of the value of the grants-in-aid.

2030. (Sir Martin Conway): Have you said anything about the amount of these grants-in-aid?—The grant-in-aid varies; it has varied from 30 to 50 per cent. of the total cost. In five years applications for grants have been fairly numerous. The result has been that there is not enough to go round on a 50 per cent. basis; it has therefore been cut down to 30 or 40 per cent. If applications

are few, and the money is sufficient, then you may get the full 50 per cent., but never more.

2031. (Chairman): In what form is the application made, and to whom?—It is made to the Department of Circulation of the Victoria and Albert Museum. A statement is sent up that the Museum authorities desire to purchase so and so, stating its price, what it is, who makes it; and if the purchase is approved they can go ahead with the certainty that some grant will be available. The amount of the grant is determined afterwards.

2032. (Sir Robert Witt): Would you be in favour of extending the provisions of these grants-in-aid, not only to purchases, as I understand they are at present, but to other museum purposes—that is to say, supposing you were offered by a local museum or a provincial museum, a fine collection of something which you wanted very much, but which you had not the means properly to show or to instal, would you be in favour of a change in the system by which it would be possible for you to apply for a grant-in-aid without it being used to purchase?—I see great danger in that. One would have to be very sure that the application was made for objects appertaining to that particular locality.

2033. I should like to ask Dr. Simpson in regard to the efforts that are made to popularise and make public the interest and needs of museums: whether he has considered at all the possibility of the formation of local societies analogous to that of the National Art Collection Society. For instance, at Cambridge there is the Society of Friends of the Fitzwilliam Museum, and though I admit that that is in rather a different position from the ordinary local and municipal museums, I would like to ask whether or not that matter might not be explored, with the object of centering at and bringing together round the museum all those in the locality who are specially interested in these matters and getting their help and support, not only in the form of gifts, but also, possibly, in buildings and in temporary loan exhibitions?—(Dr. Simpson.) The only case of that kind I know of in this country is Norwich. I may say that in Liverpool my Committee have been discussing it for some time, and I know it has been mooted by others.

2034. But you would see no objection to doing that?—I am very strongly in favour of it myself.

2035. Just on the question of publications, the British Museum issues a Journal, which I receive and which I appreciate very much. Would you be in favour of there being a similar publication for all the Metropolitan museums? At present there is no general publication of that kind. The British Museum have recently undertaken a publication of their own. The Victoria and Albert Museum have only got their Annual Report, which is generally two or three years in arrear; and the National Portrait Gallery and Natural History Museum produce nothing at all. Would you be in favour of a publication representing the considered opinions and the combined acquisitions of the London Museums, which would be issued and circulated in the Provinces also?—I should think it would be very desirable. At the present time the only publicity for the Museum movement in connection with the National Museums is through the Museum Journal.

2036. (Sir George Macdonald): You have done a good deal of broadcasting, I see, Mr. Sheppard?—Yes.

2037. Have you observed any effect in the way of stimulating attendance after the broadcast talks?—The teachers bring the youngsters after a talk to see the particular aspect of the subject we have been discussing. Broadcasting certainly does a lot of good in our district.

2038. Do you know whether any other Curators have published books such as you have?—Dr. Simpson, on my left, has.

2039. I do not know, Dr. Simpson, whether you propose to say anything about the staff of the

15 March, 1928.] Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

Central Museums?—(Dr. Simpson.) I have just given an outline of our position in this matter.

2040. You think it is improving?—Yes, but I think it can be carried some distance further. The staff of the National Museums visit the Provincial Museums in their own time, and we would like to see this extended, so that the officials might get recognition for the work that they do, and that this work might be looked upon as part of their official duties.

2041. That is obviously very desirable. We had a competent observer here, who told us that the lack of co-operation was one of the things that struck him as a serious drawback; and when he was pressed, he said that he thought there were faults on both sides: that the Provincial Curators were not over anxious to be on the best terms with the Central Museums, and that the Central Museums were not over anxious to be on the best terms with the Provincial Museums. You think there is no foundation for that, do you?—I think there is no foundation for it. On the contrary, I am certain that any advances in this direction from the National Museums would be welcomed by provincial Curators.

2042. How many museums have you at Hull, Mr. Sheppard?—(Mr. Sheppard.) We have started our seventh.

2043. What are they?—(1) and (2) A General Museum of Applied Art (opened 1902) and Natural History (1910); (3) Wilberforce Historical Museum (1906); (4) Museum of Fisheries and Shipping (1912); (5) Mortimer Museum of Prehistoric Antiquities (1928); (6) Museum of Commerce and Transport; (7) Tithe Barn at Easington—Museum of Farming, etc.

2044. And they are all under your charge?—Yes.

2045. Have you sub-curators at the head of any of them?—No; we have no staffs. We have a couple of clerks, and that sort of thing. We cannot afford a scientific staff for each.

2046. And yet you are prepared to take the responsibility of getting loans from the Central Museums?—I get loans and take the responsibility; these are all placed in the central museum which has police supervision day and night.

2047. Obviously you cannot be in seven places at one time?—I have an attendant at each place, of course.

2048. (Sir Martin Conway): Were they all made in your time?—They were all made in my time. They have mostly been given by different people. The Corporation do not give them all. (Dr. Lowe.) May I supplement Dr. Bolton's statement with regard to grants in aid? I think the Museums Association is agreed that we should ask that grants in aid be widened in scope.

2049. (Chairman): Widened in scope or increased in amount?—Both, if you like, sir; but at the present time they are limited, I understand, to grants in aid of applied art and of scientific objects which may be bought under the Education scheme; but the Museums Association would ask that the field be extended. We think that the grants might be extended to help in the purchase of anything which comes within the scope of museums. I take it that they were first limited to applied art from the financial aspect. It was hoped that by making grants in aid the objects would re-act on the district and that profit would accrue; but we would ask now that grants be made and our objects directed towards advancing general culture.

2050. (Sir George Macdonald): I take it you would not only like it widened in scope and increased in amount, but also improved in quality?—We are speaking of monetary grants, of course. As loans go, yes, we should like the best quality, of course.

2051. (Sir Richard Glazebrook): But in all cases they are to be for the purpose of objects in the museums?—Yes.

2052. (Sir Henry Miers): I take it that all the suggestions made relate to small museums as well as to large museums that are here represented?—Yes.

2053. Then the suggestion on page 2 about expert guidance in the museums really involves guidance to the Provincial museums by members of the staff of the national museums?—It depends upon the kind of guidance required. If it were obtained more or less as a matter of right, it would be more used, I am sure.

2054. I was thinking that the difficulty would be that if it is to be given to local museums it would involve a large increase in staff?—That is so. (Dr. Bolton.) In practice, the assistance of the national museums men would naturally be restricted to museums in great towns, and their visits would resolve themselves into the giving of advice to the local man who wants all the help he can get from the man who has had the larger questions to deal with. If advice from responsible heads of departments and Curators was readily available for the governing bodies of provincial museums it would exercise a profound influence for good, and would, I believe, be readily adopted. If I put it forward they would say, "Well, who are the people who could come down and assist us?" At present I should have to say "I can't tell you," but nevertheless such assistance is wanted very badly.

2055. (Sir Martin Conway): Do you mean that the people from your museum would go and attend a meeting of the City Council?—No. We could get a man down from a national museum or gallery who would, from his larger experience, be able to give assistance.

2056. (Sir Henry Miers): You want to have a right of claiming upon his time?—Yes, and to pay for it; but, at any rate, to have some claim. Our provincial museums are doing some measure of the national work for the national museums. Everybody cannot come up to the national museums, so we are to try to do national work for the national museums in the Provinces.

2057. (Sir Richard Glazebrook): To whom would you apply that? The right, if it be a right, would be a right of all the members of your Association, would it?—No. I say here: "The nature of the assistance which can be rendered to provincial museums would need careful determination, and also the extent to which it will be made available. Questions of the general development of sections of a museum, i.e., geological, zoological, art, antiquities, etc., their relation as to space, the best lines of work to be followed, and the general principles which should guide the work are all suitable matters upon which advice might properly be asked. In practice, the help of national museum men would probably be naturally restricted to the museums in great towns (where collections are relatively important, and at times profitably studied by members of the staffs of national museums) and would resolve itself into the giving of advice upon questions of installation, equipment, and methods of exhibition." In practice it could only apply to a few of the larger ones.

2058. Then how are the small museums to get assistance? Your idea would be, would it not, that some kind of scheme should be formulated whereby there was a claim from the bigger provincial museums on the national museums, and, equally, a claim of the smaller provincial museums on the larger provincial museums?—Yes; that is what I might call the going-out influence from the centre; but I have said here: "Provincial Museums can assist materially in securing collections of botanical, geological, zoological and other material needed by the Natural History Museum to complete its British collections, and in some instances might actually collect the specimens required. The Science Museum and Victoria and Albert Museum could be assisted in the same way. The establishment of such a series of collecting centres for the British Museum in various parts of Great Britain might become of

15 March, 1928.]

Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

great assistance, especially in the economics of agricultural pests, mosquitoes, and of bird, fish and marine life." We could have a current of life, as it were, running both ways.

2059. (Sir Henry Miers): You would have a larger co-operation in the country as a whole?—Yes.

2060. Would that include the transfer of objects from one museum to another?—I think that would naturally cover it; they would be naturally filtering out from the larger museums in the country to the smaller ones. We should, as it were, shake up and get a proper balance.

2061. There is no organised co-operation at present?—There is no organised co-operation at present; but we have all done a little.

2062. (Sir Robert Witt): It would apply more to Science than to Art?—I think it would go all round, as we get our own collections into order. Most Committees now are dividing their collections into Essentials and Non-essentials.

2063. (Sir Henry Miers): Are there not certain small museums in which very valuable collections exist, but which have not been properly looked after, and is it not very advisable that things should only be transferred to museums where they will be properly looked after?—Yes. (Dr. Simpson.) One of my staff visited Rawtenstall, where there was a collection of fossils, which were of no use to that museum. These have been transferred to Liverpool, where they will be very much better looked after and put to a better use than at Rawtenstall. In exchange for this we gave Rawtenstall natural history specimens which they urgently required. This is only one example of exchanges which have taken place through the Federation of Lancashire and Cheshire Museums. Thus we are really doing this sort of thing among ourselves.

2064. There has been a similar case between Dunfermline and Edinburgh quite recently. But my point is that if this could be done more largely in the country at large it might then set an example which might be followed without expecting the national museums to begin straightaway. Then might I ask a question concerning the popularising of museums, about which Mr. Sheppard has spoken? Do you think the value of museums has been sufficiently brought home to the industrial workers throughout the country? Are the museums used by them systematically at all?—(Mr. Sheppard.) I do not think the exhibits interest them specially very much. In our case we have our Commercial Exhibition where they can see all the raw materials used in the city and all the rest of it.

2065. As far as I can make out, there are no organised classes which are in any way associated with museums. It seems to me that museums have a great future before them if they can get the workers to associate themselves in some organised manner?—Yes. In my case an Assistant was appointed by the Education Committee to be their lecturer and he uses the museum to get his papers together, and that sort of thing.

2066. But it is not, I imagine, being done upon any large scale in the country at the present time?—Not on a proper systematic scale; but it is done.

2067. That is, again, a matter which the Museums Association might take up and encourage?—(Dr. Lowe.) We are all working in connection with the educational bodies in our neighbourhood, and we try to persuade them to use the museums; but the courses do not always lend themselves to use in a museum. When they do, they very often have lectures on the spot. (Dr. Bolton.) Every member of my staff has been out lecturing through the winter, at the cost of the museum, and they have been very successful.

2068. Then one question about grants-in-aid. There, again, so far as the smaller museums are concerned, it has been urged that it is impossible for them to share in these grants-in-aid because they cannot contribute anything whatever to the specimens they want. What they want is a grant for the complete purchase. Is that, do you think,

true?—(Sir Francis Ogilvie.) The view of the Association, generally, is that this is a matter very difficult to handle. In the larger museums it is not so essential to have a large money grant as it is to have something which will definitely show that it is fully regarded as not merely a good thing to purchase, but a good thing for that museum to purchase, so that a moderate grant may be a very useful thing in the larger museums, and no use at all in the case of the smaller ones. In the smaller ones, the higher percentages, that is to say, up to 50 per cent., are probably pretty well necessary, but in the museums which have considerable support from local public funds this full measure of grant is unnecessary, unless there are special circumstances, as there sometimes are; but it is difficult to speak of that in definite terms. That is a sort of general fact. Obviously, it is proper to regard the grant-in-aid in relation to the larger museums rather specially. The fact of the grant being given, and in being given, is accompanied by a statement that it is desirable that the object in question should be purchased for that museum, is working very well.

Might I mention one or two points that have been dealt with but not quite carried through, in order to make clear what the Association ask? With regard to the Central Office, practically it comes to this: What the Association want to see is something that will facilitate a continuous web of connection between the national museums and the smaller museums. At the moment sections of such a web have only just been initiated in the relation between the smaller and larger museums of several regions; it has been informal in all these regions; but such connection has not been sufficiently recognised to be really effective generally. We want to do our part inside the Association, but so far as the national guidance is concerned, what seems to be required is that there should be a Central Office; for short, let us call it the Circulation Office, expanded a bit. It does not want a very great expansion of personnel at all; it is not a big proposition. The requisite is a sort of Office regarded as the centre for communications which can directly act between the two parties who are best able to deal with them. Thus, say, a Provincial Museum Director in a small town wants certain assistance; none of the men he knows round about him can help him; he can write to the Secretary of this particular Office and say, "I want to get information upon so and so." It would save a lot of trouble if it could be done in that way. This does not need explanation. Then, again, if that Office were in communication with different museums who were contributing to a Circulation of Loans system, that Office could carry through more easily than a number of separate sets of people, the necessary routine matters for keeping communications going, keeping the records of the difficult places and the easy places, and so on.

As to Grants-in-aid, I think the point that we have been talking about is very important; but I want you to bear in mind that it is not very costly. The grants-in-aid just now amount to £1,000 a year. A couple of thousand pounds would go very much more than twice as far as £1,000. That is the point. It is quite possible that this "grants-in-aid" system might become a very effective means of applying not merely a small amount of national money but a large amount of provincial money, much more effectively than the want of system permits. The present limited system would not succeed at all if it were not that in several parts of the country there are those museum directors who do a good deal of business in pretty well all the more important sections, and there is general helpful guidance from one to the other. But these two items would really amount to establishing something which would be greater than the present Circulation Branch of the Board of Education; it would be related in one way or another to the different possible national museums and galleries to which we look for guidance, and in that

15 March, 1928.] Sir FRANCIS G. OGILVIE, C.B., LL.D., Dr. HERBERT BOLTON,
Dr. E. E. LOWE, Mr. T. SHEPPARD and Dr. J. J. SIMPSON.

[Continued.]

way it would be in direct touch with a wide range of museum officers throughout the country. It would help very much if alongside that Office there were a Central Office of the Museums Association itself.

Then with regard to what the National museums might do for the other museums, I should like to refer to one item—it is a very trifling one, I think, really, but one that it would be very useful to keep in view. It is within my knowledge that the British Museum has been doing a considerable amount in the last few years in the matter of developing methods concerning the care and restoration, or condition it may be, of specimens which either have been injured or were liable to difficulties. These methods are published, and there are instructions given about them; but when it comes to the point when something of that kind has got to be done in a local museum, a great deal turns upon the pure handicraft of it, the technique of operation. It would be a very simple thing to arrange occasionally for short courses of, it might be, even a week or a fortnight, for such employees as are already efficient craftsmen at the local museums—it might be half-a-dozen or a dozen as might be arranged, for any particular thing—to attend in London. At such courses they would receive the necessary hints and instructions, practice

or whatever it might be, in a Central Museum. That would not be a very costly business, and it might be a matter of very great importance. We have been talking round the table mainly of the distribution of *knowledge* in the higher regions of museum work; but in the *technique*, method might be disseminated very effectively at small cost.

2069. (Sir Henry Miers): You mean falling upon Imperial funds, whatever the cost of it was?—Imperial funds would certainly have to bear the cost at the centre places; but the other museums would send their men up and pay their wages in the ordinary way, so that the National Museums would only be giving their instructional services.

2070. (Chairman): Has there ever been a scheme for grading museums into different classes—A, B, C and D?—No. Anything of that sort would be very difficult. One generally gets round it in other ways.

2071. I presume that the Circulation Department practically have something of the same kind?—Museums are in different grades and different sections. A museum might be of Grade I in this and that section; but of Grade IV in one or two other sections.

(Chairman): We are very much obliged to you, gentlemen, for your valuable assistance

(The Witnesses withdrew.)

TWELFTH DAY.

Friday, 16th March, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

Sir MARTIN CONWAY, M.P., Litt.D.
A. E. COWLEY, Esq., D.Litt., F.B.A.
Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.
Sir RICHARD GLAZEBROOK, K.C.B., LL.D.,
F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.
Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.
Sir HENRY MIERS, D.Sc., F.R.S.
Col. Sir COURTAULD THOMSON, K.B.E., C.B.
Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (Secretary).

Mr. J. R. CHAMBERS (Assistant Secretary).

Sir HENRY LYONS, F.R.S., Director of the Science Museum, called and examined.

A Memorandum was submitted by the Board of Education in reply to the Royal Commission's Questionnaire (See Appendix 1); this Memorandum, which covered the Victoria and Albert Museum, the Science Museum and the Bethnal Green Museum, is printed as Appendix 4.

2072. (Chairman): We are indebted to you for your Memorandum. I propose to ask the following question. Have you any suggestions to make for promoting co-ordination, efficiency and economy between the various scientific museums on the South Kensington site, including that of the Geological Museum which is to be removed from Jermyn Street. Would closer co-ordination involve a modification of your relations with the Board of Education?—At present I think, sir, most of what we do in the way of co-ordination is by cross reference on the collections. There is not a great deal of that at present, mainly because the Science Museum having doubled in size in the last five or six years it has hardly begun functioning in that direction as it should be able to and also, since the collections of geology and biology have been suppressed as over-lapping there is not very much that we have in common with, for

instance, the Natural History Museum. There is probably more connection with the Victoria and Albert Museum because we can show the processes, for instance in textile machinery relating to the textile collection, and a considerable number of visitors to the Victoria and Albert Museum are directed to the Science Museum to see the textile machinery there. We are, I think, in the position of having complementary collections to the other museums and when the Geological Museum comes down next to the Science Museum there will be two collections of mining and ore dressing machinery and of metallurgy which will be going to the Geological Museum and anything we could do to connect up those more effectively of course one would do.

2073. Would you suggest increasing your organic co-ordination with the Victoria and Albert?—I think we ought to be able to do more than has been done in the way for instance of showing the scientific side of glass, glazes and processes of that kind, but up to the present there has not been a collection illustrating glass manufacture. It is in course of formation now consequent on our having rather more

16 March, 1928.]

Sir HENRY LYONS, F.R.S.

[Continued.]

space to put it in and the idea is particularly to illustrate the scientific and technical side of glass and glazes.

2074. Is your contact with industry sufficiently close and do you think that your function in the application of science to industry is being adequately fulfilled?—I do not think it is nearly as close as it should be. That is a thing that we really ought to improve very much I think. At present it really depends, such as it is, and there is a good deal of it, on the individual activity of the different officers in the Museum who get to know and get into touch with a certain number of people in the industry which their collections illustrate; but I rather feel that a great many people in industry still look upon the Museum as one that is primarily an educational one only and which stops short of being a Museum of Industry. Cases of that occur from time to time. Quite recently we asked whether a firm in London would lend us examples of some things they made but they were not very keen about it and politely declined. Two of the Directors were looking round the Museum about a week later and then they changed their minds completely; they not only presented what we had asked for as loans but were most anxious to furnish other things as well. Of course the position of the old Museum, lying between the Natural History Museum and the Imperial College of Science and Technology was such that it was completely hidden from every main road and numbers of people who might otherwise have been interested, never knew of its existence. Now that there is this new front opening on to Exhibition Road I hope there will be a complete change. It is extraordinary how many people do not know of the existence of the museum.

2075. It is extraordinarily difficult to get in?—It was, Sir. Of course, any industrial development, the historical side of it from the earlier stages of an industry to the later is pretty well represented in the Museum, but the current practice of the day is poorly developed as a rule partly because there has hitherto not been space, and partly because if you want to go beyond what is produced in this country, that is to say if you want to show objects of a similar type but produced in other countries, then you have got to buy them and our fund is very very small for that purpose so we have not been able to do it. This question was raised by two industrial gentlemen who were in the Museum about a month ago. They said, for instance, on the question of hack-saws, which was interesting the trade very much, "Couldn't you have shown an exhibition of hack-saws as shown in various countries and the special characters of them?" Firstly, we had not an idea that the hack-saw question was an interesting one in the tool industry at the moment, and secondly, in the case of foreign examples, we should have had to purchase them.

2076. What is your purchase vote?—The whole purchase vote for the Museum is £2,000 of which £1,200 has to be allotted to the Library so that the purchase vote available for the Museum is £800 a year. It is the same as it was as far back as 1865. It has never changed much.

2077. It has been suggested that there is a tendency to show too much in the Museums, that is, too many examples of machinery which do not show sufficient variations to justify the amount of space occupied. What are your views about that?—I should have said we were fairly innocent in the Science Museum in regard to that. That might have been said about some of the older Collections which probably were criticised in that way, but what we have done in the last five years is to draw up for every group a scheme of what should be in that group if it were possible, and first of all to show in a historical series examples of the early stages of development, then after that to give a current practice group which is more fluid and is practically all on loan. For the Historical series group we have

got a scheme laid down for every group and officers who wish to accept a thing or to acquire it or borrow it have to show that it falls reasonably within that group and is not simply duplicating another. We argue that point almost daily and so in that way I do think we are controlling it pretty well. There is just occasionally a case where we have an object of considerable interest which is on loan and we get a chance of having one very like it as a gift; sometimes we take two on that ground. We do think we have kept that down pretty well by these half-yearly Boards of Survey which means that we are constantly going through the collections and eliminating what is no longer essential; we have got rid of many things which certainly a year or two ago did show duplication. During the last seven or eight years we have moved out of the Museum about 10,000 objects. A great many of them had been lying in store for years and were quite useless, but it also represents a good deal of combing-out of non-essential exhibits.

2078. To what extent do you make gifts or loans of objects to provincial museums and how many provincial museums in the past year have profited by such gifts or loans?—There are not many provincial museums which care to take technical objects partly because they have not got the space and partly because their collections do not cover that field. On the half-yearly Survey Boards there is before the chairman a list of all the provincial museums, with a note of those which will take technical objects and of the class of object in which they tell us they are interested, so that we try each time to offer them anything that seems to meet their requirements. I have had these figures taken out of the books. We have sent to provincial museums 1,346 objects since January, 1892, 860 in the last 12 months, that is spread over about six museums. It is largely a question of groups or small collections. For instance, the National Museum of Wales took a large proportion of the biological collection when it was suppressed the other day. The Salford Museum took a group of botanical specimens. Many of these collections that were no longer required had been originally purchased in groups and the whole group rather fell together so that it was only some of the larger Museums that really cared to avail themselves of them.

2079. How does your Museum compare with that at Munich. In what respect does it diverge?—I have not seen the Deutsche Museum as now complete but from what I have been able to ascertain they have more space than we have at the present and I fancy they have got considerably more resources because industrial groups do a considerable amount for them. From what I saw and from what I have since heard from the officers of the Science Museum who have been out there the Deutsche Museum aims very much more at realistic treatment of science in industry than we do, and they go less into detail. The industrial groups that assist them are prepared to do it on a big scale, a big exhibit of mining, a gallery of mining or an alchemist's shop, or something of that sort. That we have only done in one or two quite exceptional cases because, first of all, our space has not allowed it, and, secondly, it does not fit in very well with a collection which is being intentionally designed to show the gradual developments. If you have a big exhibit like that it breaks up the series and makes it rather difficult to follow. I have been told by people who have been there, they are tending in the case of some groups to get rather inconveniently overcrowded and it is difficult to follow on those grounds, but I think our line is really different from theirs in that we are more detailed and more concerned with showing the development of each group.

2080. Rather less popular?—Yes, I think they are more popular. There is one other point which might interest the Commission. At the present time I am in correspondence with five different countries all of

16 March, 1928.]

Sir HENRY LYONS, F.R.S.

whom are aiming at producing a technical museum or something of the same kind and so far they tell me they are all gravitating more towards our type than to the Deutsche Museum type. Those countries are Italy, Japan, Czecho-Slovakia, Sweden and the United States. A visitor from Italy told me the other day very distinctly that they have gone carefully into the Deutsche Museum's scheme but prefer that of the Science Museum.

2081. Have your officers adequate facility for travel?—I would say yes. No application to visit a museum abroad has ever been refused since I have been there. Some officers have been a good deal, others not quite so much. The work during the last five or six years has been very heavy, but for this they would have been visiting a little more, but most officers have a pretty good knowledge of the corresponding Museums abroad, except the American ones. They are rather too far away.

2082. Are they allowed travelling expenses?—Yes, travelling expenses are paid.

2083. We understand that on your present in-take of books your library will be full in four years, even with adaptations of existing accommodation. Where is it proposed to find room for the in-take of books after that period?—If the centre block of the new building is anywhere near completion by that time of course part of the basement of the centre block will be available for them. If not, the only other place I should think would be part of the basement of the new block which is at present occupied by aeroplanes and aeroplane engines which are not on exhibition on the lower floor and which are on loan from the Imperial War Museum. It would mean that instead of being set out in the basement where people can see them they would have to be packed up again and compressed into a smaller space in order to use part of that space for the books. There is an area of about 6,000 square feet.

2084. Would you illustrate the educational value or use made of the Museum at present and have you any suggestions for improvement?—The educational value—one tries to meet that in several ways. Firstly by the labelling of the object and the general arrangement. I have a sample of the labels here if you would care to see the form of label we use; they are very detailed. Where another museum is able to label the object simply in a few words "Given by so and so and the date" we have to practically say what it is, why it is exhibited and what its peculiar characteristics are. The result of doing that is that anybody visiting the museum and looking at the objects can find out nearly all about them from the labels themselves. The first paragraph of each label is always in heavy type and is a purely general description of the object; the second part is a full technical description. Secondly by catalogues, but frankly I am not satisfied with the catalogues. The same type has been in use for many years, and it has been referred to favourably by more than one Committee but it really is too technical, and dry, being little more than a reprint of the labels.

2085. Have you got a catalogue there?—I am afraid I have not. We are trying now to get out a new form of catalogue which will give a description of the group in question, written with special reference to the collection and using the objects in illustration, which will make it much more readable and then we shall be able to bring down the price of the catalogue because we shall be able to sell larger numbers. The sales are very low indeed now.

2086. What is the number of visitors?—We had 710,000 visitors last year and the number is steadily increasing. Then there are public lectures which are given twice a day by the Guide Lecturers. Those of course are intended for the general visitor who happens to be in the museum at the moment. They are, I think, quite successful. It is a handicap on the guide lecturer that the labelling is so full because if visitors are not very interested in what he is saying at the moment they drift off and look

at the things for themselves with the aid of the labels. I fancy that the drifting to and from the lectures occurs more with us than in the case of other museums. Then there are special lectures given to school parties or any other groups that like to apply for a special lecture. They are rather more useful and the demand for them is increasing very rapidly. These special lectures represent an attendance of about 8,000 students of various sorts every year, and the number is going up quite steadily. One difficulty that we are trying to meet is that teachers who bring classes may not be very familiar with the collections. It is a very difficult museum to take a class to and show round any of the galleries if you do not know them very well. I have arranged with the London County Council Education Authorities to try a group of three lectures for teachers next autumn. Electrical engineering has been chosen, and teachers will be taken round the collection by the officer in charge of it and he will show them what are the best things to bring to the attention of their class. This should assist them when they are showing classes round the museum.

2087. Are you open in the evenings?—Only till 6 o'clock. We used to be open till 10 o'clock, then it got to 9 o'clock and then to 8 o'clock and during the War it dropped back to 6 and has never been put forward again.

2088. What is your view on that, what is your view on the desirability of evening opening?—It is very hard to say. I think probably we could show a good attendance on Saturday and Sunday evenings, but I do not think we should show much attendance on the other weekday evenings because the people who would come to our Museum are people who have got to work during the day. When it was open in the evenings the last hour was always poorly attended and the numbers were never very high, though sometimes satisfactory, but this was usually at the end of the week.

2089. Have you any particular suggestions you wish to make with regard to the development of the Museum?—I think we are on the right line, so far as I can see, in making the catalogues more attractive. Probably we could get out some simple leaflets at a penny. Most of our clientèle won't pay a shilling, but they might pay sixpence for a catalogue. The great majority of them rather shy at paying a shilling, and if you are only going to sell four or five catalogues a day it is not enough in a museum like ours.

2090. Your visitors are of a poorer class?—Yes. They are essentially the working professional classes and there is a large proportion of comparatively young people who do not want to buy a catalogue that is merely a list of labels. I am very pleased to notice of late a very great increase in the number of young men about 18 to 30, who come in small parties, two or three at a time, and usually they go to some particular collection in which they are specially interested. Of course we get small children in very large numbers in the holidays, and they come of their own accord. Though they run about and turn handles for amusement, I am quite certain that a great majority of them gain a familiarity with the Museum as a whole and a knowledge of many things in it. On the two mid-term holiday days in last November we had 9,000 visitors, and as the normal attendance in November for two days is about 2,000, 7,000 of those were young children who came because they were interested.

2091. (Dr. Cowley): You referred to turning the handles. Do you think you could usefully add more moving machinery to attract people or do you think you have really enough and that they are treated as toys for the children?—We have as many moving models as we possibly can. We would always sooner have a model in motion, and we have 300 of them now in the Museum. Our object is to draw the visitors' attention to all the things that are worth looking at, sometimes by illumination, sometimes

16 March, 1928.]

Sir HENRY LYONS, F.R.S.

[Continued.]

by keeping them in movement, sometimes by making them workable.

2092. Your loud speaker, I believe, has been a great success and has drawn a lot of people?—Yes. That was put in with the idea of showing what has been done recently in the electrical transmission of sound waves, and a special receiving set designed for the purpose was put in; the B.B.C. helped us very largely in this and constructed it. A very large number of people are interested first of all in hearing the particular type of loud speaker and many others in the construction of the receiving set; copies of the diagram of that receiving set are frequently asked for.

2093. (Sir Robert Witt): You referred to the fact that you had combed out, I think you said, 10,000 exhibits at one time. Can you tell me what became of them? Do you give them away or do you sell them or what happens to them?—That number included an enormous amount of material that had drifted in past years into the stores of the Museum. A great many of those things had come from old exhibitions and had been put into the Museum stores but had never been on exhibition at all. There were also many diagrams, photographs and plans that had deteriorated and were useless. Things that are useless for all purposes are destroyed. Another class are offered to provincial museums, but, as I have said, not a great many of them are useful to them. There was a very considerable amount of old elementary education material, some of it not very elementary. That has been offered to different educational institutions. The great bulk of it was offered in the first instance to the Imperial College of Science and Technology because it had been originally procured for the old Normal School of Science, later the Royal College of Science, when the Museum was the teaching collection of that College. The professors there have always been in the habit of borrowing those exhibits, and it was the natural arrangement that they should take them over altogether. Finally, there is a certain amount of material which we cannot find an owner for in order to return it; it is of no use to us and nobody else seems to want it, so it is sent to the auction rooms, usually Stevens' Auction Rooms. We have not made a great deal out of them because something like one-third comes back as unsaleable. Then it comes before another Board, and it is usually a question of destroying it if we cannot find anybody to make use of it.

2094. Just one other question, on the question of evening opening. I am sure you are in favour of it if there is a demand for it?—Certainly. I think we could justify it on the evenings at the end of the week, but I am rather shy of saying we could do so on the other evenings because before the War the evening attendance was not very good.

2095. If the demand did exist could you deal with it from a staff point of view?—It would mean the question of a certain amount of overtime payment.

2096. Would you feel any difficulty in securing that?—That would be a financial matter which would have to come up in the Estimates in the ordinary way.

2097. But you would be in favour of it?—I should like it if there really is a need for it, and I think there would be at the end of the week.

2098. (Sir Richard Glazebrook): You have spoken with reference to the collection of the exhibits in the various Museums on the South Kensington Site. They are all under three different Governing Bodies. Would you like to say anything with regard to that. Have you any views as to the desirability of a more common system of Government?—For the lot or for the Science Museum?

2099. Science, geology and natural history. I do not know whether it is a question you are prepared to answer at the moment?—I had not really thought of that very closely. I feel that we differ rather materially from either of the others. We do not

touch them very closely at any point. We should certainly be complementary in many ways to the Geological Museum. I should think a workable arrangement could be easily made.

2100. Would such a workable arrangement be advantageous? You have not thought about it?—No, I do not see anything very great in the way of advantages to either because we seem to be following different lines.

2101. I think you said contact with industry was not quite close enough at the present time?—No, it is not.

2102. Can you suggest any way in which you can improve that?—What I had in my mind was more criticism. We do not get any except occasionally when you can induce somebody to say that something is not as good as it ought to be. There is an Advisory Council and they give us advice about anything we like to ask them, but it seems to me if there were some body which represented groups of industry or groups of technical institutions more directly then probably we might be more effectively kept up to the mark than we are now. If a technical Museum is not going to keep up to date it ceases to be useful much more quickly than other types of Museum, I think.

2103. Suppose there were a Board of Trustees, for example, drawn partly from representatives of industries. Would that produce the desired result?—It seems to me that that probably would have this effect provided it was a responsible Board.

2104. If instead of being merely an Advisory Council they are a responsible Body of Trustees?—A responsible Body who would be able to say: "That is not the way to do it, we want it done this way." Personally I think it would be an improvement and I should rather like to have to give reasons for what I was going to do. I do feel that if a Technical Museum is not kept well up to date it ceases to be useful.

2105. You said that the Industrial groups in Germany do more for the Deutsche Museum than anybody here. Do you know how that has been brought about?—No. I think that Dr. S. von Muller's original scheme was to interest them. When the Deutsche Museum started I understand that he went round to the different industrial groups urging them that they should support the Museum largely, and if my recollection is right they were to do that both by contributing material and also by undertaking the setting up of great group exhibits.

2106. Suppose the Board of Education gave you permission to go round to the various Industrial centres pointing out the aim of the museum and the value that the industrial centres could add to it, would it be helpful?—If I had the time to do it and if I was the right person to do it, but as to that I am not sure. I am certain we should get considerable support once industry realised it was essentially their museum. Even to-day 90 per cent. of what we get are gifts and loans, largely from firms and institutions.

2107. You do have from time to time temporary exhibitions such as those organised by the Research Associations and so on. Can you tell us something about those and as to their advantages?—So far as we have had them—we have had about five—a portion of a gallery and museum cases have been put at the disposal of either Research Institutions like the National Physical Laboratory or a Research Association like the Woollen and Worsted Association or the Non-Ferrous Metals or the Adhesives Committee of the Department of Scientific and Industrial Research, in order that they might exhibit recent results of their research. It seemed that at an exhibition like Wembley a small exhibit of research would be swamped; at a trade exhibition people go there to buy and not to see what the latest scientific advances are; it seemed to me it would be useful to give them a portion of a gallery for four months for an exhibit. So far as I have been able to gather, in every case it has been quite successful. However,

16 March, 1928.]

Sir HENRY LYONS, F.R.S.

[Continued.]

that does throw a lot of work on the Research Association, and my feeling is that in future one ought to make arrangements with such associations at least a year beforehand, so that they can make any preparation that they want to do without interfering with the work due to their members from them. There are two now who have said they would like to hold exhibitions in the future, the Linen Research Association and the Cast Iron Research Association, but no date has been fixed yet.

2108. In Washington at the Museum of the National Research Academy there they have a series of temporary or permanent exhibits arranged to show every development of some scientific method or some modern discovery actually working. Have you had any experience of anything like that or any views as to its advantages or desirability?—We have not attempted anything of that sort but I have thought of it.

2109. If you had the time do you think you would value it?—If it could be done I think it would be well worth doing, but it would mean a great deal of preparation.

2110. I spent some time in the exhibition at Washington, and found a considerable number of people looking on at the actual experiments that were being done. Just one other remark in order to clear up the points that were referred to by Sir Robert Witt. When the Bell Committee was sitting a series of sub-committees were appointed to go through the objects on exhibitions and to make some kind of list of the articles that ought to be retained and the articles that ought to go, and I think probably those lists have been the basis of some of the work. That is merely a matter of historical record?—That is relating to the objects on exhibition.

2111. Yes?—There was a mass of material downstairs a great deal of which can never have been on exhibition at all.

2112. Yes, it only related to the objects actually on exhibition.

2113. (Sir George Macdonald): I think you said about 90 per cent. of your acquisitions come in the shape of gifts?—And loans; 60 per cent. loans and 30 per cent. gifts.

2114. So that there is only 10 per cent. required to be purchased?—Purchased or made in the workshop.

2115. So that your purchase grant of £800 is not so inadequate as it would be if you had to purchase everything?—Well, it is inadequate because every now and then you have to pay £100 or £150 for an object. Now that the Museum has doubled in size £5 or £10 are required for small objects for filling in a series, and they add up very quickly.

2116. You are much more fortunately situated than Museum people dealing with art objects?—There the objects are much more expensive. We have not the competition in the field that they have. On the other hand we have no professional dealers collecting for us, and everything that we buy, ask for or borrow we have to ask for, borrow or purchase ourselves, which takes a great deal of time.

2117. What I mean is that you get a very much larger proportion by way of loans?—That may be.

2118. I suppose you are offered sometimes objects that do not interest you much?—Very frequently.

2119. What do you do with them?—If they are objects that are likely to be of interest to another Institution, we suggest they shall be offered there. That is very common.

2120. Have you ever thought of having a circulation department?—No, there used to be one in the old days but that was a circulation of scientific instruments circulated to schools to suggest to them what scientific instruments should be used in scientific teaching. That was done away with a good many years ago, because the equipment of schools had become in advance of the circulation sets.

2121. I think there was an unfavourable contrast drawn between you and the Victoria and Albert Museum. The latter accepts the objects they do not want for exhibition and puts them in a circulation department, whereas you turn them down altogether?—Of course we have never done any circulation. First of all there are so few of the provincial museums which take technical objects; secondly, it takes up all our time to find and to get things we want for the main collection. The offers made to us are comparatively few compared with what I fancy the other museums get.

2122. You would not be in favour of the idea of a circulation department?—It would mean a good deal of work and a certain amount of expenditure, and I do not quite see where the equivalent gain would come. The number of museums that have accepted things from us, technical things, are comparatively few. They are Birkenhead, Cardiff National Museum, Edinburgh (the Royal Scottish Museum), Dundee (two objects), Glasgow, the Hull Municipal Museum, which has taken a great deal, because at the moment they happen to have a good deal of space, and Salford. We offer them a good deal, but most of them say they are sorry they cannot take it.

2123. You would welcome criticism from representative business men?—Yes, very much.

2124. Do you know anything of the National Federation of British Industries?—I have met one or two connected with it.

2125. Have they ever offered any criticism on the Museum?—It was one of them who asked why we have not taken up the question of hack-saws. As far as I remember, that is the only one I have before me.

2126. There is a document they have put in in which they tell us, among other things, that the Science Museum ought to have a periodical series of "weeding-out." They say it is open to question whether a large number of the collections maintained in the present Museum are really suitable for its objects.—I should be glad to have criticism in a detailed form as it is difficult to answer it in a general form.

(Chairman): We will give you a copy of it.

2127. (Sir George Macdonald): I will go on to the question of sailing ships. That was the illustration which they took.—Of course, a good many of the collections here are collections which have come down from the past, and that collection of ships was first formed in 1864, when it was started by the loan from the Admiralty of a number of ships' models. Something like ten years later the Admiralty withdrew their models and transferred them to Greenwich. By that time the collection had grown considerably and a reasonably large collection was left behind. That collection since then has been steadily growing on the lines of the illustration of ships and boat construction.

2128. Have you done any weeding out from the illustrative collection as time goes on?—You mean from the historical series?

2129. It becomes historical when it ceases to be illustrative of current practice?—Yes, at that stage. The idea is that only an occasional object goes from the current practice into the historical series. The current practice is very wide; they are almost wholly on loan and are returned as loans.

2130. Again I am quoting their criticism: "We are told that a good deal of space could be saved in the Museum by more effective weeding out."—Well, I should like to discuss that in detail. In the past more than one departmental committee has gone into that question and has come to the conclusion that there was not very much in that. Of course, we have been weeding steadily of late years. If anybody says this collection is wholly unnecessary, of course it would mean removing a good deal, but there is no doubt a good deal to be said on that point.

16 March, 1928.]

Sir HENRY LYONS, F.R.S.

[Continued.]

2131. Sailing ships that you have mentioned raises an issue which is dealt with in another paper, the question of the possible overlapping with Greenwich and so on and with the Imperial War Museum. I notice a list of museums with which there is possible overlapping; those are included and you might also include the Royal Scottish Museum. You say that different fields of interest might be defined in each case. How would you define the field of interest of the Royal Scottish Museum as compared with the Science Museum?—I have not considered the Royal Scottish Museum so much because I consider they were concerned very much with the same objects as we were but for Scotland.

2132. Overlapping, in other words?—They would be showing in many cases similar groups, but showing them for the benefit of Scotland.

2133. So far as you would define the field of interest it would be on national lines rather than on scientific lines?—In that case.

2134. I mean in Scotland, for instance, they might rather pay more attention to shipbuilding, seeing that is an important industry on the Clyde?—Yes.

2135. Only one other point which interested me. What have you to say on the question of recruitment of attendants?—For some years we have been getting them from the senior non-commissioned officers of the Royal Engineers, the Royal Navy and the Air Force, with a view to getting a man who already was conversant with the technique of a particular group. The ship collections are in charge, as assistants under a Museum officer, of two ex-chief petty officers; the stationary engines are in charge of a naval mechanic; the electrical collections are in charge of an ex-Quartermaster-Instructor in Electricity from Chatham, who lectures every day on the automatic telephone exchange, with the object of getting in each group an attendant who is, for most of the time in the gallery and available for the public, and who can give an intelligent answer to a technical man who wants to know something.

2136. There is a great deal to be said for that, but is not there a danger that they may be inclined to go too far and that something may go out as the dictum of the Science Museum that is not quite accurate?—I will take the risk of that.

2137. (Sir Henry Miers): I was going to ask you about the Federation of British Industries. I suppose it would be quite possible for you to consult them officially and ask for their views?—I should be delighted to.

2138. I should think they would probably welcome that?—Yes, we should be rather glad of a suggestion. Of course, one has a certain amount of diffidence in asking busy people to come and help one.

2139. It appears they have views and it might be as well for you to consult them?—Quite.

2140. With regard to gifts and loans to other provincial museums, those have been gifts and not loans?—In nearly every case gifts, some that went quite recently to the Royal Scottish Museum are loans, but that was rather a matter of convenience than anything else. We have things from them on loan, the idea being the remote chance in the future that one might want to exchange them again.

2141. (Sir George Macdonald): The collection of scientific instruments?—Yes, and there was the question of agricultural models for which they had no space.

2142. (Sir Henry Miers): The provincial museums have not as a rule asked for loans?—No, I do not think so. Speaking from memory, I think they were all definite transfers. One or two things for Hull may possibly have been loans.

2143. I suppose it is very important that you should be up to date, and such things which become obsolete should be taken back by the firms who have lent them. Do you find difficulty in getting them taken back?—None whatever. Very often they call them back even though we would like to keep them.

The reasons are generally that they are wanted for sale. The rule was that no loan would be accepted for less than six months. The object of that was that it meant a certain amount of trouble in drafting and working out the label and having it printed, but as a rule they stay for a year or two.

2144. Is there any danger of your being overloaded with obsolescent specimens?—No, there is no difficulty. We simply say it is returned and we are very grateful it has been left for so long.

2145. Another small matter. You have spoken of the Board of Survey. What is their constitution, are they heads of departments?—Officers of the Museum taken so as to distribute them from the different groups or departments.

2146. They meet periodically?—Every half-year we have one. There is always something wanting to be transferred from one group to another or something that somebody does not want.

2147. In one of the memoranda sent in you suggested when the Geological Museum went to South Kensington its library might be incorporated with the Science Museum library. Would that be possible in view of the lack of space?—Well there is space at the present time to do it.

2148. It could be done now?—Yes. It was estimated that we could take about 49,000 more volumes at the present time, but then, of course, we were counting on our annual increase taking up that.

2149. You think it would be an advantage to have the two libraries in one?—Well, I do not know whether it would be from the point of view of the Geological Museum. They might say that at all events a certain proportion of it would be required as a working library, as at the Natural History Museum.

2150. Then I think you stated that it is pretty clear that the imposition of an admission fee would keep out one of your most desirable set of visitors?—I am certain it would hit the smaller people, under 15.

2151. They come in large numbers?—In considerable numbers, from what you might call the poorer part of the community. Very often a brother and sister will come with a couple of quite small children. You will probably see the brother and sister going round and taking an interest in the things, and they bring two little ones because they are in charge of them for the afternoon. I cannot say that the little ones are much trouble although they do mess the columns by rubbing their hands on them. They will paw and finger everything they can but they do very little harm indeed.

2152. I understand from Mr. Kennedy that when they make their purchase grant to the local Museums he is obliged to consult other persons as to which of those applications should be met and he does consult you as to the scientific grant?—The technical ones.

2153. Is that in an official capacity?—I suppose it is in an official capacity. He asks me to sign the letters.

2154. It is known that the recommendation is coming from you?—Yes. And in all the Zoological and Botanical matters he consults the Natural History Museums, and that is an unofficial arrangement because as I pointed out to him, although I might be able to find my way in Geology, I could not be responsible for Zoology and Botany. I wrote to Sir Sydney Harmer asking if he would be prepared to help and he said he would, and I think it is quite unofficial from their side. It is really to do what we could not do for ourselves.

2155. It is quite clear that without your help it would be impossible for the Victoria and Albert Museum to decide which of the scientific applications to grant?—There are a certain few, but mainly they are Art or Natural History.

2156. (Sir Lionel Earle): Can you tell me what proportion of the ship models you consider as really essential from the point of view of ship construction. The reason why I ask you is that you know

16 March, 1928.]

Sir HENRY LYONS, F.R.S.

the Admiralty are starting the museum of ships again at Greenwich, and I was wondering whether a large proportion of those models ought not to go to Greenwich unless they are absolutely essential from the point of view of teaching ship construction?—They all show the history of ship construction. Of course, what we do not cover and have never attempted to cover is the history of the Navy or Maritime History. We have never dealt with that at all.

2157. You would say then that all your models are actually useful to the Museum from the scientific point of view?—Yes, they show the history, the development of the wood ship passing into the iron and steel ship.

2158. You would not think there would be overlapping if Greenwich made a large ship museum?—I have no idea, except what I have seen in the papers, of what the ideas of those who are interested in Greenwich are.

2159. It is chiefly to save the collections going to America and other parts?—It seems to me, if Greenwich is going to illustrate the history of the Navy, which is a different thing from ship construction, there will certainly be a considerable number of objects which I should not wish to take into the Science Museum, because I could not consider that they came within our scope.

2160. I do not think it can be, otherwise the MacPherson collection would not be going into it. A large number of the drawings are in connection with this, and it is going to deal with the Royal Navy. The other question I wanted to ask you was about the lectures. If a lecture room was constructed on the site of the new Geological Museum do you think it would be of use to you?—Are you speaking of the large lecture room?

2161. Yes, to hold 500 or 600.—Yes, that would be breaking out in a new direction altogether.

2162. You would advocate it?—Yes.

2163. The idea is, I think, to have a general user of the three museums, the Science, the Natural History and the Geological?—I should think that would amply meet our requirements.

2164. It would be used?—It would be used from time to time.

2165. I have another question I would like to ask. You said there was a good deal to be done as regards closer touch with industry. Would you be in favour of the representation of trade associations on your Council?—What body would they represent?

2166. Well, I presume that they would be leading people in the various industries or certain people who are in touch with those industries who would come in direct contact with your own council.—I was thinking of representatives of the technical institutions like the Civil Engineers, the Mechanical Engineers, the Electrical Engineers, Naval Architects and so on and any groups of industrial interest, British industries or anything of that sort.

2167. You see no objection to those bodies being actually represented on the Council?—I do not think

there would be. My point is that they ought to consider it as their National Museum.

2168. (Chairman): How many members have you on your Advisory Committee?—There are 11 members on it now.

2169. Who are directly representative of trades or industries?—They are all technical or scientific men in one direction or another, but I always have felt that an advisory body is in rather a different position.

2170. You definitely prefer a Board of Trustees?—I think it would be better for the Museum.

2171. Because the Board of Trustees would have more direct responsibility and more direct authority?—More direct interest in it, and naturally if one has responsibility one is more prepared to give one's aid to it than if one is merely offering advice. I think very strongly that it should be up to date and there should be something that would ensure that it is.

2172. We are greatly indebted to you for your valuable evidence and the memorandum which you have been good enough to send in.—May I mention one or two points which I think come within the scope of the Commission. One is the question of the purchase fund which has been referred to once or twice. It is really a very serious handicap to us at the present time. It has not been increased for the last 60 years. I think that the library needs more assistance than the museum, because it has got to a point where we are absolutely unable to obtain the volumes which we should have.

2173. What would you consider would be an adequate sum?—I suppose I ought to give the figure that was given to the Advisory Committee on Public Libraries the other day, of which Sir Frederic Kenyon was chairman. It was reported that the Library ought to have £3,500 a year, in addition to the £1,200 which it now receives.

2174. (Dr. Cowley): Because I think you mentioned £4,700?—Yes. Practically we have not bought any Foreign Scientific books for two years and have ceased to take 400 scientific periodicals in 1927 and we shall have to drop some more in 1928.

2175. (Chairman): You put the claims of the Library before those of the museum?—Well, it is the fact that the Library is less able to wait than the museum, because once these periodicals are out of print it becomes extremely difficult to complete your series since there is only a limited printed edition.

2176. On the other hand I should think the museum wanted money more than the Library?—That is so, but there is no doubt that the Library is becoming more and more used by scientific workers now that the books are lent out, because they are largely using scientific journals or periodicals which their local library or their institution library has not got. The Medical Research Council wrote the other day and said they had been able to reduce considerably their expenditure on periodicals which they used quite occasionally, because they could borrow them from the Science Library.

(Chairman): We are greatly indebted to you for your evidence.

(The Witness withdrew.)

THIRTEENTH DAY.

Thursday, 29th March, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

Sir MARTIN CONWAY, M.P., Litt.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D.,
F.R.S.

Sir HENRY MIERS, D.Sc., F.R.S.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).Mr. J. R. CHAMBERS (*Assistant Secretary*).

Mr. F. E. SMITH, C.B., C.B.E., D.Sc., F.R.S., on behalf of the Royal Society, called and examined.

2177. (*Chairman*): There are a certain number of questions that I want to ask you, as I think you know. The memorandum* addressed to us by the Royal Society suggests the desirability of organising periodical exhibitions dealing with recent discoveries and advances. Would you illustrate from your experience at Wembley how this may be done and what steps would be necessary to give effect to the suggestion?—(*Mr. Smith*): I will tell you quite briefly what was arranged at Wembley, and then you will see what we have in mind. I speak more particularly of the second year at Wembley, when the Royal Society arranged an exhibition there to illustrate the results of recent research work. It is quite obvious, if one takes a subject like X-rays, infra red rays, or wireless, that it is not possible to exhibit any one of those things. We desired to demonstrate by means of experiment the existence of such phenomena and show how scientific investigators have, by means of experiments, developed their particular lines of thought. The Royal Society arranged at Wembley some 30 experiments illustrating phenomena over the whole range of electromagnetic radiation. Such phenomena include X-rays, ultra-violet radiation, infra red rays, and long wireless waves. I was amazed, and the organising Secretary himself was also amazed, that not only did people come again and again, but teachers with students came on as many as five occasions and spent many hours there. I was Chairman of the Committee, and I found that whenever I went to Wembley my whole time was spent in explaining the experiments to people. The Committee were very much impressed with the good that this kind of exhibition does. There were experiments which advanced students of physics and teachers of physics had heard of and had seen illustrated in text-books, but which they had never seen, and probably, would never have seen but for the exhibition. As you will appreciate, the experimental method is one of the very best methods of teaching. As a result of the exhibition a proposal was made by the Committee when it terminated its labours that the Royal Society should endeavour to arrange an exhibition of this kind in London. The Committee thought it might be under the auspices of

the Royal Society, but no suggestion was made at the time that it should be at the Science Museum. We were hoping that the Royal Society might see its way to organise every three or five years a similar exhibition with a large number of experiments which would illustrate the more modern discoveries in science. Immediately the suggestion was made, Sir Henry Lyons welcomed it, and such apparatus which had been bought out of Government funds was transferred to the Science Museum. However, at present it is quite impossible to organise experiments there. If you want an example, take a topic which is very prevalent at the present time; I refer to infra red radiation. The public do not really know what is meant by infra red rays, and the majority of scientific people have never seen experiments illustrating such rays. One may suggest that it is quite easy to arrange the experiments at lectures, but I desire to point out that even at the Universities it is not done, and not likely to be done. It takes a long time to set up some of the apparatus, and people are not prepared to spend much labour for a demonstration lasting only 10 minutes. Discoveries in infra red can be illustrated with an arc lamp transmitting through a polished sheet of ebonite. There is no visible transmitted radiation, but the rays can be brought to a focus, and a piece of platinum at the focus will become red hot. Such a demonstration would prove first that these rays do exist, and secondly that we have to modify our ordinary ideas of transparency. A substance which is transparent to some rays is not transparent to others. This leads to the question of coloured glasses. Again invisible rays may be rendered visible by the action of certain chemical substances. This leads on to phosphorescence and fluorescence, and so we can proceed with a number of not too expensive experiments illustrating many of the phenomena of radiation. In my opinion the Science Museum should show historical apparatus and modern apparatus, but historical apparatus should not be shown unless lessons can be learned from it. I regard the Science Museum as being a very considerable factor in scientific education, and by such periodic exhibitions of the kind I have mentioned its influence should increase.

2178. What prevents the Science Museum having these exhibitions now?—They have not the facilities

* See Minutes of Evidence—Ninth Day.

29 March, 1928.]

Mr. F. E. SMITH, C.B., C.B.E., D.Sc., F.R.S.

[Continued.]

at the present time, and so far as I know they have not the money even to purchase the apparatus, and certainly they have not the people to demonstrate.

2179. Will you give other examples of what they could do?—X-rays is a subject which is becoming of industrial importance, and few people, apart from seeing an exhibition of X-rays, really know anything about them. How interesting it would be if in the Museum there was an X-ray spectroscope. There are few such spectroscopes in the country, but with one, the analysis of crystal structure can be demonstrated, and other experiments could be arranged showing applications to metallurgy. At the Museum now models of crystals can be seen showing the crystal arrangement of certain substances. I think that not one person out of a dozen looks at them, but if the analytical apparatus could be demonstrated interest would be greatly increased.

2180. What is your estimate of the requisite cost?—The Royal Society Committee did not go into that in detail, but Sir Henry Lyons thought it would not cost more than £1,500 per annum. I think that very moderate, but one has to remember that a large number of manufacturers in this country will willingly lend apparatus.

2181. £1,500 a year would enable you to give a series of exhibitions and lectures on different subjects?—You would be able to provide a professional demonstrator and lecturer on such a subject as those I have mentioned, and I think find a certain amount of apparatus which would have to be purchased, but the bulk of the apparatus would undoubtedly be loaned. At Wembley the bulk of the apparatus was loaned. The General Electric Company lent apparatus, and I have no doubt they would lend to the Museum.

2182. Are you satisfied with the manner in which the Science Museum has been organised, or have you any suggestions to make as to improvements in the general method of showing the exhibits?—I am perfectly well satisfied. It is easy to be critical, but if one attempted to be critical and the Director of the Museum were here, I know that he could himself be critical of his own Museum. Certain sections are most admirably organised, but if I named a section which is not so well organised it is not because the defect is not known to the people at the Museum. It is, however, very difficult for them at the present time to put some of the exhibits in the best arrangement. So I hesitate to make suggestions, although I could give an example.

2183. Can you give an example of the sections you consider inadequate?—A short time ago I inspected the optical section. There is an admirable collection of antique optical instruments, and certain modern instruments, but you do not gain much optical knowledge. You cannot do so by merely seeing a microscope which was used by a certain investigator. But I know the Director agrees entirely that the optical section wants reorganising. It also needs money, because a number of the optical exhibits which are desired will have to be purchased. However, in general I express the greatest appreciation of the general organisation of the Museum. I do not desire to be critical.

2184. What do you say about the new building?—It is a very fine building, the finest Museum I have ever been in.

2185. And appropriate for the purpose?—I think very appropriate.

2186. The Royal Society memorandum suggests that a more advanced class of lectures than those at present given would be useful. Would you develop this suggestion. I think you have already done that?—Not entirely. In the Museum itself there is at the present time a half-finished Conference Hall. I believe a great deal of good would be done if the Conference Hall could be made useful, say, to the Scientific Societies and others. I can give a recent example. Six weeks ago the Optical

Society had a meeting, and the subject which they discussed referred to optical instruments. The meeting was held in the Imperial College. After the meeting they adjourned to the Museum to examine specimens. That is one example. The ideal thing would have been for the discussion to have taken place in the Museum so that the people taking part in the discussion could have the specimens from the Museum in front of them. To give another example, the Physical Society some time ago had a discussion on refrigeration. At a meeting of a small scientific society it is impossible to give demonstrations with refrigerating machines, and so no experiments could be made. If, however, one could have got an invitation from the Director of the Science Museum to hold the meeting in a conference room and have examples of refrigerating machinery on show, it would have added greatly to the value of the proceedings of the Society, and indirectly be beneficial to the country. There are many Scientific Societies that have discussions relating to subjects which the Museum illustrate by exhibits, but at present the exhibits cannot easily be shown at the discussions. Again, suppose that a professor of engineering, say from the Provinces, brings a number of advanced students to London, to visit the Museum. He quite frequently desires to give to his students a short lecture on some of the exhibits in the Museum. At present that is not possible; there is not a suitable room. The Conference Hall, of which the walls are up and I think the roof finished, should be completed for such purpose. I think it would be a very valuable adjunct to the Museum.

2187. Your suggestion is that a Lecture Hall is a requisite adjunct?—That is so. If the Museum is going to perform its proper functions—and I do think that assistance to industry is one of its functions.

2188. And for education?—Certainly—education and industry.

2189. Are you familiar with other Science Museums, e.g., the Munich Museum? How does the English Science Museum compare with them?—I am not familiar with the Munich Museum.

2190. Are you with any other Science Museum?—I am familiar with a new Science Museum which has been erected in Washington. I do not know the organisation of that Museum in detail, but I do know that experiments such as I have been indicating to you are shown there.

2191. Does the Washington Museum develop more on the side of education?—The Washington Museum, as I saw it—I was only there a short time—was really attempting to show the public by means of experiments the results of recent discoveries. I do not know even the name of the Museum.

2192. (Sir Richard Glazebrook): It is doing extraordinarily well. I know it?—They were attempting to do this kind of thing for the pure science side as the Museum to-day at South Kensington does for the engineering side. There, by operating switches, machinery works. There, by appropriately operating switches or making arrangements with the attendants, one can see the cathode ray in operation.

2193. (Sir Lionel Earle): With regard to the theatre, I think you say it ought to be in the centre of the Museum practically?—There is the foundation, and the walls and roof are already erected. I judge that the accommodation would be quite suitable, but as I understand it there are no funds provided with which to complete it.

(Sir Richard Glazebrook): May I interrupt for a moment? I think a distinction needs to be drawn between what Mr. Smith has called the Conference Hall and the Lecture Theatre. He is not contemplating, as far as I understand it, a room where there would be very large meetings, but where a Professor could talk to a body of students.

2194. (Sir Lionel Earle): I believe it is contemplated to build a theatre which would be available

29 March, 1928.]

Mr. F. E. SMITH, C.B., C.B.E., D.Sc., F.R.S.

[Continued.]

at times for the three large Museums, the Natural History Museum, the Geological Museum and the Science Museum. Would that not meet your case at all, because you could not move the machines?—You want to be able to move the machines.

2195. It must be actually in the Science Museum itself?—Certainly.

2196. What number of people would you consider should be accommodated?—The theatre should accommodate say 200 people. You might at times desire more accommodation, but I would not suggest a larger room.

2197. It was the intention to have the Conference Hall for that purpose.

(Chairman): Independent of the theatre?

(Sir Lionel Earle): Independent. Therefore they would probably never have to use the theatre, at the Science Museum.

(Sir Richard Glazebrook): They might get large popular lectures.

2198. (Sir Henry Miers): Would you have the public demonstrations to which you referred given by a staff that was part of the permanent staff of the Museum?—Yes.

2199. It comes to that sooner or later you could not engage different demonstrators for different occasions?—I think that would lead to dissatisfaction.

2200. It would be a permanent enlargement of the staff?—Yes. I do not contemplate that the figure I quoted, £1,500, would be sufficient for any great addition to the staff. No considerable addition would be necessary.

2201. It is evidently a beginning?—A very modest beginning.

2202. As a sequel to that, do you think the staff of the Science Museum should be used for research as well as demonstration?—No.

2203. No research is done at present?—No. I do not think that one of its functions should be physical research.

2204. You do not think that should ever become necessary?—No.

2205. On the other hand, it is rather difficult to dissociate teaching and demonstration entirely from research?—That is so.

2206. Still, you would face that?—I would face that in the case of the Science Museum, certainly.

2207. You say that much of the apparatus would be loaned, or given by different firms. That would very much reduce the expense, but do you think there would be much danger of the Museum being used by firms for the purpose of advertisement merely?—At Wembley quite two-thirds of the apparatus was loaned by firms, and there was no suggestion from any firm even that their name should be attached to the apparatus. I do not think there would be any danger of the Museum being charged with giving preferential treatment to any exhibiting firms.

2208. It would be important, for this or any other purpose, that that should be safeguarded, I take it?—Certainly.

2209. The Science Museum must always rely to a large extent on gifts and loans from firms?—Yes. One might take as an example calculating machines: there are machines in the Museum which show the development of calculating machines, and some modern ones are, I think, on loan.

2210. You would not protest against the preservation of obsolete apparatus?—Yes; if it is merely obsolete; if it is merely antique and teaches no useful lesson.

2211. Except in so far as it illustrates the history of the subject?—Links in a chain of progress are of educational value. For example, I very much appreciate the early calculating machines. Those of Babbage and Stanhope are interesting and much can be learned from them.

2212. You would not like a complete series to illustrate the stages?—I would like that.

2213. And preserve them permanently?—Yes.

2214. Do you think it would be advisable to preserve old apparatus permanently not merely for that purpose but for others? They have been used for the purpose of settling inventors' claims after the War, I understand. Reference is made to old wireless apparatus, for example. I think that is mentioned in the report we received from the Science Museum?

I have not thought very much about that.

2215. And also for the infringement of patents. I believe appeal has been made to the Science Museum when such questions have arisen. There is a case for the permanent retention of obsolete apparatus?—If one can learn lessons from obsolete apparatus, it should remain there. Probably there is not much difference of opinion on this point. If the apparatus shows novelty, it might be shown in the Museum, and if any patent questions were involved, presumably the apparatus is novel.

2216. I think it is important, because if you preserve all the old apparatus you very soon fill your Museum?—Yes. I am not in the least a supporter of having the Museum as a store house.

2217. Yet you cannot say when apparatus may not be needed at some time for some purpose?—But I do not think that is the function of the Science Museum.

2218. (Sir Robert Glazebrook): On the question of the co-ordination of the various Museums, there will in the future probably be three Museums on the site, the Science Museum, the Geological Museum, and the Natural History Museum. At the present moment those three are all under distinct Governing Bodies, and separate. Something is said here about co-ordination, and possibly I suppose if we were starting afresh, we would start with some kind of system whereby there was a Body of Trustees for all three working as three separate Committees possibly dealing with each of the separate Museums. Would any scheme of that kind, do you think, be desirable at present, or have you any views in regard to it?—This matter was discussed by the Royal Society Committee. The view I think which was quite generally expressed and approved was that they could not conceive of any super body managing all three Museums, but in any case there must be, as you said, three separate Councils. One cannot imagine a body of men who are competent to look after the Science Museum and be equally competent to look after the Natural History Museum. Two Councils are needed and a third for the Victoria and Albert Museum. Whether those three Councils should be responsible to a single Minister, or whether there should be some sort of super Committee, is a very delicate question. What one had in mind was rather this. In the Science Museum the Chairman is a man who gives his services voluntarily. Supposing this Chairman and the Director of the Science Museum met the corresponding Chairmen and Directors of the other Museums, say once or twice a year, and discussed their projects with them, I think there would be no overlapping, if that is one of the things which is feared. At such a meeting a great deal of good might be done. There was a little overlapping, as you know, in the past. The Science Museum at one time had a small Geological collection and a small biological collection, but both of these have been made over to the Natural History Museum. Meetings such as I have indicated between the responsible people, once or twice a year, should do a great deal of good. I might give as an example the scientific departments of the fighting services where excellent results have been obtained.

2219. The Council you have referred to at the present moment is merely an Advisory Body. Do you mean that it should remain an Advisory Body, or should it be an Executive Body managing and looking after the Museum, and with responsibility for seeing that the Museum is working satisfactorily?

The difficulty of an Advisory Body which consists of a number of people acting in a purely honorary capacity often means that the members have not the

29 March, 1928.]

Mr. F. E. SMITH, C.B., C.B.E., D.Sc., F.R.S.

[Continued.]

time to devote to the work of the Museum that they ought to devote. If the Body is going to be an Executive Body, it has to meet frequently, and the members have to put in much more time, apart from the meetings, in order to go thoroughly into the matters affecting the Museum. Either scheme is practicable, whether an Advisory Body or an Executive Council.

2220. Have you any preference for the one or the other?—There is a great advantage in having an Executive Council. I had in mind, quite apart from that, that the Council of the Science Museum might have on it certain representatives of the larger technical Societies in London, say the Civil Engineers who might nominate a representative, and the Mechanical Engineers. If those people took their duties seriously, it would to a considerable extent ensure that the Museum was fairly up-to-date with regard to engineering and civil engineering and other branches.

2221. Would it be sufficient if they had merely the duty of advising the Minister of State on questions referred to them, but had no real responsibility for the executive control of the Museum? Suppose, for example, the Director was not, as the present Director is, doing his work satisfactorily?—My preference would be to make the Council an Executive Council, but I have not thought out the exact machine. I think as a safeguard—I should have mentioned this earlier, as I think it is an appreciable safeguard against possible overlapping—that at meetings between the Directors and Chairmen of the three Museums a representative of the Treasury should attend.

2222. (Sir Martin Conway): I do not quite understand the difference between a Conference Hall and a Lecture Theatre. Do you mean that you want both?—I was speaking of the Conference Hall and considering advanced lectures on technical subjects. The theatre itself, I take it, is for a different purpose. The theatre may have meetings of 500 or 600 people where lectures on fairly popular subjects would be given. The British Association have citizens' meetings at which a lecture is given to citizens without any pretensions to advanced technical knowledge. The British Association also arranges discussions to which no citizen of the town is ever invited, but which are attended by members of the Association. At the latter meetings the subject is of an advanced character, and at the former meetings the dissertations are on more popular lines. When speaking of the Conference Hall, I had in mind the more advanced type of discussions where the number present would be comparatively small. In general a Conference Room to hold 200 people would suffice.

2223. You would like a Conference Hall for each of the three Museums, the Science Museum, the Geological Museum, and the Natural History Museum, and a larger theatre common to them all?—I have only really been thinking of the Science Museum, but it may be that the remarks with regard to the Natural History Museum are equally true.

2224. It would apply to the British Museum, to the Victoria and Albert Museum, and to any Museum?—Yes, I think it probably would.

2225. With regard to these demonstrations, there came into existence the day before yesterday an Association under the auspices of the Colonial Office and the High Commissioners of the Colonies, and so forth, for producing gramophone records and cinema films of matters of scientific, historical, artistic and other interest for circulation all over the world. We have already received applications from Japan and from Central America, Australia, and out of the way places, for cinema films of scientific experiments, in so far as they do not involve colour. We are informed that such cinema films can efficiently represent a very large number of important experiments?—I think in the mechanical sciences the answer would probably be yes,

2226. And in physics?—Not many in physics.

2227. You could not show the sub-red rays, and the vulcanite prism, and the platinum glowing by cinema films?—I think not. Let me give an example in illustration of what was done at Wembley. Visitors are always interested in wireless, and they refer to the characteristics of their valves and to electronic discharges, but how many have seen a demonstration of an electronic discharge in a valve? At Wembley the characteristics of valves were determined experimentally; the ionic discharge was caused to make the cathode red hot and other electronic discharges were made audible.

2228. You can do anything physical that does not involve colour?—It would not be possible to project the actual bombardment of an electrode with the result that the plate becomes red hot. A film, I think, could not show that.

2229. I do not know.—On educational films the movement of valves in engines is shown and in general for mechanical subjects I think the film is a most useful adjunct.

2230. If they were efficient for certain purposes, you could have those on automatic machines?—Yes. I like the suggestion of the cinema as an adjunct. We had one at Wembley to show scientific subjects.

2231. The Science Museum has a certain number of those things, but in your opinion could that be developed with advantage?—I am sure it could.

2232. (Sir Robert Witt): You have referred to the Conference Hall, and reference has also been made to the Lecture Room. Is there anything you could suggest that might be done to increase public knowledge of what is going on at the Science Museum, that is to say, to bring it to the attention by publicity or otherwise of a larger number of people who can enjoy the Museum or benefit by it?—I think once a Conference Room were arranged there, the mere fact that a number of Scientific and Technical Societies took advantage of it would soon give the Museum more publicity than it has at the present moment.

2233. Do you think it possible that either by the expenditure of a small amount of public money, or by possible organisation within the Museum itself, greater publicity could be obtained and that it would be time and money well spent?—Increased publicity would no doubt increase the attendance. I know that the publicity given to the Museum by the opening of the new extension by the King increased the attendance 100 per cent. The public suddenly realised that there are on show models of ships, aeroplanes, and old engines, of which they should have known before but did not because there was not sufficient publicity. But the people who would really benefit by the Museum would probably not be largely increased. The occasional visitor would no doubt increase, but it might not do corresponding good.

2234. Perhaps I could sum up my question in this way. Could anything more be done, in your opinion, to the advantage of the Science Museum by spending more time or money in publicity?—Yes, I think it could.

2235. Have you any suggestions to make?—A good deal depends on the form of publicity. I should not suggest that it should take the ordinary form of widespread publicity, I would rather suggest that publicity should be given in the way of the Museum preparing an account of its exhibits and circulating it to a large number of Philosophical and other Societies all over the country. I think that would lead to the biggest advantage to the community in general.

2236. (Sir Lionel Earle): In another memorandum which has been submitted to us by another Body in reference to the Museum they speak of unsuitable exhibits, and they say "it is open to question whether a large number of the collections retained in the present Museum are really suitable to its objects. Thus there is a very fine collection of models of early sailing ships which might be more

29 March, 1928.]

Mr. F. E. SMITH, C.B., C.B.E., D.Sc., F.R.S.

[Continued.]

properly housed, either at the present United Services Museum in Whitehall, which already has a large collection of such objects, or, alternatively, placed in a new Museum which would deal with the social rather than the industrial history of the country. The preservation of such models is a matter of prime importance." Do you feel that these models, which are very attractive, are essential from the point of view of the bulk of them to the Museum?—Not the bulk of them.

2237. Therefore you think that if a Museum were created, as is the intention of the Admiralty, at Greenwich, the bulk of those models should be removed there?—Yes. That would leave those models at the Museum which really show advances in naval architecture.

(The Witness withdrew.)

Sir CHARLES HOLMES, D.Litt., Director of the National Gallery, called and examined.

The following Memorandum was submitted by the Trustees of the National Gallery in reply to a Questionnaire addressed to them by the Royal Commission (see Appendix I):—

1. (1) The foundation of the Gallery dates from 1824, and was effected by a Treasury Minute of the 23rd March, in which Lord Liverpool announced the purchase of Mr. Angerstein's collection by the Government, and the measures which he had taken for its custody. It was provisionally housed at 100, Pall Mall.

(2) The first Act of Parliament relating to the Gallery was the National Gallery Sale Act of 1856, which gave permission to the Trustees and Director to sell pictures unfit to be preserved in the collection, subject to certain conditions. The proceeds of the sale were to be paid into the Exchequer.

(3) The next Act of Parliament is the National Gallery Loan Act of 1883, whereby the Trustees and Director were empowered to lend pictures to other public galleries situated in the United Kingdom under the control of the Government, of any municipal authority or of any society or body approved by the Trustees. Pictures which were acquired by gift or bequest were excepted from the operation of the Act, subject to a term of years.

(4) In July, 1824, a Treasury Minute nominated a Committee of six gentlemen to undertake the superintendence of the National Gallery pictures, who gradually acquired the title of Trustees. By the Treasury Minute of 27th March, 1855, the whole National Gallery establishment was reorganised; the number of Trustees was then 13, exclusive of two *ex officio* members. The Minute recommended that this number should gradually be reduced and that it should not at any time exceed six, none to be *ex officio*. The Trustees were to hold meetings at Trafalgar Square every month during the session of Parliament, or at such other times as the Director might consider necessary. For reasons detailed in the Minute their powers were limited to advice, approval or protest to the Treasury and Parliament. They could not prohibit or insist upon a purchase, or any other measure, in opposition to the Director. In 1894 this constitution was changed by Treasury Minute of 26th April, by which the responsibility of the Trustees was increased and that of the Director diminished. (See under (5)). The Director became at the same time a member of the Board. A Treasury Minute of June, 1897, increased the number of the Trustees from six to eight.

A further Minute, July, 1909, increased the number from eight to 10.

A Treasury Minute of 3rd August, 1916, limited the period of office of future Trustees to seven years, subject to re-election under certain conditions.

2238. The trade of shipbuilding?—Yes.

2239. But the bulk of the models which are not really necessary for that purpose ought to go to the Naval Museum at Greenwich if made?—I would say the models are of great interest, but in the main not of educational value.

2240. (Chairman): You think that more can be done for the Science Museum in the educational direction?—Yes.

2241. And rather by sacrificing the past?—Sacrificing the antiques.

2242. And developing the new and the present?—I think so.

2243. We are greatly indebted to you for your valuable evidence.

(5) The Minute of 1824 had appointed a Keeper and Assistant Keeper to the Collection. When the administration was reformed in 1855, in accordance with the recommendations of the Select Committee of the House of Commons, Sir Charles Eastlake was appointed Director for a term of five years, to be eligible for reappointment. His chief duties were the selection and purchase of pictures, and superintending the arrangement, description and conservation of the collection. He might purchase pictures abroad, or in cases of emergency, on his own responsibility, recording his reasons for the information of the Trustees. He was to prepare and issue, with the sanction of the Trustees, rules and instructions for the guidance of the officers and the attendants, regulations for the admission of students; and was to prepare and issue a descriptive catalogue of the pictures in the collection.

By the Treasury Minute of April 1894, the Director, while remaining the chief executive and administrative authority of the Gallery, was to take his place as a member of the Board, and any decision as to the acquisition of new pictures, the preservation of those already in the Gallery, or the management of the institution was to be arrived at on the responsibility of the Board as a whole. In cases of emergency the Director was empowered to act on his own responsibility, reporting to the Board what he had done with as little delay as possible. An age limit of 70 was imposed.

By Treasury Minute of August, 1916, the new Director, being an established Civil Servant, retained his status as such. The conditions as to tenure will be open to re-consideration in the case of future appointments.

By a Minute of the National Gallery Board, 8th March, 1921, the Director was empowered in cases of emergency to purchase a picture or pictures for a sum not exceeding approximately £2,000, if possible in consultation with not less than two members of the Board.

(6) From 1824 to 1854 the sums voted for the purchase of pictures were the exact amounts required to meet the purchases which had been negotiated, and were charged to Civil Contingencies. From 1855 to 1864 votes were taken in anticipation of purchases.

From 1865 onwards the normal method of provision was an annual grant. Up to the year 1888 this grant was £10,000, which was twice temporarily suspended for several years, to allow for the purchase of the Peel collection and of the Blenheim pictures. In 1889 the grant was reduced to £5,000 but the Trustees were permitted for the first time to retain any unexpended balances.

In 1921 the Trustees were empowered to aid to this grant of £5,000 which had been suspended during the war, the fees from two additional Pay

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

Days, an allowance which on the 27th of June, 1923, was commuted by increasing the Grant-in-Aid from £5,000 to £7,000.

2. (a) Shortage of clerical staff, which throws wasteful routine work on officers.

Difficulties arise from our insufficient grants for—

- (1) An adequate purchase of Pictures Fund.
- (2) An adequate Library Fund.
- (3) Fuller staffing of the Reference Section.

Though these are not exactly caused "by the historical origin of the Museum, etc."

(b) "Legal difficulties."—Certain restrictions as regards (1) the sale of pictures and (2) the loan of pictures are imposed upon the Trustees by the two Acts of 1856 and 1883 respectively.

The restrictions are—

- (1) We cannot lend gifts and bequests till 15 years have elapsed from the date of acquisition.
- (2) We cannot lend gifts and bequests, to which a condition as to grouping is attached, till 25 years have elapsed.

(3) We cannot lend to other places than "public galleries situated in the United Kingdom (including the Free State of Ireland) belonging to or under the control of Government or of any municipal authority or of any society or body approved by any two or more of the Trustees together with the Director."

Municipal authority means the Common Council of the City of London, the Metropolitan Board of Works, Town Councils, etc., etc.

- (4) We cannot lend to a Public Gallery which does not exclusively devote the profits made from the exhibition of our pictures to promoting Science and Art.

The terms of the Sale Act of 1856 render the Trustees unable—

- (1) To sell certain classes of pictures, *i.e.*, bequeathed and presented pictures; and pictures which are deemed fit for or required by the National Collection.

- (2) To sell any pictures not bequeathed and not given (*i.e.*, purchased) except after tabling the contemplated sale for six weeks previously in both Houses of Parliament and then only by public auction.

The Trustees have no powers to exchange anything absolutely; but in practice they exchange loans. They are free to select pictures from offered gifts or bequests and to exhibit any picture in the Exhibition Galleries or in the Reference Section, save where the Donor or testator imposes an "all or none" condition as regards acceptance and a "grouping" condition as regards exhibition.

3. Intercourse with and loans to galleries in the United Kingdom are unhampered. Exchanges (save as loans) are precluded.

But as stated under (2) (b) (Legal difficulties) loans to Dominion, Colonial and Foreign Galleries and Museums are not open to the Trustees.

As regards intercourse with Foreign Galleries it is the practice of the National Gallery officers when abroad to visit the Directors of Foreign Museums and *vice versa*.

4. Intercourse between the National Gallery and the other National Museums is constant. Actually neither competition in purchase nor overlapping takes place, the Directors making a practice of keeping in close touch.

In common with the National Galleries of Scotland, Ireland and Wales, the National Gallery, London, purchases pictures. But in these cases no question of overlapping would rise; since different publics are served. The National Gallery Board is also suzerain Board of the Tate Gallery, with an eye on the

mutual needs of the two Galleries, so that here again overlapping could not reasonably arise.

It is of course possible that the National Gallery and the Victoria and Albert Museum might wish for the same article: Cassoni, Rood screens, Carved and painted retables, altar frontals, painted church furniture, etc. In such cases experience has shown that agreement between the galleries is easily reached. But overlapping as such is not necessarily harmful to the public services and in certain cases deliberate overlapping would serve two functions—a panel at Trafalgar Square and a replica at South Kensington having separate significance. Moreover with scope for overlapping the chance of securing valuable objects would be increased; *e.g.*, if the Victoria and Albert Museum failed to secure a retable the National Gallery might step in.

As regards the relations subsisting between the National Gallery and the Millbank Galleries, it is understood that in considering the location and distribution of British pictures between these galleries regard should be had by the two bodies of Trustees to the year 1850 as the normal date after which British pictures should *prima facie* be exhibited at the National Gallery, Millbank. For modern foreign pictures 1870 should be the agreed corresponding date. This decision to be subject to the right of the Trustees at Trafalgar Square to exhibit at the National Gallery such picked examples as they consider desirable.

Competition with the National Portrait Galleries in London and Edinburgh is not impossible; but the working arrangements of other public collections are familiar to the National Gallery Trustees among whom are Trustees of the British Museum, the National Portrait Gallery, the Victoria and Albert Museum Advisory Committee, the Wallace Collection and the Tate Gallery. There is no doubt that arrangements would easily be made between the Departments, if any question of overlapping should arise.

5. At present the National Gallery has two Students' days each week, on which 6d. entrance is charged to the ordinary public. Students holding tickets, and members of the National Art-Collections Fund are admitted free. This entrance fee diminishes the public attendance in the interest of the students and makes an Appropriation-in-Aid.

Total Annual Attendances of Visitors.

	Two Free days a week.	Sundays.	Four Pay days a week.
1921 ...	351,645	87,445	120,128
1922 ...	362,959	91,206	175,078
1923 ...	328,236	44,217	160,354
1924 ...	540,121	116,865	98,537
			(part 4 days).
	Four Free days a week.		Two pay days a week.
1925 ...	506,454	97,490	73,794
1926 ...	439,968	82,730	69,294

Attendance of visitors is also influenced by other conditions than Pay-days and Free-days. Special exhibitions, such as an event as the Wembley Exhibition and also weather conditions greatly affect public attendance, *i.e.*, August Bank Holiday attendance in 1927 (a record wet day) was 12,560. August Bank Holiday, 1926 (a fine day), the attendance was 4,600.

The Trustees favour the retention of this assistance to students. From its foundation the Gallery was regarded as an educational source for British painters, and to-day the leading art schools make

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

constant use of the Gallery as part of their students' training. In the last four years 372 art-school students, out of a total of 571 new ticket holders, have had tickets issued to them.

The monetary yield from these two pay days in 1925 was £1,844 17s. (73,794 visitors). In 1926 £1,732 7s. (69,294 visitors).

As from 1st April, 1921, an experimental increase to four pay days per week was made. The effect of this can be gauged by comparing the following figures:—

Number of Pay days per week.		Total attendances for year.
Pre-War.		
1913	2	617,892
Post-War.		
1919	2	511,785
1920	2	659,423
1921	2 for the first three months, and 4 for the rest of the year.	559,218
1922	4 (throughout year)	629,243
1923	4	582,807
1924	4 for three months only, 2 for remainder of year.	755,523
1925	2 all the year	677,738
1926	2	591,992

The proceeds of the two additional pay days, imposed from 1st April, 1921, to 31st March, 1924, were credited to the Picture Purchase Grant, and amounted to £6,076 10s. The proceeds of the two normal pay days per week from January, 1921, to December, 1924, was £7,775 18s. 6d.

The Trustees would strongly deprecate any increase in the number of Pay Days.

6. The posts of the Director and the Keeper and Secretary of the National Gallery are not filled by competitive examination. These officers are appointed by the First Lord of the Treasury, and Civil Service Certificates are issued in their favour. The Director's office is dealt with separately under Question 1. At the National Gallery the Keeper acts as Director in the latter's absence. His normal duties as Secretary and Accounting Officer cover the maintenance of the fabric, the control of the staff, as well as responsibility for the Minutes and accounts of the Department. The Director makes a practice of consulting with the Keeper, whenever possible, on the technical and administrative matters, and it has become the Keeper's duty to equip himself to be able to act for the Director, if necessary, in all matters.

The Assistants are recruited through the Civil Service Commission, in accordance with the Regulations. One of the Assistants works chiefly under the Director, the other chiefly under the Keeper and Secretary and Accounting Officer.

In so small a department as the National Gallery, with a superior staff of only four, the Assistants rapidly acquire first-hand knowledge of the administration of the Gallery, and the Director's policy ensures that both Assistants are grounded and constantly exercised in the technical examination of pictures. It is taken for granted that their principal business is the study of pictures and the literature of art. In practice this has usually to be done after office hours. The Trustees have sanctioned yearly grants to the Assistants, out of the Lewis Fund, to aid them in visiting foreign galleries. But they would be glad to find a way of extending their facilities for foreign study.

They also regard additional staff to undertake routine clerical work, e.g., pay sheets, accounts, indexing, &c., as essential. A technical carpenter would be a very useful addition to the staff.

The Trustees would welcome any scheme enabling them to increase the educational and research facilities for the Junior Officers of the National Gallery.

7. The exhibition rooms of the Gallery no longer afford proper accommodation for many of the first-rate pictures which the Collection possesses. These pictures have to be arranged in a series of rooms on the Ground Floor, where the lighting is imperfect and unsuitable. No permanent attendant staff can be provided for these scattered rooms on the Ground Floor, though individual members of the public may visit them on request with the Head Attendant, or some officer of the Gallery. As opportunity offers, occasional pictures from this Reference Section are shown in the upper galleries. The provision of further Exhibition galleries is an imperative need.

The pictures in the National Gallery are arranged by schools, and, so far as possible, in chronological order within those schools. The largest Italian altarpieces are collected in the cruciform space round the Dome. The Mond Collection, covering more than one school and period, has under the terms of the Mond Bequest to be shown as a separate unit.

8. The Trustees of the National Gallery, by arrangement with the Treasury, finance all their publications out of the Lewis Trust Fund, crediting the said Fund with the profits of sales. The Trust Funds of the National Gallery are altogether independent of the Vote, and, subject to audit by H.M. Exchequer and Audit Department, are entirely controlled by the Trustees of the Gallery.

The only payment in connexion with reproductions included in the Vote for the National Gallery, Trafalgar Square, is the sum of £300 in respect of the provision of official records for the National Gallery, Trafalgar Square, the National Portrait Gallery and the National Gallery, Millbank. All of these Galleries are served by the photographic staff of the National Gallery, Trafalgar Square.

The salaries, apparatus and material of the Photographic Department, with the salaries of the two saleswomen at Trafalgar Square and of one saleswoman at the National Gallery, Millbank, are charged against the Lewis Fund.

The National Gallery, Trafalgar Square, is supplied by its photographic staff with the prints which are sold to the public from the Stall.

Prints for reproduction are supplied to the public on the payment of a fee entitling the purchaser to make a reproduction. Electrotypes of more than 1,000 pictures are available for purchase. The Trustees publish Illustrated Post Cards, prepared from their own photographs and printed by various firms. The Trustees further publish an Official Catalogue, an Illustrated Guide, a Short History of the Gallery, and three Volumes of Illustrations to the Catalogue. Production of these is put out to competitive tender. A small series of coloured post cards has recently been published by the Gallery.

The following reproductions made by outside firms are on sale at the Stall:—

A series of four coloured reproductions.

A series of coloured postcards.

Two colour reproductions of Turner Water Colours.

The Trustees sanction, in addition, the sale at the National Gallery stall of various books, published by outside firms, which deal primarily with the pictures in the National Gallery and the National Gallery at Millbank.

These publications are sold on trade terms.

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

The National Portrait Gallery is supplied with photographic prints for sale in that Gallery, free of charge. Proceeds of these sales, minus a commission of 15 per cent., which is retained by the National Portrait Gallery, are credited to the Lewis Fund. The Record Department of the National Portrait Gallery is supplied with photographic prints by the National Gallery, free of charge.

The photographs for the illustrated publications issued by the National Portrait Gallery are supplied by the National Gallery, free of charge, and the preparation of such illustrations is supervised by the National Gallery staff.

The National Gallery, Millbank, is supplied by the National Gallery with photographic prints for sale on the stall, and with the photographs needed for the publication of its various illustrated Guides and Catalogues. No charge is made for the latter photographs.

The National Gallery at Millbank is credited with the net profits realised from the sale of their photographic prints by the National Gallery.

The copyright of all photographs made by the National Gallery is the property of the Trustees.

9. All the exhibits in the National Gallery are available for close study by the public, or by students, subject to the condition that the glasses may not be removed from the pictures.

Two days in the week are Students' days, for practising painters and Art School Students desirous of copying in the Gallery. Tickets enabling such copying are issued by the Keeper; subject to the Trustees' rules.

The Trustees have a small Art Library intended for the official work of the place. Students with personal introductions are allowed to consult books, and the staff do their best to help inquiring visitors. But the Library has not the accommodation, the scope, or the attendants required by a reference library for the general public. Those who wish to make any systematic study are therefore referred to the National Art Library in the Victoria and Albert Museum, or to the British Museum.

EXAMINATION OF WITNESS.

2244. (*Chairman*): We are anxious to have your views on the present system of purchase at the National Gallery. Do you consider that the present sums available for the purchase of pictures are laid out to the best advantage?—Will it be in order if I read my reply to that question?

2245. Certainly.—Our system of purchase under the 1894 Minute, and as still further defined by the Lansdowne Resolutions of June, 1902, is one of purchase by Committee. The system has one disadvantage which is generally admitted, in that it tends to compromise, and to the loss of works of outstanding power and originality. All the greatest works of art have in them some element of the surprising and the unusual, to which the trained professional judgment is attracted immediately, but which is apt to shock the amateur at first sight, so that to him appreciation comes more slowly, and perhaps not at all. In consequence, one or two cautious members of a Committee, especially if they happen to be powerful and distinguished personages, may influence the rest by their hesitation, and block the purchase of the very works which by their surprising character should be the chief attractions of a great gallery. Agreement will be reached only in the case of works which are inoffensive to all, and therefore supremely interesting to nobody. This was precisely what happened during the first 30 years of the Gallery's existence. The explosion that followed a long series of commonplace acquisitions of the Committee system

cleared the way for the reforms of 1855, and purchase by an independent Director. This proved to be the making of the Gallery. So much for theory. In practice, during my term of office, the Board, with one or two exceptions, and these not supremely important, has always acted on the Director's recommendation. But this apparent uniformity has brought one curious and serious disability in its train. Several of the most notable purchases have been made only at the cost of considerable controversy. Each controversy tends to leave a little bitterness behind, a bitterness which perhaps is inevitable where a man's personal taste seems to be at issue, and to be flouted by the purchase of a picture which he dislikes. In time this creates a very real difficulty for an active Director. Whenever he obtains a majority vote for a purchase, he runs the risk of alienating the confidence of friends in the minority, who cannot on this occasion see eye to eye with him. They prefer some other school, some other type of work, or may be frankly suspicious of the picture in question. In time the cumulative result of these disappointments will be to create a strong body of doubt, if not of definite opposition, upon the Board which would be fatal to the Director's influence. Unless the Director be a man of immense determination and courage, he will begin to feel that his task is hopeless, and to avoid giving further occasion to hostility will be careful to recommend nothing that is not inoffensive to the Board, with a result that the purchases tend to be as undistinguished as those of a Committee pure and simple. Such a breakdown of the Director's energy and initiative would, of course, be a deplorable thing for a great Gallery; since it is by the exercise of these qualities that all great Galleries have been made. And the fear of it is no imaginary thing. I myself, for example, have not used the powers of emergency purchase which are nominally granted to the Director, simply because experience showed me that they were hedged round with so many cautionary restrictions that their employment would have led to immediate and formidable controversy. We have not perhaps lost much thereby, and I have been saved the trouble of hunting the sale rooms as carefully as I used to hunt them for the National Portrait Gallery, but the fact may be cited to show how dread of unpleasantness, even in a relatively trivial matter, may hamper a Director's energies. For it must not be forgotten that the very eminence of the Trustees, and the fact that the majority of them are famous in debate and in public affairs, places a Director at a great disadvantage the moment he has to discuss questions of principle and procedure, and at some disadvantage even when the controversy is more or less technical. He cannot always be so ready with his arguments, so apposite in his illustrations, or so just in his phrasing, as men whose lives have been spent round the Council table. He cannot hope to succeed in a discussion with such men, especially when they may be said to belong to a society apart from his, with direct access perhaps to the Cabinet or even to the Prime Minister, unless his case is so overwhelming as to speak for itself. Even then some phrase for which he is not prepared may lead to his undoing. Unless, therefore, his powers, both personal and statutory, are considerable, the professional adviser to a Board of Trustees is likely to find after a time that he has to struggle against an opposition which is too strong for him. That is the inherent fault of the 1894 system. And the time is one at which we cannot afford any system but the best. Our rivals are wealthier than ourselves, and we can only make up for our financial deficiencies by employing the money which we do possess to the best advantage possible. A complete return to the 1855 system is probably impossible in the present state of feeling. But I think if the Director, after weighing the opinion of the Trustees, could be granted the deciding voice in all purchases

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

except when opposed by a unanimous decision of the Board, we should have the best obtainable working compromise. For if we assume that the general judgment of the Board will be sound, we must assume also that the Director will be a man of sense who will not go out of his way to risk a contest with the Trustees by openly disregarding their reasoned collective opinion.

2246. What is the extent of your emergency powers of purchase now?—Up to the sum of £2,000 with the consent of two Trustees, but the Lansdowne resolutions have never been quite formally annulled by the Board, so that the actual definition of emergency is one which might be stretched so far against a Director as to make almost any purchase a matter of controversy. And where there are so many other controversial matters, unless it were a life and death case, and something of quite supreme importance, the Director would not be likely to exercise that power, because he would say it was not worth risking a serious quarrel for something that was not absolutely of vital importance.

2247. Have you the Lansdowne resolutions there?—(The witness then read the resolutions of the National Gallery Board passed at a special meeting held on 10th June, 1902.) The emergency powers you have spoken of are an addendum to the Lansdowne resolutions?—They were certainly subsequent to the Lansdowne resolutions, but the latter, certainly during Lord Lansdowne's lifetime, were very real to him and, as you know, he was a very formidable debater. So without the very best reason in the world, without some very, very strong reason, I should not have cared to risk a conflict.

2248. What are your personal views, as Director of the National Gallery, of the advantages or disadvantages of the present administrative system, i.e., as created by the Treasury Minute of April, 1894?—Although I am in general agreement with Lord Carlisle's Memorandum of June, 1902, a return to the constitution of 1855 might be distasteful to some members of the Board, as diminishing too much the authority to which they have become accustomed. I think the practical working of the department would be greatly improved by a much less drastic change, which can best be understood by a brief summary of the historical facts. The constitution of 1894 soon gave rise to internal difficulties, and led to severe external criticism of the ineffectiveness of the Board at a time when fine pictures were rapidly leaving the country. As a constitution, indeed, it did not differ in essentials from the practice of the National Portrait Gallery, which had worked without a single hitch during the whole seven years of my Directorship there. But on coming to Trafalgar Square I found that the constitution was interpreted in a wholly different spirit, with a wholly different tradition, and a wholly different conception of the relation of the Trustees to the Director. At the National Portrait Gallery the Director was a professional adviser to the Board, and administrator of the Gallery, whom the Trustees united to help and encourage. At Trafalgar Square his opinion seemed neither to be asked nor expected. As the controversies between Lord Lansdowne and Sir Edward Poynter were on record, and as the breakdown of Sir Charles Holroyd under the system had just occurred, I saw that this attitude was not personal to myself but was the tradition of the place. Lord Plymouth acted as mediator in the discussions which ensued, and an assurance was obtained from Lord Curzon that in 99 per cent. of the technical matters discussed the Board would accept the Director's opinion. This assurance, coupled with permission to make an emergency purchase up to £2,000, with the consent of two Trustees, removed for the time being the more prominent disabilities of the Director and Staff. Hitherto the Chair at each meeting had been taken by the Senior Trustee who happened to be present. The appointment in 1919

of a permanent Chairman created a new division of authority, but as I had worked under Lord Dillon in that capacity at the National Portrait Gallery with perfect ease, the position was not unfamiliar. And with Lord Lansdowne, the first Chairman, constitutional precedent was so carefully observed that few difficulties arose. His successor, Lord Curzon, so far enlarged the activities and authority of the Chairmanship, that by degrees the Director's authority was gradually absorbed. The cleaning of pictures, for example, being a highly technical matter, had hitherto been done by the Director's order and on his responsibility. Now the services of a foreign picture cleaner were pressed upon him strongly by certain members of the Board, and on the Director's refusal to take responsibility for the change he was ordered to report to the Board before any cleaning of importance was undertaken (January, 1925). Shortly afterwards the Director was forbidden to make any change in the attribution of pictures in the Gallery without first reporting to the Board. Two years later the Trustees rejected the Director's plan for hanging new acquisitions. By these and other decisions of minor importance the Director's power of making any change in the arrangements, repair or labelling of the collections without risking a conflict with the Board was extinguished. Even the propriety of his encouraging important gifts to the Gallery was seriously challenged. Concurrently the development of the Cabinet system of circulating memoranda on details of policy and prospective purchases, added immensely to the labours of the Director and the Staff. In default of any more drastic remedy, it would be no small help to harmonious working if some distinction could be drawn officially and formally between the technical matters on which the officers of the Department may be presumed to speak with professional authority, and those matters of general and financial policy where the counsel of the distinguished amateurs forming the Board would be of service. Such technical matters would seem to include the cataloguing, attribution, cleaning, restoration and arrangement of the pictures in the collection with the selection of the suitable frames and backgrounds for them. The right of the Director to decline pictures which he considers unsuitable has never been challenged. It would be well in addition to define beyond question his right of purchase and acquisition in emergencies, and of settling the organisation and work of the departmental staff. He would then be able to use his technical knowledge to proper advantage although his powers would still be less than those of the Directors of most of the great Continental Galleries, or than those of his predecessors of 1855-1894—by far the most notable epoch in our Gallery's History. Such a definition, after all, would be hardly more than a formal embodiment of the assurance given by Lord Curzon in 1916, to which I have already referred. I must add that the staff of the Gallery is at present insufficient. The multifarious duties which now devolve upon the senior and junior officers, in particular the valuable work done for the Estate Duty Office, leaves them little or no time for private study and no reserve to fill any sudden vacancy. Men capable of making the rapid and accurate judgment which every branch of National Gallery work involves, cannot be improvised, nor can they be procured ready made at the rate of salary allowed for junior assistants. At least one more junior is urgently needed at once to be trained for work in both the Gallery and in connection with the Estate Duty Office, lest when any change takes place in the present personnel, the whole machine breaks down.

2249. Do you consider that under present arrangements there is sufficient co-ordination between the various Museums and Galleries purchasing pictures? Do you think more regular arrangements would be to the public interest?—Yes, so far as pictures are

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

concerned, there is now no chance of serious overlapping in purchase. Any doubtful point can be settled by friendly co-operation between the Directors. The acquisition of drawings by no less than three of the great London collections would appear more open to criticism. But each of these collections has a special function of its own, and the public convenience is probably well served by not being confined to any single one of them.

2250. Do you suggest any more regular system of meetings between the authorities of the different Museums?—Unofficially, there is a little institution known as the Museums Dining Club which meets, I think, about three times a year, where we all have very pleasant meetings. We meet quite regularly, and the meetings include the Directors and Keepers of all the London Museums together with the Directors of the principal provincial museums. There we always go through almost any technical and inter-departmental questions which might otherwise give rise to possible misunderstanding.

2251. You have said that the work is such and the exiguity of the staff is so great, that you have not time for private study. That would also apply, I suppose, to your contact with the public, that the amount of time you have for contact with the public is seriously diminished by your official duties?—The officers of the Gallery have naturally to make the best compromises they can. There are times when absolutely necessary official work has to be done, and at those times what you might term the opportunities for social intercourse or travelling are naturally very restricted, and one has to fit things in as best one can.

2252. Would the increase of staff give you further opportunities of travel and better opportunities of contact with the public?—I certainly think it would give everyone a somewhat easier time when once the new men had been trained; but it is still more important, I think, to give the Board one more person to rely on, because we are always very short handed, if there is any double claim on the staff such as might come through illness at a busy time. At the present moment I have one assistant away ill, I hope he will get back next week; and another has been ordered a month's holiday from the end of this week, so that we always work, I think, rather too near the edge of disaster.

2253. Would it be possible or desirable in the National Gallery to regroup pictures into exhibition and study series effectively?—I should have said that that was done already, so far as the physical conditions of the building admit. It was the principle that the Trustees adopted when we started reorganising the Gallery after the War, and a principle which has been approved, I think, and is being followed almost everywhere, in the more go-ahead modern museums. We only exhibit to the public works which we consider good for them, that is to say, the very best things of their kind. The things which are less artistically important are kept on the first floor in a series of rooms, all classified so that any student or special enquirer can, within our means, have access to them readily.

2254. Would that plan of division be facilitated by the further building facilities?—Further building facilities would alter it a little in one respect. At present we have to keep on the first floor, that is to say away from the ordinary public, a certain number of pictures which in any other Gallery of the world would be exhibited in a top-lit room upstairs. If the increase of pictures, slow as it is, goes on, the number of pictures which will have to be kept downstairs, and their quality, will rise steadily. As the number of works in the Gallery increases, if the building is not also increased, the number which will be unjustly relegated to the first floor will increase. In connection with the new Venetian room the point of the gift of this new gallery by Sir Joseph Duveen, the intention of the gift, was to remedy the most glaring of these anomalies. The

Venetian School has suffered very badly for the want of space in the upstairs galleries, and though I did my best, by changing the exhibits on the walls upstairs, to give everything a chance, there was a wholesale removal of pictures downstairs which ought by rights to have been shown on the top floor. And indeed to show them now, I have had to prevent the very natural expansion of the English School, to which I would like to give one more room. But until I get a room for the Venetians the room which naturally would have taken the overflow of the English School has had to be devoted to the Venetian.

2255. To what extent will the offer of the new gallery by Sir Joseph Duveen relieve any existing congestion?—It will just relieve congestion in those two schools. It will enable us, I think for the first time, to show our Venetian pictures in something like a complete sequence, not only of pictures but of galleries. We shall have a complete series running from the beginning of the Venetian School in the early fifteenth century up to the Venetian School of the eighteenth century, one series of galleries, and it will set free another gallery adjacent to the English School for the occupation of the English School which at present is quite unjustly congested. It will not, on the other hand, relieve the congestion in several other rooms. The Flemish pictures of which we have a most admirable and beautiful series are at present quite inadequately housed, and I see danger in two or three other quarters of, if I may use the simile, the jug being too small for the gradually increasing quantity of liquid that it is to contain. We are in a great many cases in the position of having rooms which are so full of pictures that they are like a jug which is brim full, and which, if other works are added must overflow into the Reference Section or relative darkness, works which in any other gallery would be regarded as most important and attractive. The Flemish rooms are the next ones after the Venetian and the English, which suffer badly from this overcrowding, and it would be extremely useful if from time to time—I know what the difficulties of the day are—we could get similar benefactors, because I know I must not expect any building from Sir Lionel Earle. If now and then a room could be built on the space at the back, we could, by gradual shifting, make further rooms available for other sections as they overflow.

2256. Does not the National Gallery largely owe its distinction and charm to the fact that it is not too large?—I am afraid I could not admit that for a moment. I think the distinction of the Gallery is due entirely to the quality of the pictures. The size of the Gallery appears to me to make no difference—within limits. A large Gallery, if well spaced and well arranged, must be much more distinguished and charming than a small one which is neither so well equipped nor so well ordered. I do not think there is any charm about size, either great or small, in itself: it is simply a relation of size, the fitness of size, to contents. It is exactly like a suit of clothes. A small tailor's dummy, when newly tailored by the tailor, looks very neat; but if that admirable suit of clothes had to be put straight on to someone six feet high, the result would be ludicrous. A Gallery grows like a person, and the building has to be adapted to its natural growth. We are in the stage where the Gallery is still in the position of a growing schoolboy whose cuffs, sleeves and trousers from time to time become extraordinarily short, so that in some respects the Gallery is discreditable. The Director ought from time to time to act as a good tailor would, and say: "It is really time you had another pair of trousers." Buildings, like clothes, cannot be indefinitely let out; you have to make a really substantial addition. You cannot expand a small room into a large one just by putting a hydraulic blower inside it.

2257. Then you contemplate indefinite extension?—I think extension within reason must keep pace

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

with the additions to the Gallery. If we are to look at it as a historic record, the Gallery in process of time must absorb a certain amount of what is now called modern art, as modern art becomes classic, as it will do perhaps in another century. There will always be a process of accretion. As regards the old Masters, and very valuable old Masters, those accretions, as we know, will probably be limited by sources beyond our power. We may get a dozen or so very important pictures from various sources, some of them rather large pictures perhaps, which will entail every now and then an additional space for the old Masters. But we have also to contemplate that the future will provide Masters, as the past has done, and that the National Gallery will always have to be the home of the very best things. However carefully you select and sift, some growth is essential to its continual vitality. We happen to have the space at the back which ought I think to be sufficient for the needs of at least another, shall I say, half century, or century—at least half a century—and I think I might say fairly a century with economy; but the necessity of future growth, if the Gallery is to be a living Institution, must be contemplated and be kept in mind.

2258. (Dr. Cowley): The extension at the back, of which you have just spoken, would I suppose be largely taken up by relieving the present congestion of which you were speaking?—I do not think largely. I fancy myself that so far as the old Masters are concerned three, not more than three, Galleries of moderate size ought to contain our acquisitions for a good many years. I think that the principal need of the future will be the provision of Galleries for works which are now relatively modern but which will in time and in their turn be old Masters, so that I should say that of the perhaps 12 or 14 rooms for which space is available at the back, not more than one-third or one-quarter would be needed for what are now old Masters. One other school I have to consider is the English school. That is a point on which I believe Sir Robert Witt and other members of my Board all feel very strongly, that an extension there would probably be necessary. But I think at least half the space available would not have to be built on for a great many years. I do, however, think that it is very desirable that say three or four more rooms should be provided at the very earliest possible moment.

2259. There are one or two older questions that we have already talked about to some extent. I gather that you do not consider the danger of overlapping to be serious, overlapping in objects acquired by the National Gallery?—Not at all in the future. There have been certain bequests in the past, notably I think to the Victoria and Albert Museum, which at certain points do seem to overlap with ours. They have French pictures in the Jones bequest, among the furniture, which include several works which might be in the National Gallery, and they have a collection of English pictures. And of course there is the great question possibly of the Raphael cartoons. If those were ever transferred to the National Gallery that would mean the provision of a special Gallery for them. Those are the only notable cases of overlapping in the past, that occur to me at the moment, and I really think that in future, if the official and other authorities of the Galleries concerned maintain the existing friendly relations between each other, there is no reason why that should be taken as a serious danger so far as painting is concerned—actual oil paintings. I have mentioned separately that in the case of water colours there did seem to me need for just a little care, but in the case of oil paintings there is none.

2260. You think there is a considerable overlapping in the case of water colours?—Undoubtedly; there are three collections in existence or being formed, but whether the overlapping is detrimental to the expenditure of public funds, or contrary to the public convenience, I should very much doubt. I

think that each of these forms of collecting has its own public and makes its own separate sort of appeal, so that probably the overlapping there does little or no harm.

2261. I gather that you do not regard as serious the kindred danger of competition in the things acquired by the Gallery?—No, not if the authorities of the Galleries have the same friendly and co-operative spirit as they possess now.

2262. You would be in favour of greater freedom in lending pictures, I gather, to Municipal Galleries, and so forth?—I think we have at present, so far as Municipal Galleries are concerned, a very considerable freedom in lending. No Municipal Gallery that can protect pictures properly and insure them properly, is ever refused a loan, but the number of pictures available for loan from us must always be limited. And the actual works available for loan are still further limited by the risks of travel. Valuable panel pictures, for instance, cannot be sent about the country without risks being incurred which I think are quite out of proportion to the benefits derived from the loan. I think some members of the Commission are aware that one or two are being lent actually inside London, but the precautions taken in connection with the loan are such that could not possibly be taken in the case of long journeys. It involves a considerable danger to send a panel picture any long journey, because in many cases, the panels, even if sound outside, are badly worm eaten, and one serious jolt might cause irreparable damage. And of course those responsible for the safe custody of these things would have to be very careful before exposing anything for which they were responsible to a risk of that kind.

2263. You think the present powers are sufficient?—So far as loan inside this country is concerned. I really am not conscious of any case of loan inside this country where our present regulations have resulted in grave hardship, or grave loss to what I might term the public convenience.

2264. I feel great sympathy with what you were saying about the Director's position. That is a very important thing, it seems to me, from the point of view of the administration. What would you recommend as the best solution of the difficulty? You spoke of Lord Curzon's Minute, I think, as having defined his position?—It was a personal assurance that an official distinction should be drawn very sharply between what I might term technical matters, on which the head of the Department might be regarded as the professional authority, and the more general matters of administration where naturally the Trustees, from their wide experience of the world, would be entitled not only to have a voice but perhaps a dominant voice. And I was anxious to ask the Commission to consider seriously the drawing of that distinction clearly and rather generously as regards the Director, because he, poor man, has to contend sometimes in debate with a weight of metal that no ordinary man is expected to face. I can assure Dr. Cowley that a debate with, shall I say, masters of debate like Lord Curzon and Lord Lansdowne is no joke, for even if the Director is right, the skill and weight of authority with which the other point of view is put, imposes a very heavy physical and nervous strain upon him. Before a friendly meeting like this it is quite easy for me to explain. When sometimes the *instantes tyranni* seem rather numerous and very much on the war-path, the Director has rather a tough time, because he has not had the advantage of a long Parliamentary training in the House of Commons, and afterwards in the House of Lords and the Cabinet. He is the unfortunate technical student who is brought in to be sort of professional adviser and administrator, and his position is of course extraordinarily difficult. Unless he is given rather more power than shall I say, in strict constitutional theory he ought to possess, he is apt to be absolutely over weighted by the heavier metal with which he has to contend.

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

That of course has been one of the most extraordinary features in the Board's history in the past. I read about the early history of the Gallery when composing this little pamphlet on its history, and I was very much impressed by the way in which the very great gentlemen who originally managed the Gallery were so overpowering that the unfortunate early keepers did not dare to express an opinion. Things happened without their opinion being asked or their daring to say anything, because they were not able to express their opinion fully out of regard for the greatness of the personages with whom they had to deal.

2265. I can quite understand the difficulty, I know what it must be, but what do you think would be the best way of remedying that?—Through a very formal definition of the technical matters in which, unless some very strong reason were urged to the contrary, the Director might be supposed to have naturally a deciding voice, that is to say technical matters connected with the Gallery management, and with the details of the repair and custody and arrangement of the pictures.

2266. You do not think it would be difficult to lay that down in black and white?—Not a bit.

2267. To draw a line?—No. I think it would be a relatively simple matter, and I believe it would remove one of the very greatest difficulties we have had. I think the members of the Board who are present here would agree with me that it is very difficult, unless that definition is made, for the Board to say, under the terms of the Rosebery Minute, that they are not responsible for these things just as much as the Director; and under that unfortunate Rosebery Minute they are. Lord Lansdowne was, of course, a great stickler for this point. He said "We are entrusted with these powers, and we cannot divest ourselves of them." The same view was held by all the legal minds on the Board, and they were perfectly right in theory. All the Director could ask for was a certain amount of rope. Sometimes he was able to get it, sometimes he was not, but I think his position would be very much easier if his responsibility for his technical advice and technical action in these matters was definitely defined. Then, after all, if he is wrong and is hammered by the Board and censured by the Treasury, it is his own fault. But you may be quite sure that he would not take advantage of powers of that kind, where they are accompanied with so much responsibility, except after weighing every act of his most carefully. It is perfectly safe from the practical point of view, and I think it would save the Board a great deal of trouble. At present they are bound, in theory at least, to take responsibility for a great many of these technical matters, and naturally it does lead to a constant, or there is a risk of constant, clashing of opinion with their professional adviser.

2268. (Sir Lionel Earle): Does that include increased powers as regards the Director's purchase of pictures?—No. I had made a suggestion as to the purchase of pictures when I spoke of purchase. No. This merely concerns matters of administration; that for the technical things the Director should be solely responsible. If he went wrong, that would be his fault.

2269. (Sir Robert Witt): In your very interesting and forcible criticism of the changes that have taken place since 1855, and from what you said to Dr. Cowley, I gather your view to be that you would prefer the position of the Director to be that which it was in between 1855 and 1894 rather than what it is to-day?—A similar one. I do not ask for a return to that constitution. Then the Director had paramount authority in everything. There is always this tendency to conflict between the professional and the amateur on purely technical matters, and it is much better that the Board should have someone to whom they can say, "Very well, the Director has taken responsibility for that,

though I do not believe he is right." Then, if he proves to be wrong, it is his responsibility. It would immensely simplify the actual working of the Department. All I meant was that on technical matters, which it is not for me but for others to define, the Director should be absolutely responsible. In all the matters of larger policy and administration, I think it is well that the position should not be changed. In the greater matters, the authority of the Trustees might well remain as it is in the 1894 arrangement. By separating out this technical business we should at once remove one of the most constant causes of friction, and I think I may mention to the Commission that it is not only possible friction with a Director, but a certain amount of trouble with the staff. They can never know, even in doing the smallest technical thing, whether they are not liable to do something which is going to get either themselves or someone else into trouble with the Board. The result is that the actual working of the place is delayed by people wanting to know whether they have authority for the smallest thing, because they do not know whether it will be brought up in judgment afterwards or not. I think it would make all our lives a great deal easier if—and now I am speaking as a human being and not merely as an official—we could be relieved of that risk. It is very hard, I can assure the Commission, to argue sometimes with a Board that contains so many men of immensely greater ability and knowledge of the world.

2270. I think you said that it was between 1855 and 1894 that occurred the great period of the Gallery acquisitions?—I think I could quote your own words to that effect.

2271. I think I would accept that. That would be my own view, certainly, but is not there one change that has been made since then, since those great days when the foundations of the Gallery were well and truly laid, and that is that the Directors were appointed for a period of five years only, renewable at the end of that period?—Yes.

2272. That is no longer the case?—No. Might I add one sentence on that? I do think that the shortness of the Director's appointment had one disadvantage, if I may mention it to the Commission, that is to say, it could be used to a certain extent as a sort of threat. And, undoubtedly, it was so used occasionally, I believe: rather in the way of old gentlemen, in novels at least, who shake wills in the face of those with whom they do not quite see eye to eye, and to whom they would say: "You oppose me in this. Just you wait and see when your term of office is coming to an end." The consequence was that it had in it the germs of subservience. If I may answer frankly, when my own appointment was considered, I was a Civil Servant, and therefore not liable to this. And I declined to accept the offer that was made to me unless my Civil Service status was confirmed; because I felt that if things at the Gallery happened to be very difficult (the position of the Director there had notoriously been rather a difficult one, for the causes I have indicated to the Commission), the difficulty of facing a large number of extremely able and practised men was in itself a sufficient handicap. And if they had the power in addition of turning you out into the streets after five years, it was not good for the Director himself. So where I have spoken here of initiative and energy, I think our policy in the future ought to be to try to encourage the next Director rather than to depress him.

The policy of rather patting a man on the back, which was the one followed by the National Portrait Gallery, produced very willing and good servants, always trying to do something extra well for the Gallery. If, on the contrary, you feel that almost any show of initiative is going to lead you into trouble, you are not going to get, the government and the nation are not going to get initiative; and even if you have got a natural store of it that

29 March, 1928.]

SIR CHARLES HOLMES, D.Litt.

[Continued.]

initiative from time to time is apt to be very seriously sapped by the controversy that you feel you will have to face, if you take any definite move. You will forgive me perhaps for speaking on the human aspect, but I honestly believe in this matter three-quarters of the difficulty is human, and only about a quarter of it is constitutional. If the general position of the Gallery had been like that of the National Portrait Gallery, you would not have wanted any change in the present constitution, but the National Gallery tradition is one of much more strenuous debate, and where you have strenuous debate you must give the weaker animals a certain amount of rope, otherwise they will be knocked over.

2273. But whatever the merits of the five years or the life appointment system may be, I only want to ask you whether you think that the five years system did work well during that very famous and important period between 1855 and 1894, or can you see any disadvantage that accrued to the Gallery from that system during that period?—The change of constitution seems to me to have made the five years a difficult thing. When the director was independent the five-year system does not seem to have been a disadvantage to him, because I think the results of his initiative in all cases were so conspicuous; but when his initiative ceased to work with the same freedom, things became troubled, and so the five-year system became an additional rope round the director's neck.*

2274. If I might just ask one other question. We are talking purely of administration, and nothing personal in any sense. How would you view the opinion expressed that it is not essential that the director of the National Gallery should be a painter. There have been many distinguished painters who

* Sir C. Holmes subsequently asked that his answer on this point might be supplemented as follows:—

We all hope to educate in England a race of Students similar to those whom the Continent has produced. But the young Englishmen who start upon this profession, and qualify for it, as for example my assistants here have done, will be placed at a very grave disadvantage compared with students of other artistic subjects, and deprived of a not illegitimate goal of ambition, if the Directorship of this Gallery, the chief post for which their studies might be supposed to qualify them, and one of the very few posts in England which is comparable to the Directorship of the great foreign galleries, is not only hedged about with restrictions which we look to your Commission to moderate, but is also liable to abrupt termination after a five years tenure. I know how hardly the scanty material rewards attaching to this form of disinterested but most precious scholarship are already bearing upon scholars who have wives and families to support, and some sort of public position to maintain as well. I fear that if to these pecuniary disadvantages we add extreme uncertainty of tenure, we are not likely to attract the best students of the future, and are certainly not likely to retain them. No other Gallery or Museum known to me imposes any such disheartening limitation of office upon its chief for that very good reason. We all know how directly and quickly the risks and discomforts of a post are reflected in the inferior quality of the applicants for it. Men of common ambition indeed will never be lacking, but those who might have a place in the highest walks of scholarship will avoid, if they are young, and seek to escape, if they are middle aged, a career from which they are liable to be thrown on the streets by some unexpected act of those in authority. And they are not likely to encourage their juniors to follow them into the same administrative *cul-de-sac*. I have seen something of the evil effects which uncertainty as to future treatment may have upon able men, and so venture to reinforce the plea which I made before the Royal Commission, to make office here a thing to which a fine intellect can look forward without apprehension.

have been Directors of the National Gallery; you perhaps the most distinguished of them, but how far do you consider it essential that the Director of the National Gallery should be a practising painter?—Honestly I think some close and practical experience of painting is absolutely essential for judging the finer points, both in connection with the value of pictures and their conservation and repair. I have noticed, for instance, that in discussing matters with our own exceedingly skilful repairer, Mr. Holder, there are certain points now and then on which he comes to me for advice, simply because I happen to be a painter, a painter shall I say on rather a broader scale than himself. The small things he can do; his work is absolutely miraculous, but sometimes where there is a larger space to be covered, or as in the case of one or two pictures during the war, such as a head with a piece damaged, he would come to me naturally and ask advice as to how exactly that thing should be treated. There are cases where my technical knowledge might in some very small degree overlap his own. As the Director has to employ the cleaners and watch them, it is most important that he himself should have considerable knowledge of the actual manipulation, not only of the actual processes, but the results of those processes and the peculiarities of all the mediums employed. I am happy to say that all the present assistants at the National Gallery are in one degree or another painters and, though I would not go so far as to say it is necessary for the Director of the National Gallery to be anything more than, shall I say, quite a bad painter, he ought to have been trained in the technique of the craft because without that knowledge he is apt to come appalling croppers. I may mention the late Sir Claude Philips as an instance; in spite of his almost unique memory and scholarship, there were particular things which he could not tell, because he had not actually handled a brush, and so was unable to draw the proper distinction between the work of a master and a pupil. A very good example which I may quote is the case of Watteau. I do not think anyone who is not something of a painter could tell the difference between a genuine Watteau and a good work of the school. There are certain things which require real technical knowledge, and a very nice technical knowledge, and though I would not go so far as to say that a man need have been a very good painter, yet he should have had some practice in painting if he is to face the ordinary everyday problems which we have to face. We have quantities of problems submitted, quite different problems, connected with the technique of painting; but everybody in the Gallery is more or less trained, and could up to a certain point answer those questions offhand. If they had to be referred to outside authorities, the Gallery could never carry on except with about three times the staff it at present possesses. We have constant need of people who are able to give a comparatively rapid and approximately accurate judgment, and I do not see how that judgment is to be arrived at without some real technical knowledge of painting. Many amateurs have a very fine *flair* and shrewdness and sympathy with what I may term the spiritual qualities of a painting and its colour, but the questions of execution have to be settled for them first; that is to say, they will go and buy something which is, as a painting, quite rubbish, simply because it is rather attractive in colour and has a certain effectiveness; when any painter could have told them at once it was not painted by a first-class man.

2275. One other question with regard to the powers of the director. In view of what you have said, should I be right in saying that, as far as you remember, there has not been any case of a picture being bought by the Gallery against the wishes of the director?—No, never in my time, and I wish particularly, when giving evidence here, to say that only in two cases that I remember have the Board

29 March, 1928.]

SIR CHARLES HOLMES, D.Litt.

[Continued.]

turned down a suggestion. In the one case it was turned down, and I would like this to be placed on record, on the question of price, and that they repented at the next meeting, but then it was too late. They said it was rather too dear and authorised me to negotiate at a lower figure than the one suggested. The result of the negotiations was the man withdrew the picture.

2276. What was the picture?—It was that Nattier, the finest Nattier that I think, in handling, we ever saw. The other, of course, was the Chinese fresco, where a large principle was involved. I was sorry the Board decided as it did, and it did not decide on what we may call purely aesthetic grounds. If my evidence here is to be recorded by the Commission I would like to say I have always felt that the addition of a small Oriental collection, an Oriental room, to the National Gallery would, in my opinion, be a most desirable thing. And it will be a necessity in future because only by comparing the artistic products of the East with those of the West, on the spot, can one learn what the relative value of their respective contributions to the whole of Art really amounts to.

2277. Only one more question, in regard to loans abroad, to the Colonies and Dominions. You are, I think, aware that there is a certain body of opinion that stresses that, with proper safeguards as regards the kind of picture, the quality of the picture and the condition of the picture, it is a desirable thing in itself. Would you take that view, or would you like to say anything on that subject?—I think, if I may slightly shift the form of my answer, I would say I should always be in favour of a much increased policy of exchange of loans. It is not so much the making of loans for themselves that I value, as the fact that where we have a surplus we should be able to exchange with things in which we are deficient. I think that really is the more practical part of the policy, because in most cases the things that we could send to the Colonies are very few. It is very easy to exaggerate the number of pictures that we have really available for loan, because of this system of ours of exhibiting the big collections upstairs, big collections which are catalogued and which are known all over the world. The depletion of those for any purpose whatever seems to me a most undesirable thing. The pictures in the Reference Section are all catalogued, and for the most part are pictures of some considerable interest, and if they once go to a place far out of reach they cease to be available for historical and critical study. All that we could lend in that way would be a limited number of things which are in the nature of duplicates. It is clear that a Gallery like ours is in the position of a great library; it represents a sort of complete unity, of which its catalogue is the record, and the rather reckless dispersal of that by means of loans, to any considerable extent, really does weaken considerably its value as a centre of study. If the loans to distant places were confined chiefly to pictures that were duplicates, of course there could be no possible objection to it, so long as they were not works of capital importance. I think it ought always, however, to be recognised that such loans, as we are a poor country now, have to be quite subsidiary to the loans which we make in exchange for other loans. I think this aspect of international exchange and loan is quite as important as the other one.

2278. My question, of course, was intended to apply to both, to those who can afford to lend in exchange and those who, like our Dominion Galleries, have nothing practically to send us in exchange. Your answer has covered both. Thank you very much.

2279. (Sir Henry Miers): You have, I understand, a very generous system of loans to provincial galleries. Do you consider that they make proper use of their opportunities, or adequate use of their opportunities in getting pictures from you?—I think the use of

them is increasing and, so far as I can judge from the visits I pay from time to time to provincial museums, the wish to make use of them is increasing too. One cannot help being struck when one goes to many of those places, by the extraordinarily inadequate equipment that they possess; and it is our duty, I think, to encourage them, so far as possible, not only by loans but by personal contact. I have of late been trying to do a little more than I have had time to do in the past in that way, because I think that is one of the next directions in which the National Gallery ought to expand. After all, we are supported by the taxpayers, and it is our duty to see that the taxpayers, so far as possible, all over the country get something in return for their money.

2280. I was doubtful whether local galleries had applied to you for loans, or whether they are reluctant to do so?—I think they very often are influenced to a great extent by the character of their Art Committees, and their Art Committees are not always composed of men of very wide or acute intelligence.

2281. Also whether they change the pictures as often as they might under your system?—There I think the Trustees have a very wise system, that we only lend for comparatively short periods. We try to lend a little group of chosen pictures for a period, say, two or three months, so that the place has an opportunity of seeing them for two or three months, and then we have them back again or send them on somewhere else.

2282. Are those loans entirely made from the whole of the Reference Collection, or is it only some part of the Reference Collection on the ground floor which is used for these loans?—Usually loans are made in this way. A curator will come and explain what he wants; he wants representative Dutch pictures, such as Hobbema's. We go through the collections with him, and give him a representative series which does not contain any bad pictures, and does not contain anything which we think is likely, by its absence from our Gallery for two or three months, to cause inconvenience to any students who happen to be studying that branch of the Arts: that is to say, we try to lend out of our wealth rather than out of our poverty. We happen to have 14 or 15 examples of a man like Hobbema, some of them very fine. We will lend perhaps a couple of good ones. Hobbema is a Dutch Master in whom we happen to be rather rich; we can lend quite good examples of him without depleting on the whole our own collection for visitors.

2283. One more question about the Reference Collection, would you if possible wish that to be more accessible to the public than it is now, that it should become part of the public galleries? Is that merely limited by the absence of staff?—It is limited by the absence of staff: and the actual staffing of it does present a rather serious difficulty because it is of necessity housed, as I think you have had an opportunity of seeing, in a certain number of quite distinct sections; each of those in itself is rather complex and contains several rooms. For the more valuable portions of the Collection upstairs the Trustees have very rightly insisted that the Treasury shall provide us with a nominal, I say only nominal, minimum of one attendant per room. At luncheon time it generally reduces itself to about half that proportion, but the Trustees could not ask the Treasury in the present state of the national finances for anything like the same allowance for our downstairs rooms. I do not think the Board would object, and I certainly should not, if we could have perhaps a couple of attendants provided specially to look after these places, but the difficulty of really admitting the public wholesale to these rooms is a sort of geographical difficulty. As they are straggling rooms, and stretched out a good deal, if you once get the public mixed up in them, they would be wandering into the offices and into the housekeeper's room and into all sorts of places. You know the

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

inquisitiveness of, shall I say, some nationalities other than our own, and it would be very difficult to shepherd them. But I think it would be a great help to us if we had just a couple of attendants, to be able to put one in charge of each side of the Reference section, so that when an application was made upstairs to look at that section the man could be told off to show people round.

2284. (*Sir Lionel Earle*): About the loans abroad, how do you expect foreign countries to send their magnificent collections, like the recent Flemish Exhibition, if we never reciprocate to any extent as regards some of our masterpieces? Does not it give us the character of meanness. Can you say that any of those wonderful Flemish pictures which came from Belgium had any real damage done to them by the journey?—No. As regards large loan exhibitions I do not think necessarily they create a precedent for us. I do not say that in the case of the Flemish pictures any actual damage was done, but I think the habit of sending very valuable and fragile pictures about is one which I might recommend to private owners, but which I could not conscientiously recommend to the Trustees of the National Gallery for their more important things.

2285. You really condemn the directors of the great galleries abroad for doing what they do?—I think condemn is an unjust inference.

2286. You do not anyhow support them?—I would say that every loan of the kind from us means the double transit of the Channel. If I might draw a distinction the majority of their inter-State loans do not involve sea transit and transhipment.

2287. But if it comes to London?—It does then, but with the majority of their loans it does not. You have to remember that every loan of ours has to go across the Channel and if it is ever to reach us again it has got to come back across the Channel. I think that the preservation of a great collection like ours, as a substantial unit, is after all the permanent duty of the Trustees.

2288. Would you go so far as that even as regards the great English School, I am thinking more of them because it is no good sending Flemish pictures to Belgium, I am thinking of the great English School which is little known on the Continent?—May I refer to something which I said earlier on, namely, that we should lend out of our wealth. I consider our wealth consists chiefly in Turner and, as we have a fair supply of Turner, from the national point of view works by Turner of which we have a fair number are the contributions which I think we might generally make to any movement for international exchange, because those are things we can lend out of our strength. I could not recommend lending out of our weakness. An American millionaire, supposing that he lost a Roger Van der Weyden, could either out of his insurance, or out of his own pocket, with the help of some friends of ours, replace it. But the British nation would find it very difficult, and I do not think, if damage did occur, it would be very nice for the Trustees and the Director who would have been contributory agents. I think that for these overseas loans, possessions like our unique group of Turner are the main bargaining assets that we have and that, while the loan of English pictures in general might be made from some other source, these would be, I think, the natural contribution of the National Gallery.

2289. It would require statutory powers I fancy to do that?—It would.

2290. Therefore it relieves the Director and the Trustees of responsibility because Parliament would take the responsibility?—Parliament would only pass an Empowering Act.

2291. I know, still I assume they recognise that and would be prepared to take the risk as regards certain English School pictures, which it would be

justifiable to exchange for the loans coming here, the great exhibitions?—I was going on to say that perhaps there is a certain number of pictures of the English School that might be loaned, but it would have to be more or less confined to those painters in whose works we were richest.

2292. I am not sure that I do not attach as much importance to this—I won't say more—as to the loans Sir Robert Witt has suggested as regards the Dominions because I think that international reciprocation and so on is a very great factor in humanising the world, anti-war, and for every reason and I think we are particularly disliked on the Continent on account of our extreme Conservatism. I would almost say selfishness in these matters?—I hope you will not think I disagree with that policy, generally speaking. I only have to recognise that in giving evidence here on the subject I must guard myself against the danger of that altruistic generosity to which public bodies are often so liable, giving away anything so long as it costs them nothing. But if I have to give advice on the matter where I am paid to advise, I must give it with proper caution and so, although I quite agree with you in general, I feel sure that we ought not to go too far in lending from our weakness, but only from those sources where we are strong. I entirely agree with you that British works of the British School, in particular Turner, are a most desirable form of propaganda.

2293. Would you say that the field for recruiting keepers is fairly strong in England, or in Great Britain? The reason why I ask that question is because a scheme has been brought before us of taking on *attachés*, to train for future heads of Museums. Do you think that is an advantage?—I think in idea the thing is admirable, but to carry it out you need certain preliminaries. The training of any young man calls for a certain amount of time and attention from his seniors, if the training is to be any good, and the consequence is the seniors must have time to attend to that. We can give and do give to one or two voluntary assistants a certain amount of quite useful routine work to do, but if anybody is to be trained with us, I think he should be attached by some much closer tie. That is why I have been pressing the Treasury to let us have one more junior assistant because then, if he is once definitely attached to the Gallery as a junior assistant, he can go through the mill thoroughly, whereas your amateur, however well-intentioned, cannot be used in quite the same way. He has got his people; his people want him to go away; there are all kinds of ties which may prove stronger than those of the Gallery.

2294. Unless he plays the game he does not get his certificate. It is very important for him to get it?—I may say that it is very difficult for me to find any young man now who can afford to give much time to a profession where the rewards are so precarious and insufficient.

2295. Do you think they are better in Germany? Of that I have not sufficient knowledge to say, but here at least the number of men who are anxious to do work of this kind is very small, who are willing to do it voluntarily, and those who do come to me are nearly always exceedingly poor and very anxious to get some sort of pay. What we do need badly I think is a paid junior assistant. I have only asked for one. I should like two. We could use two to be trained, and they can be trained by us. I think we all feel this very strongly. We do not object to the *attaché* system at all, but unless the man is a young man, someone whom we can employ with the freedom with which one employs a junior assistant, he would for a very long time be an additional handicap to the already very small staff.

2296. If you had one assistant, or even two, would that ease your position as regards taking on the *attachés*?—Yes. I think it would do so

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

most definitely, because at present, as I ventured to put in my reply about administration, we work with an extremely dangerously small margin of, shall I say, administrative competence. I think I may mention that on Monday, as a matter of fact, I was trying to get the Treasury to consider seriously an application made on this very point by the Trustees. I brought Sir Russell Scott in, and took him over the various parts of the Gallery, and showed him all the cataloguing and Estate Duty Office work that my Department had to do. Then I took him, at the last, to the Keeper, so that the Keeper could show him the accounts and administrative side of the thing from his point of view. We found the Keeper in front of a table covered with pennies, silver and ten shilling notes. He was doing the petty cash, because the other assistant was ill and there was no one else to do it, and so he had to do it himself. This did impress the Treasury. It was the only thing there, I think, which really made them see that we were not over-staffed, that everybody has to do the work of the others. So that we could not really, I think, do justice to any young man who wanted to get the better part of the initiation the Gallery ought to provide, until we have enough junior staff to carry on while we are teaching him.

2297. I think you said that the space at the back of the National Gallery was sufficient in your opinion for 50 or perhaps even 100 years, if new galleries were placed there. Is that your view?—I think so.

2298. What would be the future after 100 years? What is your idea; that the Gallery could not expand any more, and have to go to a new site, or what? I asked because it might be unwise to build for the National Portrait Gallery and move it elsewhere altogether, if you consider your dream of the future is that the whole of that site, say 300 years hence, would be required for the National Gallery?—If we imagine ourselves at the end of those 100 years, it is quite possible that a portion of the pictures which we now have in the upstairs Gallery, some portion of them, will have gradually so far faded out of intelligent sight as to be in a sense negligible, that gradually a weeding process would go on *pari passu* with acquisitions. And I think I can answer in another way. Do you not think that in the course of 100 years the whole question of lighting will have altered so much that a reference section can be constructed under the Galleries, so well lit as to accommodate not only Sir Robert Witt's library, but I think all our reference section, and show that perfectly. I believe you will agree with me that it is in that that we really see our future.

2299. I just wanted your views?—I think that if I could go to sleep for a 100 years, and had to tackle the problem then, I should not find any great difficulty about it.

2300. It has been brought to our notice that the attendance, certainly on the paying days, is really not nearly so much as one would expect at a great Gallery like that, and it has been brought to our notice that a good tearoom in any of the new buildings would have a magical effect on the attendance. It is suggested that people get tired and weary, and that if they knew they could get a good cup of tea at the Museum they would come more readily. Is that a thing that you would advocate in future extensions?—I believe I have to ask the Chairman's permission to answer that question, because it is a matter which is coming up at our Board next Tuesday.

(Chairman:) Certainly.

2301. (Sir Lionel Earle): I wanted the Director's own opinion.—My own opinion would be this, that around Trafalgar Square there are a great many places of refreshment. As a matter of fact, it is one of the headquarters of places of refreshment of various kinds, and so the need of a tearoom on the spot is not nearly to my mind as urgent as it is either at South Kensington Museum, where the few available tea houses I have ever tried in

the neighbourhood are quite unsuitable, or the Tate Gallery, where there is, to the best of my knowledge, absolutely nothing except the admirable establishment which Mr. Aitken has provided.

2302. It is a different thing. You might still go home for your tea. It is for the people who get weary while seeing the pictures and who would like a cup of tea and then go on to continue their tour of the Museum.—I do not think we could, except probably after an immense amount of preparation, provide anything which would constitute a rival attraction to the various places in the immediate neighbourhood of Trafalgar Square. I am not by any means certain whether at some time the Government will not have to. I have often felt myself that if I were running the National Gallery as a business proposition, I should try and indicate that it was a National Gallery, in some way which was perhaps not quite too blatant on the front, because I think a great many people pass the Gallery without realising what the building contains. I was most particular in the case of the National Portrait Gallery, when first I went there, to ask to be provided with nice brass plates, and I think they certainly made a very, very great difference. A great many people stopped and looked at the plates and then turned into the Gallery on realising what it was.

2303. (Chairman): Mr. Charteris has asked me to put the following questions. With regard to powers of sale, do you agree that they should not be extended?—At one time I thought that our powers of sale might well be extended, but I am now inclined to think, in view of the provision that the Government has made for what I may term our greater emergencies, that we should be probably wise not to ask for increased powers of sale, but only for increased powers of loan.

2304. With regard to powers of exchange, would you like a definite power to exchange with foreign Galleries, and if so, how should the power be limited? I understand that the Bill of 1916 had no restriction of any kind apparently, and such absence of restriction might be considered too wide?—I think that the exchange should always be in the form of exchange of loans. That does give both parties, I think, a very desirable elasticity, and I think you would agree, Lord d'Abernon, that it has the great international advantage of silencing many recriminations, because what would always happen would be that, supposing you exchanged a Turner for a Goya, in Spain, a certain number of people would say, "Why have we the Turner and not the Goya?" and people here might say, "Why have we that inferior Goya instead of the beautiful Turner?" But if it were merely exchange of loans, the risk of international friction would be greatly diminished.

2305. With regard to Turners, where ought they to be kept, at the British Museum, the Tate Gallery, or at the National Gallery?—The collection of Turner drawings may quite logically be divided into two parts. The first part contains some three or four thousand water-colour drawings, finished or partially finished, which are of very great aesthetic interest and value, and have a very considerable market value, since a great many of them belong to the phase of Turner which is most highly valued by collectors all over the world.

The second portion consists of sketch books in pencil—isolated sketches in pencil—mere scribbles and note books, of which I believe there must be something like 12,000—the material from which Turner composed his pictures. Those have a very definite historical interest for the few, really few, students of Turner. They have all, by the action of the Trustees in the past, been arranged in good order, and if they were deposited on loan in the British Museum they could there be stored and kept in the way which would make them most useful to the occasional student. The coloured drawings, on the other hand, ought to be retained by the Trustees,

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

because they are part of the nucleus of Turner, which is perhaps the largest remaining asset that the Trustees have for interchange of loans. In connection with such a suggestion as that made by Sir Lionel Earle, a group of Turner water colours might well go with any show of English pictures, because there is nothing which is better calculated to show the originality and greatness of the English School. If those were once deposited anywhere else, as at the British Museum, we at the National Gallery would be divesting ourselves, quite unnecessarily, of one of the most valuable parts of the possessions with which we are entrusted. And I venture to say that at the British Museum they would be infinitely less accessible, when once put away in their portfolios, than they may ultimately become if they are looked after either at Trafalgar Square or at Millbank. When the question of custody at Millbank arose a few weeks ago, my colleague spoke to me about this, and I said at once: "If you are in any doubt let me have them at the National Gallery and I will somehow or other make arrangements for their custody, shorthanded as we are." I think it is most important that the Trustees should not relinquish, or should not be induced to relinquish by any specious arguments, something which is not only extraordinarily creditable to English Art, but which is very closely wrapped up with the unique collection of Turner paintings which we possess.

2306. Would it require legislation to enable the National Gallery to make extended loans of Turners?

They would naturally come under the same law as oil paintings belonging to the Gallery. The only condition the Trustees would probably be wise to make in their case is that as they are water colours, and very susceptible to light, they should always be exhibited with proper precautions as to curtains, similar to those which we now adopt in the National Gallery.

2307. To enable you to lend them abroad, you would require legislation?—We should require legislation to enable us to loan them abroad, just as one requires it for anything.

2308. With regard to the division of modern foreign pictures between the Tate Gallery and Trafalgar Square, Mr. Charteris says how very much better the Tate Gallery would be and how very little worse Trafalgar Square would be, for the removal from the one to the other of the Manets, Latours, Puvis, etc.?—The matter has already been discussed more than once, I think, between the two Boards, and the conclusion come to has always been the same. I should have to protest most strongly against the removal from the National Gallery of a portion of the pictures which entitle it to be called a living gallery, and to urge that these are things which already in every country but our own are old masters, and that some small representation of them at Trafalgar Square seems to me essential.

2309. As to the question of copyists, do you favour the imposition of a fee on copying days?—I think it is largely a matter of expediency. I have myself a great respect for some of the copyists in the Gallery. The Gallery is used at times by quite a number of intelligent young men who seem to me to do admirable work there, and I cannot forget that one of the chief objects for its foundation was the encouragement of the study of painting in this country. A great proportion of the most intelligent of our modern painters have learned a part of their craft there. I might in particular mention the late Mr. McEvoy, whose immense originality in later life was balanced by the reputation of being the most unremitting and patient copyist in the National Gallery during his student days. I think that if only 1 in 50 of our copyists justified themselves afterwards, the National Gallery would have served part of the purpose for which it was founded. Though I do not think that probably the removal of the fee on a sixpenny day would make very much difference to the copyists, I think if, on experiment, it were found to do so, the discouragement of a

limited number of geniuses, which might be the result of removing the 6d., would be a more serious thing for the country than the discouragement of a few thousand people who were not geniuses. I honestly think that the culture of the more promising men of the country is one of our particular duties, and though I would not be averse myself to the abolition of the 6d. being made the subject of an experiment, I think that the abolition should be merely experimental. And if it were found, in, say six months, that it did create anything in the nature of a nuisance or impediment to this little band of copyists, I think the little band of copyists ought not to be deprived of the limited isolation which they have had ever since the Institution began.

2310. (Sir Lionel Earle): Is there not a possibility of giving better facilities to the copyists by getting a new building and putting up some rules such as "not open to the public"?—Then you have the difficulty of removing pictures from the walls for an uncertain period, and the complaints that arise from even necessary changes now would be multiplied. I am afraid that is not possible. There is no doubt that the system that we have now is the only one. The removal of many of these pictures is a thing which we only undertake with fear and trembling, because the mere moving of very heavy pictures from one place to another is a very serious thing. One or two had to be built up during the War, simply because, owing to the way in which the panels on which they had been painted were constructed, even the setting down of them on the ground might have broken the frail gesso into a series of wide cracks, and caused pieces to split off. So that I fear there is no way of accommodating copyists in that way with the best pictures; the best pictures must, I think, remain in their places. On the other hand, it is not fair to the public to pay 6d. and find that the best exhibits in the Gallery have been removed to where they are inaccessible.

2311. In spite of that you advocate the abolition of the 6d.?—Oh, no, I only said that if it were felt very strongly that the 6d. ought to be abolished, I would suggest only doing it as an experiment, so as to see what the result was, before it were made a permanent thing. I know the case of the copyists is a much better one than anyone imagines. I think that sufficient justification is provided by the three or four people, perhaps, who at any given time are copying, and who do good work afterwards. Four geniuses in a century are sufficient to justify a system.

2312. Are not a great number of the copyists purely commercial copyists?—I should have said that the proportion used to be one-third commercial, one-half purely amateur, and one-sixth professional. As the amateurs died off we have not replaced them. We have always tried to get a professional or semi-professional qualification from each copyist, and the number of purely commercial copyists is much smaller, I think, than it used to be. I was looking round this morning; a great many are really hard-working art students, and there are one or two specially copying pictures for commissions for public places or other purposes.

2313. (Chairman): I have finished Mr. Charteris' questions. With regard to your reference section, how do the public know of the existence of a reference section below?—Every picture in it is included in the catalogue. I do not know whether the catalogue itself perhaps gives the reference section due publicity, but we make a point of cataloguing absolutely everything, so that if a man is looking for a particular picture, he has only to look at the catalogue, or ask the attendants who direct him to the reference section from the catalogue. We have nothing but the entry in the catalogue. We have no staff for showing the reference section; it is really for the use of students and not for the public in general, although any member of the public can see a picture there on application.

29 March, 1928.]

Sir CHARLES HOLMES, D.Litt.

[Continued.]

2314. With regard to the division of questions, which should be under the competence of the Director only, or mainly under the competence of the Director, and that of the Board, I want rather a clearer definition of what you call the technical questions specifically—backgrounds to the pictures, backgrounds to the hangings?—That was, after all, a matter which the Commission would naturally wish to decide for itself. "Such technical matters would seem to include the cataloguing, attribution, cleaning, restoration and arrangement of the pictures in the collection, with the selection of the suitable frames and backgrounds for them." I said "would seem to include" as a personal opinion.

2315. You would include hanging, background, labelling and framing?—Yes. Attribution.

2316. (Sir Lionel Earle): Restoration?—Yes. There are definite things for which the Director, while he is given independence, is also directly responsible and liable to be "shot at" but at the same time I want the Commission to recognise that a sensible Director would not in any important issue in connection with those matters commit himself, if he

had the least doubt, without telling one or two members of the Board what he intended to do. And I may now tell the Commission that when the Gallery was redecorated after the war, as we did room after room, I did specially bring this question before the Board, asking what sort of schemes they liked, and explained to them, and they said, "Do different rooms in different ways," and I jotted down what they said, and actually carried out in one room or another I think practically every suggestion that was made to me by the Board. I do not feel that in giving some of these powers to the Director you do anything really except help him to get through what is an enormous amount of work with the least possible friction. If there is any important issue, you must assume that your Director is a sensible man, and that rather than risk an unpleasant controversy he is sure to consult you.

2317. Do the Board interfere now with the hanging?—I think that is rather a direct question. I should say once or twice, but not often, not often.

(Chairman): We are greatly indebted to you, Sir Charles, for your evidence.

(The Witness withdrew.)

FOURTEENTH DAY.

Thursday, 26th April, 1928.

PRESENT:

The Rt. Hon. the Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.

A. E. COWLEY, Esq., D.Litt, F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Mr. JOHN BERESFORD (Secretary).

Mr. J. R. CHAMBERS (Assistant Secretary).

The Rt. Hon. Sir HERBERT MAXWELL, Bart., F.R.S., D.C.L., LL.D., The Lord President, The Rt. Hon. Lord CLYDE, D.L., LL.D., The Rt. Hon. H. P. MACMILLAN, K.C., LL.D., Mr. JAMES MACLEHOSE, LL.D., Mr. W. G. NORMAND K.C., Mr. W. K. DICKSON, LL.D., on behalf of the National Library of Scotland, called and examined.

The following Memorandum was submitted by the Trustees of the National Library of Scotland in reply to a Questionnaire addressed to them by the Royal Commission (see Appendix 1):—

The National Library came into existence as such in 1925. It was formerly the Advocates' Library, and having been gifted to the Nation by the Faculty of Advocates was reconstituted as the National Library and vested in the present Trustees by the National Library of Scotland Act, 1925, which received the Royal Assent on 7th August, 1925. The actual transfer took place on the 26th October of that year, being the appointed day fixed by Order of His Majesty in Council in terms of the Act.

The Library was founded in 1682 by the Faculty of Advocates, that is to say by the Scottish Bar, Sir George Mackenzie of Rosehaugh being then Dean of Faculty and the most active supporter of the project. Large donations of books were made to the Library by Members of Faculty and by others

and a portion of the fees of Intrants to the Faculty was appropriated to its support. In 1709 the Copyright Act of Queen Anne conferred upon it the right to claim a copy of any work published in Great Britain, a privilege which has been renewed by every subsequent Copyright Act. It soon became the largest and most important Library in Scotland. Permission to make use of the Library for purposes of reference and research was readily granted by the Faculty to all suitable applicants, and since the 18th century it has been practically the Scottish National Library.

By the middle of the 19th century the operation of the Copyright Acts had enormously augmented the bulk of the Library, and this process continued at an increasing ratio. It became evident that the private resources of the Faculty were insufficient to provide adequately for the maintenance of so great a Library, or to continue satisfactorily the historic policy of the Faculty of making their collection

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND, and Dr. W. K. DICKSON. [Continued.]

available for the use of the public. In 1864, in 1869, and again in 1873, endeavours were made to obtain public support, but without success. In the following years the question was mooted from time to time, and in 1912, by which time the annual expenditure had risen to a sum approaching £5,000, it was once more seriously taken up by the Faculty. The suggestion that the Library should be transferred to the Nation was favourably received by the Government of the day, and negotiations were proceeding when the outbreak of the War put an end for a time to the project.

Post-War conditions rendered the position more acute. As temporary expedients, special funds for carrying on the Library were raised by subscription among the members of Faculty, but it became clear that it was now impossible for the Faculty out of their own unaided resources even to maintain the Library on the old level. In 1922 the Faculty made a definite offer to present the Library to the Nation, with certain reservations. The then state of the public finances prevented the immediate acceptance of the offer, but the Government expressed high appreciation not only of the offer which had been made but of the Faculty's liberal policy with regard to the Library in the past, and a grant of £2,000 a year was made to enable the Library to carry on to better times. In 1923 Mr. (now Sir) Alexander Grant offered to provide from his own resources the sum of £100,000 to provide for the administration of the Library. This solved the immediate financial difficulty, and the transfer of the Library to the State took place as above mentioned in 1925. With the transfer of the Library the annual grant of £2,000 ceased, and the Library has since been supported in effect by the income of Sir Alexander Grant's endowment supplemented by small votes from public funds which in 1927 amounted to some £350. In addition to this, in 1926 and 1927 the Library has had the advantage of services by the Office of Works and the Stationery Office. In particular the Office of Works has improved the Electric lighting and the storage accommodation and has executed other much needed improvements to the value of about £6,000.

Information has been requested by the Commission with regard to certain special matters:—

1. *The statutes, charters, or other instruments creating and governing the Library, the constitution of the governing body and its method of appointment.*

The constitution of the Library is created by the National Library of Scotland Act, 1925, copies of which will be sent to the members of the Commission. The Act established as the governing body of the Library a Board consisting of 34 members appointed as follows:—

Ex-officio members.—The Lord President of the Court of Session; The Lord Advocate; The Secretary for Scotland; The Dean of the Faculty of Advocates; The Minister of the High Kirk (St. Giles), Edinburgh; The Member of Parliament for the Central Division of the City of Edinburgh; The Lord Provost of Edinburgh; The Lord Provost of Glasgow; The Lord Provost of Dundee; The Lord Provost of Aberdeen; The Lord Provost of Perth; The King's and Lord Treasurer's Remembrancer.

Appointed members.—Five appointed by the Crown on the recommendation of the Secretary for Scotland (one of whom must be "representative of organised labour") and five appointed by the Faculty of Advocates.

Seven appointed as follows:—

One by the Senatus Academicus of each of the Universities of St. Andrews, Glasgow, Aberdeen, and Edinburgh, and one by the Convention of Royal Burghs, one by the Association of County Councils in

Scotland, and one by the Association of Education Authorities in Scotland.

It is also provided that Sir Alexander Grant, or a person to be nominated by him, shall be a member during the lifetime of the said Sir Alexander Grant.

Co-opted Members.—The trustees also co-opt five members.

Powers.—Section 2 of the Act provides that the Board shall have the general management and control of the Library, and for that purpose may:—

(a) make, revoke or vary statutes for securing the due administration of the Library and preserving the books and other articles belonging thereto, including statutes regulating admission to the Library;

(b) accept and receive for the purposes of the Library or any of them gifts or bequests of money, books or articles, or any other property;

(c) exchange, sell, or otherwise dispose of any duplicate books or other duplicate articles belonging to the Library, and with the consent of the Treasury exchange, sell, or otherwise dispose of books or other articles belonging to the Library which in the opinion of the Board are not required for the purposes thereof;

(d) with the consent of the Treasury apply any money received by the Board on the exchange, sale, or disposal of any books or other articles and any moneys received by the Board from any other source and not subject to any specific direction or condition in the purchase of any book or other article which in the opinion of the Board it is desirable to acquire for the Library, or otherwise in defraying any of the expenses of the Board;

(e) lend to any library, gallery, or museum under the control of a public authority or university in Great Britain or to any library, gallery, museum, or exhibition approved for the purposes of this provision by the Treasury, any duplicate book or other duplicate article belonging to the Library, or any book or other article, not being a duplicate, which can in the opinion of the Board be temporarily removed from the Library without injury to the interests of the students or of the public using the Library: Provided that, before making any such loan, the Board shall be satisfied that due provision is made for the safety and insurance of the book or other article lent, and for payment of all expenses in connection with the removal and return thereof or otherwise in connection with such loan;

(f) subject as thereafter provided, and with the consent of the Treasury, appoint a librarian and other officers, assistants, or servants on such terms and subject to such conditions as the Board think fit;

(g) subject to the provisions of the Act, do such other things as appear to the Board to be necessary or expedient for furthering the interests and increasing the utility of the Library.

The Act transferred to the National Library the copyright privilege held by the Faculty of Advocates, subject to the condition that legal books received under the Copyright Act should be transmitted to the Faculty for the purposes of their Law Library. Persons who were Members of Faculty at the date of the transfer retain a limited right of borrowing from the Library. Joint regulations have been framed by the Board and by the Faculty regulating the exercise of this right and other matters in which both bodies are interested.

The Rt. Hon. Sir Herbert Maxwell was appointed Chairman of the Board.

The former Keeper of the Advocates' Library was appointed Librarian of the National Library, and certain members of the staff were transferred to the new establishment:—

26th April, 1928.]
Lord CLYDE, The Rt. Hon. H. P. MACMILLAN,

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon.
Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND,
and Dr. W. K. DICKSON.

[Continued.]

2. *Difficulties of current organisation and administration and legal difficulties arising out of the historical origin of the Library, or the statutes and instruments by which it is governed or the method of government (including restrictions on the power to lend, exchange or dispose of its possessions or on the power to exhibit a selection only to the public with reserves for students).*

As regards the organisation and constitutional machinery of the Library no difficulties have arisen. The Statute was carefully framed in view of the requirements of the Library and is of recent date. It has operated smoothly and the experience of the Trustees suggests that there is no need for modification of the Statute.

Certain difficulties have arisen as regards administration, which are attributable to the historical origin of the Library. These relate chiefly to staff, funds, and accommodation.

Staff.—At the time of the transfer of the Library the staff of the Advocates' Library consisted of eleven persons, the Keeper and ten assistants, one of whom was a boy of 16. The Keeper was one of the annually elected officers of the Faculty. The assistants were all employees on monthly or weekly engagements. The caretaking and cleaning of the building and the portering of books borrowed by Members of Faculty were carried out by the Faculty servants, who were under the direction of the Treasurer of the Faculty and did not form part of the Library staff.

When the transfer of the Library took place the Faculty retained the legal portion of the Library as their Law Library. Four of the assistants who were at that time employed in the Law Department remained in the employment of the Faculty. The Keeper became Librarian of the National Library in terms of the National Library of Scotland Act, Section 14 (1). Five of the assistants who were employed in the General Library were on the recommendation of the Keeper and with the consent of the Treasury transferred to the National Library, and became permanent Civil Servants under the same Section. The boy was employed by the Trustees as a clerk on a weekly engagement.

The National Library accordingly started with a staff consisting of the Keeper, five assistants and a boy clerk. It was arranged with the Faculty that the cleaning, heating and other necessary services should be done as hitherto by the Faculty staff, a contribution towards the cost being made by the Trustees. Thus, in effect, the Library commenced its life with the same staff as had been employed by the Faculty, though the Faculty had been compelled to restrict the staff to the minimum required to carry on the Library on the most economical scale.

Two additions have since been made to the established staff. Dr. H. W. Meikle has been appointed Keeper of Manuscripts (Civil Service certificate dated 30th May, 1927) and James Ramsay, formerly the boy clerk, has been appointed junior assistant (Civil Service certificate 13th April, 1927). Another boy clerk has been engaged in his place. An unestablished messenger has also been appointed.

The Library Estimates for the current year include £100 for temporary clerical assistance, and a typist is employed as required. At present the Trustees also employ a temporary assistant who is engaged in cataloguing the Lauriston Collection, recently bequeathed to the Library by Mrs. W. R. Reid of Lauriston Castle. This assistant is not paid out of public funds, but out of the income of the Reid Estate.

The present total staff of the Library thus consists of the Librarian, the Keeper of Manuscripts, six permanent assistants, a boy clerk and a messenger, with a temporary typist and a temporary assistant, twelve persons in all. The assistants transferred from the Staff of the Advocates Library all receive fixed personal salaries, which were sanctioned

by the Treasury after consideration of their experience, qualifications and duties. By the Act their retiring age is fixed at 70.

The dimensions of the present staff are utterly inadequate to the needs of the Scottish National Library. The staff is exceedingly small in comparison with the staffs of other comparable Libraries. The Trustees have from time to time been in correspondence with the Treasury and with the Scottish Office regarding its increase. They do not think that it is possible to settle the number and organisation of the staff which will ultimately be required for the Library. That depends upon the nature of the public services which it undertakes in the future, and also in some measure on the buildings provided for it. But the Trustees think that ultimately the Library should possess a staff organisation at least comparable to that of the National Library of Wales.

No great increase of staff can be satisfactorily accommodated in the present building. The Trustees have accordingly confined themselves to indicating such an increase of staff as seems to them desirable while the present building continues to be occupied and the work of the Library continues substantially as at present. On 15th July, 1926, the Trustees addressed to the Secretary for Scotland a letter proposing that the following additions should be made to the staff: a sub-Librarian, a Keeper of Manuscripts and three additional assistants. Further correspondence took place on the subject, and the result was the appointment of Dr. Meikle as Keeper of Manuscripts and of one junior assistant as above mentioned. The Trustees are still of opinion that a sub-Librarian or Secretary and two more assistants should be added to the permanent staff without delay.

They think that it is desirable to appoint a Secretary or sub-Librarian to take charge of routine correspondence and accounting, and generally to assist the Librarian in the routine of administration. A similar official exists in most comparable Libraries, in particular in the National Library of Wales, the Bodleian, and the University Library of Cambridge. At present these duties are necessarily discharged by the Librarian personally and absorb a large part of his time which should be devoted to his proper duties as Librarian. The Trustees regard this as an undesirable arrangement.

In view of the increasing accessions received by the Library and its increasing use by the public there is ample work for at least two additional assistants. For example, the systematic ascertainment of gaps in the existing collection with a view to filling them up by purchase is impracticable without further assistance. As the Trustees have already found, this is an urgent matter. Again it has long been impossible to deal satisfactorily with the large accessions of music received by the Library under the Copyright Act. Further the existing cataloguing machinery of the Library is not and cannot without increased staff be sufficient to deal punctually with the numerous items comprised in recent donations.

These observations relate only to the staff required for the ordinary and necessary work of the Library. In other comparable Libraries much valuable bibliographical work is produced in connection with special departments and collections. In the Scottish National Library there are many special departments and collections calling for such work. But without a considerable extension of staff no service of this kind, such as other Libraries offer to the public, can be rendered by the Trustees. Further, if the Catalogue is to be reconstructed, a special temporary staff will need to be organised for that purpose.

With regard to the future recruiting of the staff the appointment of officials under the Act rests with the Trustees, subject to Treasury consent. The appointments in the Library, whether of high or low grade, in general require special qualifications,

26th April, 1928.] The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND, and Dr. W. K. DICKSON. [Continued.]

and each vacancy should be considered as it arises. This is a matter to which the trustees attach great importance. If all or even the majority of vacancies in the staff were to be filled up by assistants originally appointed to the lowest grade there would be no security that efficiency would be maintained. With regard to the recruitment of those assistants, for whose work only ordinary educational qualifications are required, the practice of the Advocates Library was to engage boys of suitable character and education and to train them as boys for four years. If a vacancy occurred on the permanent staff of assistants, one of these boys, if he had proved satisfactory, was generally appointed to it. Boys who were not so appointed had good opportunities both of self-education and of obtaining employment as law clerks or the like. Mr. Ramsay, the recently appointed assistant, was formerly trained as a boy, and received his present appointment after passing a qualifying examination by the Civil Service Commissioners. The Trustees think that this system has worked well in the past and that it is desirable to preserve it.

Funds.—The funds available for the use of the Library consist of:—

(1) *Grant Fund.*—The income from the Endowment Fund of £100,000 provided by Sir Alexander Grant, which income, amounting to about £5,000, is collected by the Exchequer and is treated as an Appropriation-in-Aid.

(2) *Annual Vote.*—Moneys voted by Parliament, appearing in the Estimates for the current year as £772 (Civil Estimates, Class IV, 12).

In addition, the following funds which cannot be used to meet any part of the ordinary or administrative costs of the Library, are available for purchases:—

(3) *Reid Bequest.*—Income receivable from the estate of the late Mr. and Mrs. W. R. Reid, of Lauriston Castle, of which the Trustees are the residuary legatees. Of these funds £50,000 have been already paid over, and when certain life-rents have fallen in it is expected that the total residue of the estate will amount to about £70,000. The income at present receivable from this source is about £2,230.

(4) *Rosebery Fund.*—The income of a sum of £5,000 provided by Lord Rosebery is available for additions to the collection of manuscripts.

(5) *Tait Fund.*—A sum of £200 received through Mr. W. A. Tait, C.E., is available for the purchase of engineering books. Part of this has already been spent.

(6) *Lyle Fund.*—A sum of £500 received from Mr. A. P. Lyle, of Glendelvine, is available for the acquisition of books on ships and shipping.

The maintenance and furnishing of the building are undertaken by H.M. Office of Works. Heating, lighting and domestic services are carried out by the staff of the Faculty of Advocates, a weekly payment of £7 out of Library Funds being made for these services.

The book-binding of the Library is done by H.M. Stationery Office.

Generally speaking, the Trustees think that the funds now available for the purchase of books are sufficient under present circumstances, but that the funds available for administration are inadequate. They desire to point out that for many years the funds at the disposal of the Faculty of Advocates were admittedly insufficient for the proper maintenance of the Library, and that every effort was necessarily made by the Curators to reduce expenditure to the lowest level consistent with the absolute essentials of Library service. They would regard it as unfortunate if the expenditure on the Library by the Faculty of Advocates were regarded as forming a precedent for the provision to be regarded as suitable for the National Library.

3. *The desirability of freer intercourse and a larger measure of loan and exchange with Municipal, Colonial and Foreign Collections.*

Under the Statute, Section 2 (c and e), the Trustees have certain powers of loan and exchange. These powers are at present exercised by the Trustees, generally, in the form of the loan of a manuscript or rare book to the British Museum or to one of the University libraries for the use of a reader engaged in research. The Trustees are of opinion that sufficient facilities for loan and exchange are provided for in the Act. They think that such loans should not be of frequent occurrence and that they should not become matters of course. Extensive or regular lending appears to them to be inconsistent with the purpose of a library of deposit and research.

4. *The extent of present intercourse and the desirability of more frequent and fuller intercourse with the Authorities of the different National Libraries in this country, and also with other Libraries in Edinburgh, with a view to the more scientific co-ordination of the policy of purchase, and the elimination of overlapping.*

Most of the accessions to the Library are acquired under the Copyright Act. With regard to these the question of co-ordination does not arise.

With regard to purchases, the Librarian of the National Library corresponds from time to time with the Keepers of Printed Books and of Manuscripts at the British Museum and with the Librarian of the University of Edinburgh and of the Signet Library, these being the libraries with whom competition or overlapping is most likely to occur in connection with the purchase of important items of Scottish interest, and endeavour is made where possible to avoid competition or unnecessary overlapping. It is probable that if the National Library finds itself in future in a position to make more extensive purchases such communication will become more frequent. The Trustees are of opinion that this matter may appropriately be left to the personal co-operation of the Librarians and that the creation of formal machinery is not necessary.

The Library has not hitherto been a large purchaser of modern foreign books. So far as it has been necessary to consider the purchase of foreign scientific books the attitude of the Library has been that if these are to be found in other Edinburgh Libraries where they can be consulted by students there is no necessity for their being added to the National Library also. But in special circumstances the purchase of foreign scientific books would be favourably considered, e.g., a book of permanent value which is not included in any of the scientific libraries in Edinburgh.

5. *The existing accommodation, present arrangement of books, and allocation of space.*

The Library is still housed in the premises adjoining the Parliament House which were occupied by the Advocates' Library. These buildings belong partly to the Crown and partly to the Faculty of Advocates. When the Library was handed over, the Faculty of Advocates retained their Law Library as a professional working library. This library is also housed as formerly in the same buildings. The buildings have been provisionally allocated by agreement between the Faculty and the Trustees of the National Library. (Plans of the existing buildings showing this allocation will be submitted.) The portion allocated to the Trustees includes the Laigh Parliament House, in which books and manuscripts of special interest are exhibited to the public, the Business Room, and the old Reference Room of the Advocates' Library, now used as the public Reading Room. The existing public entrance to the Library is through the Parliament Hall, and it is difficult to shut off the Library premises from premises occupied by the Faculty and the Law Courts. A

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. [Continued.
 Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND,
 and Dr. W. K. DICKSON.

large number of books belonging to the Faculty's Law Library are still shelved in rooms occupied by the National Library and *vice versa*. These are being gradually re-arranged.

The present accommodation is insufficient and much of it is unsuited for library purposes. In particular a considerable part of the book-storage is dark. Some of it is badly ventilated and the books consequently suffer to some extent from damp. At the same time owing to the shortage of space it is impossible to discontinue the use of these rooms.

In 1924, when the proposal for the transfer of the Advocates' Library to the Nation was under consideration H.M. Office of Works prepared plans of a building on the existing Library site and the site of the present Sheriff Court House, with a frontage to George IV Bridge, designed for the housing of the Library, and also intended to provide improved accommodation for the Faculty of Advocates. These plans will be submitted to the Commission. They provide on paper for a suitable building giving ample reading room accommodation and staff accommodation and storage for about 1,400,000 volumes in addition to those already in the Library. The Trustees note with satisfaction that the plans show that suitable space will be provided for the exhibition to the public of books, manuscripts and historical documents, a matter which they regard as of great importance and for which the present buildings are not well adapted.

The Trustees appreciate the difficulties of carrying out such a building scheme as is contemplated in the plans, and they understand that the matter cannot be hurried. They are however anxious that the urgent necessity of more suitable buildings should be appreciated. In particular, they desire to point out that so long as the Library remains housed in the existing building, and continues to share it with the Faculty of Advocates, it is impossible for the Trustees to provide adequate accommodation for the use of the Library by any large number of the public, or to provide suitably for the exhibition of books and manuscripts. With regard to book-storage, measurements have recently been made of the amount of vacant shelving still available, and it is estimated that at the *present* rate of increase of the Library the question of storage will become acute in about ten or twelve years. But it must be kept in view that accessions from all sources, under the Copyright privilege, from purchases and from donations, show a strong tendency to increase every year, and that if this tendency continues the period of ten or twelve years may be subject to very serious reduction.

The joint occupancy of the building by the National Library and the Faculty of Advocates has worked well so far, owing to the friendly relations existing between the Library staff and the Faculty officials, but it contains obvious possibilities of difficulties, and the Trustees think that it should be brought to an end as soon as circumstances permit.

6. *The present position as regards the production of a catalogue, and the financial arrangements in connection therewith.*

The Library possesses a Printed Catalogue in seven volumes, which contains about 260,000 entries and includes all accessions down to the end of 1871. Since that date the Catalogue has been continued in slip form. This Catalogue has been kept carefully up to date till the present time, the cataloguing rules being almost identical with those of the British Museum. This slip Catalogue has served the purposes of the Advocates' Library fairly well for more than fifty years, but it has the obvious defect that it can only be used with the assistance of the staff and cannot be handled at all by readers. The Trustees regard the provision of a catalogue which can be so handled as an urgent necessity. They have had under consideration the comparative merits of a card catalogue and a catalogue in book

form similar to those of the British Museum, the Bodleian Library, and the Library of the University of Cambridge. They are of opinion that the book form is preferable and that a catalogue in that form ought to be provided.

To provide such a catalogue, starting from the present date, would be a comparatively simple matter. The real difficulty is to provide a catalogue in book form covering the time which is at present covered by the slip Catalogue, from 1871 to the present time. This is estimated to cost at least from £15,000 to £20,000. An endeavour is being made to raise a fund from private sources towards this purpose and subscriptions to the amount of £1,500 have already been intimated.

7. *The present practice as regards facilities for students.*

Reference is made to the Regulations as to the Admission of Readers, a copy of which is annexed. These are practically the old Regulations of the Advocates' Library, and are framed on the lines of those of the British Museum. They have been found to work satisfactorily.

Hitherto the Library has been closed in August. It is proposed that from next year onwards it should be kept open in August with the exception of a few days required for cleaning.

The Reading Room at present closes at 4 p.m. on week-days. The Trustees have given careful consideration to the possibility of keeping it open till a later hour. It was their desire to keep it open till 6 on week-days, but after anxious consideration it was decided that it was impossible with the existing staff and in the existing buildings to achieve this. They have therefore decided that it is to be kept open till 5 o'clock on ordinary week-days.

* * *

With reference to the request of the Commission that the Trustees should submit a separate statement on the extent to which they take advantage of their privilege under the Copyright Acts, the Trustees would refer to the Report by the Standing Committee for the year 1926. It contains (pages 6 and 7) a complete statement of the items received under the Copyright Act from 26th October, 1925, the date on which the National Library as such came into existence, down to the end of 1926. A similar statement will be contained in the Report for 1927.

EXAMINATION OF WITNESSES.

2318. (Chairman): We are indebted to you for your memorandum. I do not know if you would like to make a general statement before we ask questions?—(Sir Herbert Maxwell): Well, my Lord, before my colleagues give their specific information I may make a very few observations on the general questions before us. I assume the Commissioners are well acquainted with the conditions which led the Government to take over the Library founded by the Faculty of Advocates and owned and maintained by them for nearly three centuries, therefore I need not enter into that question. When we as Trustees took over the Library as a going concern we were faced with certain difficulties which have not yet been entirely cleared away. The staff was wholly inadequate. It was inadequate for the Advocates' Library and it was still less sufficient for the development of the Library into a National Library and we found ourselves in considerable difficulty, and have been so far unable to discharge the functions which should be undertaken by a National Library. Then another question was the Board of Trustees. The Trustees, thirty-six in number, are scattered over a very wide area, and it is very difficult, indeed it has been found impossible, to keep them duly informed of the proceedings of the Executive Committee. We have no

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND, and Dr. W. K. DICKSON. [Continued.]

funds to defray their expenses in coming to Edinburgh from as far North as Aberdeen and as far South as Galloway, and as it is essential that the Committee should meet not less frequently than once a month, unless the Trustees can be kept regularly informed of the proceedings of the Executive and Finance Committees, they practically become Trustees only in name with no voice in the administration of the Library. I think there is only one other thing I need mention of pressing importance, that is the catalogue. The last printed catalogue ends with the accessions of 1871. Since then there has been a slip catalogue which has been kept closely up to date. This catalogue has the disadvantage that the public cannot be permitted to handle it, which renders it quite unsuitable for the purposes of a National Library. The provision of a catalogue which can be so handled is an urgent necessity.

2319. We are very much obliged to you. Lord Clyde, you have had a discussion with the sub-committee?—(Lord Clyde): Yes.

2320. Which, I think, has advanced matters a good deal in regard to future accommodation and building for the National Library. Perhaps you would make a considered statement of your general views?—(Lord Clyde): May I explain, in supplement of what Sir Herbert Maxwell has said, that in the old days when the Library was under the administration of the Faculty of Advocates, the responsible body was a small group of curators appointed by the Faculty itself from among their own members. These curators were always on the spot. They were for the most part men who had an interest in books and were often personally interested in letters; and their regular meetings which took place (if I remember rightly) once a month were easily convened, and if any occasional question arose they were always immediately available. The convenience which attended private administration of that kind cannot be expected under a system of public administration; but the point which Sir Herbert has raised is on that account really a vital matter, though not a very large financial one.

2321. You are speaking of travelling allowances?—No, what I have in mind is rather this: in the place of the old curators there comes now a Standing Committee of the Board of Trustees. Two difficulties arise. The Board is not, and should not be, an Edinburgh Board; but it must be remembered that Edinburgh does not stand to Scotland as London does to England. That means there is difficulty in obtaining regular attendance of the same men every month to attend to the same piece of business, a difficulty which never arose in the old days. That difficulty can only be palliated (it cannot be overcome) upon condition that we are in a position to circulate the minutes of the Standing Committee every month, not only to the members of the Standing Committee, but to the whole body of Trustees. There are no less than 34 of them. In present circumstances we have neither staff nor money to do this; and that constitutes our second difficulty—which is indeed involved in the first. We may have been right or we may have been wrong, but our policy from the beginning has been that all our available resources should be used for the purpose of giving increased facilities to the public, and we have done so deliberately and persistently. We have not spent a single penny more than was spent in the old days on what is purely administration, and the result is (as Sir Herbert has pointed out) that neither the members of the Standing Committee nor the members of the Board of Trustees have circulated among them the minutes of the Standing Committee; indeed, they are practically without information of the actual administration of the Library throughout the six-monthly period between the meetings of the Trustees.

2322. What financial diversion would that necessitate?—Not a large one. At the present time we have no administrative staff beyond that which the

Faculty of Advocates had. We have the Librarian and we have a typist. That is all. Now you can see at once that it is impossible to conduct the mechanical details of public administration upon that basis. I have ventured to reinforce this for this reason, that I am aware that some of the Trustees resident at a distance from Edinburgh have found themselves disappointed because they are not more intimately associated with the administration of the Library. In present circumstances this is inevitable, unless we were to infringe upon the increased privileges we have given to the public. We have spent all our money upon that. Indeed, I remember when Sir Herbert occupied the Chair at the first meeting of the Board of Trustees, the last thing he said (and I thought it was entirely right) was that, as we were situated financially, we could do no more than carry on (as regards the internal administration of the Trust) exactly as the Faculty of Advocates had carried on; and that is what we have done.

2323. What does it mean financially?—It means a Secretary who would take the whole of the secretarial work off the Librarian's shoulders, including correspondence and accounting. The Librarian has plenty of work to do in regard to his proper work as Librarian. It might also mean an additional typist.

2324. Put it into money; how much does it mean?—Might we defer that until we come to staff? We have the figures.

You asked me about buildings. It occurred to me that the most convenient way might be if I put in a copy of a memorandum which the Trustees have prepared regarding the Library building. It summarises the situation up to April of the present year. Perhaps it would be convenient if I read it, and if, as I did so, any members of the Commission would ask me any questions they wish. This memorandum has recently been forwarded to the Secretary of State for Scotland by the Trustees along with a letter (which, if you please, my Lord, I will put in also) intimating to the Government the precise position up to date, and making a certain request which you will find in the letter and to which I wish to refer in a moment.

2325. I think it would be better if you read it right through and then we can put our questions afterwards?—Very well, my Lord. I will read the memorandum:—

"Since the institution of the National Library in 1925 the Trustees have had before them the need for the provision of more suitable accommodation for the Library, and have from time to time been in communication on the matter with the appropriate Departments of His Majesty's Government. They now desire to bring the subject again under the consideration of the Secretary of State, in view of the fact that owing to the generous offer of a private benefactor it is now possible to provide the necessary buildings largely from private resources.

2. In 1924, when the proposal for the establishment of the National Library was first under consideration, H.M. Office of Works prepared plans of a building partly on the present site and partly on the adjacent site of the Sheriff Court House with a frontage to George IV Bridge, designed (along with the premises in which the existing collection of books is now housed) to provide permanent accommodation for the Library and for the readers who resort to it. In the opinion of the Trustees these plans, subject to some modifications of detail, provide for a suitable building.

3. The plans have now been so arranged as to admit of the building being completed in three parts or stages, namely:—(1) A main block facing George IV Bridge, adjacent to and communicating with the Parliament House, containing the Reading Room, Exhibition Rooms and administrative rooms of the Library, with

26th April, 1928.] The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. [Continued.
Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND,
and Dr. W. K. DICKSON.

storage for about 1,197,000 volumes; (2) A subsidiary block at the back of No. (1) providing additional storage for about 300,000 volumes; and (3) A further block providing accommodation for the professional use of the Faculty of Advocates and for their Law Library. The Trustees are satisfied that if the first portion alone were carried out the main needs of the Library would be permanently met as regards reading room accommodation and exhibition space; while the accommodation for book storage, together with the relatively small unexhausted storage in the existing premises, would provide accommodation for accessions for the next fifty years. The erection of the second portion might be postponed until the question of storage accommodation again arises, say fifty years hence. The erection of the third portion may be regarded at present as indefinitely postponed, as it is understood that the Faculty of Advocates are not anxious that their present building should be altered.

4. The erection of the first portion involves the removal of the existing Sheriff Court House, and this cannot be commenced until suitable accommodation has been provided for the Sheriff Court elsewhere. The Trustees are aware that a scheme for the erection of a new Sheriff Court House on another site has been mooted for some time past, and is at present under consideration by the Office of Works. The Trustees are advised that the preliminary arrangements in connection with the transfer of the Sheriff Court House to the new site and the erection of the new Court House will occupy three or possibly four years, and the cost is estimated by the architect of the Office of Works at £78,000 exclusive of site. It will thus be seen that the lapse of three or four years and an expenditure of £78,000 are unavoidable preliminaries to the commencement of any operations connected with the erection of the new Library buildings.

5. The demolition of the existing Sheriff Court House and the erection of the first portion of the Library buildings will occupy three or four years more, and are estimated to cost £178,000 exclusive of site, say, £200,000 in all.

6. On 28th June, 1927, the Trustees addressed a letter to the Scottish Office inviting the consideration of the Secretary of State to the provision of suitable Library buildings. The chief requirements of the Library were indicated, and it was stated that the space for book storage in the existing premises would be exhausted in ten or twelve years. If the accessions increase in volume as they are at present doing the storage will be exhausted even earlier. These are among the circumstances which make the early settlement of plans for the new buildings a matter of urgency.

7. In his reply to the Trustees' letter the Secretary of State pointed out that it would be appropriate to raise the building question before the Royal Commission on Museums and Galleries, the appointment of which was announced on 6th July, 1927. On 28th January, 1928, the Library was visited by a Sub-Committee of the Royal Commission under the chairmanship of the Hon. Evan Charteris. The Committee were conducted round the buildings and made a detailed inspection of the premises. They were shown the plans of the existing buildings and of the projected new buildings, and they took evidence from the Librarian, from Mr. Normand, K.C., Chairman of the Standing Committee, from Mr. Paterson, Architect of the Office of Works, and also from the Lord President. A detailed Memorandum on the requirements of the Library has been furnished to the Commission

8. Within the last few days the Trustees have received from a private individual an offer to contribute to the cost of the first portion of the new Library building to the extent of £100,000 subject to the following conditions: (1) that the Government is prepared shortly to take in hand and complete the first portion of the new building; (2) that the donor's contribution shall be paid in instalments from time to time as the work proceeds simultaneously with payments not less in amount to be provided by the Government out of public funds; (3) that the donor is to be the sole private donor contributing to the work; (4) that the building is erected on the existing site and an adjacent site fronting and having a public entry from George IV. Bridge and communicating directly with the buildings in which the National Library (formerly the Advocates' Library) is at present housed; and (5) that the plans ultimately adopted are approved by the donor.

9. In view of the new situation thus created and of the urgent requirements of the Library the Trustees desire to invite the consideration of the Secretary of State and of the Government to the matter and respectfully to express the hope that action with regard to it may be no longer deferred."

That memorandum has the donor's full approval. The conditions, as stated, have been adjusted by himself. They are wholly, and from the beginning, his own. They have not been the subject of any concerted deliberation of any kind. The memorandum was sent to the Secretary of State for Scotland on the 6th April, 1928.

2326. This gives the views of the Trustees?—Yes, the letter which accompanied the memorandum was in the following terms:—

"DEAR SIR JOHN,

I am authorised by the Trustees of the National Library of Scotland—through their Standing Committee—to approach you on the subject of the enclosed Memorandum and to ask your good offices in bringing it before the Government, and particularly the Prime Minister and the Chancellor of the Exchequer.

The public-spirited offer to which the Memorandum relates is made by Sir Alexander Grant, the same generous donor who contributed the original endowment fund at the time when the Library was handed over to the Nation. He has requested that no publication of his new offer should be made in the press until the Trustees are in a position to accept it, and I feel sure you will help us in respecting this request. I have his full authority in communicating his name to you and to the Government, and the Memorandum has been submitted to and approved by him.

The importance of his offer and the urgency of dealing with it, will be obvious from a consideration of the circumstances already known to you and summarised in the Memorandum, and the Trustees, to whom the problem of increased accommodation of a kind worthy of the national character of the Library is a matter of the most pressing concern, are anxious to be in a position to accept it as soon as possible. To this, the Government's assent to the whole undertaking referred to in the Memorandum is, of course, an essential preliminary; and it is with a view to obtaining that assent that I am authorised to approach you. Upon such assent being given, I anticipate no difficulty in having the sum named in the offer put under trust for disbursement in accordance with the conditions of paragraph 8 of the memorandum, in much the same way as was done with the original endowment fund.

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND, and Dr. W. K. DICKSON. [Continued.]

The Chairman of the Board of Trustees (Sir Herbert Maxwell) and myself, along with Mr. Ramsay MacDonald—who is much interested in this matter—and one or two of the other Trustees will gladly wait upon the Prime Minister and the Chancellor of the Exchequer at any time convenient to them—and to yourself. Some of us (myself included) are to give evidence regarding the Library before the Royal Commission on Museums and Libraries (we have already appeared before their Committee sitting in Edinburgh) on the 26th or 27th of this month; and we shall accordingly be in London at that time in any case."

Before you ask me any questions, I ought to say that I received an acknowledgment of this letter, and that I have since been personally in communication with the Scottish Office. I think, perhaps, I need say no more than that the result of my communications (which extend up to yesterday afternoon) are so far entirely favourable. I have, as yet, no definite assurance that the Government accepts the position

2327. But the first reception is favourable?—Entirely so.

2328. Now do the Trustees make any comments upon the position?—The first definite indication which we had of any intention on Sir Alexander Grant's part of contributing a further sum to the Library was received in the month of November last. It was not in the form of a definite offer; indeed, it was not in the form of an offer at all. It was an indication that he was anxious to make a further contribution to the funds of the Library and particularly to the building fund, but it was accompanied by a condition of absolute confidentiality. As anybody else would in such circumstances, he wanted to be fully informed of the nature of the proposals and indeed to be placed in possession of whatever information the Trustees themselves had on the subject, and I need not say we at once gave him every facility in that respect. But when I say 'we' I do not mean the Board of Trustees; I mean some four or five of the individual Trustees who alone were in what I may describe for the time being as the secret. The result was when the annual meeting of the Trustees occurred there were four or five members of that body who had information which they were unable even to disclose to their colleagues; and a further result was that when the Commission's Committee met us in Edinburgh I was unable to acquaint them fully with the position of matters. There followed sundry communications, and as the result of these the offer which you find recorded in that memorandum was made, and the condition of confidentiality was withdrawn with the exception that Sir Alexander is anxious there should not be any press publicity until the building project was assented to on the part of the Government.

2329. Before the completion of the first stage of the building the Government has to find another £100,000 outside Sir Alexander Grant's contribution?—That is so, roughly. In regard to the question of cost—suppose the Government gave their assent to what I have described in that memorandum as the whole project (because it is no use carrying through the first portion alone), the first thing will be to arrange the transfer of the Sheriff Court, not an entirely new and unexplored problem but still one upon which some negotiation may be required. There are plans for the new Library building, that is to say, there are elevations and plans of the ordinary kind for the various buildings; but there are no details, no working plans, and it is a very large concern. There are no plans at all for the new Sheriff Court. It seems to be inevitable that 12 months would be consumed in negotiations in regard to the transfer of the Sheriff Court, the terms the Government will give and all the rest of it, the preparation of detailed plans for the

new Sheriff Court and for the new Library buildings. I feel sure that at least 12 months is involved in that before a penny of public expenditure is required. Assuming 12 months did it, there follows upon that the erection of the new Sheriff Court, the existing Sheriff Court being occupied as usual. The new Sheriff Court will take two or three years to build, and it is only at the end of three or four years that the first slate can be taken off the roof of the existing Sheriff Court with a view to getting it demolished. It is only after that that the erection of the new Library building can begin. In other words the financial problem from the point of view of the Government is nil for 12 months at least: then, during say 2 years, something like £100,000 will have to be provided, and at the end of that there begins the expenditure to which Sir Alexander Grant's contribution would be available to the extent of 50 per cent.

2330. You said just now that no approval has any validity unless it includes the whole scheme, do you mean all three portions or the first?—No, the approval need not go beyond the first portion.

2331. (Sir Lionel Earle): May I ask a question? Supposing the building of the first portion came to £180,000 or £170,000, whatever you like to take, do I understand then that Sir Alexander Grant will give on the fifty-fifty basis on that and anything that remains would be carried forward to a future extension 50 years hence?—No. His idea proposes the demolition of the existing Sheriff Court and the construction of portion number 1. Suppose that came to £170,000, then he would bear £85,000 of it and the Government would bear £85,000 of it and that would wipe off his obligation.

2332. He would not pay £100,000 towards that £178,000?—No. It is pound for pound. May I say I do not think there is much likelihood of that position arising?

2333. (Sir George Macdonald): Does his condition cover the second and third portion of the scheme as well as the first?—Only the first.

2334. His condition about being the sole donor?—His offer will only apply to No. 1.

2335. And therefore his conditions only apply to No. 1?—Yes.

2336. (Chairman): What are your views as to his condition that he should be the sole private donor?—You ask me a difficult question. I am not the donor, and represent only the grateful recipients.

2337. As the recipient?—We must take what we can get.

2338. Is there any probability of that condition being waived?—None.

2339. (Mr. Charteris): Would he regard a contribution towards the new Sheriff Court as interfering with his conditions?—I do not think there is the slightest probability of that condition being waived.

2340. The point I was wondering about was supposing a private donor made a contribution towards the erection of a new Sheriff Court, would he regard that as invalidating his conditions?—I do not think he would, but I cannot imagine any generous donor giving anything towards the provision of a new Sheriff Court.

2341. (Sir Lionel Earle): With regard to the Trustees whom you said were so scattered, I presume there would be no question of changing that body to make it less scattered?—You cannot, to be representative in a national sense it must be scattered. We are faced in Edinburgh with difficulties which would never face you in London, and which make the necessity of some means of communicating our proceedings to everybody much more imperative than it would be here.

(Sir Herbert Maxwell): Several of the Trustees are *ex officio*, the Lord Provosts of Glasgow and Edinburgh.

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. [Continued.
 Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND,
 and Dr. W. K. DICKSON.

2342. (*Sir Lionel Earle*): I think we recognise—the sub-Committee recognised—the staff was inadequate for a great National Library?—I do not want to over-emphasise the point, but there is sometimes a little jealousy in Scotland of an Edinburgh Committee and an Edinburgh Board; and it is inevitable in existing circumstances that the practical work of administering the Library should come to depend upon four or five people who are on the spot; but that is very undesirable.

2343. I am not sure whether the National Library of Wales would be allowed to frank the communications from that Library.

(*Mr. Beresford*): The National Library of Wales gets a lump sum in the form of an annual grant.

(*Sir Lionel Earle*): They have to pay for their own stamps.

2344. (*Mr. Beresford*): Everything.—(*Lord Clyde*). I hope you will not think it is a mere question of stamps. It is the physical job of getting minutes and relative papers reproduced and sent out. At present all that must fall on the backs of the Librarian and one typist—which is to use the Librarian as a clerk, while he should not be used in that way at all.

2345. (*Sir Lionel Earle*): Only one other question. Has any member among your body any idea whether the Sheriff Court House is going to oppose going to the new site? Are they going to resist that and say it is unsuitable?—It is difficult to foretell which way the sparks will fly when you light a fire; and while I see no reason to anticipate any material opposition there is sure to be criticism. I do not think that will come, either the criticism or the opposition, from the Sheriff Court House Commissioners, but it may come from other sources of public opinion.

2346. There will be a great deal of criticism to building anything of that sort, altering that castellated building?—Possibly.

2347. But you have no reason to assume they will strenuously oppose it?—I do not think any formidable opposition is likely.

2348. If they won't go there, it means an extra £30,000 to be added for buying a site?—It is conceivable there might be such determined public opposition as might bring about a situation of the kind you indicate, but I think it is extremely improbable.

2349. (*Sir Henry Miers*): If five years or so must elapse before any building extension is made, can the Library carry on during that period? I gather, as far as the storage of books is concerned, it can, but can it as regards reading-room accommodation?—Yes, we can. As you will learn, the number of readers has increased very materially since the change of administration has occurred, and indeed in the last year there is an increase in readers of 40 per cent.

2350. (*Chairman*): Have you the figures?—We can give you them. Those who will come after me have got them. For all that, our existing public reading room, although it is not all that might be desired, is a good one, and is ample, and we have storage accommodation which ought to provide for the accessions of from 10 to 12 years. I would like to say about that that, while that is the best information we can give you, it is an estimate. It depends on an estimate of 15,000 volumes per annum of accessions, but even the unit basis of one volume is a matter of estimate as you can understand, and the tendency in the last few years has been for accessions very materially to rise. If they do, the 10 or 12 years' estimate will be upset; but we think you may reasonably take it there is 10 years' storage at any rate.

2351. (*Sir George Macdonald*): May I ask one or two questions upon the memorandum that was put in? It is stated that one of the reasons for handing over the Library to the Nation was that it was impossible for the Faculty out of their own unaided resources even to maintain the Library at the old

level. Now I have heard that made the basis of a criticism to the effect that the Faculty were in possession of a white elephant which it wished to present to the Government. There is probably an answer to that, and if there is it is desirable it should be on the notes?—I was Dean of the Faculty during a considerable part of the War-time; and as Dean of the Faculty bore the main responsibility in connection with the affairs of the Faculty and their Library. When the War began the Faculty had accumulated funds amounting to somewhere between £20,000 and £25,000; I am sorry I cannot be more accurate from recollection than that. The effect of the War was that the number of persons who entered the Faculty became very attenuated and for a number of years entirely ceased. A large part of the revenue of the Library depended on the fees paid by entrants, and the consequence was that that revenue entirely failed, and the small fund of between £20,000 and £25,000 rapidly diminished, while the unavoidable costs of administering the Library rapidly increased until they approached close on £5,000 a year. I was personally responsible for starting a fund in order to see ourselves through as far as we possibly could. We had to depend upon our own resources, and we raised a figure of about £13,000. You can easily imagine at the rate of an expenditure of £5,000 a year how long £13,000 lasted; and before the War was over I saw plainly that the possibility of going on was hopeless. A relatively small professional body like the Faculty could not be expected to provide a sum of £5,000 per annum in perpetuity; and my then colleague Mr. Macmillan took the lead in the movement which ultimately resulted in the offer of the Library to the Nation. There is that justification for saying that we had a burden heavier than a professional body could bear.

2352. But I take it there was another alternative open to you; if you had taken a less statesmanlike view of the position you might have sold some of your manuscripts?—That was proposed when I was Dean of Faculty, but I did not countenance it, and the Faculty would never have agreed to it.

2352A. I merely wanted to point it out as a possibility that it would have been open to the Faculty to dispose of some of their valuable property and cut down facilities for public access and carry on as before?—That was proposed.

2353. I think that is the answer to the criticism I referred to?—I think it is.

2354. In reply (2) to the Commission's Questionnaire, you mention the appointment of Sir Herbert as Chairman. It rather reads as if that were made by the Trustees, and I think it was made by the Secretary of State?—I think it was made by the Crown.

2355. In regard to the point you raise as to administration, I do not want in any way to detract from the effect of what you say, that there is a need for increased staff, but how do you produce the minutes of the meetings? Do typists do them?—At present we keep, with the help of the Librarian and his typist, we keep a minute, but there is no circulation at all.

2356. Do you ever try the Stationery Office to reproduce the minutes for you?—This very memorandum we have put before you was reproduced by the Stationery Office, but we have felt ourselves from the beginning bound, as far as we possibly could, to avoid directly or indirectly the incurring of any administrative expense at all.

2357. You are now suggesting that expense should not be incurred or met?—Yes.

2358. There is a passage which rather interests me in the memorandum in which you refer to recruitment. You say, "If all or even the majority of vacancies on the staff were to be filled by persons of the lowest grade there is no security that efficiency would be maintained". You might elaborate that

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND, and Dr. W. K. DICKSON. [Continued.]

a little by telling us what is in your mind?—Take the appointment which has recently been made (which I myself believe, and I know my colleagues all believe, has been a very successful one) of Dr. Meikle as Keeper of Manuscripts. There is a case where you cannot promote a man from the staff at all. You want a specialist. Promotion is a personal question, and when you get to the higher positions in connection with a Library mere clerking, mere experience, is not enough; you want special qualifications, and you cannot expect these to be produced automatically in an officer who rises gradually through the usual steps of promotion.

2359. Is there not this in it, that you are a very small unit; when you come to the British Museum, there you do not have to go out of the area at all?—There you have a large area of selection and somebody who proves his merit.

2360. What would be your remedy for this difficulty which you have experienced and which you foresee?—I have never myself quite seen my way through the trouble. As you know, the difficulty is that the moment you introduce people from outside you come athwart the pension difficulty, and that has been to me always the main difficulty. I would rather leave this point to others. I think Dr. Dickson might be of value to you on it.

2361. Then in regard to purchase, you received a year or two ago a very valuable bequest?—Yes, the Reid bequest.

2362. What is it likely to amount to?—At present it amounts to £2,300 a year. It ought to amount, when certain life interests fall in, to something between £3,000 and £4,000?—(Dr. Dickson): The total capital is round about £70,000.

2363. That means you are not likely to have to come upon the Government for purchase grants?—(Lord Clyde): Not, I think, to any large extent. Of course, the Reid bequest is so far earmarked that it is for the purchase of "suitable additions to the Lauriston Library." But Mr. Reid's Lauriston Library had no special characteristics except that it was generally Scottish and historical, and these are characteristics of the National Library also—apart from some of the accessions under the copyright patent. There are many lacunae in our collection, and most, if not all, of these can be filled by purchases made out of the Reid bequest. The books so bought will receive the special Lauriston Library mark, and will constitute additions to that department of the collection. The answer to the question you put to me accordingly is that the bequest will practically meet most of our demands in respect of purchases for the time being.

2364. One of the effects of this bequest will be to increase the rate at which your Library is growing. The Faculty have not expended anything like £4,000 a year up to the present.—No, a few hundred only.

2365. Then we have had a representation made to us about a point you have not referred to and have not referred to in your memorandum, that is the possibility of conflict between the interests of the National Library and the interests of the Register House in regard to particular documents. I suppose you would agree that documents of national importance, if of a strictly legal character, if they related to property and that sort of thing might be more appropriately housed in the Register House.—(Mr. MacLehose.) That question has been merely considered by us incidentally, but I happen to be Convener of the Books and Manuscripts Committee of the Trustees, and we do not anticipate any serious difficulty in regard to that point. The question arose quite recently in reference to some valuable manuscripts which are loaned to the Register House. We are hoping they will become national property. The question was put to me as to whether an arrangement could not be made by which the strictly legal documents might go to the Register House, and the documents (of which there are a considerable

number) dealing with literary matters might go to the National Library. As far as the National Library is concerned, we do not anticipate any difficulty or any conflict of interests that cannot be quite easily arranged.

2366. I read from a memorandum which has been presented to the Commission:—

An effort at adjustment is most desirable, and indeed necessary, in the interests of historical scholarship, on behalf of which I venture to submit this Memorandum. It would be unfortunate if the two places were suffered to proceed on the present unsystematic lines.

Arrangements for an adjustment of function in respect of historical documents acquired by the nation would seem to involve the institution of an impartial body of experts, qualified to pronounce upon what claims relevance to the Public Records.

You would not be disposed to agree with that?—(Lord Clyde.) No. I was not aware this question was to be raised, but is it not vitally connected with the organisation of the Record Office? There can be no difficulty on this matter if the Register House (including the Record Office) is given a proper Official Head.

2367. You mean the keeper of records would be in close touch with the keeper of the National Library?—Yes, and the idea of conflict would be almost impossible.

2368. And I suppose in the last resort the Secretary of State would exercise some sort of influence in that way?—No doubt. Difficulties of a not dissimilar kind, I am very well aware, have arisen recently over and over again, but they have arisen because of the chaotic state of the Register House; and until it is put under a proper Official Head you will never advance at all.

2369. (Sir Thomas Heath): May I just ask one question in regard to the finance. I understood at first that Sir Alexander Grant offered a sum of £100,000 towards the cost estimated at £178,000, and I rather gathered from what Lord Clyde said that would go in the proportion of £100,000 to £178,000?—That must have been some fault of mine. It goes £ per £.

2370. That really means it was based, I suppose, on an estimate of £200,000 rather than on £178,000?—It was. £178,000 is a carefully estimated figure by the Board of Works for these plans, but of course there is always the chance that it will be more, and there is nothing estimated for site at all. My view was that that £178,000 for all practical purposes might be regarded as £200,000. If the cost was £250,000, then the last £50,000 would fall upon the Government alone.

2371. Supposing it was above £200,000 then the offer does not extend beyond £100,000?—That is right.—(Mr. MacLehose.) When Sir Alexander Grant spoke to Lord Clyde and myself I think he made it quite clear that he assumed the cost would not be less than £200,000, therefore he was offering half. I think the contingency of it being £78,000 and £100,000 was not present to his mind at all.—(Lord Clyde.) Not at all.

2372. (Dr. Cowley): You spoke about increase of staff as being the first necessity for efficiency of the Library. You only mention the need for a secretary and a typist, but that of course is a small matter, I suppose £500 or £600 a year would cover it?—You will get the figures.

2373. But that is not the whole of the increase of staff necessary I gather?—No.

2374. You want a considerable increase besides for Library purposes?—Yes.

2375. I wanted to be sure that was so.—My colleagues are quite ready to give you the figures.

2376. The need for the typist and so on is in order to keep you in touch with the Trustees. I was going to put what Sir Lionel Earle asked, whether the present constitution of the Board of Trustees is really the best that could be got. It seems awkward to

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon.
 Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND,
 and Dr. W. K. DICKSON.

[Continued.]

have a lot of people scattered about the country who cannot possibly meet. Is it impossible to arrange a Board of Trustees, since the matter could be done by the Government, I suppose it would be constituted in such a way that they could meet?—That is a very hard question to answer. It is inevitable that if the Institution is to have a National character the membership of the Administrative body should be widely scattered. I had not personally very much to do with the actual selection of the membership of the Trustees at the time the Act was passed, but I think it would be very difficult to make a change which would give you any material improvement.

2377. (Sir George Macdonald): The constitution was settled by Act of Parliament?—(Lord Clyde.) It was.

2378. (Sir Lionel Earle): How are the Trustees appointed?—It is provided under the Act. There are a certain number of members who are *ex officio*. A certain number are co-opted and certain others are elected at the annual meetings.

2379. That is in the recent Act of Parliament?—Yes.

2380. (Dr. Cowley): There is an account of it in the Memorandum?—It is important. If you were to ask me can I suggest anything that would be really better, I could not, if you are going in for public administration at all.

2381. I imagine that the administration of the Library is in the hands of a standing Committee?—For practical purposes, yes.

2382. And the standing Committee is appointed by the Trustees?—The standing Committee is appointed by the Trustees at the annual meeting.

2383. Is the standing Committee resident in Edinburgh?—No, only partly so: that is the trouble again. It would not do to make it a preponderantly Edinburgh body, it would not give contentment I am sure. I am not suggesting that the non-Edinburgh members begrudge their railway fares, but they are people with their own business to attend to.

2384. With regard to the building, you spoke of the building being constructed in three parts. I suppose you have a general design for the whole building first?—That is so.

2385. You put up the first part, which is to last I gather for about 50 years, and then would the whole building be calculated to last for about a century?—No. You may I think, disregard the third portion altogether. The third portion was really dependent upon the requirements of the growth of the Law Library of the Advocates which remains their own, and on certain other conditions about storage which I need not go into. I do not think the third stage is a practical matter at present; it may become so some time hence. The first stage is really the frontage building. The second stage is nothing but the raising up of the back building to the same height. These two together provide for considerably more than half a century. The first one provides for 30 or 40 years.

2386. (Chairman): Mr. Normand is prepared to make a statement regarding administrative staff, as to immediate requirements and the requirements when the new scheme is completed?—(Mr. Normand.) As regards the present staff I think it should be clearly understood that the position is that we practically inherited the staff with which the part of the Library which was handed over was carried on by the Faculty of Advocates. Twenty years ago the Faculty of Advocates found it necessary to restrict in the most drastic manner their expenditure upon the Library, and they reduced the staff to the bare minimum which permitted them to carry on, to receive books and to catalogue them. They had practically no funds available for the purchase of books, and the gifts to the Library, while they were important, were not nearly as considerable as they now are. When the transfer took place, there were transferred to the National Library the Keeper and, I

think, five assistants. We have made demands since then for considerable additions to the staff. All that has been conceded is a keeper of manuscripts and one assistant, and that is the staff with which we are expected to carry on a National Library just now. All that we can do is to take in the books and to catalogue them and to make them available for the number of readers who are at present there. We can only catalogue them—Mr. MacLehose will discuss how we catalogue them—but we can only catalogue them by preserving for our own use, and not for the use of the public, a slip catalogue by which we can find any book added to the Library. We have now a purchasing power of about £2,800 per annum. We have in addition received a very much greater flow of accessions since the transfer of the Library to the Nation, and thirdly the accessions under the Copyright Act are always slowly but surely mounting. Therefore, how much longer we shall be able even, for example, to keep our slip catalogue up to date, as we now do, with the present staff is doubtful. There are certain things which have long fallen into arrears through no fault of the Faculty of Advocates or anyone, but because there has not been the means adequately to carry on on a National scale. One for example, and perhaps the most important, is that there are known to be considerable blanks in our collection through the failure to take full advantage of the copyright privilege in the past, and also the casualties of loss which leave in our shelves blanks which ought to be filled up, particularly perhaps things relating to Scottish History, topography and so on, and also in other departments. One thing we ought to be doing is to be filling up these blanks on some system. We ought to be spending our purchasing power of £2,800 a year in some systematic manner. We ought therefore to have persons available who will look into these collections on a systematic basis to ascertain what the blanks are in relation to what we ought to have, and to enable us to expend our money in a fully rational and beneficial way. The longer that is postponed the more expensive the books which we intend to purchase, and which we must purchase, will become, the less far our money will go, and therefore we ought to commence that operation as soon as possible. It cannot be done with the existing staff. Another thing is the collection of music. That is in a worse position than it was during the time when the Faculty had charge, because when it was the property of the Faculty there were certain members of the Faculty who were themselves musicians and they formed themselves into a Committee which went through the music as it came in, who classified it, catalogued it, and placed it. That broke down during the War when members of that Committee went on Service, some were killed, and it was never reconstituted after the War, and now the music is not adequately dealt with and nothing more can be done until we have an assistant who is capable of dealing with music. I only give those three things, the necessity for keeping the catalogue up to date even in its present form with a greatly increased flow of accessions, the necessity of finding out what are our lacunae and filling them up, and music, as illustrations. There are numerous other things which might be indicated, but those are very simple things which we cannot carry on; we cannot succeed in carrying on longer the essential part of a Librarian's duties as things are, let alone any of the things one would expect from a National Library. We have accordingly asked more than once that in addition to the increase of staff already authorised we should at least and at once get an assistant Librarian (I should prefer to call him a secretary) with a typist and two assistants. The need for an assistant Librarian or Secretary is very urgent and pressing. The real truth is that unless we get such an official our administration will be in great danger of break-

Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND,
and Dr. W. K. DICKSON.

ing down. Under the former regime when the Faculty of Advocates were in possession, the duties of the Librarian in matters of office administration were slight, indeed negligible. There was no official correspondence, there were no accounts to keep, in fact they were kept by other officials of the Faculty, there were no letters to write to the Scottish Office or other Departments, and there was no complicated official correspondence of any kind. Now all that has changed. The Librarian has to prepare accounts, for the King's Remembrancer, he has an extensive correspondence which takes a large part of his time every day, and a great deal of his time is taken up with work which is no part of the duty of a Librarian. If it had not been that there was a certain number of the Trustees who carried on a good deal of the work of administration which ought to be done by officials, I am certain the Library affairs would have been in a less advantageous position than they are in now. As it is, some of the most prominent of our Trustees, not resident in Edinburgh, have protested, and I think reasonably, against a system of administration which concentrates the work in the hands of a Standing Committee or a few of its members and only summons the general body of the Trustees twice a year and never sends them any information in the intervals. The reason of that is that we have no means really of making information available. If we had a Secretary, with a typist, he would at any rate be able to write full minutes of the meetings of the Standing Committee and we should circulate them and keep the Trustees generally in touch with the proceedings of the Standing Committee. It appears to us to be essential that the Librarian's merely clerical work should be taken off his shoulders and transferred to someone else who would be competent to deal with it. Apart from that, two assistants, in addition to a Secretary and typist, would be of considerable value and at any rate enable us to overtake some of the work which is in arrears and prevent the catalogue falling into arrears. How much longer such an addition to the staff as I have indicated would serve our needs, I do not know. It could serve them only for a little while. The cost of such an addition to the staff is a matter of estimate. I consider that a sum of £1,350 per annum would cover it. As to more remote contingencies we have considered that, and it is extremely difficult for us to indicate what would be the probable requirements say in the event of the new buildings, which have been discussed, being built. There was, however, put forward at the meeting of the sub-Committee which came to Scotland a suggestion by the present Librarian to the effect that we should have besides the Librarian, a Secretary or Assistant Librarian and a typist to do what might be called the office work, and in addition that we should have a Keeper of Printed Books, one Head Assistant Keeper, another Assistant under him, six less important assistants, and six junior assistants, all in the Department of Printed Books; that we should have a Keeper of Manuscripts which we have now got, and one assistant to him; and two messengers. That is at any rate a very modest programme as compared with any comparable Library in this country. It allows for a personnel of 22 at an estimated cost of £8,050 in all. I see the National Library of Wales has a personnel, a staff, of 49; I believe that the Bodleian has a staff of somewhere in the seventies. Close comparison with other Libraries is a little difficult, because the personnel of other Libraries appears to include cleaning staff. Now our cleaning is done by servants of the Faculty of Advocates, who clean the whole building in joint occupation. For these services we of course pay the Faculty. If our new building scheme were completed we should require cleaning staff of our own over and above the Library staff which I have outlined. All one can say is that our demand is by comparison extremely moderate. If a Library building such as we hope for were, as it were, erected

to-day by some magician's wand, a Library staff of 22 or 30 is the staff which we should have to constitute at an early date. That staff is more or less the staff which we shall have to work up to, and have in being at or soon after the time when in reality the new building may be expected to be created. Our needs by that time may go beyond that; we cannot say, it depends upon what accessions we get, whether we get further gifts of money in order to purchase, and a great deal depends on the number of readers. One of the most hopeful things about the National Library is that ever since its transfer to the Nation the readers have been increasing continuously. Last year there was an increase of nearly 40 per cent. over the previous year, which was a much higher number than any year before that. The figures, which I may give, are as follows:—

1926	Total attendances of readers	= 4,360.
1927	" " "	= 5,985.

For the first three months of this year the attendances have been 2,014, as against 1,691 for the corresponding months of 1927.

Accordingly it would be extremely rash for us to commit ourselves to any general statement as to our expected requirements, say seven years hence, when we might be in possession perhaps of other buildings. All I can say is that, if the other buildings were in existence now, that is the staff we should have to constitute probably. If the buildings are to be created seven years hence, that is the staff we shall have to have in being at least at or about the commencement of the new era with the new buildings.

2387. (Chairman): Dr. Dickson, I understand that your present exhibition facilities are very inadequate. Will you give us some idea of what you consider desirable?—(Dr. Dickson.) That is an aspect of the Library about which I have always felt strongly, because our Library is one of the ancient Libraries which like all such Libraries is also a Museum. It has always seemed to me that while a Library like ours must be primarily a Library of Research, that is intended for the use of a selected public, on the other hand the principal service which such a Library can render to the man in the street is to provide an exhibition. We could provide an exhibition of historical and literary manuscripts, illuminated manuscripts, early printing, bookbinding, etc., of the same kind as is provided by the British Museum, of course on a smaller scale, but of its kind and within its limits certainly as interesting, at any rate to Scotland. It has been suggested to me that I might illustrate what I mean by recalling something that happened in connection with the Glasgow Exhibition in 1911. There was an International Exhibition in Glasgow in that year which comprised a very important exhibition illustrative of history. A Committee of persons interested in history was got together. My friend Mr. MacLehose was a member of that Committee and was asked to take charge of the exhibition of printed books. I was asked to take charge of the manuscripts. We put our heads together and arranged an exhibition illustrative of the development of the book over a period of 1,000 years. The exhibition was entirely of originals without facsimiles or photographs or anything of that kind, and most of those things, certainly most of the manuscripts, were selected from the shelves of the Advocates' Library. That is a line of development where I think the Library might be of great use to the public, and I am anxious that that should be kept in view in anything that is done. The plans as they exist provide I think fairly adequate accommodation for exhibition purposes. As the plan stands I think the building is adequate, only ample provision should be made in the way of show cases and of facilities for exhibitions. I wish to make that point before the Commission because I think it is one of great importance.

and Dr. W. K. DICKSON.

[Continued.]

2388. (*Chairman*): Mr. MacLehose, I believe you can tell us about the catalogue position?—(*Mr. MacLehose*.) The position in regard to the catalogue of the National Library is that up to the year 1871 we have an excellent printed catalogue which is in eight bound volumes and was completed in 1879. That contains a quite adequate and satisfactory record of the books which were added to the Library up to the year 1871. From 1871 to the present day the only catalogue we have is a series of packets like this (*example handed in*). This is a dummy packet with one or two written titles at the beginning. That is the actual catalogue which exists. That provides for a careful record for office use of the books which are added to the Library, but Your Lordship will understand that it would be impossible to put the only official record such as that into the hands of the general reader. There is only one copy. If any reader goes to the Library he cannot turn up any catalogue and see what the Library contains, after 1871. That is, we feel, all the more important in a Library like the National Library, because it is a Library which is used for research. The opportunities of work are very greatly limited if the student is unable to ascertain what books on any subject are available. I feel sure Dr. Cowley will appreciate the extraordinary difficulties of carrying on the Bodleian if the only record available was merely a collection of slips in his private room, of the contents of the Library. In calling attention to this clamant need, I should like, if I might, to say that having been on this body of Trustees for a year or two I am impressed with the enormous amount of work that the Members of the Bar in Edinburgh were able to carry out, and if I feel that there was a very great need for a better catalogue I think the last thing we should do is to complain that more was not done, because a very great deal was done for that Library. But the problem before the Advocates for the last 50 years has been one which was entirely beyond the capacities of a body of private individuals who had to put their hands in their pockets in order to accomplish their aims. We are now met with the problem how we are to supply this need, and it is a question which becomes the more difficult because there is not a "shelf catalogue" in the Library. I do not say that is absolutely accurate, because there are certain rare books which are treated separately and there is a fuller record of them, but, broadly speaking, and very broadly speaking, there is no shelf catalogue at all. In the British Museum not only have they a shelf catalogue, but they go over the whole Library every six months and have an inquest and see that every book is there. I think in the Bodleian you do it once a year?

2389. (*Dr. Cowley*): Yes.—In the National Library it has not been done for 45 years. We have also to remember that Members of the Bar and one or two other privileged persons in these 45 years were allowed to go about the shelves. The British Museum have every morning to correct the mis-placings on those shelves in the Reading Room which are open to the public, because readers put books back in the wrong places. Mr. Normand and Dr. Dickson and myself took a very great interest in trying to get some scheme of finding out what were the lacunae, and getting a list of wants prepared, but we were immediately met with the difficulty that we had not sufficient staff to give the time required for such work. We were also met with the difficulty that we could not count upon the absolute reliability of this manuscript catalogue, although it has been kept with great care. Certainly within recent years it has been kept with very great care, and it is greatly to the credit I think of the officials of the Library that it was reported—and this is true of every month—it was reported at the Meeting on 5th January that all books received up to 31st December had been incorporated in the list of books. It is

not allowed to get into arrear. But still the need is there for a catalogue which can be consulted by readers. We then proceeded to see if we could raise some money ourselves, and so we issued an appeal for £15,000 or £20,000 to try and give us a complete catalogue on the lines of the British Museum catalogue. The result of our appeal has been that we have got in a sum of £3,051. That is the amount of the promises collected in the last six months. As the Commissioners will understand, it is a very difficult task to collect money for the catalogue of a Government Library. It is not an object that particularly appeals to the average donor, but we have made this beginning. The scheme however, is a very big one. As to the future, we are well aware that a question may be raised with regard to cataloguing. We recognise that if you have half a dozen Libraries with copyright privileges, the British Museum, the Bodleian, Cambridge, Edinburgh, Dublin, and Wales (and other Libraries, for instance the Glasgow University Library print their accessions), it may be an extravagant thing for each of these Libraries to be printing their new accessions at the present day. It is quite possible that some system of combination may be arranged for the future as regards that. As to this point we are fully alive and are ready to co-operate. But our problem is really the gap between 1871 and the present day. We feel that we have very great treasures in that Library, and for the most part until the catalogue is available they are locked up. I am so conscious of the other needs of the Library in the matters of buildings and staff, that, as I mentioned to Lord Clyde yesterday, I was unwilling even to press for the catalogue, important as that is, because other things are also needed. But the impression of the Trustees who have been brought into the management of this Library is, I feel sure, that we have there for Scotland a very great treasure house, that a great deal has been done to preserve these treasures at great sacrifice in the past, and that if we can only find some means of making them more accessible to the public we shall be doing a great service.

2390. (*Chairman*): Mr. Macmillan, we should like to hear your views generally?—(*Mr. Macmillan*): I have not had the privilege of listening to what my colleagues have said hitherto, and really I am not in a position to deal with the immediate administrative requirements of the Library with anything like the fullness that they can. There is, however, one aspect of this Institution which I should like with your permission to emphasise for a moment, as having had something to do with the carrying out of this transfer to the Nation of the Advocates' Library. I am not sure that it has been fully realised what was, if I may so call it, the munificent character of the transaction. The Faculty of Advocates had in 1689 founded their Library. It was originally intended as a professional Library, but it ultimately came to be regarded as the National Library of Scotland to all intents and purposes. It received that recognition when the Copyright Act of 1709 was passed, by being privileged to ask for a copy of every copyright book. That is really the hall mark of its public character, and yet it remained until 1925 a Library which was the private property of the Bar of Scotland, a relatively small profession numbering only between 300 and 400 members, and in no sense a wealthy body. Such was their enthusiasm in the cause of letters that throughout all these years they maintained this great Library at their own charges, maintained the building, maintained the service, and not only had of course themselves the privilege of the use of the Library, which was a very great privilege, but they extended that privilege to the public. It was a very remarkable thing that a private Library should thus have been made available to the public; no one was ever turned away, any person who came to consult books was welcomed, he was given accommodation and the services of our staff and he had every facility that

26th April, 1928.]

we possessed placed at his disposal. That was a great service to the country, and we carried it on all these years until, as has already been explained to you, the financial position became really impossible. One does not want to emphasise unduly the financial sacrifices that members of the Bar made, because we were very anxious if we could to continue on the old lines as long as we could, having always been very proud of what we were able to do. But, as the Lord President will bear me out, we reached the breaking point after the War, and notwithstanding certain exceptional efforts that were made, we recognised the time had come when the Library must be transferred. We then made an offer which I think is unique in the history of this country; we made an offer to the State of the entire contents of this Library which include, pray observe, not merely those accessions which we had received through the Copyright Act, which we always regarded as having a certain public character attached to them because we had received them really in a sense for the public, but many treasures which we had ourselves acquired and which we could have realised at once with Dr. Rosenbach for a fabulous sum, such, for example, as the original manuscript of Waverley, the most precious of all Scott's manuscripts, as well as other manuscripts of his, valuable collections of correspondence, including letters of Mary Queen of Scots and Queen Elizabeth, and innumerable manuscripts and books of the greatest interest. There were, indeed, some members of the Bar—of whom I was not one—who thought that we ought to save the financial situation by selling some of our manuscripts and with the proceeds carry on as we had done in the past. Personally, I was always averse from that course because it seemed to me most unfortunate that the Library should be in any way impaired. The transfer was made ultimately, but it was a transfer of an exceptional character, an entirely exceptional character, it was a free gift of the whole contents of this Library of a value practically inestimable in cash. It was accompanied by an offer on the part of this relatively small body of professional men in Scotland of the premises which contained that Library, and moreover it was accompanied by a remarkable additional attraction to the State, inasmuch as a public benefactor in the shape of Mr. Grant, now Sir Alexander Grant, was prepared to accompany the gift with an endowment of £100,000. I am in the judgment of members of this Royal Commission, if there has ever been in the history of this country a transaction of that sort where treasures of such value, with the premises containing them, and with an endowment of £5,000 a year, have been handed over to the Nation without condition at all, except the condition that the Nation will continue to administer this undertaking. I do not wish to detain you by expatiating upon that aspect of it, but I am glad to have an opportunity of impressing it upon this Royal Commission, for this reason, that I should hope that when these circumstances are taken into account, your approach to the consideration of the problems of this Library will be to some extent influenced by the entirely exceptional circumstances of its genesis. It is not the creation of public monies at all, it is the creation of private funds. The Bar in Scotland spent out of its own pocket over £250,000 on this Library, which they have preserved for the public benefit and which is now in the hands of the public. Surely in return for the very great gift which we have made, the Library is entitled to receive, I venture to say, exceptional treatment at the hands of any Royal Commission which is concerned with the interests of the Libraries of this country. I trust I have not unduly emphasised that aspect of it, but it is certainly an exceptional feature of this Library which should commend it, I should think, to anyone who is anxious to assist the Library cause in Scotland.

2391. (Dr. Cowley): With regard to the catalogues, we have talked about it before I know, and therefore I believe you have a scheme yourself, Mr. MacLehose, for the catalogue from 1871 to the present time. Could you tell us something about your view of that?—(Mr. MacLehose.) What the Committee on which I serve would like to see would be a catalogue after the manner of the British Museum catalogue. Our accessions are about 15,000 items a year, and we have at present, 450,000 entries, roughly speaking, perhaps more, to make up since 1871. In answer to Dr. Cowley, what I should like to see would be a complete catalogue of the contents of that Library, that is 450,000 additional entries printed and the old catalogue cut up and incorporated with the new entries, leaving plenty of space for future additions. As far as the future is concerned, I think the expense of the printing might be reduced possibly by taking the British Museum Library accession lists, some kind of co-operative scheme might reduce future expense, but I can see no help for the last 45 years without our making a very substantial effort. We have considered the question whether the British Museum accession lists could be used with the press marks altered, but any scheme that we could think of was going to take a number of years, and a very great deal of labour. We estimate between £15,000 and £20,000 as the total cost.

2392. You did not reckon it would cost more than £20,000?—No, but we also felt it was extraordinarily difficult to make any reliable estimate, partly because of the difficulty of estimating the actual physical labour of taking 450,000 entries, and bringing the books to the entries or the entries to the books. I should not myself be satisfied until every entry was checked, and until you have tried it, it is difficult to say what amount of clerical staff and walking staff would be required to get that done, but we hope that the sum of £20,000 would cover it.

2393. The expense would be largely expense of staff?—The expense would be largely expense of staff and printing.

2394. You would require a special staff for that purpose?—A special temporary staff.

2395. (Sir Lionel Earle): Have you any idea how long it would take to do that?—We have no definite idea, but we were hoping that five or six years would practically see the thing through. Dr. Cowley can say whether he thinks that is a reasonable estimate.

2396. (Dr. Cowley): It seems to me rather optimistic, but it would depend on the staff you could assign to the work without their getting into one another's way, of course.—(Mr. Macmillan.) I asked the Lord President if I might bring forward one consideration which may not have been present to your mind. This Library is in rather a peculiar position in respect that it is associated with the Courts of Justice in Scotland. The Courts and the Library have always been under the same roof, and under this plan would still be in close juxtaposition. The Courts of Scotland—the Lord President will bear me out—have always enjoyed a peculiar advantage from that circumstance, for the Courts are naturally constantly referring to books of one kind or another, not merely law books, but a geological case, for instance, might come up and it might be desired to see McCulloch's geology, and it is in the hands of the Court within five minutes. Consequently this Library has served as a most important adjunct to the administration of justice. Supposing an ordnance map is required in a right of way case, these are all there and available to the Judges at once. The same with dictionaries, foreign dictionaries for example, to interpret words that come up. It is a most remarkable association. I do not know any other instance. The Courts of Justice here in England have no such advantage, but a Judge in Scotland or a Counsel can constantly have access to this

and Dr. W. K. DICKSON.

[Continued.]

treasure house of knowledge, and as a practitioner myself I know, and the Lord President will bear me out, as head of our Court, that that facility has been regarded as of very great value. It is an aspect of this Library that I think is unique, and I may be pardoned for referring to it. It is contemplated in the Act of course.—(Mr. Normand.) It was explained to the sub-Committee in Scotland—I do not know whether it has been said to-day—that without the continued association of the National Library and the Law Library of the Faculty of Advocates in close juxtaposition to one another, you will not have a complete Library under the Act of Parliament. The collection of law books which formed part of the Advocates Library remains the property of the Faculty, whereas the rest of the Library was transferred to the Nation and there are in operation rules framed under the Act of Parliament between the Trustees of the National Library on the one hand and the Dean of Faculty on the other hand, by which books of the National Library are made available to the Faculty and also to the Court, and Law books on the shelves of the Faculty are made available to the public who come to the National Library in search of them. That is to say they are temporarily lent by the Faculty to the National Library for the consultation of readers in the National Library, and accordingly you have only a complete Library when the two are taken together. If you separate them you will lose that.

2397. (Chairman): What conclusion do you draw, that the two must be kept together?—(Mr. Normand.) Yes. (Mr. MacLehose.) With reference to the question of the Reid bequest the Committee on books and manuscripts was for the first year or so very anxious, on account of the small resources they had for the purchase of books, but the Reid bequest has removed that anxiety. At the same time we are not at all alarmed by the amount of the bequest; we see ample need for the money we have in hand. There are a great many gaps which should be filled up, and while we have no expectations of having a large foreign collection there are a very considerable number of important foreign books of a cyclopaedic nature, and other things, which ought to be included in the Library. Last year we were able to get the great collection of manuscripts of Lord Morton, and the Reid bequest account has been actually overdrawn until the last few weeks. It is admittedly a great relief to us that we have that fund for the purchase of books, but we are not allowed to use one penny of it on the staff, and the more we spend on books the more do we need additional staff.

2398. Under the terms of the bequest, you are not allowed?—(Mr. MacLehose.) No. The terms of the bequest are very strict. The money must be confined purely to the purchase of books and manuscripts. The terms were so strict that we were rather anxious about that, but the legal opinion we received made us feel that we could buy what books we required, but we could not use the fund in any way for the administration or staff.

2399. (Sir George Macdonald): I think it might be well to get some sort of light upon the finance. Am I right in saying that the salary bill is about £4,325?—(Mr. Normand.) Approximately.

2400. What is the amount of the endowment interest?—The income from that is approximately £5,000.

2401. This leaves a balance of about £1,000?—Approximately.

2402. Am I right in thinking that that £1,000 virtually meets, in the first place, the expenses of the Copyright Agency?—It does that amongst other things.

2403. What does that amount to?—(Dr. Dickson.) £420 as our contribution.

2404. How far does it go towards meeting the heating and lighting?—(Mr. Normand.) The next principal charge is £300 for purchases of books,

2405. I think heating and lighting cost about £400?—(Lord Clyde.) That is so.

2406. Are you under any obligation to spend £300 on purchases?—(Mr. Normand.) If we spend it at all we spend it on that. (Lord Clyde.) Hitherto that has been in the estimates.

2407. The net result is that that calculation, as far as I can work it out, means that next year the Government will have to vote on the Library Vote somewhere about £600, or £700?—(Mr. Normand.) I think that is approximately right. It should be remembered that we also get the benefit of the services—

2408. I was coming to that. Sir Lionel Earle's department has a considerable Vote?—Yes.

2409. How much does that come to?—I cannot answer that, the figures appear in the estimates. There is the Stationery Office also. The Stationery Office estimate for us for 1928-29 is £450, of which £400 is for bookbinding.

2410. The Stationery Office spent nearly £800 upon you last year?—(Mr. MacLehose.) Does that include binding?

2411. I think the arrears of binding are principally responsible?—(Mr. Normand.) The arrears of binding in the first year.

2412. You only had £176 in the first year, in 1926-1927 £698 and in 1927-1928 the estimate was £762. I wanted to ask whether that was for arrears of binding?—(Lord Clyde.) I think so, entirely. (Dr. Dickson.) We got a special grant in 1926-27 of £750 altogether for both arrears and current binding, including £50 for special binding of certain manuscripts, etc. This year the total for binding is £400.

2413. So that the total cost to the Exchequer will be reduced by the absence of that grant for binding?—(Dr. Dickson.) Yes, by the absence of the special grant for arrears.

2414. (Dr. Cowley): That is a very low estimate for the cost of binding, is it not?—Very. I think it is quite insufficient.

2415. I should have thought so.

2416. (Sir George Macdonald): So that your request for more staff has a good deal behind it in the way of interest on endowment still to draw upon if the Government are responsible for heat and light?—(Mr. Normand.) Yes.

2417. Are you satisfied with the operation of the Copyright Act, Dr. Dickson?—(Dr. Dickson.) In what way?

2418. The use you at present make of your privileges under the Copyright Act?—We do not work the Copyright Act separately. There is a joint arrangement with other privileged Libraries, namely the Bodleian and Cambridge and the Library of Trinity College, Dublin, and ourselves.

2419. You maintain a joint agency?—Yes.

2420. I understand that, and your contribution to that joint agency is £420?—We are allowed £420. The Agency is run by Cambridge.

2421. What was in my mind was this. What do you do about newspapers?—We take very few newspapers. We do not want more under present conditions. We file and bind the principal London and Scottish newspapers, and we have good sets of the earlier Scottish papers, the "Edinburgh Courant" and the "Caledonian Mercury," back to the beginning of the eighteenth century.

2422. Do you keep enough?—Possibly not. We have nowhere to put them.

2423. Take the Scottish Provincial Newspapers.—We do not have anything like the whole of them.

2424. If I want to consult the "Stirling Observer" of 1837, I have to go to Hendon?—That is the only place.

2425. Is it worth considering that you might do a little more in that way?—I agree, if we had the space and the staff. Newspapers and periodicals require a good deal of staff work for arranging and placing. They are expensive to bind, and very

26th April, 1928.]

The Rt. Hon. Sir HERBERT MAXWELL, The Rt. Hon. Lord CLYDE, The Rt. Hon. H. P. MACMILLAN, Mr. JAMES MACLEHOSE, Mr. W. G. NORMAND, and Dr. W. K. DICKSON. [Continued.]

bulky. The British Museum found the thing impossible in its own building.

2426. You remember the point I raised with the Lord President about the recruitment of staff. I think the Lord President agrees that one of the difficulties in your case, which is alluded to in the memorandum, was the fact that you are rather a small unit, and cannot grow upon specialisation. Where do you contemplate looking for the specialist when you have to pluck the flowers?—It is such a small unit that the question is bound to arise very seldom, and only in the case of one or two people. Perhaps the best case to take is the recent appointment of Dr. Meikle. We had been pressing for a whole-time Keeper of Manuscripts and when the question arose practically we made enquiries, the Trustees appointed a Committee with powers to make the necessary enquiries and to make a recommendation. We made enquiries at Oxford and Cambridge and of one or two people who are manuscript specialists in London, and we heard of Dr. Meikle as being the very man for the post. We considered a good many other candidates, but Dr. Meikle was obviously the man, his qualifications were quite exceptional. We got him and made the necessary arrangements with the Government.

2427. You regard Oxford and Cambridge as possible reservoirs?—Certainly.

2428. And other Universities in the same way?—Yes. The real difficulty in that particular case was that we wanted a man with quite special qualifications, a man who was a competent palaeographer, a man who knew manuscripts and knew manuscript work. There are plenty of them but we wanted to combine with that a wide knowledge of the history of Scotland. It was difficult to find such a man, but we think Dr. Meikle fills the requirement.

2429. The Lord President said very truly that the difficulty that occurred to him at once was a pension difficulty, but that is simplified now to some extent by the fact that the Universities have a pension scheme and the possible beneficiaries under that scheme can carry their benefits forward? That might simplify things a little?—(Lord Clyde.) Partly. It is the Civil Service difficulty.

2430. There matters have been aggravated since 1914 when the Treasury were deprived of the power of adding years in the case of persons who had special experience of that kind?—It is a very serious difficulty.

2431. (Sir Richard Glazebrook): The whole staff are civil servants?—(Dr. Dickson.) Eight of the staff are established civil servants. (Lord Clyde.) And the future recruits will be established civil servants.

2432. It is not possible to arrange that the University insurance scheme should apply to your Library rather than the Civil Service Scheme? That has been found useful in a number of Institutions I am connected with.—(Lord Clyde.) You would have to exchange from the one to the other somehow.

2433. (Sir George Macdonald): The civil servant, I am afraid, would not be allowed to take advantage of the University Scheme?—You might make an exchange from the one to the other.

2434. Not from one to the other, but you could carry on your University benefits, you understand. When you finish your University service and come to retire you get the benefits. They are completely linked up now, there is no difficulty about that at all.—This is one of the most serious problems of the future staff that I myself have foreseen and I have no answer to it.

(Sir Richard Glazebrook): My suggestion was that the staff should not be civil servants but should have the advantages of the University Pension Scheme.

(Sir George Macdonald): Would there be any advantage in that?

(Sir Richard Glazebrook): I suppose it depends on the arrangements which can be made for interchangeability.

2435. (Sir George Macdonald): No arrangement is necessary for interchange. Under the University scheme the man carries on his rights without paying. —(Lord Clyde.) One of the great troubles is this. The moment your selection becomes limited to the civil service you at once fall under one, or other of the grades of the civil service pay. Unfortunately, those grades are regulated without the slightest regard to any special form of qualification, without the slightest, and therefore whether it comes to the selection of a service for the Library, or in connection with other proposed changes, you are exposed to getting the class of man who naturally belongs to that grade of the Civil Service. I have not myself been able to see any solution.

2436. (Sir Lionel Earle): They are dealing with the professional grade question in the Government now. We have had it before the National Whitley Council on which I sit many times. A Committee has been sitting a long time.

2437. (Sir George Macdonald): They are considering whether Lord Clyde and his Parliamentary colleagues were really wise in doing away with that power on the part of the Treasury to add years in cases of this sort.—(Lord Clyde.) I certainly think that we must look at this again.

(Sir Lionel Earle): I have the same problem in my Department with technical officers, sanitary engineers and other officers. You cannot grade them.

2438. (Sir George Macdonald): A question about the catalogue. You estimate the cost of that at about £15,000 to £20,000?—(Mr. MacLehose.) Yes.

2439. Does that include printing, or simply the preparation?—When we made that estimate of £15,000 to £20,000, we had originally put down £25,000. Then we were asked if we could not do it for less. We felt that the whole thing was very problematical. I considered an estimate of the printing, and I made inquiries as to what other Libraries were paying, and estimated that the printing could not be done for much less than £12,000 or £13,000. I began by multiplying that by two and assuming the clerical labour would cost about as much as the printing, and I was told that was an unnecessary estimate and we put down in our figures, £15,000 or £20,000. What we have been really very keen about has been to get a sufficient amount of money to justify us in making an experiment. We would like to make a start and really get at more definite figures. At present it is really a guess.

2440. The bulk of the figure you mentioned is for printing?—The bulk of the figure probably. But there again we were subject to a qualification. The British Museum have Library accession lists which Dr. Cowley and you know of very well. We tried to see if we could get some copies of the back numbers of those. We have in the Library almost a complete set of them. They begin about 1882. I know there is a period from 1871 to 1882 for which we might have to provide otherwise. We thought we might reduce the expense of printing by taking the Library accession lists of the British Museum and altering the press marks of the British Museum to the press marks of the National Library. It was not an ideal system but an attempt to reduce the printing account.

2441. How is the cost of the printing of the British Museum catalogue met?—They print that for themselves, and they sell these accession lists at a subscription of £3 a year, I think it is, and you are allowed to buy them. They print them on one side of the paper.

2442. I think we are rather at cross purposes. They print them for themselves. The expense of the printing is not borne on the British Museum vote?—Surely!

2443. I should doubt it.—At all events, extra copies can be purchased from the Museum for the sum of £3 a year. But the back numbers are out of print and we would require two sets. You cannot

have one copy of a printed catalogue, you would have to have a duplicate. I think there is no question about that. The British Museum has three copies of their printed catalogue.

2444. Perhaps it is not for me to suggest it, but you are a National Institution and I represent a Government Department, and if I want printing done I ask the Stationery Office to do it for me. Would you not expect them to print the catalogue for you? I may be wrong.—Whether or not the Stationery Office would face an expenditure of £10,000 or £12,000 for this Library I am without information, but if they would, a great deal of our difficulties would be minimised.

2445. I suggest that avenue is worth exploring. I am sure you know about this, but I don't think the British Museum have their own press.

2446. (Mr. Beresford): They have not their own press, but they arrange for their own printing, it is not done by the Stationery Office.—Yes: They have not their own press, they employ a printer, and the cost of the printing will come out of the British Museum Vote, and as an offset against their printing they sell duplicate copies at a subscription rate of £3 a year.

2447. (Sir George Macdonald): I think you would do well to see how much the Printing Vote comes to, and see whether Scotland has really taken the best line?—Perhaps I might be allowed to explain that this attempt to use the British Museum accession list was with the idea that we might reduce the printing account, and, therefore, we reduced the item of £13,000 for printing a little in the hope that £15,000 or £20,000 would cover it. But I can say that if we had any reasonable expectation that we were going to get any considerable proportion of that, we would begin and make an experiment.

2448. The cost of preparing the catalogue apart from printing would be somewhere about £8,000 or £10,000?—Yes, that is what we counted, but the National Library is a very large building and every time you check an entry, you have to walk to the shelf and back. It is difficult to say how long it would take, but the people who would do the bulk of that work need not be highly-paid people, and we were hoping that £8,000 or £10,000 might cover the clerical and secretarial work.

2449. (Sir Lionel Earle): Have the expenses gone up very much since the Act as regards the administration, or was all this paid for by the Advocates before?—(Lord Clyde): Substantially, all this was paid for by the Advocates. During the War and after, the costs were getting round about £5,000.

2450. The endowment of Sir Alexander Grant has really relieved that expenditure from the Advocates?—Substantially.

2451. Or very little more?—Nothing material.

2452. If you have to apply for increase of staff, do you do it through the Scottish Office or direct to the Treasury?—We consider the better way is to approach the Treasury through the Scottish Office.

2453. Has any demand been made as yet by the Trustees for increased staff?—Yes.

2454. They have made an effort?—Yes.

2455. Has it been turned down, or do they say their Lordships are considering it?—We were not encouragingly met. I think we asked for three, and we got one, Dr. Meikle, for which we were extremely grateful. We would have been more grateful if we had got more.

2456. Have you met with a refusal as regards the others, or is it merely that the financial conditions will not allow of it?—It was not a refusal, I am sure, but owing to the financial difficulties.

2457. Perhaps they put it on the Royal Commission?—I had a suspicion that was the purpose.

2458. (Sir George Macdonald): I think I am right in saying that some years before the transfer you had a grant of £2,000 from the Treasury?—(Mr. Macmillan): On our first approach to the Government the grant was £2,000 a year. It was intimated in a letter of 7th March, 1922, from the Scottish Office.

2459. The grant of Sir Alexander Grant replaced that?—(Lord Clyde): Yes. (Mr. Macmillan): That is not quite the position. After the transfer to the Nation the whole responsibility was taken over by the Nation. Up to that time the Nation had only given us a grant in aid of £2,000. That naturally merged in the general responsibilities thereafter.

(Mr. Beresford): Since the National Library was taken over it has cost, I think, rather more than £2,000 a year.

(Sir Lionel Earle): Services rendered?

2460. (Mr. Beresford): Yes.—(Lord Clyde): Oh no. Since the Library was taken over, it is proper to say that there was a considerable expenditure, I think £6,000 was spent on improving electric light and fire provision, and things of that kind. I do not know of anything else.

2461. (Mr. Beresford): I think the average works out at something like £2,300?—(Mr. Macmillan): The position differed very much before the Library was taken over; £2,000 was a grant in aid given to persons to maintain their own Library, not the National Library. After the Library was handed over—it was handed as a gift to the Nation—that disappeared, but the position is very much the same now, after the gift has been received by the Nation as it was before, in fact the Nation is not spending more now that it is its own property; on its own property it is not prepared to spend more than when it was our property.

2462. (Chairman): I think you might hand in a statement of receipts and expenditure?—(Lord Clyde): I think I understand what you want.

2463. I want to be quite clear about the position, what resources you disposed of, and the limitations on them?—The endowment fund is treated as an appropriation in aid. It is handed over to the Treasury and treated as an appropriation in aid, and that appears in the public accounts of the year. Therefore, there is a real sense in which we handle no money at all, except the Reid Trust.

2464. The Reid Trust and the Grant Trust?—No, the latter has gone from us.

2465. Let us have that clear.—I understand. (Mr. Macmillan): Lord D'Abernon would like something in the nature of a balance sheet.

2466. That is it.—(Mr. Macmillan): You want the presentation of the financial position in the usual form?

2467. Are there any other points you desire to give information about?—(Lord Clyde): I think not, unless you have anything further to ask.

2468. We are greatly indebted to you for your attendance to-day and for the valuable information you have been kind enough to give.

(The Witnesses withdrew.)

FIFTEENTH DAY.

Friday, 27th April, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Mr. JOHN BERESFORD (*Secretary*).Mr. J. R. CHAMBERS (*Assistant Secretary*).

The Rt. Hon. Lord HANWORTH, K.B.E., Master of the Rolls, and Mr. A. E. STAMP, Deputy Keeper, Public Record Office, called and examined.

The following Memorandum was submitted by the Master of the Rolls in reply to the Royal Commission's Questionnaire (see Appendix 1):—

1. The Public Record Office was established to carry out the provisions of the Act 1 & 2 Vict. cap. 94 which gave to the Master of the Rolls the charge and superintendence of the archives of certain specified courts and public departments of State then scattered in many places, the Tower of London, the Chapter House, Westminster, the King's Mews at Charing Cross, Carlton Ride and elsewhere, and provided that documents in other public departments might be brought into his charge by Order in Council. Moreover, he was enabled to issue a warrant transferring records in his charge and superintendence to his actual custody, and such a warrant is at times issued.

This principal Act provided for the building of a central repository (on the Rolls estate) where the records should be assembled under the charge of a Deputy to be appointed by the Master of the Rolls with the approval of the Crown, and gave the Master of the Rolls power to make rules for the management of the office and the consultation of the records by the public, and sanctioned the preparation and publication of lists, indexes and calendars.

An order in Council of 5 March, 1852, extended the charge and superintendence of the Master of the Rolls to all records belonging to Her Majesty.

Since 1902 the Deputy Keeper of the Records has been also Keeper of the Land Revenue Records administering the Act 2 Will. IV, cap. 1.

The Public Record Office is therefore not a home for a heterogeneous collection of documents but a public Department, the statutory recipient and custodian of the public archives, charged with a duty of safeguarding the documents entrusted to it and producing them for inspection when required by proper persons.

The east wing of the building was built in 1851 and the years following. The wing facing Chancery Lane took the place of a row of old houses between 1890 and 1900. The intermediate block, incorporating the site of the Rolls Chapel and the Rolls House, was begun as soon as the Chancery Lane Wing was finished.

All the record rooms in the building were full 10 years ago and since 1921 the disused Gaol at Cambridge has been provided by the Office of Works to be used as a branch repository.

The question as to what records should be sent there immediately by departments and what should be sent from here to make room for more important documents ready to be transferred, is causing some anxiety. Documents at Cambridge are continually being asked for by students in London and it has been found necessary to instal a small public search room there. This difficulty will disappear when money is found for the extension of the building in Chancery Lane.

It may be claimed and not unjustly that for intrinsic historical value, continuity and variety and range the contents of the Public Record Office constitute the most splendid collection of archives in the world.

Beginning with Domesday Book and a single Pipe Roll⁽¹⁾ of the time of Henry I (31 Henry I) (1131), the records of the Exchequer extend in gradually increasing quantities from the time of Henry II, for whose reign (1154-1189) there is a complete set of Pipe Rolls, to the abolition of the old Exchequer in the reign of William IV, including accounts of royal revenues, customs, taxation, army and navy, ordnance, works and buildings and others too numerous to mention.

The rolls of Chancery begin in the reign of King John and are still being transferred at intervals from the enrolment office at the Law Courts and the Office of the Clerk of the Crown.

For instance, the first Close Roll, recording directions to administrative officers all over the country, is that of 1204-5. At a somewhat later date the back of the Close Roll, at first used only for the enrolment of public documents, began to be used for enrolling private deeds and this practice gradually extended while the original matter dwindled away, until nothing remained but a series

⁽¹⁾ The Pipe Roll contained the accounts of sheriffs and other officials charged with the collection and expenditure of public money. There are 676 annual rolls in the office extending to the second year of William IV, by which time the entries on them had become mainly formal.

27 April, 1928.]

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

of private documents, enrolled as a rule under statutory requirements. In 1903, books were substituted for rolls, and these enrolment books still continue to reach the Public Record Office from the Enrolment Office at the Law Courts. The last volume received is No. 20899.

The first Patent Roll containing diplomas under the Great Seal is that of 1201-2, the latest to reach the office is that of 13 George V, No. 5306.

The ancient correspondence which begins in the 13th century is the lineal predecessor of the State papers of a later period and of the papers deposited by Government Departments to-day.

The records of the Courts of Law begin in the reign of King Richard I (1189-1199)⁽¹⁾ and are continuous with those still accruing at the Law Courts.

In the Chancery Lane building there are 140 strong rooms containing at least 35 miles of shelving. The manuscript indexes alone fill three whole rooms and a considerable part of the wall space in two of the public search rooms.

Over 400 volumes of calendars and 50 volumes of lists and indexes have been printed and published.

2 and 3. The very wide powers given to the Master of the Rolls by the Record Acts tend to simplify administration. The nature of the collection and the fact that public records are received without question as evidence in the Law Courts puts any question of lending or exchanging them out of the question. Having once been out of official custody they would be of no more weight than private papers, whose authenticity has to be proved before their evidence can be admitted.

The Acts 40 & 41 Vict. c. 55 and 61 & 62 Vict. c. 12 enabled the Master of the Rolls to make rules for the disposal of such documents in his charge and superintendence as were not of sufficient value to justify their permanent preservation in the Public Record Office.

Public Records which are not for any reason considered worth permanent preservation in the Public Record Office are disposed of under the Acts by destruction or by presentation to certain libraries. An outline of the procedure may be of interest. As a rule a schedule of useless documents is drawn up in the department where they originated. This is considered by a committee of inspecting officers appointed by the Master of the Rolls, of whom one must be a barrister of seven years' standing. Specimen documents are called for and examined by them in conjunction with a representative of the department concerned and the schedule is approved or amended. When finally agreed on it is signed by the inspecting officers and the departmental representative and after approval and signature by the head of the department it is submitted to the Master of the Rolls. When he has considered its contents and approved them, it is signed by him and then it is laid on the Table before both Houses of Parliament for at least four weeks, at the end of which time, if no objection has been made, it becomes operative and the documents named in it may be disposed of.

The committee of Inspecting Officers was exceedingly busy in the years immediately following the War, and submitted to the Master of the Rolls lists covering an enormous mass of documents accumulated as a result of war activities. By this course the material was systematically reduced to more manageable proportions by the removal of documents that had become mere waste paper of no historical value. The work of the committee has been most interesting and has proved to be one of the most urgent and effective functions of the Department.

During the years 1919-1925, 62 of these lists were laid in the form of Schedules before Parliament.

(1) The earliest roll that can be dated with certainty is that for Trinity Term 1194

Half of them dealt with departments, or branches of departments, owing their existence directly to the Great War. The inspecting officers aimed at preserving all documents dealing with matters of principle or precedent or containing matter of historical, technical or legal importance and at destroying routine documents, in which, for example, principles were applied to individual cases. In the great executive and military offices, such as the Ministries of Food, Munitions, Pensions, and Air and the War Office, the latter class were particularly numerous; and 18 War Emergency Departments of the Board of Trade submitted their records. In order that evidence might be preserved as to the executive methods adopted, departments are required to preserve and transfer to the Public Record Office specimens of every class of document scheduled. Similar methods have been applied to the permanent departments, many of which, such as the Post Office, the Home Office and the Customs have had schedules in operation for 40 years, which have only needed from time to time amendment in detail or supplement when the duties of the department were modified or increased.

We are insistent with the Stationery Office that documents sent for destruction shall be actually destroyed, not merely defaced and sold as waste. It would be inconvenient if documents bearing the Public Record Office stamp could legitimately exist in private hands. As it is, a document so marked (outside one or two known libraries) must have been stolen from the Public Records.

The Public Record Office now contains two classes of documents:—

(a) Those which are absolutely in the custody of the Master of the Rolls, such as the records of the old Chancery and Exchequer, the Courts of Law and the contents of the old State Paper Office. These are all open to Public Inspection, subject in some cases to the payment of fees.

(b) Documents no longer in current use in Public Offices deposited here for safe custody but remaining the property of several Departments, e.g., the papers of the Secretaries of State, the Ecclesiastical Commissioners for England, the Treasury, etc.

There is no definite rule as to the age of departmental papers when they are sent here. It depends on the accommodation available in the department itself, the rate of accumulation, space available in the Public Record Office, etc. An attempt to introduce a regular system of transfers was ended by the outbreak of war.

Departmental papers are only shown to students by consent of the department concerned. As a matter of practice, departments (with some exceptions) have thrown open their records down to the end of the year 1878.

Since 1900, there has been a small permanent exhibition of interesting documents and miscellaneous objects. It is now in the room known as the "Museum," which was built on the site of the Rolls Chapel and contains the old monuments and stained glass windows. Some of the exhibits such as Domesday Book, the barons' letter to the Pope, the submission to Edward I. of the candidates for the Scottish Throne, the Gunpowder Plot papers, and the "Scrap of Paper" were selected for exhibition on account of their intrinsic historical importance, others, such as the Exchequer tallies, Henry VII.'s chamber accounts, with the items initialled by him, and the roll for pricking the sheriffs, as specimens of constitutional methods, and others, such as the gold seals, the Wolsey treaties, the illuminated manuscripts and the autograph letters, as objects of art or historical curiosities.

Any documents, whether exhibited in the Museum or not, can be got out at a few minutes' notice on demand by a student.

27 April, 1928.]

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

4. The constitution of the Public Record Office precludes the possibility of overlapping to any serious extent. Occasionally we are offered by a private owner a collection of old family papers. If they are of the same nature as those which come here in the regular course (e.g., the official or semi-official correspondence of a minister) we accept them, although there are a number of such collections in the British Museum, but we do not as a rule accept casual papers and we do not and cannot buy anything, for we have no money grant available for such a purpose.

The total quantity of documents taken in in this way is very small indeed compared with the bulk of the Public Records.

One of our most interesting duties is to advise would-be donors where their documents may most usefully be deposited.

Enclosed with this memorandum are copies of a letter lately written to the Treasury distinguishing between the functions of the Public Record Office and those of the Manuscript Department of the British Museum, and of a memorandum written some years ago for the information of the Prime Minister on the subject of historical documents in private possession.

By the recent Law of Property Amendment Acts the Master of the Rolls has been given the charge and superintendence of manorial documents, which in other words means that he has been given the duty of directing to proper custody the records of the various manorial courts which will become obsolete by these Acts. He appointed a small committee, over which he presides, which has been at work for two years, and they have secured a great deal of important information as to manors. The Master of the Rolls has endeavoured to dispose of these documents by selecting for their deposit libraries and museums provided with strong-room accommodation, so distributed about the country and of such a character as to be available as nuclei of local collections of documents. They are not documents of a public nature the property of His Majesty, as are the principal contents of the Public Record Office. Considerable success has attended this effort. In all counties there is now a recognised depository for manorial documents, and this has excited interest locally in the preservation of materials of historical importance. Several counties have taken up the collection of documents with zeal, e.g., Surrey, Sussex and Northampton.

There are a number of manorial rolls in the British Museum which have reached it from private sources. A complete list of them is being furnished to the Public Record Office and no overlapping in the true sense of the word occurs.

5. The Deputy-Keeper (the head of the administrative staff) is under the Record Act of 1837 appointed by the Master of the Rolls, with the assent of the Crown. Vacancies in the administrative staff (Assistant Keepers) are filled by successful candidates in the Class I examination for the Civil Service who have a competent knowledge of Latin and French. Technical training is obtained by a system of apprenticeship inside the office. The work is so much specialized that this seems to be the only practical plan. It would be different if we were buyers or collectors.

Ancillary to the prime work of the Record Office, but of very great importance, is the repair and renovation of the documents that are in its custody. Thus there is a department for repairing documents and seals, and for binding or rebinding books. The binders and repairers, who, as a rule, are ex-service men, are selected from candidates for posts of Attendants and Repairers and taught this work here. One or two have been chosen specially on account of their knowledge of book binding. The staff is not sufficient to overtake the work that lies before it.

6. The existing accommodation is quite inadequate to take the accumulations waiting in the various Government offices. An extension of the present building was fully planned five years ago and land acquired for it, but work has been postponed owing to the need for economy. Meanwhile we have Cambridge Gaol as a makeshift. This has already been referred to above.

7. The editorial work of publication is done by the ordinary staff, or by editors specially appointed on the initiative and under the direction of the Deputy Keeper, with the sanction of the Master of the Rolls, and, in the cases of editors specially appointed, that of the Treasury.

The business of printing and publishing and the financial arrangements connected therewith are in the hands of the Stationery Office. The Museum Catalogue is on sale in the Museum, but here we only act as agents, accounting to the Stationery Office for all copies sold. Negotiations are going on at present for the preparation and sale of picture post cards in the same way.

In connexion with our publications attention may be called to the activities of the Committee of the League of Nations with regard to the permanence of papers and books.

Some volumes of our publications printed about 25 to 30 years ago are showing considerable signs of decay already. The problem is complicated by the fact that it is not a question of whole volumes rotting away. The printers seem to have received mixed supplies of paper so that often in the same volume several sections are now quite brown and brittle whilst the rest of the volume is apparently quite good. No suggestion has been made as to what can be done by way of remedy.

This question of permanence applies equally to the records themselves. The only records received here of a date later than the general introduction of wood pulp paper (*circa* 1890-1900) are those of the Foreign and Colonial Offices, which notoriously use good paper, so that we have no means of judging the state of the records generally. But the matter has been brought to the notice of the Stationery Office, the department responsible for the supplies of paper for the public service.

8. Fees are charged for the inspection of records which are remitted to holders of Students' Tickets who do not wish to see modern legal documents. In practice the proportion of documents on which fees are paid is very small.

Students' Tickets are given to British subjects on the recommendation of any person of recognized position. Non-British subjects apply through their diplomatic representatives for a formal recommendation by the Foreign Office.

There are three regular search rooms for the use of the public and also an overflow room and a room where work may be done that is likely to be not quite quiet. At times the rooms are rather full, but so far we have never failed to find room for applicants.

There were complaints at one time about the slowness in the production of documents asked for, but the more complete numbering of shelves, volumes and parcels has gradually cured this.

During 1926, 71,935 documents were seen in the Literary Search Room and 42,680 in the Legal Search Room, and in spite of the number of documents then produced, no hitch occurred or complaint was received. From this experience it may be possible to claim that the present system of the Public Record Office works well and enables it to fulfil the duties which under the Act it is required to discharge. From experience there does not appear any ground for an alteration in the powers or duties of the office. The most urgent difficulty which the office encounters is want of

27 April, 1928.]

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

space and the need for a larger staff of repairers, both of which involve expense. I recognise the difficulty of the provision of further money at the present time.

Treasury Chambers,
Whitehall, S.W.1.
11th April, 1927.

DEAR STAMP,

In to-day's "Times" on page 12, in an article describing recent acquisitions by the British Museum, I notice that among these are the following:—

"A number of manorial documents of the 13th to 18th century, relating to Arlesey, Bedford, and withdrawn from the Lindsay sale by order of the Master of the Rolls. There is a 13th century roll of the Knights of the King's Household among these documents"

While we must all agree it is most desirable that these documents should be in the public possession, *prima facie* it would appear to me that the more suitable home for them would be at the Public Record Office rather than at the Museum. We are rather exercised here at the growing cost of the National collections and the demands for increased space for their exhibition, etc., and we cannot help feeling that in many cases there is much avoidable overlapping between different national institutions. I shall be greatly obliged if you can tell me whether there is any good working principle of demarcation between what is preserved in your custody and in that of the British Museum.

Yours sincerely,

(Signed) R. S. MEIKLEJOHN.

A. E. Stamp, Esq.

Public Record Office,
Chancery Lane, W.C.2.
14th April, 1927.

DEAR MEIKLEJOHN,

Your letter raises two rather different questions. We actually exist to carry out the Public Record Acts and so only receive here normally documents which cease to be of current use in public departments. These after weeding are transferred to us. Occasionally we accept as a gift from a private person or quasi-permanent deposit a collection of papers if they are mainly of a public nature and such as would be found nowadays in a public office. Thus we have the Shaftesbury papers, Chatham papers, Rodney papers, Stratford de Redcliffe papers, &c., which have been given to us at different times. Two or three times within my memory we have gone to the Treasury for permission to spend money in acquiring a document which actually filled a gap in a series already here. But these are exceptional cases. As a general rule we buy nothing, and accept nothing, from private donors.

The British Museum, on the other hand, accepts and buys documents of interest without considering whether they had any official provenance or not. None go there in the natural course as they come to us.

At present our building is practically full and, pending extension, we have been obliged to find space elsewhere for storing fresh accretions. Cambridge Gaol, the building obtained for us by the Office of Works, is now about half full of official records.

The manorial documents have been put under the charge and superintendence of the Master of the Rolls by the recent Law of Property (Amendment) Acts. In the Act as originally drafted the various lords of manors were directed to send all their manorial documents to the Public Record Office. This was subsequently amended so that actually lords and stewards of manors may either keep their manorial documents provided they do so properly or deposit them in some place approved by the Master

of the Rolls. He has already approved of a number of libraries and museums all over the country. (See his letters in the "Times," 1st March, 1926, 25th March, 1927.)

In the case of the Arlesey rolls, the Master of the Rolls communicated with the auctioneers and pointed out that they could not be sold to go to a destination not approved by him. The auctioneers withdrew them from the sale, and they were then offered at a small price to the British Museum, which is an approved place of deposit, and then the Trustees bought them by private treaty. If they had not wished to acquire them the Master of the Rolls would probably have insisted on their being deposited at Bedford or here. In this case the bulk was negligible, the rolls would not nearly fill a small despatch box.

Shortly put, the working rule is that the Public Record Office receives documents as of right from public sources; the British Museum from private collections by gift or purchase. These functions do not overlap, although documents similar in character may reach the one or the other destination according to the operation of the rule above stated.

Yours sincerely,

(Signed) A. E. STAMP.

R. S. Meiklejohn, Esq., C.B.,
H.M. Treasury,
S.W.1.

LOSS OF HISTORICAL MANUSCRIPTS.

Collections of documents are of two kinds:—

- (1) The collection brought together by a collector from various sources.
- (2) The collection which is actually the archives of a family gradually built up by generation after generation.

(1) The collected collection is generally dispersed again within a few years of the death of the collector—such have been the collections of Sir Thomas Phillipps (Middle Hill), Arthur Morrison, J. E. Hodkin and others.

With these may be grouped certain homogeneous collections originally formed abroad such as Lord Bathurst's Mirana papers, Lord Downshire's 16th century papers (Wars of Religion, Cardinal Granville, and Council of Trent), which have been in the respective families for generations, and the late Lord Crawford's Napoleonic collection (now, I believe, sold again) and the Medici papers recently bought by Mr. Selfridge.

Mr. J. P. Gilson, of the British Museum, has made a special study of this part of the subject and papers of his have been published in the bulletin of the Institute of Historical Research. I will ask the Secretary of the Institute to send copies for the use of the Prime Minister.

Collectors of this kind are becoming rarer in this country and the British Museum is practically the only library in a position to buy. On the other hand there are very wealthy collectors in America and numerous libraries, able and most anxious to buy historical documents, so that what might be called the floating historical material is rapidly leaving the country. Competition by Americans among themselves is raising the price to such an extent that, with the best will in the world, none but the most wealthy can afford to buy.

(2) Until about 50 years ago there were hundreds of families possessing deeds and documents dating back to the 18th century and earlier, many to the 16th century, some to the 15th, 14th and 13th century. Many of these documents, especially the

27 April, 1928.]

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

early ones, were title deeds, estate papers, manorial documents and family correspondence, of historical value only in so far as the history of a family and its possessions is part of the history of the nation. But in many cases members of the family had held official positions in the State, the county or the town, and their official correspondence, or their private correspondence connected with their official position, has descended to their heirs with their more private papers and is of the greatest historical interest.

For instance, the Marquess of Bath, the Duke of Buccleuch, the Duke of Portland, Earl Bathurst, the Earl of Dartmouth and many others own papers inherited from ancestors who have been Secretaries of State; thus many old office letter books and much purely official correspondence is in private possession mixed up with semi-official and private correspondence.

Again, the ancestors of the More Molyneux family were, in the 16th century, prominent county magnates, so that many of the early records of the Lieutenancy of Surrey are to be found at Loseley.

The Treasury Solicitor has only recently rescued from private possession not only the archives, but the mace and other insignia of a defunct municipal corporation.

Until comparatively recent years these great family archives were for the most part intact; in some cases their owners did not know that they possessed them. Thus the best part of the magnificent series of family papers of the Duke of Rutland were forgotten in a stable loft until rediscovered by Sir Henry Maxwell Lyte when working at Belvoir Castle for the Historical Manuscripts Commission some 40 years ago.

But of late years the increasing poverty of county families and the more tempting prices offered year by year for historical documents have induced people to bring out their family papers, formerly considered as lumber and of little value, examine them and, in many cases, offer them for sale.

In this way, not only old deeds, charters, accounts, estate papers⁽¹⁾ and family correspondence are put on the market, but also books and papers such as in these days would never be allowed to leave the office of the Secretary of State.

Moreover their historical value is often much deteriorated by their being sold piecemeal in lots and not as a whole collection, particularly if there are attractive autographs among them.

For instance, Lord Lansdowne's Shelburne papers have gone to America, the Blathwayte papers have been dispersed, the sale of the Melville papers is actually in progress at the present moment, and it is hardly possible to look through a sale catalogue from Sotheby's or Hodgson's without seeing therein one or more lots consisting of State papers or other official records.

Any of these touching even remotely the history of the United States, even ancient deeds, court rolls, and manorial documents find eager purchasers in America.

This is a short but, I think, accurate representation of the state of affairs indicated by Sir Charles Oman's question.

The demand for original documents has been intensified by the custom originating in Germany and now becoming universal in America and Great Britain of requiring from candidates for higher degrees in the Universities a thesis treating intensively some small historical point. For such a purpose a knowledge of manuscript sources is considered essential.

⁽¹⁾ The new Law of Property Acts have prevented this in the case of Manorial Records.

EXAMINATION OF WITNESSES.

2469. (Chairman): What we are anxious to get, Mr. Stamp, is your view on the particular recommendations of the Royal Commission on Public Records which have not yet been carried out. What has been carried out I think we can pass over?—Most of the important recommendations in the first report of the Public Record Commission are referred to on pages 2 and 3 of the second report. To the most important, however, there is no reference. On pages 28 and 46 of the first report it is recommended, as I understand, that the connection between the Master of the Rolls and the Public Record Office be altogether severed. He is to be replaced by a permanent commission of nine persons, unpaid, to whom the Deputy Keeper is to act as Secretary and Executive Officer. This recommendation has not been followed. Do you want me to say anything about that?

2470. May we have your views?—The control of the Master of the Rolls is by no means nominal. It is never for a moment forgotten in the office that he is the official custodian of the records; and no important decision is arrived at without his concurrence. Even in matters that are entirely within the competence of the Deputy Keeper it is customary to ask his advice on points of difficulty. He is always at hand. For instance, the Office of Works some years ago proposed a change in the way of protecting the office at night. Lord Sterndale came over himself and held an inquiry and settled the matter with Sir Arthur Durrant in half an hour. The steps taken to carry out the provisions of the recent Law of Property Amendment Acts in connection with manorial records have been taken under the personal direction of the Master of the Rolls, who has himself written letters to the Press in furtherance of his plans. At the same time he leaves the Deputy Keeper to be the effective head of the office. Under the scheme of the late Record Commissioners, as outlined in their first report, the Master of the Rolls is to be superseded entirely by a Permanent Commission of nine unpaid Commissioners, to whom the Deputy Keeper is to act as executive officer and secretary. They are to manage the general affairs of the office. There is also to be an independent publications committee to which the Deputy Keeper is also to act as executive officer and secretary. One of the arguments in favour of these recommendations is that at present the Deputy Keeper has not time for all the duties of his office. I do not think I can say anything more about it than that. The subject of the Deputy Keeper is rather a personal question. In the second and third reports this proposal of a permanent commission seems to have been abandoned. The authority of the Master of the Rolls is invoked on almost every page. I do not quite understand the position.

2471. You do not wish to make any special recommendation in favour of it or against it?—I am very much against it. It seems to me that no man can serve two committees, one recommending in one direction and the other in another; neither of them executive but only making recommendations. I do not see how any man can do it.

2472. What are the other points?—Speaking generally, the commission may be said to have recommended more or less drastic changes in every department of the activities of the office, some of them, in my opinion, made on one-sided evidence. I ought to point out that of the recommendations said to have been adopted (e), that on the free distribution of record publications, has ended finally in the total abolition of all such free distribution and (j), that on the subject of a Welsh Record Office, have been abandoned for want of means. With regard to the recommendations on pages 3 and 4 which are said not to have led to any action. (a) This is a question of the best distribution of our resources. Sir Henry Maxwell-Lyte was only able to discover a very few people who said that they would use

27 April, 1928.]

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

the search rooms if the hours were extended, but were unable to do so at present. One body, the Council of University College, wrote him a letter on the subject; in addition to his formal reply I wrote, with his knowledge, a private letter to the Secretary suggesting that he should ask some of those who actually wished to work, especially on Saturday afternoon, to write to Sir Henry and tell him so. He wrote saying that he understood the position and would act accordingly, but we did not receive a single application. I have made personal inquiries and have found only a few people anxious for the extra accommodation. There is even difference of opinion among the professional record agents. On the whole there is more demand for the extra half hour than for the Saturday afternoon. The technical difficulty is that our attendants are eight-hour day men, working normally from nine to five. At present the last half-hour before five is occupied in removing the records in use to a safe place for the night and generally tidying up the search rooms. The hour between nine and ten is fully occupied in putting away documents returned from the search rooms the evening before. If the tidying process had to be pushed on until after five, it would either mean overtime then, or in the morning. The change could not be met by just making the hours of attendance 9.30 to 5.30. Sir Henry Maxwell-Lyte would not ask for an increased vote for this purpose while we were feeling the want of money more severely in other directions. I have no view, Sir. If I can be convinced that there is a sufficient demand for the extra hours I would be perfectly willing, but I do not know; I do not know whether there is a demand.

2473. That can only be judged by somebody in contact with the public?—Yes. I have taken the opportunity from time to time of asking people and I have been told, on the whole, that they do not want it; but other people who also say that they have spoken to the public tell me that there are people who very much want it. I do not know. Do you want me to say anything more about that?

2474. No.—(b) is about keys being provided for documents that have been moved. This recommendation and the statement that it had not been adopted must both have been made on incomplete evidence. Published so far back as 1903 the first volume of the new Calendar of Inquisitions post mortem contained a complete key of the kind indicated. There are, and were in 1914, many such keys on the search room shelves. It is true that they have not been published, but the superseded lists had not been published either. I think I ought to modify that a little. I realise now that they refer more to lists of books. In many cases the books have been rearranged several times and it is almost impossible to give a key to any definite old number. If you try to do it very often you find you have to put—number so-and-so; changed on such-and-such a date to so-and-so and from that to so-and-so; really it is almost impossible to do it in some cases. Of course, in a great many cases you can.

2475. The next (c) is I think on the question of destruction?—The Commissioners, as far as I understand their recommendation, suggest the assistance of outside experts to determine whether documents should be condemned as valueless or not. The context makes it clear that the documents referred to are ancient documents in the Public Record Office, none of which have been scheduled as valueless since the Commission began its sittings.

2476. So that there is no question about adopting that recommendation?—All that has been considered of late years has been the ordinary office books and papers actually accumulating from day to day in Government Offices. In any case I do not think that suitable outside experts could be found.

2477. Then on the next recommendation (d)?—The Commissioners expected results too quickly.

The war broke out before the Deputy Keeper's arrangements were complete. Since then a good deal of progress in this direction has been made by the office staff. We have had no funds available for employing outside help.

(Sir Richard Glazebrook): What was (d)?

2478. (Chairman): "The employment of competent persons to sort and list the undescribed 16th and 17th Century law proceedings, in accordance with the scheme submitted to us in evidence by the authorities of the Public Record Office"—The late Mr. Scargill-Bird had a scheme for employing a number of outside people who had spare time to make a list of early Council proceedings and law proceedings. That was what he proposed to do. He gave it in evidence.

2479. Then as to (e), the adoption of a new method of appointing record officers, and giving them systematic training?—I am strongly of the same opinion as Sir Henry Maxwell-Lyte on this subject. I know of no way so good as the Class I examination for obtaining men with a capacity for getting on with the job in hand, a most serious consideration in work like ours, full of attractive by-paths. Nor do I know anywhere where a young man can be sent for preliminary training. There is no school for archivists in this country and the number of archivists employed is so small that, if there were one, pupils would not find employment. Having been brought up on mathematics myself until I actually entered the office, I naturally take the view that the value to our work of a general historical training may be exaggerated. There have been other men in the office who have not had historical training, very good men.

2480. (f) Revision of the scheme of payment for editorial work?—I cannot find any recommendation on this subject in the report. The recommendation on the page referred to about the employment of officers' leisure pays no regard to the actual needs of the department.

2481. Have you got any recommendations to make regarding that? What is the editorial work?—What we do at present and what we want is that a young man coming into the office is given a publication to make an index to, for which he is paid extra. The object from their point of view is to take it home. They take a few works of reference home and can do most of the work at home. I have done a great many of them myself. I think it is excellent training and it gets work done that we really want. If they do not do it at home they will have to do it in the office. The suggestion the Commission makes is that we shall find other work for them to do. The work suggested is of a kind that cannot be done at home away from books of reference.

2482. (g) Improvement of the position of certain Supplementary Clerks at the Public Record Office, as recommended by the Deputy Keeper?—Since 1914 the Supplementary Clerks have been amalgamated with the Civil Service class of Clerical Officers. I agree that they often do work for which they would be paid better outside; but this is a feature common to all Government Offices. I think that is the position.

2483. (h) The provision of suitable accommodation for the Resident Officer?—We have pressed this question on the Treasury and Office of Works. The improvements in the telephone system and the introduction of taxicabs has made it in some ways less important that the officer in charge should be actually resident, but the increase of rents and the transformation of Chambers into business premises make it increasingly difficult to get accommodation within a reasonable distance of the office. In my opinion if he is not actually resident he ought to be so near that, for instance, if he goes out after dinner, he ought to be able to pass the office without going much out of his way, and pay a surprise visit to the night watchmen and police. It seems to be almost impossible to achieve this without paying a prohibitive rent.

27 April, 1928.]

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

2484. What officers are resident at present?—At present the resident officer is living in Southampton Row, which is 10 minutes walk away.

2485. So he is not resident really?—He never has been. He has not been resident since about 1890, actually resident.

2486. Do you consider it very important to have a resident officer?—The object of having a resident officer is to make sure that the police and the watchmen do their duty. If he is able to go pretty often to make sure they are doing their duty, there is not much object in his being actually on the premises.

2487. But he must live near?—That is the point, yes. I must say that the Office of Works has done its best for us by going all round and trying to find a suitable place.

2488. Then I think the question you are mainly occupied about is accommodation?—Yes. A few days ago I was prepared to say that if the Office of Works would let us have the sheds, built on our own ground, and now occupied by the Ministry of Pensions and the British Optical Association, for workshops for our repairers, we could probably manage, with the assistance of Cambridge Gaol, for 20 years or so. The repairing staff now occupies three large rooms eminently suitable for record rooms and two smaller ones. But within the last week we have heard that it is probable that the Cambridgeshire County Council will require the site of the gaol at Michaelmas, 1929, so that the question of accommodation has suddenly become urgent. If we are compelled to leave Cambridge I shall be sorry to see the records there moved to another temporary repository, especially as the ground for the extension of our building here has already been bought. The whole thing has been decided, that we have to leave the gaol in a year's time, so that the whole question is reopened. In 1921, seven years ago, a Departmental Committee of the Treasury, the Office of Works and ourselves was appointed on the subject of accommodation, and then it was decided that we should buy a piece of land adjoining the Public Record Office for permanent extension and take Cambridge Gaol just as a sort of dumping ground meanwhile.

2489. Since when have you taken it?—1921, I think it was. Before that a great many of our records had been in Bodmin Gaol during the war. The Treasury were going to buy us this extra bit of land and as soon as possible they would begin to build here, but since then financial conditions have become more strenuous and they have put pressure on us to keep Cambridge. We have settled down at Cambridge; we have got accustomed to keeping certain things there and people can go and work there. We have search rooms there and the University of Cambridge historical people are extremely grateful to us for being there; the Professors have quite a number of pupils working constantly on the Foreign Office records in the gaol. They do good work there. So that we rather press the point, apart from our own convenience, to be allowed to stay there, but if we have to leave Cambridge I am very unwilling to set up anywhere else except here.

2490. You would not go to another provincial centre?—I do not think so. I think we really ought not to go into another temporary place.

2491. (Sir Lionel Earle): Is there any great advantage in Cambridge Gaol beyond the fact that you have become accustomed to it? Would not any other centre have done equally well?—I am not sure. You cannot tell until afterwards. We had several places offered us; the Office of Works had a whole list of places and we went rather carefully into them and Cambridge seemed to be the only one that was really suitable.

2492. (Chairman): What is going to Cambridge? How did you arrive at what should go there?—The original idea of Cambridge was that those documents which had accumulated in connection with the war

should be dumped at Cambridge and men go there and weed them; those which had to be kept only for a number of years would be sent for destruction straight from there, and the ones that had to be kept permanently sent here. After some years, when it became clear that we were going to have to occupy Cambridge for quite a long time, we began to be crowded here; the Government departments wanted more room; and then we began to enquire what classes of documents here were least used by the public and we started sending one class after another, that we thought would not be much wanted, to Cambridge. The only criterion of Cambridge at present is that the documents sent there are documents that we do not think are used very much here.

2493. Modern documents?—Yes, at present only modern documents.

2494. No ancient documents?—Not at present, but I am afraid we shall have to get to our ancient documents soon. It is a very serious question.

2495. (Sir Lionel Earle): What is the space occupied at Cambridge represented in rooms here?—I cannot tell you exactly. They are very small cells at Cambridge, and it is very difficult to compare them with the rooms here. I may be able to get figures.

2496. I only wanted to know, roughly speaking, what it was. The repairing rooms here would not hold your Cambridge stuff?—No.

2497. (Chairman): I think the Commission made some recommendation about local repositories?—Yes. I have a note about that.

2498. (Sir Richard Glazebrook): Would it not be possible to build at Cambridge or somewhere else rather than here? Wouldn't that save expense a good deal?—We have a site here.

(Sir Lionel Earle): There is not very much difference in the actual building. Of course, you are occupying cheaper land outside of London, that is true; the more valuable the site the more precious the possession, from that point of view.

2499. (Sir Richard Glazebrook): I have one other question. In these hutments you are after, would there be any danger of fire?—If we can get the place we would ask the Office of Works to give us an underground strong room, which I think would not be an expensive thing to make. I do not think there would be much danger of fire in the daytime because the attendants would be there all the time.

2500. Are they allowed to smoke?—Nobody is allowed to smoke in office hours at all; that is very strictly enforced.

2501. (Chairman): Would you tell us about local record repositories, which I think Sir Henry Maxwell-Lyte recommended?—After making their first report the Commissioners visited public departments and offices all over the kingdom and made detailed recommendations with regard to most of them. I think that the most valuable of these recommendations would be carried out if the plan proposed to the Commission by Sir Henry Maxwell-Lyte for the establishment of local record repositories similar to those in France were adopted. In France, attached to every prefecture, there is a building or wing devoted to the archives of the district or department of which that prefecture is the head. These include, in addition to the ordinary records of the prefecture, the archives of suppressed monasteries, old corporations, old churches, and so on. The repository is under the charge of a trained archivist, who is also a kind of inspector-general of local archives in his district. Sir Henry Maxwell-Lyte suggested that if anything of the kind were done in England local bodies, ecclesiastical and lay, and private persons, should be asked to deposit their archives under the charge of the official archivist, while retaining for themselves the ownership and any casual profits arising therefrom. This plan has met with universal

27 April, 1928.]

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

approval. The only objection is its cost, which is, I am afraid, prohibitive.

2502. You think that would be insurmountable?—It would be very costly. I think that focuses the whole of the recommendations of the second and third reports.

2503. (*Sir Henry Miers*): Would not the corporations in the case of big centres assist financially?—I dare say. It has been discussed. A little while ago Lord Onslow, who is Chairman of the Surrey County Council, raised the question, but the County Council could not supply the money. You may have something in a small way of that kind. Dr. Fowler, who is Honorary Archivist of the Bedfordshire County Council, has organised a repository for county records at Bedford, but then Dr. Fowler himself has been giving out of his private means.

(*Sir Henry Miers*): I was thinking more of the big towns like Manchester, Liverpool, and so on.

2504. (*Chairman*): A system is worked with the manorial records, is it not?—Yes, but then manorial records are not Public Records. Actually, it has worked very well, as far as we have gone.

2505. (*Dr. Cowley*): But they have not involved any great cost, the preservation of them locally has not involved any great expense?—It has cost us nothing, but so far I do not think we have preserved more than a hundred rolls, although we have notes of many thousands. I have not counted the number of rolls actually deposited, but they only belong to a very few manors. We do not know what will happen when the repositories get crowded.

2506. (*Chairman*): To what extent do you regard your accommodation problem as immediately pressing?—It is about as pressing as it can be.

2507. It is subject, of course, to what happens at Cambridge?—Yes, it does depend on that. Except for that I would say nothing except that we want a little more room, but if we get turned out of Cambridge the whole question must be gone into again.

2508. (*Sir Lionel Earle*): In regard to Cambridge, it is a question of sale to the Corporation?—The Prison Commissioners had the gaol on condition that when no longer used for a gaol they had to give the original owners the option of purchase, and the County Council exercised their option. I thought, and I think the Office of Works thought, they would arrange with the County Council for a lease for 7, 14 or 21 years, or something like that, and I think they were satisfied we were all right until the other day when the Sub-Committee of the County Council appointed to consider the question was said to be going to report against our having it any longer. They wanted the site for a County Hall, and accordingly they would give us notice to go.

2509. (*Chairman*): That would involve entire reconstruction, of course?—Yes.

2510. Outside the points mentioned, have you anything else you would like to say on other subjects?—One other subject I would like to refer to. This (*producing volume*) is one of our publications. You can see it is coming to pieces. Some weeks ago we asked the Stationery Office to rebind some of those volumes and they sent them back and said they could not be rebound.

2511. (*Sir Lionel Earle*): Is that due to damp or bad paper?—Bad paper.

2512. Provided by the Stationery Office?—Yes, in the nineties. You see there are alternate good and bad patches.

2513. (*Dr. Cowley*): Is this wood-pulp paper?—I think so.

2514. (*Chairman*): What can be done with a book like that?—Having shown you the book, I may say that I got into communication with the Stationery

Office about that book some weeks ago, on the 12th April, the letter runs as follows:—

"Some years ago I spoke to you about the state of the paper in some of our volumes issued from the Stationery Office in the nineties.

"The matter has now come to a head. We sent some volumes to your department to be rebound and the contractor reported that the paper of several sheets in several volumes had become so brittle that they could not do anything with it. The total of the sheets affected is estimated to be approximately 400, spread over 34 volumes.

"After some discussion (in which I did not take part) it was suggested that our repairing department should case the fragile leaves in some sort of rice paper and that the volumes should then be rebound by the contractor. The decision came to me for approval, and I disapproved very strongly for several reasons:—

(1) The result cannot be really satisfactory, especially in the case of a volume that is much used.

(2) The work will take up a good deal of time.

(3) We have several copies of each volume in constant use all with the same sheets rotten, so that it will have to be done three or four times over.

(4) There are hundreds of copies in libraries all over the world in the same state as ours and it seems to me that we owe these libraries some consideration; even if we are not responsible to them for selling, as permanent, books that will only last a few years longer. They have not the repairing facilities that we have.

Your publications branch considers that the cost of re-setting the perishing sheets is prohibitive and I agree; moreover for us there would be the additional question of re-editing. We could hardly re-set mistakes, and if we correct them we shall be in trouble over the indexes.

Some time ago the Canterbury and York Society being short of copies of some of their back numbers had them reproduced by the "Replika" process very cheaply, and the result was most satisfactory.

I understand that by this process we could get 200 copies of a sheet of 16 pages for about £3 12s., very much less than the cost of printing."

2515. (*Chairman*): £3 12s. for what?—16 pages, 200 copies.

"I would suggest that we do the bad sheets of one or two volumes as a trial, and offer the reproductions to anyone having the original volumes either free or at a small price.

This plan has the advantage that it will forestall the complaints that are bound to come sooner or later in increasing violence from public and private libraries all over the world and do something to preserve our credit.

Will you discuss the matter with the Controller? I think it is a very serious question indeed for your department."

2516. What is the date of that letter?—I wrote it about three weeks ago.

2517. What was the answer to it?—I received the answer yesterday:—

"With reference to your letter of the 12th instant, relative to the state of the paper in some of your volumes issued in the nineties, the proposal to reproduce copies of the defective sheets by the Replika process for the purpose of replacing defective copies in libraries all over the world is one that cannot be undertaken without Treasury authority. The most that I could agree to would be the sug-

The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

gestions put forward in Mr. Emery's letter of the 22nd ultimo to Mr. Flower in reply to his official letter of the 18th January last."

2518. (*Dr. Cowley*): Do you find it makes any difference to the deterioration of the paper under what conditions the books are kept, does heat or ventilation make any difference?—This volume is one which has been in this room all the time. It has not been used much.

2519. I was thinking I would look into the question when I got back?—This is the process I suggested (showing specimen).

2520. (*Chairman*): How is it done, by photography?—I think by photography and then lithography in some sort of way.

2521. (*Sir Courtauld Thomson*): You are dealing with the past as far as this paper is concerned, have you any proposals as to the future to prevent it happening again?—I think we have made it too hot with the Stationery Office for it to happen again.

2522. Has the trouble been that it is wood pulp paper?—I think the Stationery Office have made things pretty safe for it not to happen again. We did not make the complaint until some time afterwards, because we had not discovered what was happening. When we found out they guaranteed it should not happen any more.

2523. (*Sir George Macdonald*): I am not quite sure that I understand what you say in the typewritten document:—

"I know of no way so good as the Class I examination for obtaining men with a capacity for getting on with the job in hand, a most serious consideration in work like ours, full of attractive bye-paths."

What is the point of it being full of attractive bye-paths?—When you are doing your work you find perhaps a reference to some man and you make a little note and you think I ought to know something about that man, and you proceed to find out about him, and then you go off and spend the whole day on things that really are not wanted for one's work. (What we want is a man who is capable and level minded to know when that sort of thing has been done enough.

2524. So instead of "attractive" perhaps you should use the word "seductive." The practical question I wanted to ask you is how many first class men have you got in the office?—The whole of the administrative class is first class.

2525. What is the total number?—25 including myself.

2526. It was represented to us the other day that an institution which we were interested in had too small a staff to make first class recruitment satisfactory because there was not a large enough field of promotion?—That is quite true. It does happen, but we insist on having French and Latin as much as we can, and that safeguards people. Everybody who goes in for the First Class examination is practically a good man. It is hopeless for a man to go in who is not good. No one who goes in for the first class examination can ever be bad. It would be simply futile for them to take the examination if they were no good at all.

2527. The other point I wanted to ask you about had reference to the Welsh Record Office; what sort of documents was it contemplated should be placed there?—It is rather difficult to say.

2528. Take the Home Office documents, a certain number of them relate to Welsh affairs?—It would not be possible to send them, because Wales and England are dealt with in the Home Office as one body.

2529. There might conceivably be documents relating to Wales alone?—You could do that with Scotland, but it is not possible with Wales.

2530. I saw something in the public Press not long ago, I cannot recall where, a statement to the

effect that the Public Record Office had recently handed over to the Government of Northern Ireland a number of documents relating to Ireland; is that so?—They wanted some.

2531. I saw it stated in the Press, and I wondered if anything of the kind had been done?—They tried to get from us the Rolls of the Irish Territorial troops.

2532. They tried to get them?—Yes, and the Master of the Rolls was of opinion they were Imperial records and would not let them go.

2533. You have not anything purely Irish which you gave them as a result of that?—No; we could not distinguish between the records of Northern Ireland and the records of the Irish Free State; they are all together.

2534. Then we had a representation made to us that there are a great many documents here relating to Scotland which some students have to come up to London to study—I do not say I am in sympathy with it at all, but I am putting the point to you because it has been put to us—which ought to be in the Scottish Record Office instead of here?—I would not say that. I would not say they should be in the Scottish Record Office. There is the Scottish Office in London, of course, and we have here records similar to those in that office.

2535. But there was no Scottish Office in London until 1882?—Scottish affairs have been conducted from London since the eighteenth century.

2536. I imagine what was in the mind of the person responsible for the representation was not so much State documents as odd documents of various kinds. I saw one in the Exhibition Room and it might be well to warn you there is a very strong representation of the Trustees of the Scottish Library in London at the present time, and it might be well to withdraw that exhibit?—(*Master of the Rolls*): I would like to deal with that subject. I have had it from time to time, not only from the Scottish Office but from the Dominions. It is a question with which I should like to deal later.

2537. (*Sir Henry Miers*): Just one question about the paper. Have complaints been made by other institutions or libraries concerning papers supplied by the Stationery Office during the nineties?—I have not inquired about it. I do not like getting up an agitation against the Stationery Office. It is an invidious position: It would look as if I was trying to stir up some general agitation on the subject. Even the volumes here kept unused and uncut are pretty bad.

2538. (*Sir Lionel Earle*): I should like to ask as regards the Welsh Record Office, if means were available, would you be in favour of the creation of it?—Some time ago they asked me about it. They put it rather in another way. They said would I be in favour of a separate Welsh Record Office or a branch of the Record Office in Wales, and to my mind it would be far more useful to the Welshmen to have a branch of the Record Office in Wales, because we could keep there all documents that mainly relate to Wales and there would be no official difficulty in sending down for the use of Welsh students any special document they wanted. If it was a separate office there would be many difficulties. I do not think there are so many things here that one could send to Wales.

2539. Do you think that sort of sub-office in Wales would satisfy their national aspirations?—I am afraid it would not do that, but I think it would be much more useful really.

2540. One other question; are you satisfied with the complement of staff you have at the present time?—No.

2541. You are short?—We could easily find work for more.

2542. Are you actually short in the Record Office?—We are below the pre-war numbers in the higher staff, and actually two below our establishment.

27 April, 1928.] The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

2543. But as regards quality you are satisfied?—Quite, at present.

2544. You said, I think, in giving evidence that it was very difficult to get trained men into the office; have you thought of taking men in here as they do in German Museums to train them as honorary attachés?—We are not a Museum. Half the things a Museum requires of an officer we do not need at all. We do not keep specimens here. That is one of the great objects of a Museum to select proper specimens and be in a position to buy them. A Museum collecting documents would have thrown at them just masses of documents and it is their business to discover what each document is. Here the documents come to us classified. It is true we have in the office a good many legal documents still more or less unclassified, but the qualifications wanted for them are quite different from the qualifications required in a Museum man.

2545. I suppose you would say a man with antiquarian and archaeological leanings would probably shape better than a man without?—Yes. It works both ways. We have had men here who were enthusiastic genealogists and they have done splendid work, but they have exhausted themselves in producing two volumes in 10 years, where another man with less zeal, less enthusiasm for that sort of thing, would have turned out 10 and just as good. The only difference is in the mind of the man, who has acquired a huge knowledge of genealogy at public expense. That is what I was trying to get at.

2546. (*Chairman*): Perhaps now the Master of the Rolls would be kind enough to say a few words?—(*Master of the Rolls*): I should welcome the opportunity of saying a few words. You of course have the memorandum that I wrote for you in, I think, October or early November, I cannot remember the exact date, but it was one I drew up with a great deal of care, and if I may just take my own course, I drew that up particularly in order to show and to mark the difference between the Record Office and a Museum, because we have a Museum here and sometimes people have imagined that the Record Office is primarily the repository of these Museum documents. Nothing can be more misleading, and that is one of the points that has been developed in the evidence which Mr. Stamp has just been giving. One has always to keep in mind what is the primary purpose of the Record Office and that is to produce at the proper moment documents which are sent here for our safe custody and which are required at times to be produced. You may ask is that a common purpose? Let me give you two illustrations. I think it was last Tuesday we had to consider in the Court of Appeal a decision which was made in 1880 and a later case in which a certain order was drawn up by the Court of Appeal. It was of great importance to know exactly what the terms of the order were, whether the terms of the order introduced certain evidence which was objected to as being parol evidence and which could not be looked at in reference to the matter in question before the Court. I sent a note over, acting as President of the Court of Appeal, to the Record Office and said, "Will you produce to me the decision given by the Court of Appeal?" and I gave the heading and so on in order that I might have it. Within 25 minutes I had in the Court of Appeal the original order drawn up and kept in the huge folio book which contained the record; and in my Judgment I referred actually to this document which it was essential I should have. That case will be going to the House of Lords and in my Judgment I have reproduced the record which was produced from the Record Office. That is an illustration of the primary importance of the Record Office confining itself to its own work, which is keeping records for the purpose of proper reference when the time occurs. Let me give you another

illustration. Sir John Simon about a year ago was arguing a case in which the question of the prerogatives of the Crown were in question. There is a case known as the Magdalene College case which was decided, if my memory serves me, by Sir Edward Coke in about 1620. In order to ascertain what were the actual terms of the order, what were the pleadings and the issues, I sent again over to the Record Office and they produced them in the Court in a very short time. We examined them for the purposes of the Court. That will give you a couple of illustrations of my own experience in my own Court to show how important it is that we should preserve the character of a Record Office and not be treated or be thought of as merely a body collecting interesting documents of national importance greater or less. I have pointed that out. Now in regard to what is called the overlapping, which is supposed to take place and which I referred to in my memorandum. Since I was Master of the Rolls, the Law Property Acts came into force, and by those Acts manors and the copyhold tenure is brought to an end in the course of a period of years. The result will be when that term is reached all the manorial documents will no longer be of any use in preserving the record of the land held under a copyhold tenure, and in order to preserve these documents there is a section introduced under which all manorial documents which are specified in an interpretation clause are to be placed under the charge and superintendence of the Master of the Rolls. I set up a Committee which meets from time to time in this room, of which Sir Henry Maxwell-Lyte is still a member, and we have taken a good many steps to try and preserve the manorial records which are, of course, of great value. Now in the course of our work we have established a register of all manorial manors that we could find and we have communicated with as many Lords and Stewards as possible in order to see that the manorial records are placed in proper custody. Of course, the Lord is entitled to keep them, but where they are kept in a country solicitor's office without much care, then if I am not satisfied, I have endeavoured to try and establish a centre in every county where these manorial records can be handed over to a Library or a Museum, under certain powers I have in the Act, in order that they may be preserved. Fortunately that has quickened the activities in every county, and we have now a centre for manorial records in every county, and in some cases two, and they have gone to the expense of providing a proper room and fireproof accommodation to take these manorial records. Incidentally it has led to a quickened activity in the collection of county documents. Now I come to the immediate point which I want to put before you. In order to secure that manorial documents should not be sold to American buyers and leave the country I have communicated with the leading auctioneers, who have all been extremely good in the matter, and they have told us whenever a lot of manorial records has come into their catalogues. I have then communicated with them. There was some difficulty about it at first, but they were soon got over and they let us know when there is a lot to be sold, with the result that I have informed the possible purchaser that unless he is able to satisfy me as to the custody in which those documents are going I will make an order for them (which I have power to do) to go into the Record Office. Naturally this has restricted the number of purchasers of these records, and the result has been in some cases we have received here the manorial records and in some cases the result has been to get the vendor to offer them at a very small price to the British Museum. I remember on one occasion, Sir Henry Miers will probably remember it too, at Bloomsbury we were offered a very good set of manorial records for a trifling

27 April, 1928.] The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

sum like £4 10s. and we bought them. That led to Mr. Stamp having a letter from the Treasury to say how was this—for it was noted in the public Press—how was it the Museum were buying manorial records when the Record Office had some power which no doubt the writer of the letter did not quite appreciate, over manorial records? It looked either as if the Record Office ought to become the purchaser or the Museum ought not to be a purchaser or possibly that the Record Office and the British Museum were competing as contending purchasers for these manorial records. Well, I have gone through this rather long story in order to explain that there is no possible overlapping. What has happened is that in all legitimate cases we have seen that manorial records shall be kept in proper custody or handed over to the Master of the Rolls. In some cases the Museum has the opportunity of making an independent purchase in the market, a matter which could not concern the Record Office, which the Record Office could not control. I have only dwelt upon that, because it is one of the questions which originally led to a number of questions being put, and I think incidentally formed one of the grounds on which this Commission was asked to undertake its labours.

Now, with regard to the question of the applications that come to hand as to particular documents in reference to Scotland or Wales, or elsewhere. That involves a very large question. Two or three months ago I got a letter from the Prime Minister saying when he had been in Canada an application had been made to him that we should hand over to Canada a document which was signed by Champ-lain in reference to our occupation of Quebec in the early 17th century. It was a document which, of course, was deeply interesting to Canada, and a request which, if one could in a complimentary way hand over a single document, one might be quite willing to accede to. I replied to him that under the Statute 1 & 2 Victoria, cap. 94, there is absolutely no power for me in the Record Office to hand over any document at all, because every document, once it passes into my possession, has to be under my charge and superintendence, and I have no discretion to exercise as to whether I will keep it in or whether I will let it go and, therefore, in that case there is no possible means of acceding to the suggestion made by Canada.

Within the last week I have had another letter from the Prime Minister saying that he has had a letter, which he sent to me, from Mr. Bruce, the Prime Minister of Australia, asking that a volume of the log or travels of Captain Flinders' voyages in 1810 or 1820, or about that date, whether it would be possible for us to accede to that request to hand it over to Australia. Well, that request stood on a very different basis. We hold here a certain number of documents which belong to the Admiralty; they are not really public records, and incidentally we held and hold a third volume of the log, which was not an official log, but a private log, kept by Captain Flinders in the early years of the 19th century, and in respect of that, if we handed that back to the Admiralty, then it will be a matter for the Admiralty to consider whether or not they will hand it over to complete the series, for Australia already has the first two volumes. I wrote to the Prime Minister and said if the Admiralty were ready to accede to the request we would be very glad to hand it over to the Admiralty, and I saw no reason why the request should not be acceded to. It was not a matter for me to decide, but for the Admiralty to decide. This request related to a private document which has got into the hands of the Admiralty, which ought not to be handed over here, which we are keeping here for safe custody on behalf of the Admiralty, and was not in any sense a public document at all. Those

are two illustrations of the demands that are being made, which serve to illustrate this, that you may find an increasing demand by the Dominions, by Scotland, by Wales or by Ireland, that we should hand over to the particular part of the Empire interested some portion of the records that we keep here. Well, my view is this, that it would be unfortunate if we did so. These records do not concern and interest solely, it may be, Canada, or Australia, or Scotland, or Wales; they are interesting from a much wider point of view; and if you begin to decentralise, you take away from the student and the man who comes to search, the possibility of his success. After all, he comes to London, which is the very centre of the Empire and where he may expect to find the document which not only relates to a particular part, we will say—perhaps this is exaggerating—to Middlesex or Surrey, but where he will naturally expect to find the documents which have been gradually accumulated here and are of interest to a great number of persons, whether they come from one end of the Dominions or whether they come from the other. To my mind, it is important to remember that the Record Office ought to keep and ought to preserve documents of interest to the Empire, and it should be a real centre where the student should expect to find, and will find, the documents which are accumulated gradually for use, for far easier research than if we satisfied what may be called local sentiment and dissipated some of our collection into areas. If we did so, that would involve a great number of journeys and researches for students, whereas if he comes here—and he must come to London—he finds them all to his hand.

Now, the next question I should like to deal with is this question—it is a convenient phrase—of honorary attachés who might be of assistance here. Mr. Stamp has dealt with it from the departmental point of view, but the same point arises and has been before me now for some time, because you may happen to know that I hold the position of Chairman of the Historical Manuscripts Commission, and in that connection we are starved for want of money. We have £700 a year—no more, and we are trying to reproduce documents from various houses, sometimes great country houses, sometimes from the library of a Dean and Chapter and the like, but you are familiar with the volumes we turn out. It is quite obvious that with an income so little as £700 a year we can do but a small amount of work. Before the War our income—it was before I was chairman—was £1,500 a year. When I became chairman it was £600, but I immediately took up an appeal to the Treasury and succeeded in getting it increased to £700 a year, and it is now £700 a year. It would be obvious that we could do a great deal more work if we had something like some more voluntary work done by persons who would, in a sense, be analogous to the honorary attachés of which you were speaking here. We have got one or two persons who are working from the voluntary point of view at the manuscripts. It is unfortunate, but we do not find it so easy to obtain that sort of voluntary assistance as one did before the War. I do not know, but I suppose there are not so many people available who have got the sort of knowledge and interest to apply themselves to that class of work which, if not very difficult, at least ought to be very accurately done, and one of the points I intend to develop when the meeting of the Historical Manuscripts Commission takes place is the need to try to find more voluntary assistance in the sense of honorary attachés, to help in this matter. Very often one meets with a man who for some reason or other is no longer employed in the work which he did from the time he was 25 to 45 or 50, and I have sometimes wondered whether it would be possible to get more of that type of man

27 April, 1928.] The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

to apply themselves to this work. As an illustration of the point, we have had some extraordinarily good work done by one of the Masters, Mr. Purnell, who retired from Wellington, and he uses his leisure on work for the Historical Manuscripts Commission. I should like to find more to do this type of work, but really we have failed to find them.

2547. (*Sir Lionel Earle*): Have you found the Universities to be helpful to you, because we have had a somewhat similar problem in connection with the work on historical monuments?—You give outdoor employment to a large extent.

2548. No. There is a great deal of office work as well?—Please do not think I am disappointed about it. I am calling attention to the fact to show that the point has not been overlooked, and indeed I am delighted to have any assistance that Sir Lionel can give me, but it is a point that I want, if I possibly can, to meet in the hope that we may get more assistance.

I have dealt with the question of the Welsh Office and of the Scotch Office and the like, and I do not want to say more because I am sure it has been fully developed. The point is that we are not a museum, but we are a record office. Here perhaps you will allow me to say this. We had a great advantage here, we had 40 years of continuous work by Sir Henry Maxwell-Lyte, and one cannot forget that. He was appointed entirely from outside, and he came in and was appointed because there was no person available inside the office who was at that time fitted to be made Deputy Keeper, and he was appointed from outside. We had 40 years' continuous work, during which time he did bring method and order and instruction to all those who were under him, and we are now enjoying here the advantage of that continuous work by him. The result is that when it came to the point of a successor I had the opportunity of a possible choice here of several men who were quite competent to take his place, and I was not faced with the difficulty that Lord Esher had to face when he appointed Sir Henry Maxwell-Lyte. I do not know whether this is in order, but you know we have at Cambridge what you may call a supplementary Record Office, which is at present in the Prison, and that stands in a rather unfortunate way at the present time. The Prison belongs to the County, and we have got there now all the diplomatic documents of the period—I think it is—beginning with the late 18th century and early 19th century; we have got them there, and each cell in the Prison is labelled; it has a geographical label on it. It forms a very useful and very excellent place for the safe keeping of those documents. At the present moment the Office of Works are doubtful whether they can continue that system, but if they are not able, if the County are not able to make an agreement with the Office of Works, then we shall be placed in a most embarrassing situation, because I do not think we could possibly have those documents returned here. We have really no space here for dealing with them.

2549. (*Chairman*): What would you propose to do?—Well, we must find some other available building of that nature. In a sense you may say to me: "You have decentralised by sending those documents there." Yes, in a sense we have, but they are all of a particular class, they are diplomatic documents of a particular period, and anyone who is dealing with that sort of work will find the whole of them there. He will not have to come here for one and go to Cambridge for another. Those are the observations I should like to make. The Master of the Rolls has a very interesting work to do with the Record Office, because one is in close touch with it and has constant questions arising, but the one point to remember, if I may respectfully say so, is that it is a record office and not a museum.

2550. Supposing you lose Cambridge, would you see any grave objection to moving to some other pro-

vincial centre?—Well, I think we should be compelled to. No, I do not suppose so. The advantage of being at Cambridge is certainly this, that we have had a certain number of students at Cambridge who have enjoyed facilities; Mr. Temperley who has been able to write his books on Castlereagh from the proximity of records to his hand at Peterhouse. I should be very sorry if we could not go near to some seat of learning.

2551. (*Sir George Macdonald*): As I was responsible for raising the question with regard to Scotland, I may say I fully appreciate the explanation which has been given by the Master of the Rolls. The extraordinarily interesting sketch of the explosion of Kirk o' Field I cannot imagine has any conceivable bearing on the possible legal position?—Of course, there are certain documents—those framed over there—(*pointing*)—which do not contain records or documents. They are extremely interesting and beautiful things, but they can hardly be said to be valuable documents. I quite appreciate the point.

2552. (*Chairman*): Is the Prison peculiarly adapted for your work?—You have asked me a hard question. I should like to say that I do not think it is ill-adapted for a good many reasons. This Prison is built on the starfish principle; the cells are not convenient, but they are not bad compartments for holding the documents, and I have taken up the point with Lord Peel that we should have some better shelving in the cells. I am speaking, of course, bearing in mind the economies that are necessary at the present time. It is no use to say we should like a beautiful building, and I am thinking of what is available and possible. Lord Peel promised me that if he can he will do something to make it more convenient. It is not very inconvenient if you can stand in the middle and see all the names of the various European embassies, and those of other countries in another place. If we could have—as we could have, as it is not a consecrated room—the chapel turned into a research room—it is a very fine and very good room which would hold tables and chairs and is very well lighted—it would make a very convenient room. It is a place in which you have your warming and your lighting already existing, and as a makeshift I should be ready to say the Prison was by no means a bad place in view of the economies necessary at the present time.

2553. (*Sir Lionel Earle*): Would London suit you?—Yes. Of course, I would prefer to keep on at Cambridge. We have one of our Record Office staff who lives in a portion of the Governor's house there. He is thus conveniently housed near by. Perhaps the inconvenience is that when you enter you find yourself in the search room, which was a different search room to the one which you would expect to find at our Record Office, and as you cross the yard to the building you come across a wooden building in which is the gibbet, which is still there.

(*Sir Lionel Earle*): Of course, they are very dry.

2554. (*Chairman*): It seems unfortunate to pull the building down if the county authority only want the site?—The committee made a report and it comes up before the Council as a whole, but I understand they merely want it as a site. A trifling expenditure—when I say trifling I mean a question of £200 or £300, a carpenter working for a few months—would make a great deal of difference to the comfort and use and the permanence of the building.

2555. Are there any other points, Lord Hanworth?—I cannot think of any, unless there is any member wanting to ask me anything. Mr. Stamp has developed the points, and I was rather anxious to explain these particular points to you. Again, my memorandum really put the whole matter before you.

2556. (*Sir Richard Glazebrook*): There is one point relating to what Mr. Stamp said in the earlier part

27 April, 1928.] The Rt. Hon. Lord HANWORTH, K.B.E., and Mr. A. E. STAMP.

[Continued.]

of his evidence as to some suggestion of rather considerable changes in organisation and management and his own possible position. Mr. Stamp would rather not express any definite opinion on that point. It related to the recommendation of an earlier Commission?—As a matter of fact, questions of staff and all that sort of thing, the Deputy Keeper of course deals with them. (*After reading a document*) I should very much resent any alteration between the connection of the Master of the Rolls and the Public Record Office. I think that would be most unfortunate. Perhaps I may say a word or two about the position of the Record Office and the Master of the Rolls in relation to it. I have been Master of the Rolls nearly five years, and before I had some departmental experience. During the war I was Controller of the Foreign Trade Department of the Foreign Office, after I had been chairman of the Contraband Committee sitting in the Foreign Office for 15 months. The Foreign Trade Department of the Foreign Office was located at Lancaster House and afterwards at Bridgewater House, and I was head of that. My first Under-Secretary or Under-Controller was Sir Walter Townley, and afterwards Sir Edward Maclay, who was in China, so I had departmental experience. I know the sort of questions that come up to the chief of a Department. The Master of the Rolls holds exactly the same position in reference to the Record Office. Mere matters of detail, staff and the like, would be dealt with as in the ordinary course by the Permanent Secretary, but there are a number of questions which come up from time to time and on which it is important there should be available a ready decision and guidance from a man who is able to take the responsibility, and which ought not to go through the long departmental control as it would if it was placed under some other department or the like. It is useful to have the opportunity of sending across to me at once for some decision. The association between the Master of the

Rolls and the Record Office is a real one. It is not a pretence at all. The matters that I have to deal with are important, they do require decisions, they do require a man who is accustomed to deal with affairs, and I do think it is of great value that one should be able, as the person designated, to deal with them and deal with them consistently over a period of time during which one secures experience and knowledge. The connection is historical, and I should be extremely sorry if the connection was broken. I am quite certain that all my predecessors and indeed a large body of opinion in the law much appreciate the close connection between the Master of the Rolls and the Record Office. And it is by no means a burden; it is a pleasure to do the work. It involves a certain amount of time, but I am quite ready to give it, and I should be very reluctant and very sorry to give it up. If I may say so, without the least egotism, I think it would be most unfortunate if there was not the personal touch between a definite man of responsibility like the Master of the Rolls and the office which he controls.

2557. (*Chairman*): We are greatly indebted to you, Lord Hanworth, for your evidence. (*Mr. Stamp*). May I say a word about the employment of amateur assistants—honorary attachés. The real difficulty is that the kind of work we have to give and to do is sheer drudgery, and it is almost impossible to get a person, however enthusiastic, to undertake hours and hours of drudgery. That is really the trouble. It is interesting work, but not to the ordinary man. It is only interesting to the kind of man who likes study.

2558. (*Chairman*): I think before we draw up our final report we may have to trouble you again. To-day I think that is all we shall want. (*Master of the Rolls*.) Of course, if there is anything more I can offer at all, please let me know, because I shall be delighted to try to assist you.

(*Chairman*): Thank you very much.

(*The Witnesses withdrew.*)

SIXTEENTH DAY.

Thursday, 10th May, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).

Mr. J. R. CHAMBERS (*Assistant Secretary*).

Mr. H. M. HAKE, Director of the National Portrait Gallery, called and examined.

The following Memorandum was submitted by the Trustees of the National Portrait Gallery in reply to the Royal Commission's Questionnaire (see Appendix D):—

1. The origin of the Gallery is recorded in a Treasury Minute of the 2nd December, 1856, by which thirteen Trustees were appointed. The number was subsequently increased to sixteen. The

Trustees are appointed for life, but by their own ruling a Trustee, not being a Cabinet Minister, who has not attended a Board Meeting for two years is held to have resigned. New Trustees to fill vacancies are appointed by the Lords Commissioners of His Majesty's Treasury.

Included in the above number are two *ex-officio* Trustees, the Lord President of the Council and the President of the Royal Academy.

10th May, 1928.]

Mr. H. M. HAKE.

[Continued.]

2. As a matter of policy every acquisition is placed on view with the exception of a very few portraits which have been found to be wrongly named and a few duplicate portraits on loan chiefly to Government offices.

The Treasury sanction is always obtained before a portrait is deposited on loan elsewhere.

Only in very rare instances has a portrait been sold or exchanged, and the only portraits treated in this way had been acquired by purchase and subsequently superseded by better portraits. No sale or exchange has taken place without Treasury sanction. Four duplicate portraits have thus been disposed of since 1856.

3. In only very exceptional cases are the most important portraits lent to exhibitions elsewhere, as it has been found that visitors, especially colonial and foreign visitors, expect to find all the portraits mentioned in the catalogue on exhibition, and it is a great handicap to students of portraiture to discover that a portrait they had come possibly expressly to inspect is in the provinces or abroad.

It is found to be extremely difficult to accommodate temporary loans, as, owing to the congested state of the Galleries, such a very great dislocation of portraits is involved.

It may be possible, when an extension is built, to set apart a Gallery for temporary loan exhibitions.

4. The nature of this Collection involves a certain amount of overlapping, as regards the best portraits, with the National Galleries at Trafalgar Square and Millbank and with the Department of Drawings at the British Museum, and the Sculpture and Miniature Departments at the Victoria and Albert Museum, as of course every fine portrait might also be exhibited in a collection of works of art.

The scope of the Scottish and Irish National Portrait Galleries and Colonial Galleries overlaps where the most eminent men of their respective countries are concerned.

The Director always communicates with the head of any other institution that he considers may be contemplating the purchase at an auction sale of an object in which this Gallery is interested, and an amicable arrangement is invariably reached.

5. An admission fee of 6d. is at present charged on Thursdays and Fridays. The fee was originally imposed when the Gallery was opened in order that the rooms might be less crowded on these days on which pictures are allowed to be copied. Those who are given permits to copy, members of the National Art-Collections Fund and members of H.M. Forces in uniform are admitted free on these days.

During the period 1st November, 1922, to 31st March, 1924, an admission fee of 6d. was imposed on Mondays and Tuesdays in addition to Thursdays and Fridays, as recommended by the Geddes Committee. The average annual income derived from admission fees during this period was £622 as compared with an average of £336 for the past three years, but the attendance of visitors amounted to an average of only 140,065 per annum as compared with an average of 187,258 for the past three years.

It would appear from the above that if a fee of 6d. were charged every day the attendance of visitors would be decreased enormously.

6. The only posts in this Gallery which might possibly be considered to be included in the category of "scientific and technical staff" are those of Director, Assistant to the Director and Lecturer.

The Director is appointed by the Lords Commissioners of His Majesty's Treasury. The other two posts are in the hands of the Trustees. In the case of the Lecturer the last appointment was made by selection from a number of candidates whose names were supplied by the Appointments Boards of Oxford, Cambridge and London Universities.

7. *Accommodation.*—The Gallery is full to overflowing. The need for an extension of the building has been repeatedly urged by the Trustees in their Annual Reports to the Lords Commissioners of His Majesty's Treasury.

Screens have been fitted in all the rooms possible on the First Floor and the Lower Floor of the East Wing. The portraits are hung two or three deep and close together to a height of 10 or 12 feet throughout the Galleries. Many have to be placed over doorways and in dark corners and in other positions where it is impossible to inspect them carefully.

Arrangement of specimens and allocation of space.—The oil paintings are hung in chronological sequence, grouped as much as possible into different categories in their different periods. The busts are placed in the same rooms as the oil paintings. On the First Floor of the building, termed the Reference Section, are hung the portraits of lesser importance, and on this floor the collection of autographs is arranged in show-cases.

The water-colour, crayon and pencil drawings are hung in three rooms on the Ground Floor. The miniatures and medals are arranged in show-cases in one room.

8. *Catalogues.*—The only catalogue which has been on sale since 1921 is the "Illustrated List," containing a list of all the portraits on exhibition, an index of artists and 122 illustrations, which is sold at 1s. per copy. This is produced by H.M. Stationery Office, and editions are paid for outright by this Department. The Stationery Office charge the Department 10 per cent. commission on the contract prices.

The last edition, published in 1925, contained advertisements, the revenue from which reduced the cost of production considerably.

The receipts from sales are credited to Appropriations-in-Aid.

Photographs.—Photographs of most of the portraits are sold at the Catalogue Stall. The negatives are taken and the prints supplied by the National Gallery Official Photographer, to which department the proceeds, less 15 per cent. commission, are paid. Fees are charged for the right of reproducing portraits from official photographs, the revenue from which is treated in the same way as that derived from the sale of prints.

Postcards and Photogravures.—Over 150 postcard reproductions of portraits in the Gallery are on sale.

The postcards are paid for out of Subhead D—Incidental Expenses, and the proceeds of sales credited to Appropriations-in-Aid.

Estimates are obtained direct from the trade for these reproductions, which are made from prints supplied by the National Gallery Official Photographer, who is as a rule consulted as to the quality of the reproductions. No charge is made by the National Gallery for these services.

Authority was given by the Treasury in 1922 to include in Subhead B—Grant-in-Aid for the Purchase of Portraits, when submitting the Estimates, an amount equal to the average profits per annum derived from the sales of publications for the 2½ years up to the preceding 30th September; from which is deducted the wages of the attendant at the Catalogue Stall, the whole being rounded down to the nearest £50.

9. Students' Tickets are issued to those who desire to copy or study in the Gallery. The holders are admitted free for this purpose on Thursdays and Fridays, on which days, the only days on which copying is allowed, an admission fee of 6d. is charged to the general public. Tickets are only granted to those who have some recognised technical qualification or who have attained a certain proficiency in painting.

10 May, 1928.]

Mr. H. M. HAKE.

[Continued.]

The Reference Library, including the Reference Collection of prints, engravings and photographs of portraits and a large card index showing the location of portraits and where they are reproduced, is available for those desiring information of this character.

EXAMINATION OF WITNESS.

2559. (*Chairman*): We have seen for ourselves that your accommodation is very congested, but perhaps you would review the position showing how it has come about?—The National Portrait Gallery came into being in 1856 and until 1869 was housed at 29, Great George Street, Westminster. The first catalogue, published in 1858, contained 42 items. In 1869, when the collection amounted to 288 portraits, more space being required, space was allotted in the Long Building, South Kensington. It was transferred in 1885 to the Bethnal Green Museum and No. 20, Great George Street, Westminster, was allotted for offices and Reference Library. In 1892 the existing building was begun from funds provided by Mr. William Henry Alexander and was opened in the month of April, 1896. In that year the collection comprised 1,036 portraits. The portraits were hung in two rows, the larger sizes above the smaller ones, and all the then available wall-space in the Gallery was filled in this way (with the exception of the corridors, staircases, etc.). In the 39th Annual Report, published in 1896 just after the opening of the Gallery, the Trustees draw attention to what in their opinion is a congested state of affairs and say that an extension of the building is inevitable in the future. The present total of portraits actually on exhibition is just under 2,000.

Since 1896 portraits have been added to the collection at an average rate of 32.5 per annum, the most considerable accession coming in the year 1924, when 70 portraits were acquired. The first method of hanging had to be given up in 1910 when the present system of hanging in panels of portraits of the same size had to be adopted, so that the smaller portraits might be hung in three rows. In order to clear space in the chief historical series low screens were put in the reference section and these screens were afterwards extended to the full height of the rooms and the whole of the reference section hung as high as possible. The corridor, which mostly needs artificial light, was also brought into use and several doorways were blocked up to make additional wall-space. Screens were also added to the Sculpture Gallery on the ground floor.

The Gallery was dismantled during the war and was re-hung and re-opened by the late Director in the year 1920. Since then and, for that matter, before, the hanging of any additions to the collection has entailed complicated re-arrangement of portraits and necessitated transference to the reference section. The increase of the collection remains now fairly constant at the rate of 30 to 40 portraits per annum.

I may perhaps mention here a serious problem of space which will arise within the next twelve months, namely, the hanging of the Statesmen Group in the Great War series, presented to the nation by Sir Abe Bailey. Space has been found for the Groups of the Admirals and Generals by blocking up windows on the ground floor. The only satisfactory place so far suggested for Sir James Guthrie's Group of the Statesmen is on the end wall of Room VIII on the top floor, where it will have to hang rather incongruously with portraits of the late 17th century, and since it will be necessary to dispossess 8 portraits of the Stuarts from their present places, the whole of that gallery will need re-hanging.

2560. Have you considered at all the possibility of elimination of portraits of minor importance and placing them in a purely reference section?—It is so very difficult to say what are portraits of minor

importance. Of course, that has been done already to some extent in the reference section.

2561. Portraits of minor importance being placed where, above the line?—There is the main historic series on the top floor, and then there is a section which we call the reference section which is designed to hold portraits which are definitely reference portraits, and also portraits which can be classed as of minor importance and are therefore hung closer together than in the main historic series.

2562. Are you satisfied with the proposals for extension which have been made by the Office of Works?—The immediate extension proposed is 100 feet and consists of three floors and a basement. Only one floor will have top lighting and the other floors will be lit on the north side only, since the proposed extension of the National Gallery will come right up to the outer wall in this section. According to the calculations made by the late Director, the extension will provide the wall-space required for the adequate exhibition of the present collection with a remaining space reckoned to provide for additions for perhaps 15 years.

2563. (*Sir Lionel Earle*): North lighting all along?—Except on the top floor where we shall have top lighting.

2564. You get south lighting to a certain extent on the south?—Not in the new extension, there will be none whatever.

2565. Look at this plan where it shows the proposed extension of the National Gallery?—The first 100 feet will give us no light at all on the south. I am only speaking of the first 100 feet. If it comes to a further extension then I imagine it will give us a south light, but it is a well light.

2566. (*Chairman*): What is the total length in feet of the first extension?—One hundred feet.

2567. (*Sir Lionel Earle*): It is only a little over one-third of the whole?—Yes.

2568. (*Chairman*): What is coloured purple on this plan is 300 feet?—I do not know the exact measurement. The Office of Works propose to extend us 100 feet for the moment.

2569. When you get this extension will the whole layout of the Museum be less confused than is your arrangement now on the staircases and floors?—I have not been there very long and I am afraid I have not gone into that point but I think it was considered by my predecessor.

2570. You will probably agree that the present arrangement is a very confusing one?—The present arrangement is an extremely confusing one, it is very difficult. One point is that the main exhibition is on the top floor and I think a great number of the general public walk into the ground floor and do not realise the main thing they should see is on the top. It is certainly a very oddly designed building to say the least of it.

2571. Then how do you propose to allocate the new space which is to be provided?—I think I have answered that in saying that the large proportion will be wanted for the adequate exhibition of the present collection and the remainder will provide for extension.

2572. Do you attach importance to a reference section and also to separate space being set apart for centenary or loan exhibition?—A good proportion of the new space will be required for the adequate exhibition of the present collection.

A reference section, comprising paintings, drawings, prints and photographs, is essential for students of history and iconography just as it is to the Gallery staff in authenticating portraits and in dealing with any problems which may arise. Upwards of a dozen queries, by letter, telephone or personally, have to be dealt with nearly every day. At present, the so-called reference section of paintings is open to the general public and consists partly of what may be called definitely reference material (i.e., copies

10 May, 1928.]

Mr. H. M. HAKE.

[Continued.]

or secondary versions of important portraits elsewhere, or additional but important portraits of sitters already represented) and partly of portraits whose sitters are not of paramount importance. In the present congested state of the galleries it is constantly necessary to transfer portraits from the main historic series to the reference section in order to make room for additions.

The library of the National Portrait Gallery contains a fairly extensive collection of loose prints and photographs and a great many of the portraits reproduced or mentioned in books of reference have been indexed on slips. This indexing is kept up as time allows and is available to students applying for information. The whole of the library reference material stands in need of revision and extension and its present value, which is considerable, could be increased enormously thereby.

I think it is most essential that some space should be kept free permanently for the exhibition of recent acquisitions and especially for temporary exhibitions, whether loan exhibitions in connection, say, with an important centenary, or exhibitions selected from the existing collection as a means of making the aims and the contents of the collection more widely known. It would be difficult even with unlimited exhibition space to show a specialised and historic collection such as this to full advantage; a series of temporary exhibitions, carefully planned and changing, say, once a year, would be bound to make the whole collection more intelligible and attract more visitors.

In connection with the general use of the Gallery a book has been kept recently at the postcard stall for recording the names of portraits for which definite inquiry is made on any one day; a note has also been kept of portraits not in the collection for which inquiry is made. I do not know if it would interest you to see that book. You will see the portraits which are not in the collection, but which have been asked for, are in the front, and you will see daily inquiries recorded under each day.

2573. There are a large number of inquiries?—The man at the postcard stall gets anything from 4 to 12 or more. I walked round and asked some of the warders and they say they get something like 6 a day; people definitely come in and ask for a portrait of so-and-so.

2574. Do the warders refer the inquirer to the book stall?—The warders know where the portraits are. This is the record of one man only.

2575. Do you see any inconvenience to students, in the British Museum retaining its collection of engraved portraits?—None whatever. The engraved portrait collection in the British Museum totals over 50,000 separate items, representing more than 15,000 individuals of all kinds; it is not a self-contained series and a considerable proportion is to be found in the portfolios of engravers' works or in books of prints. It has now been carefully indexed and more or less completely catalogued; the sixth volume of the catalogue published in 1925 contained additions made to the end of April, 1923. The collection is useful as a reference collection of the works of English painters and is constantly used as such. It is not likely that the present ease of reference could be provided elsewhere unless at serious additional cost and staff.

2576. Apart from the Scottish Portrait Gallery is there any Gallery comparable to your own in Europe or America?—A Scottish National Portrait Gallery was founded in 1882 and an Irish National Portrait Gallery in Dublin about the same time. No other nation, so far as I know, possesses so comprehensive a collection of portraits under a single roof definitely collected on an historic basis.

The 12 Trustees elected to the Board remain for their lifetime and have always been chosen so that the different walks of life are properly represented. In this way a considered and instructed verdict as

to the relative eminence of anyone whose portrait is considered has always been possible. Of the portraits submitted for purchase at least a quarter are rejected without being submitted to the Board, and of any selection of portraits submitted at a Board Meeting a quarter to a half are rejected, and at least one or two are referred back for further consideration.

2577. What views have you as to the advantages or disadvantages of fees?—At present, a fee of 6d. is charged on Thursdays and Fridays, which are termed Students' Days. I understand that the original idea in charging this fee was to ensure that the galleries should be less crowded those days of the week when students were allowed to copy. In point of fact, the artists who use this Gallery for copying are for the most part professional copyists, who are employed to execute commissions for outside bodies or individuals. Less than 50 copies are made in a year. Copying is not permitted except on Thursdays and Fridays. Artists are not admitted to copy without producing evidence of their competence to do so; there are some 48 students on the register at present, and of these some 15 attend pretty regularly.

I can see no particular advantage in charging the public fees. Members of the National Art-Collections Fund, members of His Majesty's forces in uniform and parties from schools are admitted free on paying days. The attendance of visitors on paying days varies from 50 in the winter to over 200 in the summer, or a quarter to a fifth of the attendance on other days. The average receipts per annum from admission fees amount to £320. This sum is credited as an appropriation-in-aid, but the whole of it is surrendered to the Exchequer.

2578. Have you any particular representations which you wish to make to the Royal Commission?—In connection with the need for an extension, which is generally conceded, I would like to urge one consideration that does not seem to have been touched on at all strongly in what public utterances there have been on the subject. That is the educational value of this collection. The teaching of history in schools would stand to gain enormously if it could be combined with visits, and even lectures, in the National Portrait Gallery, and I would be prepared to give serious consideration to this point when planning the allocation and the division of the space in any extension.

I understand that the late Director made representations to the educational authorities with a view to making the collections more widely known, and that for a short time school visits showed an increase. At the present moment perhaps 70 parties from schools, conducted by teachers, visit the Gallery during the year. Apart from the difficulties of arranging visits of this kind in school hours, I think that the overcrowding of the walls must be a discouraging factor; it is quite impossible to show the collection to advantage or really intelligently at present, and this must militate against the Gallery being more widely known and used by school authorities, to say nothing of the ordinary citizen.

2579. You mean you would be prepared to give consideration to the establishment of a lecture room, or how do you propose to increase facilities for schools?—I think it would come up in that point of having one or even two rooms always kept free for loan exhibitions.

2580. Do you suggest the desirability of a lecture room?—Not necessarily. A big room where lectures could be given, say in connection with a loan exhibition, is what I think I have in mind, more than an actual lecture room.

2581. (Dr. Cowley): Are any lectures given at present?—Yes.

2582. Have you regular lecturers?—There is a regular lecturer attached to the Gallery who lectures twice a day on five days a week.

10 May, 1928.]

Mr. H. M. HAKE.

[Continued.]

2583. Do you give him a selection of portraits from time to time as the subject of his lectures?—He makes up a programme in consultation with me, and this is advertised a month ahead. It is printed by the Stationery Office.

2584. He lectures in a particular room?—He lectures in a particular room according to his subject.

2585. (*Sir Robert Witt*): You referred to your list, and I think I gathered, card index of portraits?—Yes.

2586. You also referred to the fact that the British Museum has a catalogue of British portraits?—Yes.

2587. Those two masses of material would in effect cover the greater part of the ground of British portraits, would they not?—The British Museum catalogue is mainly engraved British portraits, that is to say, things definitely produced by the engraver. Our catalogue is a catalogue of portraits of which photographs are in the collection, of which photographs may be in books of reference, or even of portraits which, for instance, occur in the Royal Academy catalogues. I think the ground of engraved portraits is now fairly thoroughly covered. The other portraits indexed are, I should say, a very small percentage. The more important ones have probably been brought in, but our index is not comprehensive of all portraits.

2588. If a joint publication could result from the joint efforts of your Gallery and the British Museum, it would be very valuable work and would in effect cover the greater part of the ground of British portraiture?—I should not like to say that even, because our indexing has not been done on any set scheme. It has largely been an index made just for the use of the Department; there is already an elaborate index which was published by the American Library Association.

2589. I had that in my mind when I suggested this country should produce, whether possibly by co-operation of the different Museums or different institutions, some such corpus of British portraiture?—But I do not think we have the material ready made in the Portrait Gallery in our index. I think such a corpus would need, say, 20 years' work.

2590. That would perhaps be a good reason for beginning soon?—I do not know how far we could begin it, because our own catalogue is out of date and out of print. The first thing that needs to be done is a new historic catalogue.

2591. That is the next point I was coming to. This (*exhibiting catalogue*) is the only catalogue one can buy at the National Portrait Gallery at present?—That is all you can get.

2592. It contains 56 printed pages?—Yes.

2593. The previous catalogue at half the price contained 560 pages?—Yes.

2594. That has been out of print for 10 years?—Something like that.

2595. Will it be impossible for the public to buy a full catalogue at the Portrait Gallery for some considerable time?—I should think for another 10 years, if I began to do it now. In about 10 years' time I could produce a new historic catalogue.

2596. Would you be in favour of having such a staff as would enable a Gallery of this national importance to produce a catalogue?—Yes, I should be very much so. I have, as a matter of fact, been in communication with the Treasury on that subject.

2597. I hope you will press the point; it is an important one?—A new historic catalogue has to be written, but it will have to be completely re-cast from that. For one thing, a tremendous amount of space is taken up by biographies, recording material that is available elsewhere, and it would be impossible to produce such a catalogue and sell it for 6d. in these days. Another thing is that a great deal of research has been done since that catalogue. That catalogue is simply a catalogue, I think of 1890, into which the descriptions of the portraits from the annual report have been incorporated from time to time.

It is not a new critical catalogue, say on the lines of Mrs. Poole's catalogue of Oxford portraits. That is what is wanted, and you will see why I said 10 years would be required for its production.

2598. To pass to the question of Student days for copying, I am sure you are of opinion that really no useful purpose is served by excluding the public on two paying days for the benefit, I think you said, of less than 50 professional copies made in a year?—Yes.

2599. You would willingly sacrifice the income?—The income does not come to the Gallery. I do not know whether my Lords would sacrifice the income.

2600. To abolish the paying days, would that mean abolishing copying altogether, or would it be possible to arrange for such essential copying, or such important copying, as was desired, to be done in an open Gallery, within a special room set apart for the purpose?—I think if the present number of copyists does not increase—and there seems no particular reason to think it should—we could perfectly well cope with them and the public on Thursdays and Fridays.

2601. I was impressed on the occasion of our visit to the Gallery with the fact that there seemed to be some amount of available space in the basement which seemed to some of us at least as if it might be made more use of than it seems to be at present?—Which space was that?

2602. I am afraid I cannot describe it accurately. —There is no light in the basement.

2603. There did seem to be some rooms which might be used, and in which people could work with moderate comfort and sufficient light for studying purposes. Has that been considered?—There is a store room and part of the Library.

2604. I think probably that would be your description of it?—As a matter of fact, the guide lecturer has his place down there, and there is a little room corresponding to the Secretary's room below where I put students who come in and want to work for any length of time.

2605. You referred to the fact that you had I think 16 Trustees?—Twelve elected Trustees.

2606. And four official Trustees?—Two I think.

2607. Who are appointed for life. Would you see any objection to altering that system to bring it parallel to that of the National Gallery, by which Trustees are no longer appointed for life, but for periods of seven years only?—I myself would have a preference for the old life system, that is to say, the careful selection of Trustees for their position and knowledge and definitely remaining on the Board either for life or if necessary to a retiring age, but it seems to me that, with a historic collection, the longer the continuity and tradition the better it will be served.

2608. May I point out that the first of your reasons, namely, the careful selection of suitable people, applies equally to the seven years appointment as to the life appointment?—Yes.

2609. So that it is only on the continuity point beyond the seven years?—Yes, I think all the advantages are in the life system.

2610. In spite of the fact that a man appointed for life may, for various good reasons—health, occupation, business—?—If he does not attend the Board meetings for more than two years in succession, he goes off automatically.

2611. I think that is only a rule of your own Trustees and is not obligatory on the Trustee. He is appointed for life, and though you may among yourselves decide he should go off after two years, there is nothing to oblige him to do so?—I cannot answer that question, I only know that is the rule and the practice.

2612. I think it is referred to in your official statement, that the trustees have made that rule themselves?—I do not think there has ever been any difficulty in applying this rule.

10 May, 1928.]

Mr. H. M. HAKE.

[Continued.]

2613. (*Sir Courtauld Thomson*): Apart from copyists, can you say if there are many students who are doing serious work on pay days?—I should say no, I do not think so. I cannot really answer the question, but I should say the probability is no.

2614. If there are such, they could work equally well on a public day?—Oh yes.

2615. So that doing away with fees would not interfere with students, but only the copyists?—Yes, that is my impression.

2616. (*Sir George Macdonald*): You mention in your memorandum that the nature of this collection entails a certain amount of overlapping as regards the best portraits with the National Gallery at Trafalgar Square and Millbank and so on. That is fairly obvious, of course. Is there any other overlapping with those Institutions except in regard to the portraits? You collect autographs, do you not?—We do not buy them, we have them offered to us.

2617. You do not purchase them?—No, we do not purchase them.

2618. Therefore you do not come into competition with the British Museum in that respect?—No. I think it is conceivable that if an autograph came up in a sale room definitely referring to a portrait in the collection I should consider asking my trustees to buy it. I should very likely ask the British Museum Manuscript Department whether they wanted it first.

2619. You would not go further than "very likely"?—I only say "very likely" because it has never occurred, and so far as I know all our autographs have been presented, but it does seem to me that the definite mention of a portrait, or someone's contemporary opinion of a portrait, would be worth our while acquiring.

2620. You say the Scottish and Irish National Portrait Galleries overlap where the most eminent men of their respective countries are concerned. Have you any practical difficulty in regard to that?—I am afraid that is not a question I can answer from my own experience, but I do not see why we should have particularly. There would be heart searching sometimes.

2621. Is that due to an Irishman and a Scotsman or some other reason?—I think at any rate the Scotsmen are as proud to be in the National Portrait Gallery in London as in the National Portrait Gallery in Edinburgh. We are in very close liaison.

2622. Presumably you would apply a higher standard if it were a question of getting a portrait. They would probably take people as eminent whom you would not admit as eminent?—Possibly.

2623. That brings me to a point I wanted to ask you about, as to the standards of acceptance or rejection of an offer made to you. You have a double standard, have you not? Do you consider the eminence of the individual in the first place and the quality of the portrait in the second, or would you take a picture of an eminent man no matter how badly it was painted?—The only consideration really is the eminence of the sitter.

2624. You do not consider the other?—No. If you go to one room, we have the portrait of the Bronte sisters which was painted very badly by their brother, and the painting was folded in four and rolled up. If you look at it you will see it is a daub with two large splits across the canvas.

2625. I suppose you have a fairly high standard of eminence?—It is a very difficult thing to define what is the standard of eminence. Very often one will take as a presentation something which one would not buy at a high price. The funds are limited, the funds at our disposal are about £1,000 a year, with which to buy portraits, so that there is not much temptation in our way.

2626. You estimate your rate of growth at about 30 or 40 portraits a year?—Yes.

2627. You consider that will be constant in future?—I should say it depended upon the supply of

eminent men I do not feel competent to calculate that.

2628. I should have thought the number would tend to decrease ultimately, because of course during the 70 years which the Gallery has been in existence you have been filling up arrears, but they are not by any means filled up yet; but the number of eminent men who died before 1856 was very large and you had to get them in. I should have thought you could hardly fix a rate of growth?—I think the Victorian age at present is only represented in its main outlines. I think it is perhaps impossible to produce any reliable figures.

2629. So you think it is safe to say 30 or 40, to be sure that you do not under-estimate?—I should think so. It is not a thing one can very easily answer. I should have to ask someone with more expert opinion than I have.

2630. I do not know that you would find any expert opinion of value on the prospect of the rate of growth. I was looking with great interest at the books you handed to Lord D'Abernon. Do you give each of your warders a book of that kind?—No, I have not given one to each of them. I only began this after I had been there two months. I gave it to the man at the postcard stall, because I thought most of the people who came straight to the galleries with a portrait in their minds would walk up the stairs and ask him. I have not given one to each of the warders.

2631. It occurred to me that it might be a very useful thing if each of your warders kept a record of that kind in order that you might make up a list. There are some names, like Jane Austen, in that list which one would certainly be justified in expecting to find in the Gallery?—I think there is only one really proper portrait of her.

2632. The list of portraits asked for includes some that I think no reasonably intelligent person would really expect to find in a National Portrait Gallery, such as the Mona Lisa?—I think one has to allow for that sort of general question, but the percentage of those demands is a small one.

2633. I do not suppose that you consider Mrs. Pepys of such eminence to warrant having a portrait of her in the National Portrait Gallery?—I do not think so.

2634. I noticed her name in the list too. I throw out the suggestion that you might find it useful to have a list of desiderata in that way?—We have a small list of desiderata of our own, with names of the people not represented.

2635. The desiderata that you have here would furnish a very interesting study of the psychology of the British people. Sir Henry Miers drew my attention to the fact that at least eight individuals asked for the portrait of Nell Gwynn?—I think there was a film of Nell Gwynn on at the time.

2636. It is the only name that occurs over and over again?—I think there was a film at that time.

2637. That might account for it.

2638. (*Sir Henry Miers*): Is it the case that all the portraits are exhibited. You have none in storage, not accessible to the public?—No.

2639. You could not find more space by keeping any in store?—Well, there is nowhere to store anything.

2640. If you had space would it be possible or desirable?—I think it is a thing which one would have to consider in allocating space in the new extension, but as we are at present it is impossible even to begin to do that, because any space we could give would not be enough.

2641. You think in an extension that you might have that storage space?—I think that point will need to be considered, but it is very difficult to know what should be put away and what should be kept out.

2642. I suppose it is the case that with regard to the majority of exhibits they have come by gift and not by purchase?—Well, yes. I am afraid I cannot give you statistics. I can give you a copy

10 May, 1928.]

Mr. H. M. HAKE.

[Continued.]

of last year's Report (handed to Sir Henry Miers) Perhaps that would help you.

2643. (Sir Lionel Earle): As regards admission fees, in your Report you talk about the paying days, Mondays and Tuesdays and Thursdays and Fridays under the Geddes Committee but now it is only Thursday and Friday. You also say that the income derived from admission fees during the period in question was £622 as compared with an average of £336 for the past three years but that the visitors amounted to an average of only 140,065 as compared with an average of 187,258 for the past three years. Can you tell me how many came on Saturdays and Sundays during that period?—I am afraid I cannot. Saturday is a big day. The other three days of the week average about five times the paying days.

2644. You are in favour of the abolition of fees? Would you consider a penny for every person who came to the Gallery every day?—I think that is rather mean.

2645. I am not advocating it.—I cannot see that there is any advantage really in charging admission.

2646. Is there any charge to the public for the guide lecturer?—No.

2647. He is free?—Yes. He does sometimes give extra lectures to schools, but then he is paid for that out of public funds. He gets half a guinea extra for lecturing specially to schools. It seems to me you either have to charge every day or not at all almost.

2648. Well, the reason for these charges being put on is to protect the student. Apparently the student in your Gallery does not exist, except the purely commercial copyist?—Yes.

2649. It is very largely so in the National Gallery from the evidence we have heard.

2650. (Chairman): Have you tried evening opening?—That has never been tried. We have got artificial lighting all over the building. It would mean, of course, directly you get on to evening opening, that you would have to keep a staff to watch and ward, and that would almost mean duplicating your staff, because the other men come on at 8 and 9 and stay until 5 or 6.

2651. (Sir Lionel Earle): It means double shifts?—It means double shifts at once.

2652. (Sir George Macdonald): You could try the experiment of opening several evenings in the week?—I should have no objection to doing it if the money was forthcoming.

2653. (Chairman): Do you think you would get large attendances in the evening?—Well, I am told by the warders that the last hour, between 5 and 6, is very sparsely attended; in fact an attendant we have who has been there 40 years was telling me about it, and he said that most of the people seem to go home to tea at 5 and that between 5 and 6 the attendance is very sparse and small.

2654. (Sir George Macdonald): Is that not because the time available after the meal is so short?—Of course an enormous number of people live in the suburbs.

2655. That is a very great difficulty?—In London.

2656. (Chairman): Your anticipation is that evening opening would not be a popular success?—It is very difficult to say. It really depends whether there are people sufficiently interested to have their meals in town and then come to the National Portrait Gallery as opposed to a cinema.

(Chairman): We are greatly indebted to you for your evidence.

(The Witness withdrew.)

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S., and Professor C. G. SELIGMAN, F.R.S., on behalf of the Royal Anthropological Institute, called and examined.

The Royal Anthropological Institute were asked to submit observations generally on the question of Ethnographical Museums. The following Memorandum was prepared by a Committee on Ethnography and the National Museums set up by the Institute.

The Council of the Royal Anthropological Institute welcomes the opportunity of expressing its views on the relationship of the National Museums to Ethnography, since it has long been a standing reproach to this country that the subject is given less attention in the capital city of the British Empire than it is in countries which have far fewer responsibilities, or even none at all, towards uncivilized and alien peoples. It is perhaps scarcely necessary to say that in criticising Museum conditions the Council is very far from casting reflections on any Museum Officers.

1. In the British Museum the staff is too limited to deal with the existing material, and the funds available are insufficient for the purpose of adding to the collections along predetermined lines. The exhibition space is seriously overcrowded, and (it is within the knowledge of most members of this Council that) the storage space is not only inadequate, but is of a nature to render precarious the preservation of specimens that are liable to deterioration. All these factors are detrimental to the usefulness of the Department of Ceramics and Ethnography in its relation to the general public, to students, research-workers, and to those whose official and other duties take them into the highways and byways of the Empire.

The Victoria and Albert Museum contains some specimens and collections that are of ethnographical and archæological importance, but this point may be more conveniently discussed later.

2. As a contrast to the treatment of Ethnography in the London National Museums, there are in the United States of America several museums devoted exclusively to the subject, and others in which there are large Departments of Ethnography or Anthropology. Buildings are well equipped with ample storage facilities, and the staffs are large. Expeditions are sent out to study the peoples and cultures, not only of America, but of Oceania, Africa, China and elsewhere. Monographs and other publications are issued and distributed with great generosity.

In Germany there are at least seven ethnographical Museums of outstanding importance, while Switzerland, Sweden and Denmark, countries which have few or no dependencies, possess ethnographical Museums of great interest and value. Belgium, also, sets a notable example in its Musée du Congo, specially designed to illustrate the culture of the peoples of its great African dependency. Holland, too, pays similar attention to the ethnology of its colonies, in this case with special relation to the development of commerce. Compared with such countries as these the record of our own is lamentable.

Attached to this memorandum is a list of some of the chief American and Continental Museums dealing with Ethnography.

3. The Council of the Royal Anthropological Institute is strongly of opinion that the only course worthy of our national traditions and responsibilities lies in the establishment of a separate Museum of Ethno-

and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

graphy. The British Museum contains ethnographical collections which are unrivalled, but their present setting deprives them of much of their potential value. Given adequate exhibition, space and storage facilities, a Museum of extraordinary scientific and public interest could be brought into being by means of the specimens already available. It would, however, be essential to provide a staff adequate to cope with the collections, and it would also be necessary to make financial provision for the systematic increase. It is becoming more and more difficult, almost from day to day, to extend ethnographical collections by a method of haphazard acquisition, and unless steps are taken immediately, the national ethnographical collections will lapse into a position of inferiority which can never be retrieved.

It would be premature to make detailed suggestions as to the character of a National Museum of Ethnography, but it is obvious that it should be built with a view to later needs of expansion. In particular, stress should be laid upon storage space, in relation not only to the amount of accommodation, but to its nature and to the ease of access. A relatively small series of exhibited specimens is sufficient for the public Galleries, provided always that the stored specimens are so accessible that students and staff are not hampered by difficulties of approach. The Council recognise that one or more Laboratories for research and preparation work, together with a Library and a properly equipped Lecture Hall, are essentials.

With regard to the arrangement of the collections, the Council would not suggest any change from that which is organised mainly on geographical lines. Subdivisions within the main grouping would be determined by factors too complex to discuss in this memorandum, but it may be suggested that the addition of comparative series (of which there are now examples in the existing galleries) would add enormously to the educational value of the other collections. In the opinion of this Council it would be advisable that the new Museum should be constituted as a Museum of Ethnology (which implies the comparative method), rather than as a Museum of Ethnography (which is purely descriptive in its scope).

4. Failing the provision of a separate ethnological Museum, the Council of the Institute cannot but regard any other steps as possessing all the worst weaknesses of a compromise, since in all probability the clamant need for a radical change would be temporarily obscured without any real provision being made for future developments. Pending the establishment of a separate Museum, however, there are changes which have a prior claim to consideration. The first is the establishment of a distinct Department of Ethnology, and the second is the increase of the staff. The third, on the assumption that no more exhibition space can be made available in the existing British Museum galleries, is the provision of more storage accommodation, properly equipped for the orderly preservation of study series as well as general collections.

5. The Council of the Institute desires to suggest that the establishment of an Ethnological Museum would afford an opportunity for bringing together in one building the national collections relating to the Ethnography and Archæology of our Indian Empire, and is of opinion that the proposal for the establishment of an Indian Section in such a museum would be an additional and weighty argument for the institution of the Museum itself. Although the British Museum has valuable Indian collections, there is little unity of character or treatment. The Indian Section of the Victoria and Albert Museum, which by foundation is confined to Industrial Art, contains much that should be in a museum of Ethnography and Archæology; the collections are exhibited under

unsatisfactory conditions and since they comprise objects foreign to the purposes of the museum, their range cannot be extended by the acquisition of related specimens. This disassociation of the Indian collections leads to the loss of opportunities of acquiring specimens which do not happen to fit into the scheme of the museums concerned, and constitute a barrier to the formation of a collection truly representative of India and its people.

6. The Council wishes also to draw attention to the lack of a Museum, or separate section, dealing with those vanishing or vanished relics of the native culture of the British Isles which are often designated "Bygones." In most European countries Folk Museums have been established which perform this function. Apart from scanty collections in some of our provincial towns, this field has been left to the private initiative of those who evince an interest in the more recent material history of their own country.

7. In conclusion, the Council of the Royal Anthropological Institute would emphasize the fact that the present position of Ethnography in the National Museums of London is a grave reproach to our standing among other nations. A Museum can play a part which cannot be performed by a University or other learned Institution, and in respect of Ethnography the British Museum is not equipped to undertake all the work which might be expected of it. That so much good ethnographical work has been done by those who have been placed in positions of trust in relation to native races, is due to the enthusiasm of individuals, rather than to the encouragement of Authority. Some of our Universities are alive to the importance of Ethnology, and the Home Government has now recognised its practical value, but the future administrator, no less than the scientific student, needs museum facilities that are at present lacking. Until a National Ethnological Museum is in being our claims to be enlightened guides of the destinies of native peoples cannot be substantiated. This Council is emphatically of opinion that a Museum such as that suggested would prove of incalculable value in assisting successful administration and economic development within the Empire.

List of the Chief European, American and Dominion Museums, dealing with Ethnography.

Germany:

Berlin.—Museum für Völkerkunde.

<i>Sections.</i>	<i>Technical Staff.</i>
Asia	1
East Asia	1
America	2
Africa and Oceania	2
Eastern Asiatic Art	1
Prehistory	3
German Folklore	2
Librarian	1

Hamburg.—Museum für Völkerkunde. Ethnology and Prehistory. Staff: Director and seven heads of Geographical sections.

Leipzig.—Städtisches Museum für Völkerkunde. Director and four heads of Departments.

Stuttgart.—Lindenmuseum (Länder- und Völkerkunde) (mainly Ethnography).

Munich.—Museum für Völkerkunde.

Cologne.—Städtisches Museum für Völkerkunde. (Rautenstrauch-Joest Museum.)

Frankfurt-am-Main.—Städtisches Völker Museum (Ethnology, Prehistory, and Anthropology).

10 May, 1928.]

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S.,
and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

Bremen.—Städtisches Museum für Natur, Völker und Handelskunde.

Dresden.—Museum für Tierkunde und Völkerkunde.

France:

Paris.—Musée d'Ethnographie (Palais du Trocadero). Musée Guimet (History of Religions).

Belgium:

Brussels.—Musée du Congo (at Tervueren).

Holland:

Leiden.—Rijks Ethnographisch Museum. Director, two Conservators, one Assistant, one Librarian.

Other European Cities having Museums with important department of Ethnography and Ethnology:

Vienna.
Buda Pest.
Rome.
Gothenburg.
Copenhagen.
Basel (Bale).
Stockholm.

United States of America:

New York.—(1) American Museum of Natural History with a Division of Ethnology. (2) Museum of the American Indian (Heye Foundation), about eight in staff.

Chicago.—Field Museum of Natural History, with a Department of Anthropology, having one Curator, and an Assistant Curator for each of the following Sections:—Oceania and Malayan Ethnology, Melanesian Ethnology, North American Ethnology and Archaeology, Mexican and South American Archaeology, African Ethnology, and Physical Anthropology.

Washington.—United States National Museum. Department of Anthropology:—Division of Ethnology, having two Curators and five Assistants: Division of American Archaeology, having one Assistant Curator.

Cambridge (Mass.).—Harvard University and Peabody Museum of Archaeology and Ethnology having Director, Assistant Director and six Curators.

Los Angeles.—The South-west Museum (Ethnology of North, Central, and South America).

Other American Museums partly devoted to Ethnology.—San Francisco, Philadelphia, Salem (Mass.), Honolulu.

Canada:

Ottawa.—Victoria Memorial Museum, with Anthropological Division having staff of three Ethnologists and one Archaeologist.

Toronto.—Ontario Provisional Museum (Archaeology, Ethnology, Natural History).

Australia:

Melbourne.—National Museum of Natural History, Geology, and Ethnology (large collections illustrating Australian Ethnology).

Port Moresby.—

India:

Calcutta.—Indian Museum (Zoological and Anthropological Section).

EXAMINATION OF WITNESSES.

2657. (*Chairman*): We are greatly indebted to you for your memorandum: would you amplify your views on the present position of the Ethnological Department?—(*Professor Myres*.) In the first place the staff is very limited for the great variety of work which it has to do. The subject is an enormously varied one. The general principles of ethnological study are very much the same everywhere, but it deals with so many different regions, so many different regimes and types of culture that it is extremely hard to be anything of a specialist in more than one or two. For that reason a staff of the present size has to be spending a great deal of its time in mere curatorship, looking after things, and has very little time to spare for really studying, developing, and making available for other students, the collections which are there. Another point is this: Some of the other departments of the Museum have already found it is a great gain to the efficiency of the staff if they are not always tied to the collections, but are able to go out into field work. Other Museums do that, and in the Department of Classical Antiquities in the British Museum it is already done. With the present staff it has been very difficult to spare for excursions of that kind, on Museum business, any member, or more than one person at a time. That is the first point.

The second point is that, so far as we can judge, the funds available for additions to the collections are unduly limited. As long as the British Museum and one or two other old-world museums were the only bodies in the field, there was a great deal of material coming from casual travellers—a very haphazard series of casual acquisitions—that did not matter very much. Now, there are two big changes. The older museum is in competition with museums which have far larger outfits, schemes and projects, and far greater funds. The result of that is that the expense of getting the material has gone up enormously; prices have risen. The other thing is, that other museums are going into the field in a systematic way and getting not only better material but better documented material, of the origin of which we know something. It is not what I may call "traveller's junk."

The third point is that in the British Museum not only is the exhibition space quite inadequate—but though one cannot speak with any detailed knowledge of this—the storage space is very much congested. Further the storage space in a museum of ethnographical specimens has to be supplemented with far more varied and elaborate conservation plant than is necessary in a purely antiquarian department where the materials are more or less imperishable. They may want mending, but moth and rust do not corrupt. In ethnological work the things come in in all kinds of disrepair, infected with various kinds of ailments and they have to be pickled. They also want continual watching. That is another reason for ample allowances for curatorial staffs. It is something like what is wanted in natural history, where moth and other things get into the cases; even metal objects are liable to disease in Museums. Those are the three principal points I think, regrettable restriction of staff, of funds, and of storage.

2658. Inadequate funds for purchase and inadequate housing?—Yes.

2659. What do you think as to the desirability of increasing the present building of the British Museum, or the idea which has been put forward of building a new Museum?—If it is possible without prohibitive expense to keep all the departments now at Bloomsbury together, I should be inclined to say that is ideal, for this reason, that the ethnological collections merge inextricably with the pre-historic. In both, for example, you have series of stone implements; but in the ethnological collection, from savage cultures of to-day, you have the haft as well

10 May, 1928.]

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S.,
and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

as the blade. In the pre-historic you have the blade, but not the haft, for it has perished. It is almost impossible for comparative purposes to use either of those collections without the other. I do not see where you are going to draw the line between the stone implement part and the war club part of an ethnological collection, between the pre-historic archaeology and the archaeology of the higher cultures. On two sides, especially, it is almost impossible to draw the line. In the antiquities of this country and of Western Europe, the home-district of ethnology, so to speak, the series is continuous from the stone age to the iron age, and then into the historic. You have things which are pre-historic here but historic on the Continent; Roman and Saxon things coming in. On the other side you have similar overlap between prehistoric and Egypt or Babylonian, historic cultures going back into the stone age so that the material in separate departments becomes comparable and needs to be handled on similar lines. I think if you move the ethnological collection away from Bloomsbury and put it somewhere else, there will either be much duplication, or else separation of similar material, in which case the value of the material for comparative ethnology is lost. Or if you take away the pre-historic collection also, as in the Berlin Museum für Völkerkunde, and put the pre-historic and the ethnological together, there will be a similar loss of efficiency, though at a different point.

2660. *Chairman*: Would you state your view as to the use of Museums as adjuncts to teaching?—In subjects where experimental methods are not possible the Museum takes the place of the laboratory. The transition from laboratory teaching to museum teaching is illustrated by what happens in geology, where each is employed in some part of the subject. Without such concrete illustrations through experiment or observation, teaching has always tended to be purely theoretical. You can give the frame, you can give the student a notion of the general lie of the subject and how to deal with it when he gets into the field, but if he is to have his observation trained as well as his theoretical notions, you must be able to confront him with specimens and see how he deals with them and guide him on that. It is the clinical side of the subject, and for that the Museum, in any department of human studies, as indeed in any subject dealing with the outer world, seems to be quite essential and is increasingly found to be so.

2661. That is to say teaching is not possible without a Museum?—It is possible, but only up to a certain point. You have to push your man out of the classroom into the Museum, into the collection of material, at a certain point, and get him to look at the things.

2662. That means you have to have at Ethnological Museums facilities for lectures?—It is very desirable. It is impossible to have a lecture among the cases unless you exclude the public, for if visitors are not excluded they get in the way of the students. It is possible at Oxford to have a small class in the Museum, but you cannot open the cases if you have the general public there. It is difficult, even with a large class of students, to have the cases open.

2663. What is your idea of the arrangement of a Museum? To have lecture rooms in close connection with the Ethnological collection?—I think that is very desirable. Of course, lecture rooms for large classes are not necessary. One does not get large classes for this kind of advanced work. By a large lecture room I mean a room for lantern illustration and so forth. That is not necessarily attached to the Museum, but it is very desirable that there should be work rooms where you can have a class of 15 to 20 people—a room about this size—where the specimens can be put on the table and you can work round them; a laboratory, not an exposition room. So that it is not a question of building great lecture rooms for large audiences. That can quite well be done elsewhere.

2664. (*Chairman*): Would you speak on the use of Ethnographical Collections in particular connection with the instruction of Government Colonial officials? (*Professor Seligman*.) I think they are very essential because, although, as you must remember, the objects themselves are inanimate it is practically the only way we have in this country of bringing the men—the junior men—before they go out, in any contact with the people they are going among. You can take them round, make them handle the specimens, they get an idea of the feeling of them and you can tell them to a large extent what they mean to the people, and how they have come to be sacred or beautiful so that when they go out there the native point of view is not the queer confusion to them that it is if they have not had any previous instruction. I know in my own case, 25 to 30 years ago, if there had been the possibilities available that there are now, even with our limited resources, I should have saved a considerable amount of time in groping. I therefore hold it essential to have a teaching series, but I should very much like to emphasise I do not think a teaching series in enough. I think in association with that, in a Museum there must be a more or less constant touch between the people in the Museum or the people doing the teaching (even if they come in from outside) and actual field work. Professor Myres just now compared the Museum to the laboratory, let us say, in one of the physical sciences. That is true to a great extent, but I feel inclined to compare even more the field with the laboratory, and I should very much like to insist on the importance of Museum officials or people teaching in Museums also having a certain amount of field experience. It is just what Professor Myres was saying about the archaeologists. The British Museum sends out archaeologists to investigate, and if we are to keep up in ethnology we should do the same. This has been recognised on the Continent to a considerable extent. The Colonial Official will have had a certain amount of teaching before he goes out. When he comes back he will know a great deal more and he will want to handle a number of specimens which are not so elementary or typical as those in the teaching section, and the question then arises as to how that material is to be stored. In spite of the energy of the officials in the British Museum there is a lot of material in the basement which people from time to time want to see; it is practically impossible to study this at present, and it seems to me that some sort of arrangement must be made by which surplus specimens are drafted out, possibly into the suburbs, where they can be handled and where there is light and air. I have had a certain amount to do with officials who have been out for a term of years and come back either to take a diploma or to do the work that would be required if they were taking a diploma. Such men should be able to handle these objects. In regard to this teaching I should like to state very clearly that for the actual Colonial Officials, i.e., the senior people, there should be a reference collection that illustrates each of our Colonies and Dependencies. I think that is quite an important thing.

2665. Does that not exist to-day?—No, Sir. I think the nearest you get to it is the Ethnographical Gallery at the British Museum, where things are arranged in a certain order and you can go up one side and down the other, for instance all Africa is together and so on, but the cases are so overcrowded it is impossible in the space to make any isolation of the different areas so that you can say it is non-existent.

2666. Do you attach importance to the existence of an adequate Ethnographical Museum as an aid to intelligent government of native races?—Great importance; it is one of the great ways of training your governing people or Civil Servants, telling them something about the sort of people they are going among, the people they are dealing with, their beliefs and so on.

10 May, 1928.]

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S.,
and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

2667. You consider the present arrangement very inadequate?—Very inadequate.

2668. Dangerously so?—Dangerously so.

2669. What are your views as to how a National Ethnographical Museum (if such could be created) should be organised and developed?—(Mr. Balfour.) That is rather a large question to answer off-hand. I think that, taking the British Museum as it is as a basis, it is very difficult to see how the present Ethnographical Department can be developed actually on the spot, so that I am rather bound to assume a special building for the development of the Ethnological side and, assuming that, I would urge that that building that Professor Myres has suggested already should be, if possible, as near the rest of the Museums which deal with human culture as possible; but, even if that cannot be done, I would still suggest that a building of a really substantial character should be erected somewhere, as central as possible, which shall enable the material which we have already, and which, I may say, is excessively valuable, to be put out in such a way as to convey definite information, information which would be valuable from many different points of view. I quite agree with Dr. Seligman when he urges that a proper understanding of native races, such as the numerous ones whose affairs we control, can only be arrived at satisfactorily by an intimate knowledge of their culture. Of course, a Museum in the main deals with the material culture of a people, but incidentally it does throw light upon ideas, beliefs and so on, and it is only through understanding their culture and its relationship to other cultures that one can arrive at any sufficient knowledge of the mentality of a given people, and through acquisition of that knowledge, administer their affairs equitably and satisfactorily. As regards the building—assuming that it is possible to build a special building for the purpose—I would urge that it should be built on elastic lines; that is to say, it should be capable of extension without upsetting the whole of the existing organisation. It should be divided up into three parts, and in its arrangement three objects should be borne in mind. One is to interest the public in the study of peoples in general and their culture. That, I think, is an important matter, because, after all, ultimately we do depend upon the public for support. But then there is the teaching aspect of the Museum which, to my mind, is even of somewhat greater importance than interesting the public. That means, of course, rather special and extremely careful organisation of the material, so that the exhibits not only help those who are called upon to do the teaching, but will actually do some of the teaching itself. If the specimens can be so deployed and arranged that anybody going round the galleries without an expert can learn from them, that is all to the good. Then, thirdly, there is the question of research. The research worker as a rule wants a great deal more material than it is advisable to exhibit in the public galleries, and it seems to me very desirable indeed that in such a Museum adequate space—and it would have to be very large space I am afraid—should be allotted to the storage specimens, and by storage specimens I do not really mean specimens put aside to get them out of the way, because they are a nuisance anywhere else, but specimens that are stored and organised at the same time, so that they are readily accessible and available for research, to assist those who are actually carrying on original work. I think that, in the organisation of any building of this kind, those three objectives should be kept in mind all the time, and that the building should be designed to fit in with such a scheme. The provision for extension from time to time is, of course, a somewhat obvious thing, because all efficient Museums grow and, as far as my knowledge goes of Museums in this country and a good many others, there is no Museum at the present moment which has sufficient space, so the question of growth is always before us. Nearly all Museums are

administered in spaces which are very confined, more confined than the staff would like. Adequate growth must be definitely allowed for. Another point has been mentioned by Professor Myres, I think, already—the importance of laboratories in immediate connection with the Museum. It is desirable that all work of restoration, reproduction and preservation of specimens, should be done on the spot and as far as possible under the direct eye of the persons who are ultimately responsible, the heads of the departments. Of course, in a Museum of this kind I would suggest that the staff is a very important matter to consider. There should be one supreme head who can be referred to in all matters of doubt. At the same time, owing to the growth of the science of Ethnology, no one man can possibly be expert in all the branches which are involved in the science, so that it becomes necessary for the great mass of material, such as would be comprised in such a Museum, to be departmentalised, and the various geographical sections dealing with special areas should be dealt with by those who are expert in the Ethnology of those particular parts of the world. In that way, I think, a Museum can be established which would be a satisfactory Museum, which would perform extremely useful functions both in regard to the training of younger pupils who may have to use their knowledge professionally, administratively and so on; and I think that the general public would be very interested in a Museum which really did tell a story on a big scale and did give some sort of idea as to our responsibilities to native races. We, after all, are the people who have done more colonising than any other. We have greater responsibilities outside our own very small country, and I must say that at the present time we do not advertise that fact at all satisfactorily by means of our Museums. It seems to me an opportunity which should not be missed if it is possible to carry it out.

2670. How do our Museums compare with analogous Museums abroad?—Well, they vary very much indeed. Some of them aim at comparatively small issues and may be able to carry them out fairly well; but when we deal with the very broad subjects such as general Ethnography I think that we fail, since our British Museum will not compare favourably with, say, the Museum in Berlin, which is far better adapted and arranged for bringing out the differentiations of peoples. When I use the term "Ethnography" I would like to qualify that, if I may. Personally, I do not like the term as applied to a Museum covering a great deal of ground. An 'Ethnographical' Museum to me implies a purely descriptive Museum which is attempting to illustrate the culture of a given people. I should like to think that such a Museum as is contemplated could be arranged on strictly comparative lines. Instead of being Ethnographical it should be Ethnological and adopt the comparative method so that the culture of any one people could not only be studied in its Ethnographical aspect but in conjunction and in comparison with the culture of other peoples related or unrelated as the case may be. It brings in a larger aspect of the study and gives it greater life and greater interest. I regard Ethnology as an applied science or, at any rate, as an applicable one.

2671. (Sir Lionel Earle): I have only one question. Do I understand in a new building either at the British Museum or elsewhere for this particular purpose you would recommend a very considerable amount of what is on show at the British Museum should be moved to a students' room not open to the public? It is a nightmare to me as a member of the ordinary public on account of the congestion and mass of stuff. Would it not be better to show them to the ordinary public and have the other things admirably arranged as you suggest for the students in separate corridors and rooms?—What I would suggest is that I would exhibit less but I would deploy the specimens very much more.

10 May, 1928.]

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S.,
and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

2672. But not for the ordinary public? You mean the mass of stuff would be reserved for the case hardened student?—The exhibited material I regard as of importance to the public provided that material tells its story so that the people going round can learn something; but also I think you want a certain amount of readily accessible material in the exhibition galleries which would serve for the taking of special classes round, that is to say, as an aid to the teacher.

2673. To which the ordinary public would not have access?—I think that the ordinary public should have access to the teaching collection. It is a matter of arrangement and selection of the specimens. What one is trying to teach is what one is trying to make the public learn if they will take the opportunity. Might I add in my own personal experience at Oxford I do very much what I am rather advocating in regard to teaching in Museums. I take my class actually in the Museum itself. My lecture room is a shifting one. I place the class in front of some case I am going to talk about. That means that material must be arranged in such a way that it will illustrate my lecture. Then from time to time the class is shifted to another part of the Museum. I do that deliberately because I feel the actual specimens are of infinitely greater value as illustrations than inferior drawings on a blackboard or photographs projected on to a screen. They teach very much more. The students get accustomed to seeing them, in some cases, not in all, handling them; and also I have found that the students themselves appreciate that form of lecture with actual specimens as illustrations. In advocating that the exhibited series should be adaptable as far as possible for educating the public going round by themselves, and also for serving as illustrations to special demonstration lectures given by experts to classes, I am urging what would make a Museum of this kind most useful in a general way. Then, at the back of all that, I am contemplating, of course, a large mass of reserve material partly duplicates from the exhibition galleries, partly of a more detailed character than is required for any of these purposes.

2674. Do you know the Museum at Brussels?—Yes, sir.

2675. Do you think it is well arranged?—Yes, from a scenic point of view I think it is quite well arranged. I think it might be better arranged from the point of view of scientific demonstration.

2676. You do not put it as high as the one at Berlin?—I do not. The one at Berlin is a general Ethnographical Museum dealing with the whole of the world, incidentally dealing with some of our own Dependencies very much better than we do here.

2677. (*Sir Henry Miers*): The memorandum of the Institute emphasises the need of a new National Ethnographical Museum. Have they ever drawn out plans for an ideal building of that sort?—(*Professor Myres*): I do not think the Institute has drawn out plans.

2678. They did feel strongly that the wisest policy would be a separate building. It hardly discusses the question of providing more accommodation on the British Museum site?—That is rather a policy of despair. The ideal thing seems to be that the Museum should be if not adjacent to the existing British Museum, at all events very close to it.

2679. Supposing a space for an Ethnological Department three or four times as large as the present space were found on the British Museum site, would that be adequate?—At present.

2680. For some time to come?—Yes.

2681. Provided there were possibilities of expansion?—Yes.

2682. That would be a wiser policy than getting a Museum elsewhere?—I think it would.

2683. It would remain under the British Museum Trustees?—Yes.

2684. I suppose the National Museum contemplated in this memorandum would be under a separate body altogether, a different organisation?—I do not think so; any more than the Natural History sections of the British Museum are dissociated from the government of that Museum.

2685. You thought it was advisable that there should be a separate section to deal with the ethnography of the Empire, a sort of separate Imperial Museum?—That question arose mainly in respect of the overlapping and unsatisfactory condition of the collection relating to India. Some of our members thought that special stress ought to be laid in our memorandum on this Indian Section and that possibly the best way out of that was to associate the question of a better display of what we have got at Bloomsbury with that of a better display of the Indian collection, not as an isolated department, but as one of the principal departments of a general Museum of Ethnography, Imperial primarily, but taking account of other parts of the world.

2686. I have recently seen that extraordinary Institute at Amsterdam which appears to be on those lines. Is that the sort of thing the Institute would contemplate, a centre which would be a sort of Imperial centre?—We refer to the Amsterdam Museum as a very good example of the kind of thing wanted. On the other hand, some of the best organised and best displayed collections of this kind are in America which has no such interests.

2687. It would be desirable to have at any rate a section at least in which the Imperial specimens are connected together?—Quite, but not to the extent of distinguishing between the Imperial and general Ethnography. That would be as bad as distinguishing between Ethnography and Ceramics which happens at present. (*Mr. Balfour*): A thing which I urged myself at that meeting in connection with the Amsterdam Colonial Museum—which is brand new, it was only built last year—is that it has managed to combine the Colonial ethnological exhibition with the commercial in rather a masterly manner, which makes it very attractive indeed. It was a matter which was brought up in regard to the general development of Museums of this country, that the commercial side of ethnology should not be omitted from it, and it was desirable to interest traders, manufacturers and so on, as far as possible and that particular Museum did strike me as having succeeded extraordinarily well.

2688. It has as a matter of fact been founded by the industries, by business men?—It gets the support of the commercial people financially.

2689. To pass to another subject alluded to in the memorandum, it is pointed out that there is nothing in the way of a folk museum in this country. I take it that the Institute feels strongly that there should be such a Museum?—(*Professor Myres*): Very strongly. There is a Museum at Stockholm with a magnificent series, like the St. Germain in Paris. But it takes only one side of national history.

2690. Is it felt that such a Museum should be in a large country district in the open air, as in a good many other countries?—It is not necessary, but it is the best method, to display such material under country conditions. It is possible, in what I call a park Museum, to instal examples or reconstructions of old houses, and make them useful as cases for the other specimens.

2691. It is true that unless this is done quickly the material is perishing every day?—Quite true.

2692. Is it thought that a beginning might be made in one of the big towns or London, if it is possible to start a park Museum of that sort?—It is perfectly simple to do a thing of that sort.

2693. On a small scale?—At first. Under favourable conditions I think it might be very good. (*Mr. Balfour*): There is really quite a lot of material, but it is so scattered about in private hands, and here and there in Museums, that there is no co-ordination at all.

2694. I was interested in a Museum I saw at Arnhem in Holland, founded by a private society.

10 May, 1928.]

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S.,
and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

That would be an ideal place?—*Professor Myres*: One hopes there might be regional museums of that sort, like the Welsh National Museum which, in addition to what it has at Cardiff, has a Museum collection of Welsh local industries at Bangor.

2695. (*Sir George Macdonald*): Speaking of the Folk Museum, to which Sir Henry Miers referred, one has heard that it is too late already. Do you think there is material in this country now?—There is plenty of material still.

2696. To get as fine a Museum as they have at Stockholm?—It will not be the same as at Stockholm; it is too late for that. So much of the good stuff, some of the best stuff, has already gone abroad.

2697. I suppose you would agree that the same principle of being after time applies very specially to material from savage countries now?—We are too late for a great deal. Take the material from New Guinea now in Chicago. There will never be anything like that again. The New Guinea Department is about as large as the Ethnographic Department of the British Museum, and it is very full.

2698. With regard to the British Museum, you rather regretted that officers of the Ethnographic Department were not sent abroad to the same extent as officers of the Department concerned with Greek and Roman antiquities. The members of the Ethnographic Department are allowed to travel if that is practicable and possible?—(*Professor Myres*): My impression is that they have not travelled anything like as much . . .

2699. Did not Mr. Joyce spend six months in America a year or two ago?—Yes. Mr. Joyce was on an Archaeological expedition, he was not studying the customs of the people primarily.

2700. I suppose he was sent because he was Archaeological in a sense but I suppose he did not shut his eyes to the Ethnographic side?—No.

2701. You say in your memorandum that the exhibition space of the British Museum is seriously overcrowded. Are you satisfied with the way in which things are laid out there?—There are far too many things in the cases in most of the departments.

2702. I think we were all very much impressed with that when we visited the Ethnographical section of the Museum. You say in another part of your memorandum that a relatively small series of exhibited specimens are sufficient for the public Gallery. Do you think they try to exhibit too much in the British Museum?—In the space they have, I think so. They have so many really good things which they want the public to see, that they crowd them into the cases.

2703. You think they might do a good deal in the way of storage accessible for students?—Yes, that is the alternative. One wants plenty of room in which to show most, if not all, of those things.

2704. That is the alternative you put forward yourselves here when you are drawing a picture of the ideal National Museum? As to Ethnology, you say stress should be laid on storage space?—There should be very large storage space.

2705. And a relatively small series of specimens for exhibition in the public Gallery?—Yes.

2706. Then what exactly have you in mind when you refer to the "regrettable necessity," because it seems to conform to your own ideal?—What we feel is that in the British Museum the storage space downstairs is so congested already that there is no alternative but to put things in the show cases where there happens to be room for them; and that spoils the effect. It is time those cases were reorganized as Museum show cases. Good material has come in, and time and again the temptation has been too much for members of the staff to put things there because they are as good as they are, rather than put them downstairs.

2707. Assuming it were possible to provide more storage space, or assuming a new building were to be provided for the Ethnographical Department, would you agree that a great many of the specimens shown now in the British Museum, might be put into

storage?—I should not say a great many, because the quality of the collection as a whole is so high. I regard it as a regrettable necessity that a great many of the specimens should be crowded as they are. One wants fewer specimens to the yard.

2708. I was very much interested in what you put so lucidly about the intimate connection between pre-historic Archaeology and Ethnology. As a practical instance, I want to ask you, in the event of a separate building being provided, would you be in favour of the pre-historic Archaeological section of the British Museum going with the Ethnographical or not? What would you say on that?—It is a very difficult question. I do not know how far I am speaking for my colleagues in the Institute, but my personal impression is this. If there must be a severance of collections, at all, I would keep the pre-historic Archaeology with the other Archaeological collections, but on the purely practical ground, that they want a far simpler and less extensive curatorship, objects that are in part or wholly perishable should be in a class apart, as far as conditions of conservation are concerned. I think on the whole there would probably be a practical advantage in drawing the line at that point.

2709. Do you think it would be desirable that any pre-historic material should be duplicated and housed along with the ethnological?—That would be essential.

2710. Your proposal would mean duplication?—Yes, and very extensive duplication for teaching purposes. It would not be fair to a person to say "this is Ethnology" if you did not say "this is the best perspective of an Ethnology which we can present to you for early times thanks to the fact that not everything has perished."

2711. Your mention of teaching purposes suggests another question which I will put to Professor Seligman, because, although you all refer to it, I think he elaborated it more fully than the others. I gather we are all agreed that two of the functions of a National Museum are to interest the public and to provide facilities for research for scholars in various departments, but each of you three I think has emphasised very strongly another aspect of Museum work, that is the teaching aspect. Is that not so, Professor Seligman?—(*Professor Seligman*): Yes.

2712. You spoke in particular of its value for training young men who are going out to appointments in the Colonies and so on, and Mr. Balfour told us what is done in Oxford, but I take it that the Museum in Oxford is a University Museum?—(*Mr. Balfour*): I was referring to a section of the University Museum.

2713. It really exists for the sake of the University. Do not you think that if you are going to emphasise to the extent that you did the teaching functions of a Museum, you are going to enlarge enormously the ordinary conception of the functions of a National Museum?—(*Professor Seligman*): I suppose so as regards the conception that we have in this country, though even here we have adopted the course of having people taken round, but I understand that in America the teaching conception is quite admitted as almost one of the main functions of a Museum.

2714. Of course, in America, they can do anything because there is no limitation of money. I quite sympathise with what was said as to the desirability of teaching institutions of that sort, but my difficulty is its association with the National Museum. If you are pushing that principle to its logical conclusion, would not it mean that the National Gallery ought to be a school of art, and the manuscript department of the British Museum ought to have a school of palaeography attached to it?—I do not know anything about that. If you had your much bigger or your much smaller series in the British Museum, either would *ipso facto* when properly used be a teaching collection to a very great extent.

10 May, 1928.]

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S.,
and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

2715. Yes, but, of course, a teaching collection is no use without teachers?—No, of course not, and that is why I emphasise that the Museum people would have to go into the field or keep in close touch with those in the field and even send men to collect specimens who knew about the things already in the museum.

2716. Again pushing the thing to the logical conclusion, it would be teaching at a University or a series of Universities?—It is done to a limited extent already. We have an arrangement, a purely unofficial arrangement, by which Mr. Joyce gives people who are taking a B.Sc. in ethnology and anthropology a series of lectures at the School of Economics, and he also takes them round the Museum, or a selection of them round the Museum, a given number of times and shows them some of the chief specimens as illustrating the different technical processes. I take it exactly the same thing has been described by Mr. Balfour in relation to what he does with his students at Oxford on a rather similar scale.

2717. I agree that it is of first rate importance that the teaching Universities should be in the closest possible contact with the collections in the Museum, but I had just a feeling that the point of view that you were advocating rather suggested that the Museum should blossom into a University itself?—I do not mean that. That the best use should be made of the Museum is all I advocate.

2718. One of you, I am not sure whether it was you, Mr. Seligman, suggested that the staff was inadequate because the numbers were so small that the members had to limit themselves to curatorship and to assisting the researchers and could not give enough time to teaching?—I do not think I suggested that, although I quite agree with it. I think it would be an extraordinarily good thing if some of the experts in the British Museum could give a certain amount of time to teaching, but I think teachers can be provided, provided the Museum series can be got into a condition for teaching.

2719. Well, it is not an ideal world and we have to make the best of the organisation we have to-day. —(Professor Myres.) I doubt whether we would regard it as primarily the business of the Museum staff to give organised teaching on the subjects represented in the collection, any more than we would regard the business of a sub-librarian to be that of lecturing on the subjects of the books in his charge. He is there to make the material available for those who desire to study it or make use of it, and that inevitably means a certain amount of time.

2720. That is a function for facilitating research?—Facilitating research, and also facilitating teaching.

2721. That we all agree is the function of the Museum?—Take the case of zoology. It is of very great assistance to a professor of zoology in a university if the Provincial or the National Museum is adjacent to the university and has its collection so arranged that he can supplement the collections in his department by taking students there and, without unduly troubling the staff, have them at his disposal. That does not mean that the staff is going to teach, but that it is there to facilitate teaching.

2722. Then, Mr. Balfour, a very small point. You laid great stress upon your preference for the word ethnology as contrasted with ethnography. Do you think the British Museum limits itself very seriously because it calls itself the Department of Ethnography?—(Mr. Balfour): I think that, if the British Museum department is acting up to its name, it is doing a wrong thing, because the object should be to bring its mass of objects together from different parts of the world for the sake of comparing them.

2723. That is done at the British Museum?—Its objects are placed along side one another.

2724. In what the British Museum call the Department of Ethnography. You object to the use

of that term in relation to what they are doing?—I think it is a great pity to use that term, because it is a very narrow term, implying merely a *description* of particular items in the ethnological records, and does not suggest scientific comparative study.

2725. Do you think there is as serious a difference between ethnology and ethnography as between geology and geography?—That is a very interesting little trap. Unfortunately we are rather governed by the traditional use of words, and it is almost impossible to compare the different applications in different sciences, but in the case of anthropology you can sub-divide it very definitely into certain distinct grades, and, to my mind, the use of ethnography, which is a *description* of peoples, is far too narrow and limited, and when you are dealing with the broader comparative matters, it seems to me desirable to use the more comprehensive term which implies scientifically collated ethnography. That is where ethnography becomes material for a science.

2726. I do not think so far as the British Museum is concerned that it makes very much practical difference?—Possibly not. I think comparatively few people really trouble themselves about this kind of distinction in the use of terms. Personally, I am very anxious to see the distinction applied rather definitely to describe these two activities.

2727. Do you think it would be worth while for this Commission to include in its recommendations one to the effect that the Department of Ethnography in the British Museum should be called the Department of Ethnology?—I urge that very strongly.

2728. You attach as much importance to it as that?—Yes. Each unit is descriptive of the one thing. It is adding dignity to the Museum to suggest that it is dealing with the whole subject from a scientific and a comparative standpoint. That is really my main reason for urging it.

2729. In reading this memorandum it struck me perhaps there was a little lack of gratitude. You say the first need is the establishment of a distinct Department of Ethnology. You recognise that a very considerable step was taken in the British Museum a few years ago. There was a separate curator appointed?—Yes.

2730. You agree that was an advance?—Very much so.

2731. You want to go a step further now?—It is taking a step in the direction of doing justice to that particular Section.

2732. There is only one question I want to ask, and it is rather an important one. You say, "The Indian Section of the Victoria and Albert Museum, which by foundation is confined to industrial art, contains much that should be in a Museum of Ethnography and Archaeology; the collections are exhibited under unsatisfactory conditions, and since they comprise objects foreign to the purposes of the Museum, their range cannot be extended by the acquisition of related specimens." Now, does that sentence mean that, if you had your ideal National Museum of Ethnology, one of your first steps would be to raid the Victoria and Albert and take those things out of it?—Not necessarily. There might be certain things that would be far more desirable in an Ethnological Museum than in one like the Victoria and Albert, but I do not think it would be necessary to conduct raids on it. (Professor Myres.) The greater part of the material is either primarily of artistic value or primarily of industrial value; either of those two would probably be quite appropriate to be kept under the administration of the Victoria and Albert. On the other hand, it means weeding rather than raiding collections, and such objects might quite well be separated. They might not be duplicates, but their primary interest is rather ethnological than either artistic or industrial.

2733. I may say that every Institution and Museum now complains of congestion, so that we may take it you would be able to relieve the congestion of

10 May, 1928.]

Professor J. L. MYRES, O.B.E., D.Sc., Mr. H. BALFOUR, F.R.S.,
and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

the Victoria and Albert if you had a free hand?—Yes, I think that might be so, always provided that there was room to display properly somewhere else the objects which were thus taken away.

2735. You say the collections are exhibited under unsatisfactory conditions. Now, that is rather a serious criticism, and one of these days we shall have the Director of the Victoria and Albert Museum here and one would like to know what are the unsatisfactory conditions to which you refer?—We are referring there to what is known as the Indian Museum which is in a separate Museum, not in the Victoria and Albert, a building which was originally quite a temporary one, which has been patched up, and partly encroached upon, and partly added to, for workrooms, and it is not adequately lighted; but it is the best that can be done, with a collection that is not primarily such as the Victoria and Albert should have.

2736. It is not a criticism of the Victoria and Albert but of Sir Lionel Earle?—It is a criticism of the fact that a collection has been placed under the administration of the Victoria and Albert Museum, though it was collected for a purpose which is more connected with the purpose of the British Museum.

2737. But it is the unsatisfactory conditions I want to get at. It is the accommodation provided for them?—It is.

2738. Nothing in the way of criticism of the system under which they are preserved or exhibited?—They are very imperfectly exhibited and I think more could be done to exhibit the textiles particularly.

2739. By the administration of the Museum?—I think so.

2740. Even with the present inadequate building?—Yes, I think so. When I was there that was my idea at the time.

2741. It is pretty strong to say they are exhibited under unsatisfactory conditions, but you are thinking mainly of the building?—Yes.

2742. (Sir Robert Witt): Professor Myres, you have referred to the inadequacy of the staff in connection with these matters, and that is a point upon which we all feel great sympathy. Could you tell me this. Supposing vacancies were created, do you see your way to provide an adequate staff for an increased or for a new Museum? Do you consider the facilities for study and teaching at Oxford and elsewhere are sufficient to provide a highly trained and competent staff?—The facilities are not as good as one would like but I do not think there would be any difficulty in providing suitable apprentices with the proper preliminary general training for a considerably increased number of vacancies. I am frequently asked by young men whether there is the smallest chance of their being able to get into the Museums. It is just a matter of luck whether there is a vacancy for them. We could certainly fill double the number of vacancies at the present time.

2743. You have the material as well as the facilities for training them?—There is plenty of material.

2744. May I refer to the last paragraph of your memorandum, where you say, "This Council is emphatically of opinion that a Museum such as that suggested would prove of incalculable value in assisting successful administration and economic development within the Empire." Mr. Balfour has already referred to the question of economic development in connection with the Dutch Museum which is in Amsterdam. That I believe to be supported very largely by the Rubber, Sugar and Tea people in the Dutch East Indies. Could you develop a little, your ideas as regards the possibility of interesting our Government as opposed to our traders on the commercial aspect of this?—(Mr. Balfour): It is rather difficult for me perhaps to speak on this subject. I have practically little experience on the commercial side, but it does seem to me that a Museum offers very great possibilities in the way of preserving the history of progressive development

of industrial activity. It illustrates from given localities the way in which certain industries have arisen, how they were practised in the first instance by the local population, how they were gradually taken under control by Europeans under higher civilisation, and I think it gives a general picture of the status of that industry. Of course it cannot be exhibited in any case on a very big scale, but I must say that where I have seen Museums adapted for illustrating the development of commerce, the story that they have told has been excessively interesting. Such organized exhibits have not only interested the public, but, I think, have also interested those who have been endeavouring to develop the industries.

2745. Just to pass to another question. Those of us who inspected some of the American Museums—I am thinking particularly of the Field Museum in Chicago, New York and Washington—have been very much struck with the elaborate precautions that they take in regard to the preservation of their exhibits. I think I am right in saying that none of those precautions exist in this country, or at all events to nothing like the same extent. Do you think there is any danger, taking a distant view, of our collections suffering from want of these elaborate preservative precautions?—I think there is a very great danger indeed; in fact one can see the process of destruction going on. Those who are in close touch with the Museums are only too closely brought into touch with that aspect. The difficulty under present conditions of actually preserving specimens for a reasonable length of time is very great indeed.

(Professor Myres): Preservation of colour is a very expensive thing. In the Field Museum they have a material now for lighting the cases, which is fairly effective in preserving the colours.

2746. Would it be fair to put it that under present conditions the Government is not devoting sufficient funds to the preservation of the collections which are actually possessed, and that it is perhaps the duty of this Commission to call attention to that fact?—(Mr. Balfour): I do not think that would be an unjust reflection. Of course it is mainly a matter of funds. (Professor Myres): Prevention is much better than cure. That is the trouble. In our Museums, those that I know, one has to be constantly going around the specimens to see if anything is going wrong. For example, in New York they practically do not suffer from salt in the specimens. The Egyptian sculptures are very liable in a damp climate to suffer from salt, but in New York they are "pickled" sometimes for months and sometimes for years until the salt is out of them.

2747. They have these elaborate poison chambers, and formaldehyde, which are either necessary or unnecessary, but which in any case are non-existent in this country. (Mr. Balfour): They form a definite part of the Museum system on the spot.

2748. You referred to the importance of interesting the public in the Ethnological collections. Do you think that more might be made in making them intelligible by a greater use of maps and more carefully prepared labels?—Undoubtedly. I really theoretically regard the label as more important than the specimen. The specimen, to my mind, should be an illustration of the label. The specimen may have the intrinsic interest actually, but it is the label that has the real educational interest.

2749. Therefore, greater educational results might be obtained at a very small cost, except in thought and care?—And training.

2750. It would not be a matter of heavy expenditure, but more a matter of the staff continually revising and reconsidering the explanatory character of their labels?—Having the time really to be able to devote to that subject. It does take a very long time and experience to prepare labels, because one has to think about them very carefully and they have to be condensed. The public will not read them if they are too long, and if they are too short they

and Professor C. G. SELIGMAN, F.R.S.

[Continued.]

do not carry the information you intend to convey. It is a case of balancing the two things.

2751. But in your opinion it would be time well spent in that respect?—Yes, admirably spent.

2752. (*Dr. Cowley*): Professor Myres spoke of the inadequacy of the staff of the Ethnological Department of the British Museum. Do you happen to know what staff there is there?—(*Professor Myres*): I do not know exactly how many there are now.

2753. You know it to be inadequate?—I know it is very much smaller than the work.

2754. I was wondering what recommendations you would make for increasing it?—(*Mr. Balfour*): It is a double Department of Ceramics and Ethnology.

2755. They run together?—Ceramics being a camouflage for the civilisations of Eastern Asia. The two Departments are united, Ethnography being a sub-department within this dual organisation?—(*Professor Seligman*): I think I am right in saying the people who work in the ceramics department have nothing to do with what we call ethnology. They have no knowledge of it, and they certainly do not work in the Ethnological Gallery or in the Ethnological Studies.

2756. It was your opinion that the ethnological collections ought to remain at the British Museum, where they now are?—(*Professor Myres*): I should regret their being transferred to a building or Institution so separate as to make comparisons difficult.

2757. Then you would in that case require the Museum to provide a very considerable amount of extra accommodation?—Yes.

2758. Have you any idea where you would propose that, had you any scheme?—I do not know how much land is available.

2759. You had no scheme in mind?—No, only I understand the Museum has a certain amount of spare ground.

2760. You were not thinking that the necessary space could be got by putting away a large number of specimens?—Not in the building. No, it would mean building.

2761. You would build?—Certainly.

2762. Supposing it were decided it was better to move the collections elsewhere, I suppose it would be possible to come to some ultimate method of distinction between ethnology and archæology?—At the cost of great duplication for illustrative purposes.

2763. It would be chronological?—I think it would rather follow the line of duplication of certain stocks of material. What I am thinking of is, if the bulk of the pre-historic collections stayed at Bloomsbury and the Ethnographical Department was moved somewhere else, there would have to be a *service de comparaisons* there, which would illustrate, in mere outline, what was to be found at Bloomsbury and provide sufficient teaching material, and comparative material for the use of the staff.

2764. I suppose at present the restoration and so on required in the ethnographical collection is done at the British Museum?—Yes.

2765. (*Chairman*): What is the glass which you spoke of, which prevents colour fading?—(*Professor Myres*): I do not know the composition of the glass. It gives a slightly greyish hue. I think it has been found very valuable at Chicago.

2766. You might find out about it if you would?—Certainly.

(*Chairman*): We are very greatly indebted to you for your valuable evidence.

(*The Witnesses withdrew.*)

SEVENTEENTH DAY.

Friday, 11th May, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

The Hon. EVAN CHARTERIS, K.C.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (*Secretary*).

Mr. J. R. CHAMBERS (*Assistant Secretary*).

Mr. E. R. D. MACLAGAN, C.B.E., Director of the Victoria and Albert Museum, called and examined.

A Memorandum was submitted by the Board of Education in reply to the Royal Commission's Questionnaire (*see Appendix 1*); this Memorandum, which covered the Victoria and Albert Museum, the Science Museum and the Bethnal Green Museum, is printed as Appendix 4.

2767. (*Chairman*): First of all as regards administration, in considering the development of the Victoria and Albert Museum, do you regard its administrative connection with the Board of Education as valuable?—Frankly, that is a question that I should be tempted to answer with a direct yes. I do regard it as of very great value.

2768. On what grounds?—It seems to me honestly to be the normal system of government for a Museum, a National Museum, provided you have a developed Civil Service in the country; as at the time when the Victoria and Albert took its present form the Civil Service had developed. I should regard it as a very valuable economy of time and of money. Establishment questions and in the main financial questions, estimates, and so on, are possibly better dealt with in bulk by a Department that has the habit of dealing with those things. I feel myself that we have derived distinct benefit from the connection with the Board.

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

2769. Do you attach importance to increasing the connection between the Museum and Education?—That is a very valuable connection and certainly deserves to be emphasised. Clearly all Museums form part of the educational functions of the country, and I should be very sorry for that reason alone to see the connection dropped.

2770. How do you compare the respective merits of the Departmental system and the Trustee system?—Of course, it is very difficult for anyone to do so who has only had direct experience of one system; and as far as I can judge from what I have heard, I should say that the Trustee system, especially what I might call the British Museum Trustee system, does work extraordinarily well. So far as I understand their Trustees are appointed chiefly for official reasons, whether they are people of political eminence or are of eminence in other ways. I find it rather difficult, as I say, to speak of control by Trustees because I have no practical experience of it, and I know that a number of Trustees are represented on this Commission; but I confess that I am not very much convinced of the advantages of government by Trustees when the Trustees are selected from the point of view of expert knowledge; as assistants, so to speak, helping the Director from the point of view of expert knowledge.

2771. You prefer Trustees to be selected on grounds of?—I might be quite wrong about this, but I imagine that the Trustees of the British Museum are in the main officials, the Archbishop of Canterbury, the Lord Chancellor—

2772. The non-experts?—On the whole I should incline to government by non-expert Trustees rather than expert Trustees, on the ground that if the staff of the Museum and their Director are at all worthy of their position they ought to be able to supply the expert knowledge, and I do not think if they are not worthy of their position that expert knowledge in the form of a Committee is going to produce really valuable results as regards purchasing. I confess giving that view with diffidence; as I say, I have no first-hand experience of government by Trustees.

2773. On what system does your Advisory Council work?—Well, I have a note here, a sort of historical note, about it; the terms of reference under which it was appointed, and so on. It was instituted in 1913 and it was laid down that its function was to advise the Board on questions of principle and policy arising from time to time, and to make any observations it might think fit on the condition and needs of the Museum. This is, of course, an abridgement of the terms of reference. It deals with such matters as the scope of the Museum and its relations to other Museums and collections, the organisation and arrangement of the collections, and the arrangements necessary for making the Museum collections instructive to the general public and for facilitating intelligent observation and expert study. It reviews annually the purchases made for the Museum in the previous year and makes an allocation of the purchase grant according to the needs of the various departments of the Museum. It does not advise on, or control, the purchase of individual objects within the limits of the proposed allocation or deal with staff questions. The members of the Council are appointed by the President and chosen for their recognised position in the sphere of the Museum's activities (e.g., patrons of art, eminent collectors, retired officials of cognate institutions, directors of art schools, &c.) and their term of office is six years, though retiring members may be reappointed. I think that gives a pretty fair summary of the activities of the Council. Perhaps their chief activity is the reviewing of the purchases of the past year; every year the Council constitutes itself into a series of sub-Committees, and each sub-Committee takes a department and goes through all the purchases of the past year and reports on them to the President.

The President then transmits that report to me in order that I may answer any criticism, if there are criticisms, as to those purchases.

2774. But they do not intervene before the purchase is made?—No.

2775. And as a matter of fact they are not even consulted?—Not even consulted. The people who perform the function of Trustees in that respect are the officials of the Board. They are consulted before all purchases over £100 are made.

2776. The Board is composed of how many?—The President of the Board of Education, the Permanent Secretary with any advisors he thinks fit to call in. They sanction all purchases over £100. Up to £100 the power of purchase rests with the Director, and I believe the Director of the British Museum has a similar power.

2777. They attend at the Museum?—Sometimes they come to the Museum to see the objects. Sometimes decisions are made with the help of photographs, descriptions and telephone conversations.

2778. There is no oral discussion?—No oral discussion necessarily. In the case of very important purchases there is practically always oral discussion, in the form of my coming down to Whitehall and seeing the Secretary of the Board.

2779. Turning to the functions of the Museum, the Museum came into being to stimulate the practical applications of art to industry. To what extent is this function being fulfilled to-day?—That question, as Members of the Commission will probably remember, is dealt with in some detail in a communication which was sent in with the answers to the questionnaire last year. Mr. Beresford asked that that question should be dealt with. I should find it a little difficult to put down on paper a full statement of the way in which I think the Museum fulfils those functions, because a great deal of the most valuable work it does is done in a way which is not particularly easy to be talked about. I think one very valuable function it fulfils is that of educating the potential purchaser. In that way it undoubtedly influences manufacturers for good, because people who visit the Museum demand something better than the manufacturer would otherwise furnish them with; but this kind of work is not capable of any sort of statistical representation. Especially in certain departments (perhaps chiefly Textiles and Ceramics) there is a great deal of direct reference from manufacturers and craftsmen to the officials of the department. I can think, for instance, of a very flourishing, recently founded pottery, a great deal of whose work is based definitely on the analysis and study of fragments supplied to them for that purpose by the Department of Ceramics; chemical analysis and mechanical analysis. Again, in the Department of Textiles, there is at least one prominent manufacturer who is in very close personal touch with that department and brings problems to them for their help. There is a good deal of that going on, but I think it is a little difficult to put it down in a written or even in a verbal answer, because so much of it is informal.

2780. How do you distinguish your functions from those of the British Museum?—Well, I think I should feel inclined perhaps to class the functions of a Museum as more or less four-fold; that it satisfies communally a kind of collecting instinct of the nation (or of a community); that it serves as an inspiration for artists and craftsmen; that it serves as a means of providing information for historical students; and that—which I suppose is the highest of its functions—it possesses and displays masterpieces which can be enjoyed aesthetically by the public. I should imagine the chief difference between the British Museum and the Victoria and Albert Museum would be that the Victoria and Albert Museum naturally has a great bias in favour of the inspiring of craftsmen, and the British Museum would have a bias in favour of providing information for historical students. I do not

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

think in either case that any of those four functions, if they are at all a sound division of the uses of a Museum, should be neglected.

2781. Both Museums to a certain extent fulfil both?—I imagine the British Museum would not—I may be wrong about this—suggest as its chief function the providing of aesthetic enjoyment; yet undoubtedly artists do go there to study the Elgin Marbles. Historical students are also bound to come to South Kensington for certain things which they do not find at Bloomsbury.

2782. With regard to the question of overlapping, in two departments, particularly there appears at first sight to be a considerable amount of overlapping, namely, in Ceramics and in the prints, water colour and painting department?—I think there is. There, again, there was a fairly detailed statement about the extent of overlapping in answer to question 4 in that questionnaire. I think it is only fair to put it somewhat in this way, that there is no logical reason why there should be more overlapping in those two departments than in others. I take it the British Museum rightly professes to supply a historical conspectus of the history of this country (and other countries) as manifested in its artistic and other productions, and I do not see any logical reason why they should have excepted furniture or textiles. I imagine they have not done so partly for spatial reasons and partly for more or less accidental reasons, but I do not quite see any reason why early Ceramics should be collected as part of the history of a nation and early textiles should not be so collected. I regard it as accidental that this overlapping should be so pronounced in Ceramics.

2783. Accidental and beneficial?—I do not, on the whole, think it does harm. I have never felt that a certain amount of overlapping is a bad thing. I do not quite see how in an oldish town, with Museums which have already existed for some time, a really logical growth of Museums is likely to be practicable. I should be almost tempted to put it that the growth of a Museum is bound to be biological rather than logical.

2784. You would not be in favour of the correction of that tendency by a re-distribution or re-sorting?—I think there is a great deal to be said for getting a more consistent arrangement, if possible; but I think also that experience has shown that that kind of re-sorting is very dangerous. I am only giving my own personal opinion, but I deplore very much the more or less logical re-sorting of the collections of Florence; I am speaking now of pictures. It seems to have made enjoyment more difficult in an admittedly more consistent arrangement. You used, for instance, to have examples of Botticelli in various rooms in the Uffizi, in the Accademia, and in the Pitti as well; now they have all been collected together in one gallery, regardless of their history, and I have not found, as a rule, that people have expressed appreciation of that change.

2785. From the point of view of instruction, do you see any advantage in the re-sorting?—I should, if the collections were smaller, but I have always thought when collections are of a certain size, the disadvantage of their being separated is not very great. I could instance another very definite example of overlapping, the collections of ivories where I think the British Museum and the Victoria and Albert Museum have each got a collection of about the same extent and the same value. If you were starting a new Museum it would clearly not be arranged that the collection of ivories should be divided, but it seems to me there are as many ivories at the British Museum or at South Kensington as any one can possibly look at in one session, and, therefore, the disadvantage of their being separated by a relatively easy journey on the Underground Railway is not very great. If I might say so I think the overlapping in Ceramics is on a slightly different footing from the overlapping in

water colours. I do not at all want to suggest criticism of another Institution, but some of the Members of the staff at South Kensington would feel that was, in a sense, rather an avoidable overlap; because the creation of the British Museum Department of Ceramics is a very recent thing, and I suppose it was the first instance in which one London Museum had started a Department which actually had the same name as the Department in another Museum.

2786. As regards your Water-Colour and Paintings Department, what is your view on the report of the Departmental Committee of 1908 relative to that Department?—I find it a little embarrassing to criticise a report which was signed by my predecessor and made under his auspices; and I need not say that I have the very highest opinion of Sir Cecil Smith's Museum Services, having had the privilege of working under him for some considerable time. I do not find myself in agreement with that Section of the report, and I think it is only fair to say that Sir Cecil Smith's work as Director (when he spent a very great deal of his energy and enthusiasm in increasing the water colour collection) seems to show that he changed his mind on that point. I would say that I was rather in favour of his later point of view than of the earlier point of view expressed in the report. I should certainly very much deplore a complete divorce of pictorial art from the Victoria and Albert Museum; and I think the Sheepshanks Collection (which does include a great many very fine pictures indeed) is an example of the disadvantage to any collection of cutting it off from increase. No oil paintings have been acquired at the Victoria and Albert Museum for a very considerable time, and so the Sheepshanks Collection does produce a rather depressing effect as a dead collection.

2787. You do not suggest that the Victoria and Albert should buy pictures?—Not oil paintings. I should be sorry to see it ceasing to acquire water colours.

2787. As to the distinction between fine and applied arts, do you see any possibility of separating the two?—I should have thought that was a distinction which had almost been abandoned. I should have thought there were comparatively few people now who would maintain that a Persian rug or a Chinese pot was not fine art and a water colour was. I believe there is rather an interesting book by the Director of the Hamburg Museum, Doctor Sauerlandt, which has just been published in which he takes the same line; I only heard of it this morning and have not had time to look at it. It is only fair to remember that as far as I know there is hardly any Museum of any size which professes to be a Museum of applied art, Kunstgewerbe, which does not include a certain number of examples which under the old official dichotomy would have been called fine art; except I suppose in the case of Museums of a definite industry like the Musée des Tissus at Lyons.

2788. Now, turning to co-ordination, do you think that the time has come when some central authority, for example an Advisory Committee, acting for the governing bodies of all the institutions, would be useful?—I think it would be very valuable, but I think its value would depend almost entirely on the Museums having some rather closely related system of Government. It would be exceedingly difficult to apply when some Museums are governed by a Government Department and others by a Board of Trustees. I do not quite know the nature of such an Advisory body as is suggested, whether, to put it briefly, the advice would be advice upwards to the Treasury or downwards to the Museums. I think a certain amount would depend on that. I confess with such experience as I have had of Government Departments my own personal predilection would be in favour of some central control of that kind.

2789. By a Government body?—By a section of a Government body.

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

2790. A Department?—Yes; not a separate department, because I do not think the work would by any means justify it, but a section of a Department, either the Board of Education or another, that should definitely deal with Museums and Galleries.

2791. To have representation over the whole Museum world?—Yes. That is what I think my own personal inclination would be for. I do not know, but possibly failing that I should favour something analogous to what I have understood to be the Berlin system, of having all the Museums more or less under the control of one person.

2792. Who is what?—In that case he was General Director. The success of that plan does depend, however, enormously on personal questions.

2793. Then apart from the question of a Governing body or Government by department, do you think there is at present sufficient co-ordination between the officials of the different Museums?—I think it would be optimistic to say there was sufficient. There is a good deal more than there used to be, but I think it is perhaps true that it still depends too much on a personal equation, whether the particular opposite numbers happen to know one another and be friends with one another. I should like to see even more contact, but I think it is rather difficult to suggest developing that contact except on personal lines.

2794. Would you be in favour of quarterly meetings or seasonal meetings between heads of these departments?—I think that might result in a waste of time. There might be no really very important matter to discuss and as the people concerned are at some distance apart it might involve waste of time.

2795. I was not thinking of that at the moment, heads of departments?—Yes, but you can hardly have a meeting of all the heads of all the departments together.

2796. I meant the heads of corresponding departments?—Yes.

2797. You have a system of regular meetings with your own staff?—Yes. I started that when I took over the Directorship, and we have a weekly meeting on Fridays at 12 o'clock, which is frankly imitated from a similar meeting instituted by Mr. Masterman in a temporary department in which I was working during the War. We found there it saved an enormous amount of time, and I think it has very much justified itself at the moment. Sometimes the meetings last quite a short time: indeed, I must admit the hour of 12 was rather selected in order that they should not last too long a time; but sometimes they really only take 10 minutes or so. However, as we are all fairly near one another, I do not think it involves an exaggerated waste of time. It generally takes the form of my having quite a short agenda and bringing up questions that have arisen, by correspondence and so on, and then going round the table and asking each person if he has any point to raise. It is kept very informal. We do not have a typewritten agenda or anything of that kind, and we keep a very brief record of the proceedings, just one sheet as a rule. In the American Museums the same thing is more or less secured (or in a good many Museums) by an official luncheon. They have generally a staff luncheon room, and it is expected that, if not precluded, the staff will lunch every day together. At the Metropolitan Museum in New York they do that, for example; they have been kind enough to invite me to join that luncheon, and they get through a certain amount of casual business in this way.

2798. You have no regular meetings with the heads of other Museums?—Only in quite an informal way. Some years ago a Museums Dining Club was formed, and, as far as I can remember, we dine twice a year. It is confined to heads of departments, and, of course, Directors, and there is a Chairman, and he is supposed to suggest a

subject for discussion. I think that has been useful. Otherwise we have no regular meetings. But even during the last four years there have been a fair number of cases on which Sir Frederic Kenyon and Sir Charles Holmes and I have met for some reason or another, though it has always been for something *ad hoc*.

2798a. Can you think of some better system than meetings for preventing overlapping in the future?—I do not think so. I think the difficulty about such meetings is that if there is no supreme authority which can correlate the functions of the different Museums they are apt to be a little bit inconclusive; and further in the past, chiefly owing to the existence of legislation and so on—to be quite frank—I think the meetings have as a rule not worked out very much to the personal benefit of the Victoria and Albert Museum. There have been a good many cases of transfers, for instance, from one Museum—

2799. Of what?—Of objects; and in the case of transfer of objects from the Victoria and Albert to the British Museum, which has taken place to some considerable extent, there is no possibility of reciprocity, because the British Museum is prevented, I believe, by Act of Parliament from transferring anything to the Victoria and Albert Museum. We similarly transferred a considerable number of important pictures to the National Gallery. Well, we got some water colours in exchange, but I do not think we came best out of the bargain. I do not wish at all to put up a selfish point of view for the Victoria and Albert Museum, but I feel bound to say that I think that is rather the feeling which my staff would have; that those kind of discussions in the past have inevitably been a little one-sided, because we are rather freer in those matters certainly than the British Museum.

2800. Now, with regard to bequests, do you advise legislation?—I frankly find that of all these questions this is very much the most difficult one to give a reply to. I have thought a great deal about it for a number of years, and it is a question as to which I have been tempted to remain on the fence. I am so conscious of the disadvantages. Of course, I expect most of the members are acquainted with the definite instance we had of those dangers, at the opening of this Commission, when a lady who had definitely promised us a very important bequest revoked it in consequence of the mere appointment of this Commission. If I have to come down on one side of the fence I should come down on what I think is the wisest, and advocate some form of possible modification of bequests. Could it be in the form of some more or less permanent Committee to which such questions could be referred, and who, if they were of opinion that modification was definitely in the public interest, could then recommend legislation to that effect; provided wherever possible that the modification changed the letter of the bequest and kept the spirit of it, which I think would be possible in a good many instances. Clearly, for example, at present there is one very definite instance at South Kensington in which the letter of a bequest is being kept and the spirit of it is being completely evaded. I am referring to the Ellison gift of pictures and water colours, which was given a long time ago, by a pronounced Sabbatarian, and given on the express legal understanding that those pictures were never to be exhibited on a Sunday. Of course, the donor's object was to prevent the Museum being opened on Sunday. The provisions are being met, however, by having the pictures curtained, and the curtains are padlocked every Saturday evening and unlocked every Monday morning. It has the result that it has not met Mr. Ellison's wishes, but it complies legally with the terms of his bequest.

2801. (Sir George Macdonald): Could you suggest a way of complying with the spirit of that bequest?—I should be extremely sorry to comply with the spirit of it.

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

2802. (Chairman): As regards circulation, your circulation department loans objects to how many of the 400 Museums?—About 80. We lend to about 80, and we give grants in aid of purchases to a varying number, 24 in the year 1925-1926, 21 in the year 1926-27, and 19 in 1927-28. That decline is not due to parsimony on our part but to local economy. It is always a percentage of the purchase price. I fancy the local authorities have been restricting purchases, and that is how the decline has been caused in the grants in aid.

2803. Do you suggest that the number of Museums to which you lend could be increased with advantage?—That I think is a little difficult to reply to quite definitely. We have at present definite conditions as to loans. We can only lend to Museums which have local collections of decorative art. Therefore, by the regulations of the Board of Education (and these are similar to regulations which were in being before the Board of Education came into existence, they date from early in the history of the Museum), we cannot lend cases of decorative art or even water colours to Museums which are solely picture Galleries. If that condition was altered, I think we could lend to a certain number in addition. I cannot speak at first hand, because I have not myself visited anything like those 400 institutions, and our staff is only directly acquainted with Museums to which we do lend. I gather from them that a very large number of the remaining 300 would be considered by us at present as unsuitable for the kind of loan which we make to a Museum. We have of course to be rather careful about safe custody and so forth, and I think we do at present stretch a point sometimes in lending to buildings that are not really safe from fire or theft.

2804. As a matter of experience have your objects been damaged?—No, I think not. There is damage, but it is not very much. We often get the frames broken and so on, but I think there has been extremely little, if any, damage to the actual objects. The loans to Museums are very much safeguarded. They are of material in cases. Our own people go down and arrange them in the case, lock up the case and take away the key, and then go down again at the end of the period (which is at present 14 months), unlock the case, pack up the contents, put in other objects and again take away the key. They are very much safeguarded. Of course if we did increase the number of Museums to which we lend, it would mean either a considerable lengthening of the period of loan or else a corresponding increase in the staff. I have no doubt the Commission is aware that the lending to Museums is only a part, although a very important part, of the activities of the Circulation Department, as we lend to something like 500 or 600 schools as well, but a different class of material is lent to schools; we only as a rule lend framed material to schools.

2805. Are you able under your constitution to lend abroad?—I do not think we are prohibited by any constitution from lending abroad, but there has been rather an increasing reluctance to do so, partly since the Brussels disaster in which we lost a very large collection of electro-types through fire. We have lent abroad, especially to the Dominions. I do not think we have lent to a Continental Museum of recent years.

2806. Has there been any proposal to make an exchange with Continental Museums by way of loan or long loan?—I think it may have been suggested, but certainly none has ever been officially put forward as a proposal.

2807. Have proposals been made to make the Victoria and Albert a central clearing house or a circulation department for all Museums?—Yes.

2808. What is your view about that?—I think if such a central department were created that our Circulation Department would be the obvious nucleus for it; for our experience of course is now considerable. On the other hand the difficulty of space

would at once come in. The space occupied by circulation is very inadequate. We had a meeting of the Advisory Council only yesterday, and one of the things brought up was a strong plea for further space for the department of Circulation for the more convenient inspecting of the collections; if other collections had to be inspected and packed at South Kensington, it would definitely mean an increase of space and it would also mean an increase of clerical and packing staff, at any rate, if it amounted to anything at all considerable. On the other hand I should be sorry to see the circulating arrangements divorced from South Kensington, because I think at present they provide very valuable means of contact between the provincial Museum directors and the staff at South Kensington; and they do avail themselves of that staff a great deal. They come up to South Kensington in order to arrange for loans, and also to bring their problems involving expert knowledge to the Museum to be dealt with by the staff. Of course if the circulating department was in some other place that would diminish; at least I think so.

2809. You have touched on the question of accommodation but having regard to the admitted disadvantage of making a very large Museum still larger, what do you say with regard to future accommodation?—I think myself that a certain amount of increased accommodation is very urgently required indeed, in fact is essential if the Museum is to fulfil its proper functions. We have always, as the Commission are probably aware, had our eye at any rate on the Royal College of Art Building. We now occupy something like 9/10th of a square, of which the remaining 1/10th, the corner, is occupied by the Royal College of Art and by that fine building of the Royal College of Science; and for all kinds of reasons that is clearly an extremely inconvenient arrangement especially from the point of view of safety. It is a great embarrassment and addition to our problems, although we ward those buildings at night. It so happens that the Library at South Kensington occupies the only Galleries with a north light, therefore, the only galleries that are really suitable for the Textiles collection. The Textiles collection is now on exhibit in galleries facing south and west, which get the maximum amount of sun, and it has to be kept in a sort of twilight at present. We have always very much hoped that the Library might be moved from its present situation either into the Royal College of Art building or some analogous building that is in the same block, and possibly that the department of Engraving, Illustration and Design might be moved too; if that were done, I think it would enable us to put our own house in order. Certainly in the case of the department of Ceramics, and to a lesser degree the department of Woodwork, the congestion now is almost intolerable.

2810. When you speak of putting your house in order, do you include the better exhibition of fewer objects for the public and the provision of better facilities for students?—I should very much like to include that if possible. I think it is an exceedingly desirable thing, and I think it could be carried out under certain conditions. It is a thing that I have naturally been thinking about a great deal for some time and particularly in connection with the various experiments in that direction that have been made in America. Of course, such a reconstruction, such an arrangement, is exceedingly difficult; and it is the general opinion of the American Museum people that it is impossible in a building that has not been specially constructed for that purpose. I think evidence is in favour of that from the fact that in my own opinion no American Museum, although several American buildings have been constructed for the purpose, has really succeeded in carrying it out. One department in Boston has carried it out in the way I should like to see it done, but only one. I do

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

regard it as a quite obvious ideal of the large Museum—particularly of the large Museum—and I should enormously like to see something of the kind attempted at South Kensington. There is an interesting parallel in theory in the new Museum at Philadelphia, where they are aiming at a main collection arranged on historical lines on the upper floor, while the collection on the ground floor is to be arranged (as our collections are arranged) on lines of material; an interesting suggestion. It has not been developed yet, and I am afraid I am not particularly encouraged by what they have done so far. I regard it as essential if that kind of arrangement is to be a success that the subsidiary collection—I do not know what you are to call it—the student collection should be quite as definitely accessible as the main collection. I think the public should be encouraged to visit the whole of the main collection and get some general idea of the scope of the Museum, but that it should normally be the ideal, at any rate, that most of the visitors should feel after they have been all round that they would want to see one subsidiary collection at least. I want them to feel if they are interested in metal work or woodwork that they can then go down and see the subsidiary collection; and be able to do that without ringing a bell or having to ask permission, and still more without having to have things got out for them. That is my criticism of the average American arrangements. As a rule you do not get access to subsidiary collections without a certain amount of formality, and that deters a great many people from visiting them.

2811. How would it affect your aggregate or total size if you reorganised on the lines we are discussing?—I think it is extraordinarily difficult to say with any degree of precision, because clearly you would lose a good deal. You would have to give more space. I imagine from the point of view of an American Museum official almost the whole of our collections are exhibited with a degree of congestion only suitable for a student collection. I do not think it would be much of an exaggeration, certainly not in the department of Ceramics, to say that it would involve a distinct extension of space for the display of the main collection of the masterpieces. Once we allocated that space, I presume it ought in theory to remain fixed, and that one would not add to the space at all, so far as the collection of masterpieces went. Such additions of objects as were made would not tend to be very bulky, and I suppose storage space is much easier to add to, and is much easier to introduce. It ought to mean, once you have got the collections separated, a relative fixity as far as that is ever possible in a Museum.

2812. Can you form any estimate of the cost of reconstruction?—I cannot, but I am afraid it would be very large. Of course, the chief item would be new case material. We are very much hampered at the present moment, to be frank, by the present system of supply of cases, which is not nearly adequate to our needs.

2813. You mean they are not sufficient?—As Sir Lionel Earle knows, the matter is at present in the hands of his department; the supply of cases was more or less taken away from our control and put in the hands of the Office of Works, and I think it is not unnatural that they should find it difficult to supply quite as much as we normally did in that way. I think, and here again American experience has confirmed my belief, that it is a very much better arrangement for a Museum to make its own cases than to be supplied from outside. Practically all Museums there make their cases, and they maintain that they make them at a very material saving.

2814. Actually make them, or order them?—Actually make them. We make some of our case material, but only a very small proportion.

2815. I think you have read the memorandum submitted to the Commission by the British Institute of Industrial Art and by the Design and Industries Association. Have you any observations on them?—Well, I have. I think it very difficult to comment on them at all briefly, and with regard to the British Institute of Industrial Art, I am myself one of the Governors, although I took no part in the preparation of that memorandum, nor did Sir Cecil Smith. I believe it was felt better that he should not be one of those who contributed material to it. As regards the general provisions in it, I cordially agree with the first two general suggestions, the suggestion, for instance, that the Museum should be kept open for at least two if not three nights until 10 o'clock. At the present moment we are open until 9 o'clock on two nights of the week. Before the War we were open until 10 o'clock on three nights, and I have always regarded 9 o'clock to be a mere stepping stone to 10 o'clock. I think it is a very bad hour to choose. In view of the normal meal habits of London, it means that many people cannot get in after their evening's meal; and as a matter of fact we do not get many people coming in during the latter part of that time. When it was open until 10 o'clock we did. I am also cordially in agreement with the insistence of not imposing entrance fees, of which they make a point. I confess I am very doubtful as to the third general suggestion that there should be a kind of new officer, a liaison officer, between the heads of industry and the Museum officials. I cannot help feeling that the access is now perfectly easy and that you are not going to do much in the way of helping such people to come and refer. I think such a post would be rather in the nature of a fifth wheel; I do not feel drawn towards it. As to the second part, that is a very interesting and elaborate suggestion of a division of Museum collections more or less of the nature adumbrated in your last question but one. I think it is too elaborate a suggestion as made by the British Institute. It implies that in addition to the ordinary division by material which we have now there should be three subsidiary collections; a departmental historical collection, and then a general Museum historical collection; and then a further historical collection illustrating the history of British art. I think that would confuse visitors enormously and really my criticism of the whole of that plan would be that it is quite impossible for any outside body to make such detailed suggestions as that. The suggestions in principle are most helpful and valuable, but nobody without very intimate knowledge is in a position to put them forward in such detail. The memorandum implies that the secondary rooms should only be opened on application; I disagree as I have already said; but on the other hand I agree most emphatically about what they say as to period rooms and I was very glad to see this suggested by another body. I have always believed that a period room is very valuable as an exhibit in itself, but far from satisfactory as a setting for other exhibits. I think that is the distinction I should like to make, and it means the same thing as they suggest.

2816. (Sir Lionel Earle): Are you not hampered in that by your bequests?—No, I do not think we have any bequest that implies that the things must be kept in a period room. I mean by what I have said that I think it is a very bad plan to do what certain Museums have tried to do, to furnish let us say, a Dutch 17th Century room and then hang a Rembrandt in it; because obviously a Dutch 17th Century room has not enough light to show a Rembrandt for Museum purposes; if for no other reason. As to circulation, I was very glad to see

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

their statement, because I think an improvement in local Museums is a pre-requisite of any considerable enlargement of the activities of circulation. It is on the whole probably up to the local Museums to take the next step in that sort of development. As to purchases of modern art, that report, of course, is exactly opposed to the report of the Federation of British Industries; I think rather naturally because the British Institute has tried and still hopes to undertake the task of collecting modern art and ultimately handing on such objects as may prove satisfactory to the Victoria and Albert Museum. They have been very much hampered in this by an almost complete lack of funds; but it is perhaps rather difficult for me to comment on that point. To be frank, I did not think the memorandum of the Design and Industries Association is anything like as valuable. To begin with it shows considerable misunderstandings of present conditions. There was one very important point on which I noticed a note by the Secretary, but there are others. As I read it, it seems to imply that every London Museum is closed on Saturdays and Sundays, which is an incomprehensible statement. There are various minor points that I found myself in disagreement with; the advocacy of the use of replicas to a large extent, and the advocacy of Departmental Advisory Committees, and so on. It seems to me that is a mere complication; and I am not at all sure that I agree with such whole-hearted advocacy of children's Museums. I have always felt that it is a little bit like the question of children's books, that the children who are most worth while, prefer the adult books (and the adult Museums) rather than those that are written down to them. A memorandum which I think your question does not explicitly refer to, the one by the Federation of British Industries, I think extremely good and a most useful report. The only thing with which I found myself in disagreement there, though regretfully, was the advice that Museums should purchase examples of modern art to a large extent. I think this so beset with difficulties that I should dissent from that recommendation.

2817. Then as a last question, what is your impression of American Museums?—I was frankly going to throw myself on your mercy with regard to that question. I am proposing to write a report for the Commission on my impression of American Museums, but it is only a short time since I got back and I have been rather occupied owing to having a meeting of the Advisory Council yesterday, which I had to prepare for; so I literally have not had time to put anything down in the way of notes.

2818. I think it would meet the views of the Commission if you gave us a written report?—If I might give it to you in writing I should be grateful to you.

2819. (Sir Lionel Earle): As regards cases, can you tell me whether, in your opinion, the cases supplied by the Office of Works are unsuitable for your Museum, or bad generally?—I would not like to go so far as to say that they were bad. We often have them looked at by our carpenters and they may, of course, take a prejudiced point of view. They generally say that they think they can make them better; and we have had a good deal of trouble with regard to locks, in those recently supplied cases. Very often the locks do not work well.

2820. Because, the Scottish Museum have always told me that since it was moved from the Works Branch of my Department to the Supplies Branch, they have been satisfied up to the very hilt?—I would not in the least wish to suggest that, taking it all round, the supply of cases, or rather the quality of the cases, is unsatisfactory, but it certainly is criticised sometimes.

2821. Of course, your own people say that they can make them a great deal better, that must be taken always with a grain of salt, because they are

naturally prejudiced?—I quite realise that. It is almost impossible to get an unbiased opinion.

2822. I am really doubtful whether they could make them cheaper?—They certainly think they could make them cheaper.

2823. Lord d'Abernon has asked you about a co-ordinating Committee. My reason for wishing for some body of that sort is that on some of these questions like cases, we get demands from the various Museums, yours, the Royal Scottish and the British Museum, and the Natural History Museum. They vary in quantity and I should enormously welcome some body of persons drawn from each of the Museums to whom I could refer such questions as whether it was fair to give £22,000 worth to a particular Museum and only £2,000 worth to meet the demands of another Museum? I find it extraordinarily difficult before going to the Treasury, which I have to do, to say whether the full demand, say, of the Victoria and Albert Museum should be passed or whether it should be cut down to meet somebody else's demand, owing to financial stringency. There is no means of my getting at that, but if I had some sort of Super Senate, Co-ordinating Committee, there are lots of things of that nature I would like to refer to them?—It seems to me a very difficult thing. A Super Senate would be in very nearly the same position as your own officials. It would be very difficult for them to say, even supposing you had on the Senate a Trustee of the British Museum and, let us say, a Member of the Advisory Council for South Kensington; presumably the Member of the Advisory Council would have satisfied himself that our demand was reasonable and the Trustee of the British Museum would be satisfied that his demand was a reasonable one.

2824. But they would know much more about it than I do?—Would they be able to come to an agreement?

2825. I think they would be able to make suggestions, saying that they really thought that this demand from one particular Museum was in excess of the needs for the year, in view of financial stringency, compared with the demands of a Museum somewhere else?—So far as that goes, I should, of course, be very glad to see something of that kind. I personally do not think that we are exacting in our demands. I think we are very economical.

2826. I do not say you are not. I was only talking of the extraordinary difficulty of getting at these demands?—I quite see your point.

2827. On this report that you have been referring to?—Which report is that?

2828. This is the report of the Design and Industries Association, page 9, their recommendation at the bottom of page 9, it says:—

"The present system of annual grants from the Treasury, which in many cases are notoriously inadequate, and which if not spent must be returned to the Treasury, is often a cause of wasteful expenditure. The money which is insufficient to purchase the best is spent on the second rate, in order to avoid a reduction of the grant which would follow a return of any part of a year's allowance. Any part of a grant not spent should be held by the Museum Authorities and a fund built up which would furnish them with the means to acquire the first-rate pieces as they come into the market. The grants should in all cases bear some relation to the market value of the first-class specimens likely to be required by the institutions for their collections. These increased grants would be met from the economy on fabric expenditure effected by the reduction in the extent to which the collections are exhibited."

—I think the answer is that it is based on a complete misconception. The Secretary's note at the bottom points out that this simply is not the case and the whole question falls to the ground. I take it that

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

the Treasury would not at all approve of our saving up our purchase grant indefinitely, and I should be very sorry as a matter of policy to do anything of the kind, but we always do make it a regular practice to carry over every year a certain amount; we are always within hand with our purchases. That is one of the definite misconceptions shown in this report.

2829. Have you any views as regards whether any further opening in the evenings is desirable?—Yes, I certainly should like to see three late evenings again as before the War.

2830. It is only a question of a little more expense?—I certainly should also like to see opening until 10 instead of till 9, and I should certainly like to see what I did propose and what you will remember your Department were kind enough to experiment over, a system of flood lighting at the entrance. I regard that as a most important advertisement. At present I am quite sure a great many people go past the Museum and see that the door is open but they think vaguely that perhaps it is only for some soirée.

2831. Would one of your evenings be Sunday evening?—That would present great difficulty from the point of view of staff, it would be very unpopular with the warders, and I think justly.

2832. They do it in America, do they not?—They hardly ever open in the evenings. I doubt if I have ever come across a Museum in America that did so regularly. They are all provided with an elaborate system of artificial lighting, which they only use on dull days to supplement the daylight. I think that is one of the most remarkable things I know. They very often say they think it would be an excellent idea, but it never seems to have occurred to them to do it. The new Museum at Baltimore has a very energetic young director, who assured me that it was going to be open in the evenings; but the building is not yet finished. So far I do not know of any Museum that is open in the evenings. I have asked at every Museum I have been to and they sometimes open for parties or for a lecture or something of that kind but regular evening opening is unknown in America, and indeed on the Continent so far as I can gather.

2833. The other question is that with your building as designed, it would be hardly possible to convert that, as it would be possible with the British Museum, by the removal of a great many of the exhibits—I do not think the actual design of the building lends itself to that?—I am so enthusiastic about such an experiment being tried, that I should be very sorry to give you an affirmative answer to that. I agree that it would make it exceedingly difficult.

2834. Much more difficult than in the case of the British Museum?—I entirely agree; much more difficult; but is it really impossible in some modified form? I should be very sorry to believe it is impossible.

2835. I think the Commissioners would be only too glad to do anything of that sort because we have had abundant testimony showing that at Museums although containing the most brilliant material in the world, people do suffer from Museum ennui due to the excess of things shown?—There is another way in which I think we to some extent differ from the British Museum, that the British Museum is so clearly divided into Departments that it is possible to go definitely and see, let us say, Greek things; the fact that there are Mediæval or Assyrian things under the same roof does not confuse your outlook. There are several separate Museums as it were under the same roof. That is one way of dealing with a very large Museum, but that too is very difficult to carry out, as the experience of the Metropolitan Museum at New York shows, as well as our own.

2836. Some people have written to us that one of the most beautiful Galleries that they know is

the Italian Renaissance Sculpture at the Victoria and Albert Museum?—I am glad they should say so.

2837. As regards your loan collections, provided you are certain that the Museums are ready to receive them and decently look after them and provide decent buildings, are you satisfied with the loan collections you send out, that they are of sufficiently high quality, or do you think they could be made better from the point of view of education?—Of course they can be made better. That, I think, is almost axiomatic, but I think they are of a very high quality and, indeed, of a much higher quality than the ordinary member of the public realises. You have to remember that the London public has no opportunity of knowing about them. It is only within the last year or so that I have started, just as a very small thing, one case or sometimes two cases of purchases made for circulation being shown among our new acquisitions in the Central Court of the Museum; otherwise the purchases made for circulation are never shown in London. Certainly the Ceramics and Textile collections, it seems to me, are both of first rate quality. There are really some very good things in them. Of course they do not include the sort of £1,000 Italian majolica plate; they cannot. The silver collection is no doubt less good, because of the expense involved. However, we have got a very good collection of electrotypes; and I think that our method of sending a case of electrotypes with half a dozen original examples does make the electrotypes very valuable, which they would not be to that extent if they had no originals with them. The collection of water colours is a pretty good one, but the outstanding collections I think are the Ceramics and the Textile collection; there is a much greater demand for them, we find, than for anything else and they certainly make a very fine effect.

2838. (Chairman): The greatest demand is for what?—Ceramics and Textiles.

2839. (Sir Henry Miers): On the question of the Circulation Department, it is the most congested part of the Museum at present, is it not?—Its congestion is periodic rather. There is a sort of tide, and the high tide is in the middle of the summer. Its congestion then is appalling.

2840. It has a separate staff entirely, has it not?—Oh, yes.

2841. Would it be far more convenient if they were housed outside the Museum rather than inside?—Emphatically not, for many reasons. Emphatically not for the benefit of the Provincial Museum officials, because by coming to the Circulation staff they are in immediate contact with the Departments. Then, of course, all purchases made are made by departmental officers in the last resort; that is to say, the head of the Circulation Department very often selects objects, but no object is ever purchased for circulation except on the express recommendation of the Keeper of the Department concerned, so that there is continual passing to and fro of objects submitted for purchase. It would be highly inconvenient in that way.

2842. It seems to me what you want in that department is a very large increase in the space designed for ordinary museum exhibition?—I entirely agree with you.

2843. Which you cannot find within your own walls?—It is very difficult to find within our own walls; but I have tried to indicate in a previous reply that the disadvantages of the divorce of the Circulation Department from the Museum would, I think, be great.

2844. I was thinking of some place in the immediate neighbourhood if possible?—That I would be in favour of.

2845. At present the Indian section is away from the Museum; there is a certain inconvenience in that, I suppose?—Yes.

2846. Would it be possible to house what is necessary of the Indian Collection in the space now

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

occupied by the Circulation Department?—I am afraid not, because so much of the space occupied by the Circulation Department, as you will remember, can hardly be described as exhibition space. It is storage space in which collections can be inspected; it does not amount to very much more than that really.

2847. As regards the suggestion made that the Museum should act as a sort of clearing house for the museums of the country, I take it that might mean only administratively, that is, the circulation of the materials could go through each museum and be done by the museum itself, but you would act as a central co-ordinating body?—At present I think I am right in saying that no other London museum has any machinery at all for the purpose. I understand that when loans are made from the Tate Gallery, for instance, the machinery rests entirely in the hands of the borrower; the provincial museum which is borrowing the picture has to send and fetch it, that is what it comes to. It is handed over to a representative in the Tate Gallery. There is no machinery, so far as I know.

2848. Would it be possible to act in that capacity for other museums? Would it be possible for them to run their own circulating system, co-ordinated by the Victoria and Albert Museum?—I think so. Of course, so long as the circulation done by other museums was on a very small scale, we could, to some extent, undertake it, but our circulation of objects is regulated by a very elaborate geographical scheme in that we send to a group of museums which are geographically connected, so that suppose a public gallery wished to lend a picture to Manchester, it would be quite possible that we should not have a man going to Manchester for eight or nine months.

2849. Then with regard to the purchase grant, that has been cut down in recent years, has it not, the grant made for purchases?—The grants made to local museums for purchases, the grants-in-aid, a percentage grant. That used to be before the war £1,250 per annum. In, I think, 1922-23 it was cut down from £1,250 per annum to £10 per annum under the axe of the spasm of national economy, and it remained for three years at £10 per annum. Then recently, in, I think, 1925-26, it was raised again to £1,000, and there it has remained.

2850. I have heard so many complaints from the provinces that they wished there was a larger purchase grant and that the smallest museums could make more use of it?—I am afraid the provinces often think that the purchase grant ought to be applied for absolute purchase, and hitherto we have only given a percentage; it is 50 per cent now. We did not altogether stop purchasing during the lean years when we had only £10, because we had a certain sum in reserve and we did our best, but, of course, it very much reduced the possibilities.

2851. (Sir George Macdonald): I would like to ask you whether you have any suggestion for getting over the difficulty about bequests, but I gather you have nothing very practical to suggest?—I am afraid I have nothing to add to what I said to the Chairman. On the whole, I believe the difficulties arising from bequests to be so great that it would be wise to try and seek some legislative relief, in spite of the fact that there can be no question that any such demand would involve the loss of a certain number of prospective bequests.

2852. On the matter of quasi-permanent loans—you mention in your memorandum the Gibbs Collection at the British Museum, and you mention certain pictures in the National Gallery—you indicated that the Victoria and Albert Museum always got the worst of the bargain?—I think it has tended to get the worst of exchanges, yes. In the case of the British Museum we transferred to them on this system of practically permanent transfer the very valuable Gibbs Collection, part of which would

be of the greatest possible use to us. We transferred to them a large collection of Swiss coins, and we have made various other transfers. We have never got anything whatever in exchange. It is only fair to say that they are unable to give us anything in exchange.

2853. I was asking that question because we heard from the Director of the Royal Scottish Museum that a few years ago the Victoria and Albert Museum had stripped a great many of his cases of objects on permanent loan, some of which had been there 30, 40 and 50 years?—That is perfectly true.

2854. Does that policy meet with your approval?—I had nothing to do with it. The reason was that we were called upon to have a general stocktaking; that was the origin of it, and when the collections were being examined I think it is the case that a certain number of objects which had been on loan for many years to the Royal Scottish Museum were re-demanded by the Victoria and Albert Museum.

2855. They were re-demanded, and are they being exhibited now in the Victoria and Albert Museum?—I think so. I am afraid I shall have to look up that question, and I can let you have a definite answer.

2856. I am afraid my information is that they are largely in store under cover in the Victoria and Albert Museum?—I certainly did not know of that.

2857. I think that is worth while looking into. It has been a very serious matter for the Royal Scottish Museum, seeing that they have all these years refrained from purchasing objects because innocently they were assuming they would remain in undisturbed possession of them, and now their opportunity to purchase has gone?—If I may, sir, I will have that point looked up. Shall I let you have a reply personally on that point?

2858. I think it is probably sufficient if you would. Now about your Circulation Department. We have had various representations, both by witnesses and by memoranda, in regard to that. One complaint which is made in the memoranda we have received is that the charges for transport and so on are a very serious burden upon the local museums. Have you made any alteration in regard to those charges lately?—I think, though I am not sure, that comparatively recently the percentage of the cost of transport paid by the local authority has been increased.⁽¹⁾

2859. What was the justification for that?—The demand from the Treasury that it should cost less, if possible.

2860. Do you think yourself that that demand was justifiable? I am trying to put the point of view of the other people?—I think it is not unreasonable that the local authority should pay a percentage of the cost of transport, and insurance, which is all they are asked to do.

2861. By the local authority you mean the ratepayers of the district?—Yes.

2862. As ratepayers they are also taxpayers, and they also contribute to the other?—Yes, they do.

2863. So you make them pay twice over?—In a sense I suppose we do.

2864. Do you think that is right?—Considering the amount is not very large in reference to the benefit conferred, it does not seem to me altogether unreasonable.

2865. And does not the amount vary with the distance from London?—Yes.

2866. So that really museums at a distance from London are penalised as compared with those nearer?—Yes. I should be entirely willing to accept any alternative system. This arrangement confers no benefit upon us.

⁽¹⁾ In 1921, in view of the increased cost of transport, the previously existing flat rate of 50s. per van was abolished, and instead the local authority was called upon to pay half the cost of transport to the town, as well as any local charges.

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

2867. I understand that. It is not a matter that rests with you. You think there is something in the point that museums at a distance from London are unfairly penalised?—I think there is.

2868. And that there might be a reasonable argument for suggesting that in the case of a museum at a great distance from London it might pay a smaller percentage of the cost?—I think, frankly, if I may say so, our tendency has been always to do what we could in the way of providing these facilities gratuitously. Until very recently, until only last year, we made our loans of lantern slides gratuitously. It was only last year that we were compelled by the Treasury to institute a fixed charge⁽¹⁾ for the loan of those lantern slides.

2869. Then we have criticism, not from the man in the street, but from a rather important official, to the effect that the quality of your Circulation Department has deteriorated lately owing to a change of policy. Do you think there is anything in that?—I should be very much interested to know on what anyone would base that charge. You will probably know that until 1908 the whole arrangement of circulation was different in the sense that the entire contents of the Museum were drawn upon for circulation, with a proviso that the most important objects were never loaned; but there was no schedule of objects which could not be loaned and it led to a certain amount of friction between the circulation authorities and the departmental museum authorities. It was, I think everyone would agree, a very bad arrangement; because if some head of a department had gone to a good deal of trouble in arranging a case of textiles, for example, a fortnight after the case had been arranged Circulation would come down and remove one of those textiles for Bradford or somewhere; so that at the reorganisation in 1908 a separate collection was set apart for circulation. At the present moment as much is allotted for expenditure on that department as on any other in the way of annual purchases. I should be very much interested to see how far a complaint of the kind you quote was founded on fact. It is very difficult to get at the facts. I do not see how the collection can in any sense have deteriorated since 1908. Now and again an object is exchanged out of the circulation department into one of the museum departments for a *quid pro quo*, but that is a relatively rare thing; and certainly the new acquisitions have met generally with rather high approval.

2870. I think it is fair to say that the gentleman did not adduce any serious grounds for it, when he was asked to give them. I merely wished to ask whether you were aware of any change. With regard to your grant in aid of purchase, we have had complaints made that your percentage system results in only the rich being helped?—I am afraid to some extent that is true.

2871. To him that hath shall more be given?—Yes.

2872. You have no variation of the percentage arrangement?—It is our regulation, we are not allowed to increase it at the present moment above 50 per cent. Of course if we once began varying it, it would be extremely difficult to differentiate, and immediately we should be overwhelmed by demands from every museum in the country that we should purchase absolutely objects and give them; and with the very small sum at our disposal, £1,000, I do not quite know how we should manage.

2873. That would be your answer?—I think it would be difficult. I am quite willing to admit that there is hardship in that sense.

2874. You say in reply to the questionnaire that it is doubtful whether the number of eighty local museums can be much increased "safely" and "usefully." By "safely" I take it you mean that

in the other museums the arrangements for custody of your objects and so on are not satisfactory?—I think that any answer of that kind has to be taken as more or less provisional because I am sure no one in our Circulation Department would claim a knowledge of all those four hundred institutions. I think they were judging from those with which they are acquainted.

2875. That is what was in your mind?—Yes. I might perhaps just say that the reply was sent in my absence, so that though I read it I was not actually responsible for drawing it up.

2876. What was the point of the other adverb "usefully"?—I should say, on the same lines as the criticism by the British Institute of Industrial Art, that there are so many museums which are apparently lifeless that it would really be hardly worth the considerable trouble and expense of sending down a couple of cases of decorative art to put up in company with a merely miscellaneous collection.

2877. Would you agree that if the system of loan were to be extended at all, it would be an advantage if the central museum had some sort of system of, shall I say, inspection of the local museums?—I do not see why the inspection should be more frequent than that involved by the change of objects which is, of course, what is done now.

2878. Does one of your officers go down?—In every case and in every case writes a report. We have a report every fourteen months on every museum to which we lend; although often the report is only in a few words "conditions remain as before" or something of that kind.

2879. I want to put to you one or two points about the function of the Victoria and Albert Museum. Your original function I think, according to the official statement, was to provide models for and otherwise aid the improvement of such manufactures and crafts as are associated with decorative design. One sometimes hears it said that the Victoria and Albert has become a mere museum for connoisseurs and collectors. Is there any basis for that charge?—I think it would be fair but for the insertion of the word "mere." It seems to me that that is a definite example of what I should be tempted to describe as biological rather than logical growth. A museum of that kind does inevitably take up certain lines which may in origin have been based partly on what one would call accident. I can conceive, for example, that logically it might be said that there was not much place for a great collection of Italian Renaissance Sculpture at South Kensington. I suppose the answer to that is that in 1860 an opportunity offered itself for acquiring a magnificent collection of Italian Renaissance Sculpture. Presumably either the British Museum or the National Gallery might then, with equal logic, have purchased it, but it so happened that they did not, and it was bought by Charles Robinson for South Kensington and has, of course, developed.

2880. So that the lack of accommodation you are feeling such a difficulty now is probably due to the fact that the Museum has expanded beyond, I won't say its proper function, but the function it was originally designed to serve?—I suppose in a sense you might say that the original designers of the Museum intended to buy examples of what was then modern art; and it is a curious fact that during the first years of the Museum almost all the purchases which cost over £100 were of modern art. I tried to make a little enquiry into this a good many years ago to satisfy my curiosity, and I found that hardly one of the first lot of £100 purchases that I could find was at that moment on exhibition.

2881. I gather, for instance, that what I think you regard as one of the most important functions of the Museum, the education of the purchaser, was no part of the original plan?—No, no part of the original expressed plan.

(1) NOTE.—This charge is waived in the case of state-aided Educational Institutions, which we have interpreted as including Museums.

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

2882. But actually in your view it is one of the most important functions of the Museum?—I certainly think it is.

2883. I gather you are not disposed to agree with the memorandum of the Design and Industries Association?—In what respect?

2884. In many respects. Let me put to you one point. They say that the problem of the extent of the present exhibits could be dealt with by clearing out the greater part of what is now shown?—I do not agree with that at all.

2885. You do not think that the Museum is overcrowded in any way now?—Yes I do. I think it might perhaps profitably be divided into two classes of exhibit and that it should be possible for a visitor to see only selected exhibits, but I should like, if possible, that he should be able to see the others as well.

2886. What you want is two Museums in one?—What I want is a Museum on two floors; if I might have my choice, two parallel floors.

2887. That would be two Museums in one?—It would be a Museum in two or possibly in three sections.

2888. The Design and Industries Association are not the only body who have represented to us that there is far too much exhibited. We have a memorandum from the Sudeley Committee which is very emphatic on that head. "The original purpose has been lost sight of and the Museum has tended to become dependent on the British Museum, carrying on with the historical sections from the point reached by the British Museum"?—That is a quotation, isn't it, from the Design and Industries report and I should say that was based on a misunderstanding. We have not at South Kensington tried particularly to collect objects from a date following on the British Museum. We have been just as keen on buying Mediæval objects of art as Renaissance objects of art. That seems to me simply not to state the case. Similarly the British Museum in certain departments such as Ceramics has paid just as much attention to the eighteenth century as to the thirteenth.

2889. The official memorandum, for which you tell us you were not responsible, but with which no doubt you generally agreed, admits overlap in Ceramics and one or two other subjects—engraving, illustration and design. Is there any general principle of distinction at all as between the two Museums?—There are departments in which it seems practically impossible to make any distinction about the objects purchased, such as Ceramics and the small special section of ivories. It seems to me that any given ivory or any given pot is just as suitable for the British Museum as for the South Kensington and *vice versa*. In the case of water-colours I think there may be a sort of rough distinction. It is possible that the same kinds of engraving are bought—obviously there are duplicate engravings—but I think it is extremely unlikely that there would be any kind of difficulty arising from such overlap.

2890. I am afraid I have not made my question quite clear. You have got a group of ivories and a group of examples of Ceramics at the Victoria and Albert Museum; you have another in the British Museum; what is the difference between them? They do not duplicate?—They do in many cases duplicate.

2891. But as a whole?—I think the difference is in the point of view from which they were collected. Taking it in the main I should say that the ones at South Kensington are exhibited mainly from the point of view of the instruction of the designer and craftsman and of æsthetic pleasure to the visitor, whereas the ones at the British Museum are exhibited mainly from the point of view of history.

2892. And you agree with that?—I think so.

2893. Then you also agree with the memorandum of the Institute of Industry and Art, except on the points you have referred to?—On the whole I find

myself in pretty close agreement with that memorandum.

2894. But they recommend the establishment at the Victoria and Albert Museum of a serious historical collection?—As you know, I think the detailed recommendations are unnecessarily complicated.

2895. This is not a question of complication, but rather a question of scope?—So far as I understand that memorandum—it is one I have only just had time to read through again since I got back—so far as I understand it they recommend an historical collection in Ceramics, let us say, another historical collection as representing all the arts together, and then a third historical collection as representing the arts in England. I think that is very complicated.

2896. I think they wanted an historical collection of each of the principal sections?—They did. I was taking Ceramics as being one we happen to have mentioned, but the same would apply for metal work and everything else; and I think that very complicated. I think it would be extraordinarily confusing to the public.

2897. Are you satisfied, if you take Ceramics, that there is no unnecessary duplication of individual objects as between yourselves and the British Museum?—I should feel bound to answer that there is a certain amount of duplication; you may find a definite object exists in both collections; you might find—let us put the blame on my side so to speak—that South Kensington might have acquired an object of which a duplicate already existed in the British Museum. We would consciously avoid doing that, but I would not regard even that as a necessary condemnation. It seems to me that in a town as large as London, with such different publics as you have at South Kensington and Bloomsbury, it is not altogether unreasonable that they should be duplicated.

2898. Let us suppose that each of those two collections was to continue—I am taking Ceramics by itself—to be developed on its present lines and it was possible to have a single Keeper in charge of the two, do you think that it might lead to avoidance of duplication?—I cannot conceive how it would be possible, if only for geographical reasons, to have a Keeper in charge of both.

2899. Sir Frederick Kenyon is now in charge of Natural History?—But surely in a very remote way; it does not prevent there being also a Director of the Natural History Museum.

2900. It means a very important officer there and obviously there would require to be an important officer in each case. You do not think a combination of that kind would be an advantage?—I confess it would seem to me, from a geographical point of view, quite impracticable, whichever side the chief officer was.

2901. On geographical grounds?—Partly on geographical grounds and partly on the ground that when collections have got to that size it becomes proper to have two real experts, one in each museum; I can conceive of either Mr. Hobson or Mr. Rackham being admirable on either side, but it is clear that Mr. Hobson has no detailed knowledge of the contents of the South Kensington collection and to begin with he would have to devote a very long time to a detailed study of that.

2902. I think if the experiment were tried under present circumstances you would require to have a joint directorship of Mr. Rackham and Mr. Hobson to begin with?—I have always felt, on this question of overlapping, that it was largely a question of more or less accidental personal temperament. You do not as a rule tend to have two people, one at each museum, with closely similar interests. The museum departments are so wide that it would very often happen, for instance, that you would get a man at the British Museum with a particular penchant for Chinese porcelain and a man at South Kensington

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

with a penchant for European porcelain, each developing their own collections. If by accident you get two with the same kind of interests—

2903. I have not much sympathy with the geographical difficulty because I have an office in London and one in Edinburgh. You spoke and I spoke of the question of the combined keepership. I was thinking of the possibility naturally of something in the nature of a common government for them both. In speaking of the advantage or disadvantage of being associated with a government department, you spoke of the Board of Education and the management of the Victoria and Albert Museum. We have had suggestions made to us that all museums should be under the Board of Education. I rather gather you would sympathise with that view?—I should sympathise with it very heartily myself. I am speaking here and at all times personally. I do not wish in any way to commit the Board of Education to my view.

2904. You put it on three grounds; first of all, matters of establishment and so on are much more simple to deal with, is that so?—I think they tend to be.

2905. Also the question of estimates?—Yes, I should have thought so.

2906. It is rather easier when you get upon a big vote to keep your end up with the Treasury; is that the idea?—I was not altogether thinking of it from the point of view of the immediate advantage to the Museum. It seems to me to be an arrangement which might, in cases where the Museum was opening its mouth too wide, be to the advantage of the taxpayer; Trustees might be more willing to put claims forward.

2907. The third reason was, I think, the Board of Education had no expert knowledge of the subject they were supposed to be dealing with?—That I should not accept at all. As far as the question of purchase is concerned, clearly it would be unlikely that members of the Board would regard themselves as possessing any kind of expert knowledge which would rival that of heads of departments in the Museums.

2908. I know when it comes to purchases over a certain sum you have to go to them for an opinion?—Yes.

2909. Now what is the logic of that?—Surely, I think, their opinion is given on the ground of policy and on the ground of fairness to different Departments of the Museum, but not so much on the ground of the quality of the object. As a rule the normal procedure is that the head of the department, or perhaps another official of the department as well, writes a report on the object, and that is supplemented by a further report written by me and that goes to the Board of Education; I may then receive comments on this report that it does not seem that a case has been made out for this purchase.

2910. Speaking personally you prefer the idea of Government Department control, rather than the Trustee system?—I do personally; I think it has its disadvantages but on the whole, I do.

2911. You would put all the Museums under one department?—I think if I were given absolute powers, that is the direction I should move in. I should want a little notice of the question as to the method.

2912. Now you mentioned the Museums Dining Club, does that include all the Museums?—It includes only Museums that have to do with art in some form or another.

2913. The Keeper of the Natural History Museum?—He does not belong to it. I do not think as a matter of fact we have many provincial members of it, but there are some of the Directors of Museums outside London.

2914. But does it not rather point to a distinction between two classes of Museums?—I think it was chiefly because it was felt the problems that could profitably be discussed would be limited to those.

It would be difficult for Natural History problems to be discussed.

2915. While you do not have the heads of any of the Science Museums, you have the heads of the National Gallery and so on?—Yes.

2916. So there is a group of institutions which falls into one category and one that falls into a different category?—The Dining Club is purely a private concern.

2917. I have only one other point to ask you. Yesterday we had witnesses here who put the following point before us in regard to the Indian Section of the Victoria and Albert Museum—"It contains much that should be in a Museum of Ethnography and Archaeology; collections have been exhibited under unsatisfactory conditions." Now what have you to say there?—I should plead guilty to both indictments; but part of it is the old Indian Museum which was the property not of the Board of Education but of the India Office, and it was handed over on the condition that it was kept intact. It is perfectly true that a great deal of it is ethnographical, and I think by a tacit understanding the Department of Ethnography at the British Museum passes very lightly over certain aspects of Indian ethnography because it is represented in the Indian Museum. It is on a somewhat different footing from the other parts of the Museum. It is not just a branch of the Museum dealing with India.

2918. That covers the first part. Now what about the second part of the indictment, that the conditions are unsatisfactory?—I think in so far as the conditions are unsatisfactory, it is partly because of that ethnographical element. An attempt was made to arrange the Indian Section on a basis of material in order to make it accord with the departments of the main Museum and the ethnographical interest (for example, the wishes of visitors who came and wanted to see what was worn in a particular province where their son was stationed) conflicts with this.

2919. You think the accommodation available is reasonably good?—Compared with the general standard of adequacy for space, it is awkward but not altogether inadequate.

2920. (Sir Richard Glazebrook): In the earlier part of your evidence you said that you rather preferred if a Trustee system was introduced, that the Trustees should be generally men of experience, and so on, rather than experts?—That is so.

2921. Is it not the case of the British Museum that there are a considerable number of experts on the Board of Trustees?—I am not really competent to answer. I thought the original idea as to the British Museum Trustees, as I understand it, was that they were not selected for expert knowledge. It is quite possible that idea has been modified.

2922. Then you have spoken with some agreement to the idea that there should be in some way a co-ordinating body for Museums, and you have said once or twice for all Museums. In reply to my neighbour you did differentiate between the Science and Art Museums. When you say all Museums did you include both Science and Art?—In both cases where there is a Science Museum in London, that is to say, the Natural History Museum and the Science Museum, they are already linked with an Art Museum, in the one case with the British Museum and in the other with the Victoria and Albert Museum; so I should have imagined any common control would have to include a Museum like the Natural History Museum or like the Science Museum. It would never have occurred to me to put them under another control.

2923. There might be a co-ordinating body, one for the Science and the other for the Art Museums?—Until recently the Science Museum and the Victoria and Albert Museum were very much under the same control.

2924. Then you were anxious, I think, that your subsidiary collections should be completely open to

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

the public. Have you any kind of idea of the proportion of visitors that would want to use these subsidiary collections?—No, I am afraid I have not.

2925. You have not got that, of course?—We have not got that, and, as I tried to indicate, I was in some sense disappointed to find in America how far any American Museum was from having carried out the system in its completeness. The Greek and Roman Department at Boston was nearest to it.

2926. Don't you think it will be a very small proportion?—No, I think a considerable proportion.

2927. Who would wish to go into the study collections?—If I might take an example (it has always seemed to me one that illustrates the difficulty), you would divide your Greek Vases. You would have 20 or 30 Greek Vases of the finest artistic quality in your chief upstairs department, and you would have three or four hundred of less artistic merit elsewhere. You might find people going there did not go to see the work of the finest artists, but to see what the costume of a Greek woman was like at a certain period. They wish to see all, not merely the selected articles. Or a person might be going to study the shapes of vases; or some detail of technique. I think the idea should be that the general visitor who wanted to get an idea of the Museum should be able to go to the main collection and see the masterpieces, and should not feel he had missed anything worth seeing; but I imagine a great many of the more serious visitors to the Museum would visit at least one subsidiary collection, though possibly not more than one.

2928. A great many of the more serious visitors; are they not a small proportion of the whole?—I have sometimes thought that we exaggerate the number of non-serious visitors to a Museum. It is very difficult to say.

2929. Have you lifts at the Museum?—Yes.

2930. Are they open on Saturday afternoons and Sundays?—They were open till quite recently and now, I am afraid I am myself responsible, under some pressure I think they are closed on Sundays, only after 5 on Saturdays and Thursdays, when the Museum is open from 5 to 9.

2931. Would it be an advantage having them open longer hours?—It means a considerable relative expense to the number of people using them. I am ashamed to have to say so, but after being absent for some months I am not quite certain whether they are open on Sundays or not.

2932. I happen to have heard some difficulties at the Science Museum only yesterday caused by the fact that the lifts are closed there after 1 o'clock on Sunday and on Saturday?—I am practically certain our lifts are not closed on Saturday afternoon, but whether they are open on Sunday afternoon I am not certain. They were until a year or 18 months ago, but there was some change made in the lift arrangements recently, and I am afraid I have forgotten in detail what form it took.

2933. (Sir Robert Witt): On the question of bequests and legislation on which you have already given your views, I gather on the whole you are prepared to take some risks in the way of losing possible bequests in the general interests of the Museum?—I do not think anyone can discuss the possibility of legislation who is not prepared to take not some, but very considerable, risk.

2934. There have been some in the case of the National Gallery's legislation which has enlarged the powers of loan. Can you recall any instance of a bequest which was lost to the nation on that account?—I cannot at first hand; I have heard stories of such losses.

2935. Passing to the question of students' rooms, I was rather surprised to hear you say that you thought it was essential that the public should have access to the students' rooms. Perhaps your last answer on the question explains my difficulty. I

gather you do not mean that there should be general access of the public on all occasions, or at all events it would not be much used, would it?—I did mean precisely that I should like to see them open in just the same way; that is to say, in the ideal arrangement you should have the top floor, which should contain the cream of the collection, and a bottom floor, which should contain the remainder of the collection and which should be open in the same way as the top floor.

2936. Open in the sense that you did not have to ring the bell, but surely not as accessible. The study rooms, I take it, would be full of tables and chairs?—No. In the case of the Greek Department at Boston there the study rooms bear a remarkable resemblance to the public rooms of the British Museum. They are crowded with objects to the same extent, but not more. There is a room downstairs which contains some hundreds of terracotta figures and vases and there are some dozens upstairs, but they are in wall cases and standing cases and the public has just as free access to them.

2937. As regards free access, but surely the essential difference would be this, that in the one room, in the exhibition room, you have the few objects as well displayed as possible and the one room arranged for that purpose with the idea that people should walk through, but in the other case you would have a room arranged from an entirely different point of view with the idea that any specialist or person seriously interested should be able to sit down, study and handle those vases?—No.

2938. And that consequently that room, it would not be desirable that room should be crowded by people continually passing through merely with the idea of satisfying their curiosity as to how many vases there are?—I am afraid I do not agree with you. My point of view is quite definitely the reverse of that; and in the case of Boston it is, I imagine, no easier and no harder to have a vase got out from the upstairs big room or from the downstairs room. There is the exact opposite of that in the Department of Oriental Art at Boston, where they have, perhaps necessarily, an arrangement which in my own case prevented me from seeing the larger number of the paintings.

2939. (Chairman): Access is difficult?—No, it is very easy; but in order to see the Chinese paintings you have to see an officer of the department and you have to be admitted, which you are most freely and generously; and you have an attendant allotted to you to open up box after box and case after case, and to show you painting after painting. That is ideal with the serious student, but the casual visitor (which I should consider myself in regard to Chinese painting) is almost inevitably deterred from taking advantage of it.

2940. (Sir Robert Witt): Is not that perhaps a necessary corollary to having a vast amount stored in a limited space?—Yes.

2941. And therefore to that extent inevitable?—I think it is inevitable to some extent, but I think a Department of Engravings which exhibits no engravings, though it has them all accessible, is not fulfilling its duties to the public; and I think in regard to Chinese paintings it would be conceivable, if space allowed, to have all the more important ones accessible, at any rate on screens that an unattended person could pull out. I do not think any other arrangement can be considered an ideal one.

2942. You have an Advisory Council at the Victoria and Albert. I believe you are the only Museum which has such an institution?—I do not know of any other except the Science Museum.

2943. The members of your Committee are appointed, I think you said, for six years?—Yes.

2944. Do you think that preferable to an appointment for life?—I think the idea was—it certainly has worked out in practice in much this way—that they are eligible for re-election at the end of six

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

years and if they attend the meetings they are normally re-elected. We have weeded out a few because they practically never attended the meetings. The body was appointed in 1913 and the majority of those original members who have survived are still members.

2945. Would you agree that that system of appointment every six years does enable you to introduce new blood from time to time?—Yes.

2946. And would you be in favour of that system as opposed to life appointment in the case of, say, bodies of Trustees?—So far as I have any experience (it is a relatively short one), I should say that system worked well. I imagine there is always just that difficulty; if you appoint a person for life it may turn out he is not much interested and does not attend, and you may be keeping out a valuable Trustee by that means if you have a fixed number of Trustees, so I should have inclined on general grounds to some such system as ours.

2947. Just a question on publicity. Do you not think there might be more time and money devoted in the different Museums to what is generally now known as publicity, that is to say, in attracting the public, in making it known what there is in the place and in definitely trying to draw them into it?—If I might differentiate in my answer, I should say I think we might profitably spend more money; because I think there are certain very obvious and easy means of publicity which, if a little money was available, could be made use of without involving any further expenditure in time on the part of the staff. I should myself be inclined to say that what I was able to observe in America led me to believe that an undue proportion of time tended to be spent in America by the staff on what you might class as publicity. That was my personal impression.

2948. You have referred, I think, in your evidence or questions have been addressed to you in regard to the co-ordination of the different Museums; would you be in favour of publishing a Museums Bulletin or periodical common to all the Museums. I think I am right in saying the British Museum has recently started one, but that apart from your very excellent Review of Accessions for each year the Victoria and Albert Museum publishes nothing precisely of that kind; what I am suggesting to you is whether a joint Museums Bulletin to which each might contribute something, which therefore would appeal to a large section of the public and might be made interesting by illustrations and by scholarly articles, would not only attract public attention but in a certain sense co-ordinate the different outlooks and different achievements?—I doubt its doing much to co-ordinate outlooks and achievements. I think it would in itself be a desirable thing; there would be considerable practical difficulties in the editing of it. I think it is possible the British Museum system is the better one, but our Review of Accessions and their bulletin do cover, in something the same way, the same ground. Four quarterly volumes of their bulletin bulk about the same; I am not sure about that, possibly they are larger.

2949. No?—As far as illustrations go, it would be about the same. I think it would be difficult to work, and possibly it might result in scrapping two organisations which are each useful in their own way; but I am in no way opposed to it as an idea.

2950. Just one other question. I think all the Members of this Commission and everyone connected with Museums are very much impressed with the importance of the potential benefactor, especially in view of the examples which we have heard of in other countries, particularly in America. Do you think more could be done in the way of attracting benefactors and large benefactions by possibly some system of honours or at all events public recognition in some way, perhaps co-ordinated among the different Museums and brought together into some channel from which honours flow?—I cannot

imagine any step that would be more useful in the way of attracting benefactors. I suppose we all of us are aware that there are a great many potential benefactors who would be enormously gratified by some recognition, not necessarily of the most exalted kind. If there was some machinery by which the Directors of the main London Museums, three or four or five people, without in any way giving a promise that their recommendation would be accepted, could be authorised to recommend someone between the lot of them once a year, or something of that kind, it would go a long way. There are obviously quite definite instances which it would be indiscreet to quote. If they were able to say, "Probably an opportunity will occur sooner or later when I shall be able to put your name forward, and I shall certainly not fail to do so," it would be very helpful. At present there is no machinery for doing that at all generally.

2951. (Dr. Cowley): I have only one small point about those show cases which you were speaking of. You have a staff of workmen?—Yes.

2952. Who do fittings?—Yes.

2953. What does that consist of?—I am afraid I could not off-hand quote the number. They make the fittings as a rule for the cases, and in certain cases, when a quite new type of case is made, they make the case which to some extent can serve as a model for an outside contractor who is going to supply the demands, but it is a case which will be used and will indicate the kind of thing required.

2954. I was wondering if you made them yourselves, as you rather suggested, whether it would mean a largely increased staff?—It would mean an increase. In the Estimates, as far as I remember, we take something like £2,000, or we did in the last financial year, for the average kind of fittings; we make pedestals ourselves almost entirely; and I think about the same amount was the ultimate result of a rather larger demand which we made on the Office of Works. I think it worked out to £2,100 in the last financial year, if I remember the figures.

2955. Have you adequate workshops and laboratories?—Yes, we have new workshops which have been built quite recently.

2956. They are sufficient?—They are, I think, adequate as far as the space goes.

2957. And laboratories for dealing with specimens?—No, hardly at all, but we are able to deal with them in one way or another. We have photographic workrooms and workrooms for the making and sale of casts.

2958. (Chairman): Mr. Charteris asked me to ask a few questions on his behalf. You have spoken of the connection with the Board of Education tending to promote the educational value of the Museum. In what way does the Board of Education do this?—I think it would be a little difficult to give specific reasons for that. I feel rather that the Museum being to a considerable extent educational, the Board of Education are the natural Government Department to handle it; they certainly encourage Education Authorities to apply to the Museum, and we in many cases collaborate with the Art Schools which are under the Board of Education, and which are of course brought into contact with us by our system of circulation loans.

2959. You have spoken of the desirability of driving out the Royal College of Art? Have you any idea where it was going to?—I am merely urging there what I know were the views of my predecessor, and, for instance, the views of Lord Gainford when President of the Board. It was always proposed when the Government acquired the "Island Site" that this should be used for the Royal College of Art.

2960. Is that on the south side of you or the west?—The other side of the Cromwell Road.

(Sir Lionel Earle): It is only on a short lease?

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

2961. (*Chairman*): Would that be adequate for the Royal College of Art?—I believe it would exactly provide for their needs; a proper building would have to be built there.

2962. Are there any other intruders upon your property?—It is not quite our property. There is that square building at the corner, that very fine building which is called the Royal College of Science, and which is occupied by rather miscellaneous activities, and just behind that in a rather obscure building there is the Royal College of Art, which is closely in contact with us. It has communicating doors on all floors into the Museum. The Royal College of Science have a sort of subway communication which is normally closed.

2963. You propose to get rid of both?—I think probably ultimately it would be very much to the advantage of the Museum to occupy the whole of that square. In the case of the Royal College of Art, I do not think I should be presuming on other people's business to say they are most anxious to get other quarters. They are dissatisfied with their present accommodation, and they would welcome very much being moved to some such site as that suggested, provided they were kept in contact with the Museum.

2964. Where would you move the Royal College of Science?—I was not for the moment thinking of such consequences, but I think perhaps at some period it probably will be considered.

2965. You have mentioned an ad hoc Committee for dealing with bequests. Would not it be better if it were known that the exhibition of bequests were subject to certain conditions and possibilities of change?—That would not touch, would it, the existing bequests which I think are the trouble; because, as far as I know, all Museums have come to be careful about the acceptance of future bequests. We should be very sorry now to accept many bequests we accepted in the past upon conditions. I am sure other people have told the Commission this already, that very often if intending testators would only come to you before they died you would find they were very willing to modify their suggestions. In my own very brief experience as Director, "I have had two or three cases of people saying, 'I propose to leave you my collection, and I shall insist upon it being kept together.'" I have explained how we can produce an equivalent result in another way, and I find they are quite willing to fall in with it. However, too often the testator dies before he makes his wishes known to us.

2966. With regard to fees and your figures of attendance, are you very strongly against the imposition of fees?—Enormously so. Our attendance has increased very much during the last 20 years or so. It reached a maximum point about four or five years ago when we passed a million and a quarter. In the days when we charged admission on three days, I do not think the attendance ever rose above about 700,000. I worked out the proportional increase on each day of the week of taking the difference between the 700,000 and the million and a quarter; I think something like 70 or 80 per cent. of it is on the three days which are now free and which had formerly been paying days. So the very gratifying increase in the number of visitors is almost entirely due to the abolition of fees as far as you can judge from figures.

2967. (*Sir Lionel Earle*): The Germans charge considerably for their Museums?—I think all Continental Authorities do. In America it is very much the exception. It is only fair to say that with regard to our paying days, the days when we charged for admission before 1909, the fee was imposed solely with a view to helping the students; not with a view to obtaining revenue, but in order to keep the public out of the Museum.

2968. (*Chairman*): For the purpose of helping students you do not require a fee?—No.

2969. It is not necessary?—No.

2970. Regarding overlapping, I gather you consider that while reorganisation might have advantages it is too big an undertaking?—I think any reorganisation which amalgamated all present overlapping collections would be disastrous to the history of our organisations and to their special character. I cannot conceive if you are to have an historical Museum at the British Museum how it can omit any of the activities which do represent historically the life of this country. If you are going to have a Museum of crafts, how can it omit some of those crafts? I do not see how you can avoid overlapping if you have Museums arranged from a different point of view. But I do not think one would want to increase overlapping.

2971. That is as regards the past, but as to means of preventing increase of overlapping in the future, have you anything in your mind?—I think clearly that any reasonable co-ordination of Museums would prevent that. I almost feel—I may be wrong—that the control of the Museums by a Government Department would have prevented the creation of the Department of Ceramics at the British Museum. It seems to me that the objections to it are more likely to have occurred to a Government Department than a Body of Trustees. I may be entirely wrong about that.

2972. But co-ordination would diminish the dangers?—I think so, and I think I might say without fear of exaggeration that all the Members of our own staff are also well aware of those dangers. They would be very loth indeed to start any new additions which would cause overlapping.

2973. (*Sir Robert Witt*): And if there were a super senate or a supreme authority, might not that have been invoked quite usefully in such a case as the creation of the Department of Ceramics in the British Museum, and might not that Authority have said on the whole, however desirable it may seem to you at the British Museum, it is not in the interest of Museums, as a Body that this step should be taken?—I think so, certainly. It seems to me that I may have given the impression that I was attacking the British Museum for the creation of that Department. I did not intend to do that. It is a comparatively recent example of an overlap as far as that particular point is concerned.

2974. (*Chairman*): Would it be possible for you to obtain an estimate of the probable cost of internal reconstruction?—Frankly, I do not see how it would be. I think it involves so many subsidiary questions of which no one has had any experience.

2975. Of what is required?—Of what is required.

2976. (*Sir Lionel Earle*): It is going to be a difficult problem in that building?—I entirely agree.

2977. (*Sir Richard Glazebrook*): It is quite possible in the Natural History Museum to a very considerable degree?—I think the whole point is that it should run across the departmental division.

2978. (*Sir Lionel Earle*): The British Museum system is to have it not on the floor below, but on the same floor separated off from the Gallery where the student goes?—I still submit that is a different thing to what I should prefer.

2979. (*Chairman*): Could you explore the question?—I should be very glad if there seems to be any possibility of drawing out some kind of plan in a reasonable time, because I know some members of my staff feel very strongly in favour of some such arrangement if it could be examined.

2980. You might examine it?—We have always felt that the unfortunate thing is that the building is curiously unsuited for the purpose.

2981. (*Sir Lionel Earle*): Do you realise that certain German Experts view the Trustee system with admiration?—I do not think I do.

2981A. We have had some strong evidence to that effect.

2982. (*Chairman*): They speak of the Trustee system as a model?—I think it is very difficult to

11 May, 1928.]

Mr. E. R. D. MACLAGAN, C.B.E.

[Continued.]

get evidence on that point, because if a Museum is under Trustees it is a little difficult for the people concerned to give public evidence of dislike of the system, supposing they should dislike it. I have heard in America pretty strong expressions of opinion about government by Trustees. That is speaking as one Museum official to another.

2982A. Adverse?—Yes; not unanimously, but I have certainly heard very strong adverse criticism.

2983. How close is your connection with the College of Art?—Very close indeed.

2984. The students make continual use of your Museum?—Yes. Five hundred and six passes in the month of October were issued to students in the architectural school only for admission before the Museum opened; we allow them to come in from 9 to 10 o'clock in the morning when the Museum is closed; and the Registrar of the College estimates that the architectural students spent 5,000 working hours in the Museum. Sixty-two students of design spent 24,000 working hours in the year, in the 39 weeks during which the College is open. Those are some figures. The second year students cannot be accounted for in that way because they do not work by hours. They are given problems to do and come into the Museum to do them.

2985. (Sir Lionel Earle): Would you consider the Museum would be enormously benefited by a restaurant?—I think it was benefited by the better restaurant which used to exist.

2986. (Chairman): Is the restaurant worse than it was?—Yes; apparently because we habitually subsidised the earlier restaurant. The caterer cannot run the place at a loss, and so it is impossible to have anything like the service we had before. We admit the falling off. We had diffi-

culties in getting any people to tender for the service. We had to accept practically anybody to do it. You have limited hours. You have often a terrific crowd from 12.30 to 2.0 and then the place is practically empty. When the Museum closes at 5, a visitor will not waste the last hour in the restaurant, but will prefer to stay in the Galleries, and then to go out to an A.B.C. There, again, it might be interesting to the Commission to know that the Metropolitan Museum at New York runs its own cafeteria, which I do not think gives appreciably better than the South Kensington food, and they lose money upon it. They regard a restaurant simply as part of the services due to the public, and whether they quite recoup themselves or not they regard as a subsidiary question.

2987. (Sir Richard Glazebrook): It used to be very good years ago, and when I was at the Museum for a period I used it a great deal?—Its excellence was, I am afraid, largely owing to the real genius who used to preside at the grill and who was killed during a Zeppelin raid.

2988. (Sir George Macdonald): I think it is only fair to say, as I raised the question of the Royal Scottish Museum, that no one appreciates more highly than the present Director the cordiality of the relations which exist between the two Museums to-day and the personal help you and your colleagues always give?—That is very kind of you.

2989. (Chairman): In the memorandum you propose to give us I should like you to develop the relations between the Museum Authorities and the public?—In America?

2990. Yes?—I will, as far as I can.

(Chairman): We thank you very much for your evidence.

(The Witness withdrew.)

EIGHTEENTH DAY,

Thursday, 28th June, 1928.

PRESENT:

The Rt. Hon. The Viscount D'ABERNON, G.C.B., G.C.M.G., LL.D.

A. E. COWLEY, Esq., D.Litt., F.B.A.

Sir LIONEL EARLE, K.C.B., K.C.V.O., C.M.G.

Sir RICHARD GLAZEBROOK, K.C.B., LL.D., F.R.S.

Sir THOMAS HEATH, K.C.B., K.C.V.O., F.R.S.

Sir GEORGE MACDONALD, K.C.B., LL.D., D.Litt.

Sir HENRY MIERS, D.Sc., F.R.S.

Col. Sir COURTAULD THOMSON, K.B.E., C.B.

Sir ROBERT WITT, C.B.E.

Mr. JOHN BERESFORD (Secretary).

Mr. J. R. CHAMBERS (Assistant Secretary)

The Right Hon. The Earl of CRAWFORD AND BALCARRES, K.T., F.R.S., LL.D., recalled and examined.

2991. Chairman: I understand you desire to give further evidence regarding (a) the system of purchase, and (b) the position of the Trustees of the National Gallery?—Quite. The problem of buying for a National Collection is always difficult. The object is to secure catholicity of taste. Should responsibility rest upon a single supreme buyer, or should purchases be made by means of a Committee? The latter system is said to be liable to compromise and mediocrity, to make no great mistakes and to achieve no great feats; this was one of the criticisms which led to the enquiry into the National Gallery in 1854/55. Before this time the Trustees were responsible for purchases. It is not surprising that they missed chances considering that there was no

regular grant, and the Keeper was only expected "to be present occasionally at the Gallery." Notwithstanding this faulty system some of their purchases were notable. For example Van Eyck's Jan Arnolfini and his Wife for £630; Rembrandt's Jew Rabbi for £470; his incomparable self portrait for £430; Bellini's Doge Loredano for £630; and Van Eyck's portrait of the Man with the Red Turban for £365. For price and quality this group can scarcely be excelled. In 1855 the number of Trustees was reduced, a salaried Director was appointed with a large Treasury vote and the final responsibility for purchases fixed on the Director. Sir Charles Eastlake's first great purchase was the Lombardi Collection of thirty-one pictures bought in 1857 for

28 June, 1928.]

The Rt. Hon. The Earl of CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

£7,000—these pictures may to-day be worth half a million.

The efficient single buyer is rare. Sir Richard Wallace, Mr. Robert Holford, Sir Charles Eastlake and Burton were perhaps capable of being such, but in those conditions there is generally a tendency to limitation of taste. For instance, Eastlake was sole buyer for ten years from 1855 to 1865. During that period he bought one hundred and twenty-five Italian pictures from the grant-in-aid, whereas only fifteen examples of the Dutch, German, French and Spanish Schools were bought. Burton between 1874 and 1894 bought eighty-four Italian pictures but only seven by French, German, Flemish and Spanish Masters. I do not take into account pictures acquired by gift or bequest. In any case up till 1894 they were wholly inadequate to represent the boycotted schools. Such omissions reflect the predilections of the individual buyer, and are followed by special or sporadic attempts to find compensation. Thus in 1871 the Peel Collection was bought, of which the sixty-three examples by Dutch artists equally reflected an individual buyer's tastes, for out of this group only two were portraits. The price of £75,000 paid for the whole collection was full, if not excessive. £25,000 judiciously expended during the previous ten or fifteen years would have secured a better collection of Dutch art.

The single buyer likewise is inclined to be hustled into paying excessive prices. The Peel pictures were expensive. I cannot conceive that any Committee at that date would have consented to pay £70,000 for the "Ansidei Madonna," still less £17,500 for the equestrian figure of Charles I bought from Blenheim in 1885. These special efforts are followed by reactions and the Treasury generally manages to recoup a good deal by curtailing purchase grants later on. In the case of the Peel collection something approaching £38,000 was recouped and the two Blenheim purchases were recouped to the extent of £45,000 out of the £87,500. This means bad distribution of effort and has the disadvantage of keeping the Gallery off the market too long. Much of our great success must be assigned to our early as well as our preponderant position as buyers—from 1855 to 1865 nearly £10,000 a year; from 1866 to 1888 over £13,000 a year. For thirty years we were the biggest buyer in the world and £13,000 in 1870 might be worth £250,000 in 1928. On the whole I do not consider that the National Gallery has bought below current market values. The prices paid by Sir Charles Eastlake, as revealed at his death when his private collection was offered at cost price to the Gallery, were very modest. The Cook Van Eyck cost £335 in 1871; the late Earl of Wemyss spent no more than £4,000 on his wonderfully choice collection of Italian pictures and Renaissance sculpture. The Hertford-Wallace prices were if anything below the range of the National Gallery figures. Steady purchase without any pre-disposition towards individual schools is the ideal. On the whole I am inclined to think that it is best attained through a Committee, but its personnel and the Director Trustee must be the best available.

I should like having made those remarks to refer to the general evidence given and if necessary afterwards in some detail. I want if I may in the first place to say that the impression left by Sir Charles Holmes's evidence is that the Trustees are a tyrannical body of men and busybodies oppressing the Director and intimidating the subordinate staff. That in my opinion is unfounded. We are said to be "so eminent . . . and famous in debate, etc." that the Director who "lacks training in the House of Commons and afterwards in the House of Lords and the Cabinet" does not have a fair chance to argue his case. I confess the very idea causes me frank amazement. Sir Charles under-states his own capacities, and I may say that elsewhere in cases

where Trustees control Museums the problem is equally non-existent. I have had long personal experience of a dozen heads of these Institutions and I have never noticed reluctance or difficulty on their part in stating their case to their Board, and in my opinion they do so with confidence and success. There is curiously little difference in the nature or temperament (and often in the personnel) of these governing bodies. It so happens that besides serving on the National Gallery Board, I am also a Trustee of the National Portrait Gallery, the British Museum and the Natural History Museum. All these Boards, and not least that of the National Gallery, are animated with one dominant motive, namely a keen desire for the progress and welfare of the Institution concerned. Sir Charles Holmes's notion about the "Trustees belonging to a society apart from his," or where he says in another connection that "germs of subserviency may be bred in the Director" is in itself laughable, but when such a statement is solemnly communicated to a Royal Commission it necessarily connotes certain reactions. All these questions of Sir Charles's rights and prerogatives, of standing upon dignity, of his treating Trustees suggestions as intrusions, and of taking offence when none is intended—all such grievances, however imaginary, must indicate a frame of mind susceptible to misunderstandings.

But it must not be assumed that the Trustees are mere "distinguished amateurs" with no technical training, and whose views may therefore be disregarded by the permanent staff. The line dividing professional from amateur on aesthetic questions is finely drawn. I look upon the Trustees as a competent body of men. In point of fact, several of them appear to me very sound authorities with great technical knowledge of Old Masters and they approach problems of acquisition in a cool and unexcitable spirit. At the National Gallery Board we have constant discussions. Our finance only permits us to buy a tithe of what we desire, and policy can only be determined after full and ample review. Of course, Trustees differ amongst themselves. That is as it should be. I should look upon habitual unanimity amongst them with positive dismay; but the idea that bitterness is caused "when a man's personal taste . . . is flouted by the purchase of a picture he dislikes" is unfounded. None of my colleagues takes umbrage if and when the picture of his preference proves unacceptable. I observe no such pettiness among my colleagues, whose individual views must constantly fail to gain the assent of the Board. The Trustees do look upon the selection of pictures impartially without pressing their personal tastes, and I recall the readiness with which the late Lord Curzon agreed to purchase a Spanish picture which he loathed. Let me add that at the Tate Gallery where the much more vivacious problems of modern painting arise, this "bitterness" is also unknown. It is stated that the officials are overworked, and that the Trustees are largely responsible. " . . . Development of the Cabinet system of circulating memoranda on details of policy and prospective purchases added immensely to the labours of the Director and his staff." I have never seen a memorandum about "details of policy." The memoranda are very few in number, and all refer to questions of real importance to the vitality and progress of the Gallery. As to prospective purchases, we used to have on our agenda such items as "Offers of pictures by Greco, J. L. David and Velazquez" (14.7.1925). It is dangerous to make purchases without proper study. Our *Maitre de Moulins* (23.6.25) purchased for £10,000 was only bought after hesitation as some members of the Board saw the picture for the first time at the meeting. It was accordingly settled that the National Gallery staff should circulate a few days in advance memoranda on proposed acquisitions. This seems dictated by

28 June, 1928.]

The Rt. Hon. The Earl of CRAWFORD AND BALCARRES,
K.T., F.R.S., LL.D.

[Continued.]

commonsense and prudence. It is also useful in helping them to formulate their views in a clear and concise fashion. The memoranda are always brief. As to "adding immensely to the labours of the staff", I engage to say that the memoranda about acquisitions issued during the last two years would not, in the aggregate exceed a column and a half of the "Times." I cannot understand complaints about fulfilling so obvious a duty towards the Trustees. I may add that when I once imprudently suggested that something should be done after official hours, a very sharp reminder was administered to me.

The Trustees are conscious that the scale of the work and the extent of responsibility are constantly enhanced. It is no longer possible as in Burton's day, for the annual grant to secure a big series of important acquisitions every year. The staff has long required supplementing. The personal attention I have given to this subject has not lacked success. The Trustees likewise wish to develop the system of Honorary Attachés or students, which works so well in many great museums and galleries on the Continent and in the United States of America. This system is also useful at the British Museum, also at the FitzWilliam Museum where Keepers of various departments serve in an honorary capacity. When this is properly organised, when

the Library is adequately catalogued and equipped, and when facilities for study and research are increased, the educational value of the Gallery will become worthy of its wonderful possessions. I have also prepared a statement dealing with details of which I have given a brief outline on broad general grounds, details dealing with the staff, the constitution, the acquisition of pictures, their treatment, cataloguing, labelling, framing of pictures, arrangements for hanging of pictures and so on. I do not propose to make reference to questions relating to such items of policy as loans or sale or exchange or overlapping or entrance fees or copyists or buildings on which the Director may or may not have expressed the views of the Board. I do not know whether it is the desire of the Commission that I should deal with these matters in detail.

2992. (*Chairman*): I think what you have given us to-day covers the ground. You can go into detail on a future occasion if required. Will that meet you?—Perfectly. I will merely say at this juncture if you will allow me to do so that in my opinion the reply I should give on all these details is not only complete but convincing.

(*Chairman*): If occasion should arise, we will call upon you again.

(*The witness withdrew.*)

IN THE CASE OF THE FOLLOWING DEPARTMENTAL REPLIES TO THE COMMISSION'S QUESTIONNAIRE, ORAL EVIDENCE HAD NOT BEEN TAKEN BY THE FULL ROYAL COMMISSION UP TO THE DATE OF THE ISSUE OF THE INTERIM REPORT OF THE COMMISSION.

The accommodation position of the Scottish Institutions had, however, formed the subject of a special enquiry by a Sub-Committee of the Royal Commission which visited Edinburgh for that purpose.

IMPERIAL WAR MUSEUM.

(1) The Imperial War Museum was instituted by the War Cabinet on 5th March, 1917, and on 2nd July, 1920, the Imperial War Museum Act received the Royal assent.

The Governing Body constituted under the Act consists of:—

- (a) a President;
- (b) eleven persons appointed by the Treasury;
- (c) one appointed by the Admiralty;
- (d) one appointed by the Secretary of State for War;
- (e) one appointed by the Secretary of State for the Colonies;
- (f) one appointed by the Secretary of State for India;
- (g) one appointed by the Secretary of the Board of Education;
- (h) one appointed by the Secretary of State for Air.

The *ex-officio* members consist of:—

- (a) The First Commissioner of Works;
- (b) The Director of the British Museum;
- (c) The High Commissioner for the Dominion of Canada;
- (d) The High Commissioner for the Commonwealth of Australia;
- (e) The High Commissioner for the Dominion of New Zealand;
- (f) The High Commissioner for the Union of South Africa;
- (g) The High Commissioner for the Dominion of Newfoundland.

His Royal Highness the Prince of Wales is the President, and, in the future, the President will be nominated by His Majesty.

(2) The Trustees have full power to lend, exchange, or dispose of exhibits with the exception of dealing with Foreign or Overseas Governments, in which case the Lord Commissioners of the Treasury are consulted.

The only difficulty with which the Trustees are faced is the interpretation of the word "war." The weapons and other contrivances used in the war of 1914-18 are so varied and belong to so many different periods, that it is very difficult to exhibit them in an educative manner without recording other wars of the past.

(3) The Trustees consider that they have sufficiently free intercourse with other Museums and that no extension of this is necessary.

(4) The Museums in which a certain amount of overlapping might occur are:—

The British Museum, and the *Victoria and Albert Museum*; War drawings, lithographs, posters, decorative and commemorative medals, which have been acquired by both the above Museums and by the Imperial War Museum.

Tower Armouries; *Royal United Service Institution*; *Rotunda Museum, Woolwich*; overlapping is possible as to weapons, etc., with all these Museums, but a Committee has been appointed at the War Office to consider this very question, with a view to avoidance of overlapping in the future. Duplication of ship models with the Science Museum is unavoidable, as the War Museum considers their military

value while the Science Museum deals with the ship's construction only.

(5) No admission fees are charged. It is estimated that, excluding Saturdays, Sundays and Bank Holidays, and assuming that the attendance at the Museum did not drop more than one half as a result of the admission charge, the money taken would be—at 1d. £200; at 6d. £1,200; but it is absolutely certain that if the higher fee were charged, the attendance would drop very considerably, probably by a half or two-thirds. Of course, the cost of the turn-stile and the "risk" money of the Attendant would have to be considered.

(6) The Officers of the Imperial War Museum were recruited from the Services directly after the cessation of hostilities, and have carried out their duties in a highly efficient and satisfactory manner. Should it be necessary to replace any of them at a later date, it will be essential to choose individuals who have naval or military knowledge, but, at the same time, have also the "Museum sense" strongly developed. It would be inadvisable to employ young men on the staff who have no knowledge of war conditions, at any rate for some considerable time, but promotion from the clerical staff, who are all ex-service men, is not lost sight of.

(7) The Museum occupies the Western galleries adjoining the Imperial Institute, and uses No. 178, Queen's Gate, for Offices, Library, Maps and Storage.

The gallery accommodation is quite inadequate for the proper display of exhibits as the small gangway space is a source of great inconvenience and possible danger when the Museum is full. Our numbers during last year were 198,172 and on August Bank Holiday, 1927, we had 8,041 visitors, and the galleries were dangerously overcrowded.

The present storage accommodation is most unsatisfactory, and much that is year by year appreciating in historical value is deteriorating; indeed many pieces are irreparably damaged. There is no place available for storing glass cases, which have a considerable market value.

It should be pointed out that the tenancy of half of the building containing the galleries and also the tenancy of 178, Queen's Gate, expire about the year 1940-41. It is, therefore, a matter for serious consideration as to the future accommodation of the Museum before these tenancies expire.

(8) Catalogues are produced by H.M. Stationery Office. Illustrated souvenirs are produced, either by outside firms on a royalty basis, or directly by the Museum through a contract with outside firms. The latter has been found to be eminently satisfactory, as the whole of the profits accrue to the Imperial War Museum vote, and it has been found to be easier to deal direct with the producer of the souvenir than to carry out the work through the Stationery Office. The receipts from all sources are credited to the Appropriations-in-Aid of the Museum Vote.

(9) This question does not concern the Imperial War Museum, except that facilities are given to students of Military subjects, and they are supplied, as far as possible as and when required, with photographs or technical description of weapons and other war appliances.

LONDON MUSEUM.

1. *The Origin and Administration of the London Museum.*—In 1911 private funds were placed at the disposal of the Rt. Hon. Lewis (afterwards Viscount) Harcourt to enable him to establish a museum for acquiring and exhibiting pictures, prints and other objects relating to the history of London—the London equivalent of the Musée Carnavalet of Paris.

As a temporary home for the Museum thus formed His Majesty the King set apart the state rooms of Kensington Palace, and after an inspection by Their Majesties the London Museum was thrown open to the public on April the 8th, 1912. Prior to this it was augmented by a large collection of gifts and loans from Their Majesties and from Queen Alexandra, whilst the London County Council made a permanent loan of antiquities found during their building operations. H.M. Office of Works also transferred to the charge of the London Museum the various articles of archaeological interest from London in their possession. Since that day the collections have grown through private benefactions, though under the difficulties which inevitably arise from the absence of a purchase-grant.

The first Board of Trustees was constituted at the invitation of Mr. Harcourt and consisted of the Viscount Esher, Mr. Harcourt and the First Commissioner of Works for the time being, then Earl Beauchamp. Mr. (later Sir) Guy Laking was appointed Keeper and Secretary.

In June, 1913, Sir William Lever, Bart. (afterwards Viscount Leverhulme), having purchased the lease of Stafford House, presented it on certain conditions to the Government as a home for the London Museum. On assuming control, the Treasury re-appointed the then existing Trustees and Keeper and subsequently increased the staff by the appointment of Mr. F. Harman Oates as Assistant Keeper and Secretary, Mr. G. F. Lawrence as Inspector of Excavations and Mr. H. W. Murray as technical assistant.

In summary, the present position in regard to the actual collections is as follows:—The remainder of the lease of Stafford (now Lancaster) House is held by the Government for the purpose of storing the collections of the London Museum. These collections, except as otherwise specified, are placed by the Trustees at the disposal of the Government for the term of the lease of Lancaster House and so long afterwards as the collections shall continue to be exhibited in Lancaster House or in some other equally suitable building maintained by the Government.

2. In view of the present absence of statutory restrictions in respect of the London Museum, no observations need be offered under this head at the present stage.

3. A similar comment applies under this head. The Trustees of the London Museum advocate the continuance of their present liberty of lending or exchanging specimens with museums under national or municipal control in the Colonies or elsewhere.

4. Almost all the objects purchased for the London Museum are the subject of purchases by other national museums. At the same time, so closely specialized and localized a museum is obviously expected to represent many classes of antiquities in greater detail than is feasible for the more comprehensive collections, and in practice no serious difficulty arises from overlapping. The Trustees are of opinion that, as regards the London Museum, no regulation is required under this head, and that adjustment, when necessary, should be left to friendly arrangement between the Authorities concerned.

5. Admission-fees are charged at the London Museum as follows: Tuesdays one shilling; Wednesdays and Thursdays, sixpence. In the last complete year, 1926 (an abnormally poor year by reason of the General Strike), 240,237 visitors were admitted, and the sum of £897 18s. was received in admission fees. The average admissions per diem throughout the year were as follows:—

On days when one shilling was charged	117
On days when sixpence was charged	228
On days when no charge was made ...	1,348

In considering these figures, it should be remembered that the "free days" include Saturday and Sunday afternoon, when visitors are normally more numerous than on week-days. On Friday mornings the Museum is closed, a practice which is at present convenient but may be abolished later.

It is clear that a charge of sixpence reduces the admission to one-sixth, and that a charge of one shilling reduces it to less than one-eleventh. On an actuarial basis it would seem that the substitution of a charge of sixpence on Tuesdays would increase the number of visitors by 5,000 or 6,000 per annum without reducing revenue, but only an experiment over a period of two years could adequately test this estimate. The Trustees feel that, since the slight loss in revenue would in any case be incommensurate with the increase of visitors, the charge for admission should on no day exceed sixpence.

6. In view of the comparatively recent institution of the London Museum, the question of the recruitment of the scientific staff has scarcely yet arisen. The Trustees, however, propose to be guided by the same general principles as those which govern the recruitment of the scientific staff of the British Museum.

7. The accommodation at present available for purposes of exhibition consists of 42 rooms and corridors of varying (but mostly small) size. This accommodation cannot be increased, but a judicious rearrangement and selection of the exhibited material will enable the Museum to absorb all accessions of importance for many years to come. Some ten small rooms are reserved for storage purposes.

8. In the earlier years of the Museum the capital outlay for picture-postcards and for a booklet dealing with the history of the building was provided from private sources. It was subsequently arranged that all future outlay of this kind should be included in the Treasury estimates, and in recent years, therefore, Guides and Catalogues have been provided through the normal official channels. Much work must be done under this head in the immediate future in order to meet not merely the needs of the general public but also those of the large number of schools which use the Museum. Profits on all publications, however provided, are credited to the Appropriations in Aid of the Vote. Electrotypes, etc., have not hitherto been supplied by this Museum.

9. Facilities for students are provided in two of the rooms otherwise used for storage. The Museum has not hitherto undertaken the direction of archaeological excavations, but the Trustees regard the general inspection of excavations within the London district as falling within the normal duties of the Staff, and approve of the association of members of the Staff with similar archaeological work elsewhere provided that undue absence is not thereby entailed. If and when funds become available, the Trustees propose to consider favourably the possibility of initiating excavation on appropriate sites within the London district.

The Trustees would urge upon the Commissioners the fact that the London Museum, as a comparatively new foundation, has only in recent years attained to a position in which it can adequately fulfil the various functions for which it was intended. The collection is now, however, of primary importance in relation to the archaeology and history of Greater London, and they are of opinion that the time has arrived when the administrative machinery of the Museum should be reviewed in relation to the permanent needs of the institution. They are in particular impressed with the urgent necessity of amplifying the Staff of the London Museum within the general limits already authorised.(')

(') The present staff consists of (1) The Keeper, Secretary and Accounting Officer (a single post). (£700). (2) The Assistant Keeper and Librarian. (£250 inclusive). (3) The Lecturer. (£180 inclusive). At present, in view of the smallness of the salaries available, the two latter posts are held by a single part-time officer, much of whose time is necessarily devoted to lecturing: and this very unsatisfactory system must continue until the two posts are placed upon an adequate financial basis.

Without entering into details at the present juncture, the Trustees would emphasise their inability properly to fulfil their increasing responsibilities to the public unless financially they are placed in a position to develop the existing posts along independent departmental lines. A national Museum, which has large and growing collections ranging from the prehistoric period to 19th century costume, ceramics and topography, and is naturally regarded as a centre for research in relation to the history and antiquities of the metropolis, must, if it is to maintain and increase its prestige, have an adequate specialized staff. In the early days of the Museum the need was necessarily less urgent; but the Trustees urge that the time has arrived when, in the interests of a minimum efficiency, the appointment of a full-time Assistant-Keeper and a full-time Lecturer-Assistant can no longer be delayed. The almost daily use of the Museum by the primary and secondary schools of London, and the increasing use of the Museum by research students, may be again emphasised in this context.

THE NATIONAL GALLERY OF SCOTLAND AND THE SCOTTISH NATIONAL PORTRAIT GALLERY.

1. *Constitution.*—The Board was constituted by the National Galleries of Scotland Act, 1906. It consists of a Chairman and six Members, who are appointed by the Secretary of State for Scotland for a period of five years. His discretion is, however, unfortunately limited by a Clause in the Act which provides that three of the seven Members of the Board when appointed "shall be members of elected local authorities in Scotland." This Clause should be repealed.

2. *Organisation, Administration, Restrictions.*—The Board are satisfied with the present organisation and method of administration. They have complete control over the funds at their disposal; there are no general restrictions on their powers to lend, or to exhibit to the public a selection of exhibits with reserves for students. They are not able to exchange or dispose of exhibits and would welcome such powers.

3. *Loan and Exchange.*—The Board would welcome freer intercourse and a larger measure of loan and exchange with Municipal, Colonial and Foreign Galleries.

4. *Intercourse between Authorities.*—The Director is in close touch with the Directors of other National Galleries who often bring to his notice pictures or portraits submitted to them which they do not wish to acquire, and as a general rule they agree not to bid against one another at public auctions. A more formal arrangement might, however, be advantageous. In the case of both Galleries the objects purchased are the subject of purchase by other National Galleries, but owing to circumstances there is no danger of overlapping.

5. *Admission Fees.*—At the National Gallery (open on Sunday afternoons) admission is free except on Thursday and Friday, when a charge of 6d. is made. At the Portrait Gallery (not open on Sundays) admission is free every day, this arrangement having been made by special permission of the Treasury owing to the out of the way position of the Gallery.

The receipts on Pay Days at the National Gallery last year (1926-27) were £101 1s. 6d., representing 4,043 visitors, or an average of 39 on each paying day. The total number of visitors on Free Days (exclusive of 12,129 school children in classes and 655 copyists) was 71,927, or an average of 277 on each Free Day. The total admissions for the year were 88,754.

The Board are strongly of opinion that any increase in the number of pay days is undesirable. It would materially reduce the attendances, seriously impair the usefulness of the Galleries and result in no appreciable financial gain.

6. *Technical Staff.*—The technical staff consists of two members, a Director and a Keeper, and there is no system of recruitment. Both are appointed by the Secretary of State for Scotland on the recommendation of the Board.

7. *Accommodation.*—The two collections managed by the Board are in different buildings. In the case of the National Gallery, the wall space is fully occupied and room has at times to be found for new acquisitions by withdrawing other Works. The building is isolated; its extension might present some difficulties, but the Board would welcome additional accommodation.

The wall space available at the National Portrait Gallery building is not fully occupied as yet, but in view of the rapid increase of the collection, conditions there will, in a few years, be the same as in the National Gallery.

8. *Catalogues.*—The Catalogue of the National Gallery (1s. 6d.) is published through H.M. Stationery Office, and popular Guides to the National and Portrait Galleries (6d. and 3d. respectively) are also published. These are all sold at the Galleries. The cost is borne on the Board's Vote and the receipts are an Appropriation-in-Aid.

An Illustrated Catalogue on the National Gallery, price 4s. 6d., was also on sale, but is at present out of print.

There has been no printed Catalogue of the National Portrait Gallery for some years, but an illustrated Summary Catalogue is in preparation.

Photographs of many of the Works in the National Gallery and of Portraits in the Portrait Gallery are available and on sale at the Galleries. The negatives belong to Messrs. T. & R. Annan & Sons, Glasgow, who take them without charge and 33½ per cent. of the proceeds of photograph sales go as an Appropriation-in-Aid to the Board's Vote.

9. *Facilities for Students.*—No special provision is made for research but the Director and Keeper answer inquiries and help students as far as they can and the material in the collection's library, &c., permit.

Classes of school children come to the National Gallery daily and the pictures are explained to them by a specially qualified teacher in the employment of the Education Authority. Facilities are also given to students of the Edinburgh College of Art and artists to copy pictures.

10. *Other Responsibilities.*—National Museum of Antiquities—The Board are also responsible for the provision of Attendants at the National Museum of Antiquities which occupies half of the National Portrait Gallery Building.

The maintenance of this Museum, the remuneration of its officers, and its purchase Grant are provided for in an Estimate drawn up by the Board. The purchase Grant is, however, administered by the Society of Antiquities of Scotland, under whose charge the Collection was placed by a Treasury Minute of 1851. The Society are responsible for the arrangement of the Museum and accept or decline exhibits. The Board nominate two of its Members to serve on the Council of the Society.

The Board are entirely satisfied with the present arrangement.

Royal Scottish Academy Galleries.—The Board have also a limited discretion in regard to the granting of the Galleries on the upper floor of the Royal Scottish Academy building.

Under the National Galleries of Scotland (Appropriation of Buildings) Order, 1910, it is prescribed that "the upper floor shall for such period in each year as may be required and may be arranged with the Board be appropriated to the Annual Exhibition of the Academy, and shall when not so appropriated be available for the purpose of the exhibitions of works of art to be held by or under the sanction of the Board."

At the close of the Academy exhibition each year, the Diploma Works of the Academy are placed on exhibition in the centre gallery while the collection of the Scottish Modern Arts Association is exhibited

concurrently in the southern rooms. Entrance is given to both collections by a door in the west side of the building. The northern galleries, entering by the main door, are, at this period, granted for various exhibitions such as those of the Society of Scottish Artists and the Royal Scottish Society of Painters in Water Colours.

The Board refer all applications for the use of the Academy Galleries to the Council of the Academy for their views.

Assistance to Art Exhibitions in Scotland.—Under an Order of the Secretary for Scotland of 1907, the Board may promote or assist the holding of exhibitions of art in Scotland, and this power has enabled them to assist various exhibitions.

RECORD DEPARTMENT, EDINBURGH.

1. There is no Statute constituting and regulating the Public Record Office in Scotland comparable with the English Public Record Office Act of 1838, but by the Act 18 & 19 Vict., cap. 80, the General Register House building in Edinburgh was vested in H.M. Board of Works for the purposes specified in the Royal Warrants and Acts of Parliament dating from 1765 in virtue of which the building was erected, i.e., for accommodating the Public Records of Scotland.

From early times the Officer responsible for the control and custody of the Public Records was the Clerk Register, who also acted as Clerk of the Scottish Parliament and of the other Great Courts and Councils of the Nation. Subsequently the various Public Registers were entrusted to his care by the Statutes instituting them. He had also certain functions in regard to the compilation of local Registers established throughout the country, but he was not responsible for their custody.

The office of Deputy Clerk Register was constituted by Royal Warrant under the Sign Manual, dated June 19th, 1806, appointments of a Deputy having formerly been made by Commission from the Lord Clerk Register. From that date down to the year 1862 the holder of the office of Lord Clerk Register did not give close personal attention to the duties of the office, which were largely delegated to the Deputy, but in 1862 it was found desirable to appoint a Lord Clerk Register who should give personal attendance to the affairs of the office at the Register House.

In 1879 an Act was passed (42 and 43 Vict. cap. 44) which provided that the Lord Clerk Register should continue to be one of the Officers of State in Scotland, and should have the same status and precedence as formerly, but transferred to the Deputy Clerk Register the whole rights, authorities, privileges and duties in regard to the Public Registers, Records and Rolls of Scotland theretofore vested in the Lord Clerk Register. That Act, however, also placed upon the holder of the office of Deputy Clerk Register the duty of acting as Registrar General of Births, Deaths and Marriages.

The Deputy Clerk Register was appointed by the Crown and held office *ad vitam aut culpam* until, in the Warrant appointing the last holder of the office, an age limit of 70 was inserted. The last holder of the office died in 1919, and the vacancy has not been filled; but by 10 and 11 Geo. V. cap. 69, provision was made for the constitution of a separate post of Registrar General for Scotland and an appointment to that office was made in the same year.

The Reorganisation of Offices (Scotland) Bill which was introduced by the Secretary of State for Scotland in the early part of the present Session of Parliament, *inter alia*, provides "it shall be lawful for the Secretary of State to appoint a Keeper of the Registers and Records of Scotland, and on such appointment being made there shall be transferred to, and vested in, such Keeper the whole powers and duties of the Deputy Clerk Register, and

the whole powers and duties of the Keeper of the General Register of Sasines, the Register of Hornings, the Register of Inhibitions and Adjudications, and the Register of Entails (hereinafter referred to as The Keeper of the General Register of Sasines) and of the Keeper of the Register of Deeds." The object is to unify under one control the Departments (known as the Register House Departments) which are concerned with the registration and recording of Legal Writs and Deeds and the custody of other Records.

2. The difficulties of current organisation and administration may be summarised as arising from an insufficient definition of the powers and duties of the Deputy Clerk Register (or other Record Authority) in regard to Public Records generally and local Records in particular. It is suggested that after a Record Authority has been constituted, as proposed by the Reorganisation of Offices (Scotland) Bill, steps should be taken to define in detail the powers and duties of that Officer in regard to such matters as powers of exchange, destruction of useless Records, and control of Public Records which remain in the care of local custodiers.

3. In view of the conditions under which the Records are preserved there is, in general, no possibility of loan or exchange with municipal, colonial or foreign collections. Freer intercourse in this sense is therefore not practicable.

4. The Deputy Keeper of the Records frequently confers with the Deputy Keeper of the Records in London on matters of common interest. The only other Department whose activities cut across those of the Record Office from the points of view indicated in the question is the National Library of Scotland. Questions often arise as to which of these Departments is the appropriate repository for documents such as Charters and other Manuscripts, and it is desirable that, if possible, their respective spheres should be more clearly defined and some machinery devised for the settlement of cases of difficulty.

5. The Register House staff has in the past been recruited by special examination open to young men who have served for a period in lawyers' offices. Vacancies both in the Record Office and in the other Register House Departments have been filled from this examination. The examination, as will be seen, requires some legal training, but so far as the Record Office is concerned entrants to a large extent acquire their technical training after entering the Department. The present system is not altogether satisfactory, and it is under consideration whether some other method should be devised for ensuring that suitable men will always be available for the higher ranges of the work in the Record Office.

6. The existing accommodation in the General Register House for the storage of Records is capable of considerable expansion, as a large number of rooms are at present occupied by the staffs of other Departments who could be accommodated in other buildings from time to time as additional room becomes necessary for the storage of Records. In addition to this, it may be stated that a great deal of additional accommodation could be found within the walls of the present building without the necessity of any very serious structural alterations.

7. Certain Calendars are prepared by specially qualified Editors appointed for the purpose and paid from an annual Grant, and Indexes are prepared by a staff paid out of an annual Grant for the purpose. These publications are printed and issued by H.M. Stationery Office and the proceeds of sales are appropriated in aid of the Stationery Office Vote.

8. Facilities are given for students of Law, Genealogy and History to inspect the Records, but owing to the large increase of such students in recent years, certain limits have to be placed upon the numbers who desire to come collectively, and upon the times at which they can be received. In addition, it may be stated that the requests for

assistance on the part of students is a serious encroachment upon the time of the very limited staff available for this class of work. It has not been the practice to charge fees when the Records are inspected for purely literary or educational purposes.

SCOTTISH MUSEUM OF ANTIQUITIES.

1. The National Museum of Antiquities was instituted in 1851, when the Society of Antiquaries of Scotland made over to the Board of Manufactures on behalf of the Nation their entire collection of antiquities, coins, medals, portraits, manuscripts and printed books. These Collections, which were extensive and of great value, had been brought together in the seventy years which had elapsed since the Society was founded in 1781. The terms of agreement between the Treasury and the Society are embodied in a Treasury Minute, dated 1st July, 1851. It was agreed:—

(1) That the Society should convey their entire Collections, with such additions as might hereafter be made to them, to the Board of Manufactures on behalf of the public, subject to the disposal of the Lords of the Treasury.

(2) That fit and proper accommodation should be at all times provided in a public building for the preservation and exhibition to the public of the Collections of Antiquities, and for the meetings of the Society.

(3) That the charge and custody of the Collections should be entrusted to the Society of Antiquaries, subject to such regulations and special directions from time to time as might be prescribed by the Board of Manufactures, with the consent of the Treasury.

(4) That funds to alter and adapt apartments in the Royal Institution Buildings for the reception of the Collections, and to furnish the requisite means for the preservation and exhibition of the Museum, and to pay the salaries of additional servants should be provided by estimates to be submitted to Parliament.

My Lords concurred in opinion with the Board of Manufactures that it would not be conducive to the object that all parties had in view in making the arrangement that express stipulations should be entered into with the Society of Antiquaries on detailed points of management, but the Society was assured that it would be the desire of the Board of Manufactures and the Treasury so to exercise the general control they must retain over all Collections exhibited at the public expense as to leave the Society of Antiquaries as unfettered in the charge and management of the Museum as circumstances would allow.

The above terms of agreement were embodied in the formal Deed of Conveyance by the Society of their Collections to the Board of Manufactures, dated 15th and 18th November, 1851.

The Museum of Antiquities, formerly housed in the Royal Institution on the Mound, has since the year 1891 been installed in the East Wing of the National Portrait Gallery.

The building of the National Portrait Gallery, which previous to 1906 was vested in the Board of Manufactures, was by the National Galleries Act of 1906 transferred to the Commissioners of Works, upon whom lies the duty of maintaining and keeping it in repair. The Office of Works further provides all cases required for the exhibition of the Collections contained in the building. While the building as a whole is thus vested in a single Government Department, two other Bodies are concerned with the care and management of the Collections which it contains.

The Board of Trustees, established under the National Galleries Act, instituted for the management of the National Art Collections of Scotland took the place of the Board of Manufactures and has under its charge, *inter alia*, the National Portrait Gallery.

The Collection of National Portraits installed in the west wing of the building is vested in the Board, and with them lie the entire care and management of that Collection. The whole of the officers and attendants are directly under their charge, and are paid by them. The appointment of the officers is, however, made by the Secretary of State for Scotland, usually on the recommendation of the Board.

In the case of the National Museum of Antiquities, installed in the east wing of the building, the position is somewhat different. Here the whole Collections are vested in the Board of Trustees, who are responsible for payment of the officers and attendants. The officers, as in the case of the Portrait Gallery, are officials of the Board, and hold their appointments from the Secretary of State for Scotland. On the other hand, the supervision and management of the Collections housed in the Museum rest wholly with the Society of Antiquaries. The Society is entirely responsible for the acceptance of objects, the administration of the Purchase Grant, the arrangement and preservation of objects forming the Collections and keeping of records. The Society exercises its control through its Council, consisting of twenty-two members elected annually by the Fellows in general meeting. The Council includes two Honorary Curators of the Museum, an Honorary Curator of Coins, and an Honorary Librarian.

In accordance with the original agreement between the Society and the Board of Manufactures, two additional members of the Council are appointed by the Board of Trustees, both of these being Fellows of the Society, while the King's and Lord Treasurer's Remembrancer is appointed to the Council by the Treasury. The Director of the Museum, who is an official of the Board, is present, and takes part in the meetings of the Council. He also acts as Assistant Secretary to the Society.

2. The relations which have existed between the Society of Antiquaries and the Board of Trustees have been uniformly harmonious. The presence of the Chairman of the Board, who sits upon the Council as one of the nominated members, has been invariably helpful. At the same time, the dual control of the Museum by the Board of Trustees and the Society of Antiquaries, under which the attendants are under the management of one body and the collections of another, appears to be anomalous, and the anomaly is all the greater in that, while the Board is directly represented on the Council, the Council has no representation on the Board.

When in the year 1851 the Collections were made over to the Nation it is easy to recognize the reasons which led to the Board of Manufactures being put in control. The Board at that time was entrusted with a considerable variety of public duties. The Royal Institution building, in which the Museum was housed, was directly under it. The office of Secretary of State for Scotland did not exist.

Since 1851, however, the Museum has very largely increased in size and importance, while the Board of Manufactures has been replaced by the Board of Trustees with more limited functions. Except for the fact that the Museum is installed in the same building as the National Portrait Gallery and that accounting may be simplified through the cleaning and, to some extent, the appointment of attendants being under one body, there does not appear to be any strong reason why the entire charge of the Museum of Antiquities should not be entrusted to the Society of Antiquaries acting directly under the Secretary of State for Scotland. The crowded condition of the Museum makes it plain that before many years some additional accommodation will be required for the Collections. It does not seem possible that any satisfactory addition could be made to the building, nor could any further space be obtained in the wing devoted to the National Portrait Gallery, which is itself in need of room for expansion. The time must come, and that at no distant date, when the Museum must be housed

elsewhere in a larger building; in that event, any reason which may exist for the retention of control by the Board of Trustees would disappear. In the opinion of the Council it is desirable that the Royal Commission should not lose sight of this aspect of the matter when they are considering the position as a whole.

3. In dealing with the question of loans, it must be kept in mind that a large proportion of the exhibits in the Museum are fragile, and not infrequently fragmentary, requiring continual attention.

As a general rule, the Council, as Custodians of national property, have not encouraged lending, except in a few cases where they have been satisfied that the objects in question are not illustrative of the prehistory of Scotland and would be of greater value if added to a more complete Collection elsewhere. Acting on this view, they have in recent years, with the consent of the Board of Trustees, lent to the Royal Scottish Museum a series of Greek Vases and certain ethnological specimens not required for comparative purposes. Scottish antiquities have been received on loan in exchange. They have also deposited on loan in the Royal Scottish Museum a Collection of Silver Plate bequeathed to the National Museum of Antiquities by the late Mr. James Cowan Smith in 1919.

While it is possible that powers of lending or exchange might occasionally be valuable, it is doubtful whether many opportunities for exercising them would arise. The actual number of duplicates is not very large, and where they exist it is among objects of antiquity which are most widely distributed, such as the smaller flints. It would be undesirable in the interest of students to break up Collections gathered from specific sites, or arranged to illustrate some specific period of culture, in order to make loans. Further, it might be dangerous. As a general rule, local museums in Scotland lack the equipment necessary for taking charge of delicate specimens, nor has this Museum sufficient staff to enable it to undertake the management of a loan department, such as exists in connection with the Victoria and Albert Museum.

Powers of sale of duplicates or of objects not illustrative of the history or archaeology of Scotland, or valuable for comparative studies, might be given, but they would require to be exercised with very great care, as so large a proportion of the objects in the Museum have reached it by donation. Further, if they were to be exercised, the sums received should be specially set apart to be devoted to the increase of the Collections, and should not be deducted from the annual Grant. Similar powers on a like footing might be given as regards volumes in the Library.

4. The only public Museums which might be inclined to compete with the National Museum for objects illustrative of Scottish history or pre-history are the British Museum and the Royal Scottish Museum.

The British Museum has large Collections illustrative of the prehistoric and mediæval culture of Great Britain, and would, of course, welcome any additions from the Scottish area.

The Directors of the Royal Scottish Museum and of the National Museum endeavour, as far as possible, not to encroach on each others' province, and are in regular consultation before sales; indeed, when donations are offered to one of these Museums which would be more suitable for the other, representations have not infrequently been made to the would-be donors, which have resulted in their gifts being added to the collection in which they would be most appropriately displayed. The mutual understanding, which exists is, however, based merely upon the goodwill of the Directors of the two Museums, and there is no guarantee for its continuance under a change of personnel.

As regards the British Museum, an arrangement has been in existence for a number of years by which it does not compete for the purchase of Scottish relics with the National Museum of Antiquities. When Scottish objects of importance which the

National Museum desires to acquire appear in a London sale-room, intimation is made to the British Museum, with a note of the price which the National Museum is prepared to give. The British Museum does not bid unless the price should go beyond the figure which the National Museum is prepared to offer. Even when no intimation has been received, the British Museum, before deciding to acquire Scottish relics, communicates with the National Museum, asking whether there is any intention to bid, and, if so, what price it is prepared to offer.

5. No fees for admission to the Museum are charged. Looking to the fact that it is not situated in a main thoroughfare, the numbers of chance visitors entering are not so great as they were when it was situated in the Royal Institution Buildings in Princes Street. The average numbers for the year 1926-27 was 40,127. The average annual attendance for the past five years is 34,780. It is not considered that the sum to be gained by charging a fee would compensate for the diminution of interest in the Collections which would probably follow.

6. The staff consists of:—

(1) The Director of the Museum, who is occupied with the general charge and oversight of the Collections.

(2) The Assistant Keeper, who is a trained chemist, and whose time is largely occupied in the treatment and arrangement of specimens.

(3) A preparator, occupied in the mounting of specimens and the preparation of labels, and also assisting in the preservative treatment of relics.

Pensioner messengers are employed in the galleries and a pensioner messenger is in charge of the Library.

In the event of vacancies occurring, it has usually been necessary to fill them from candidates trained elsewhere. The staff is too small to institute any regular system of promotion to the higher posts.

In addition to the staff paid from Parliamentary Grants, the Society of Antiquaries pay the whole salary of a typist, who types the Director's correspondence, whether concerned with the affairs of the Museum or of the Society. She also types the entries for the Museum Register, and keeps the card index of the Museum; also the accounts dealing with the expenditure of the Purchase Grant.

7. The Collections of the National Museum are displayed in three galleries.

On the ground floor of the building is an important series of sculptured stones and of objects dealing with historic times.

On the entresol are situated the Assistant Keeper's room and laboratory.

On the first floor are the Collections of prehistoric and Roman antiquities.

On the second floor is a gallery devoted to comparative Collections, the Library, the Director's room and a room used for meetings of the Council. There is a cellar below ground, and some attic accommodation, employed for storing books.

The whole of the floor and wall space on the first two floors is fully occupied with cases and exhibits, which are placed so closely together that probably not more than two new cases could be introduced, though by the substitution of cases, with shelves, for flat table cases, a little more space for display could be provided. The great majority of the cases are full to overflowing, which makes the display of new specimens extremely difficult. The congestion in the cases entails much extra work, as, not infrequently, the addition of a few objects compels the rearrangement of the whole contents of one or more cases.

The window cases on the ground and first floors are all provided with drawers, with glass tops. These drawers can be pulled out at will, so that their contents can be examined by students.

A number of the old cases in the Comparative Gallery are small and badly designed. It is hoped that larger cases will shortly be substituted for

these, which will give an addition to the space in that room, but it will all be required for the present Collections.

The fine Collection of sculptured stones on the ground floor is lamentably overcrowded. Large cupboards have been installed in the cellars, but even these are being filled up rapidly.

8. The only publication on sale in the Museum is a small Guide to the Collections, issued in 1926, which is sold at threepence a copy. This Guide is produced by H.M. Stationery Office.

The Catalogue of the Museum, produced at the expense of the Society of Antiquaries and sold by them, is at present out of print. It may be, however, noted that the *Proceedings* of the Society provide a means of publishing an account of every object added to the National Collection, and, not infrequently, of illustrating it. Of this volume, 1,250 copies are issued annually, not only to the Fellows, but to many Public Libraries in this country, as well as abroad. Few Museums in Great Britain can show so complete a published record of their acquisitions.

The Museum has no system for the production of electrotypes.

By special arrangement in the past, a few objects have been reproduced for the benefit of other Museums, at their own expense.

9. Students are welcomed at the Museum. As the specimens are well mounted and labelled, they are easily available for research work. If close examination is desired, this is arranged for, except in the case of very fragile objects, the Director or Assistant Keeper being in attendance.

In the case of coins, facilities for examination are given to approved students, but only in the Director's room and in his presence.

Students are admitted to the Library to consult the large collection of works, over 15,000 volumes, bearing on prehistoric archaeology and history, which it contains. The growth of the Library since 1851 has been very large. In addition to books obtained by purchase and donation, a very valuable collection has been accumulated by means of the exchange of publications issued at the sole expense of the Society of Antiquaries.

The Museum is not itself in a position to institute excavations. The Treasury Grant allowed to it for the purchase of specimens and for keeping up the Library is only £200. There is, however, a travelling allowance up to £30, which is from time to time employed in enabling the Director or Assistant Keeper to visit excavations or proceed to localities where chance discoveries have been made. Many valuable relics have been secured for the Museum in this way.

While in the past gifts of archaeological material in private hands, supplemented to a much smaller extent by the purchase of objects, have been the main sources of the increase of the Collection, in recent years by far the most important additions have been derived from excavations, and this is likely to continue.

Since the year 1895, when the Society of Antiquaries undertook the excavation of the Roman fort at Birrens, they have annually, with the exception of the war period, organised excavations on occupied sites in Scotland. The Director of the Museum is usually elected a member of any Excavation Committee appointed by the Council. Of such enterprises, the most fruitful have been those at the Roman Fort at Newstead, and at the Hill-top Settlement of Traprain, which between them have added no less than 3,855 objects to the National Collection, among them many unique things of great value. Altogether, since 1895, the sums spent by the Society of Antiquaries on excavations out of their own funds, or from moneys raised by appeals to the Fellows and others, amount to £7,091 9s. 2d. Practically the whole of the objects found in the course of these excavations have been made over to the National Museum. Sometimes individual Fellows

have taken action on similar lines. Thus, from excavations carried out at his own expense by the late Dr. Erskine Beveridge, a Fellow of the Society and a member of the Council, in North Uist, the Museum received in 1921 a contribution of 710 objects, mostly of bone, exhibiting a very interesting and practically unknown phase of culture in the Western Isles.

The excavations which have been made, with the important finds which have attended them, have stimulated interest in the work of the Society and in the Museum. The number of Fellows has been largely increased, and, as the majority of them take an intimate and personal interest in the Museum, they form a very valuable agency through which information as to finds is conveyed to the Director, and help given in the acquisition of desirable objects.

It may safely be claimed that the Society of Antiquaries has admirably fulfilled the trust, which it undertook in 1851 in taking charge and custody of the Collection since that date. Under its management the Museum has increased year by year in importance, until it now forms one of the most complete National Collections in Europe.

WALLACE COLLECTION.

(Note.—The indented headings and paragraph numbers follow the Terms of Reference.)

1. *Legal Position.*—The legal position of the Trustees is secured by a Declaration of Trust. Before that document could be executed, however, it was necessary that a governing body should be brought into being and its constitution determined. Accordingly, upon the Government receiving a notification of the bequest, a Committee was appointed by a Treasury Minute of the 3rd May, 1897, to enquire:—

Where, in what manner, and at what probable cost, provision may best be made for the housing and exhibition of the art collection recently bequeathed to the Nation by Lady Wallace, and to make any recommendations that may seem fit to them as to the constitution of the Trust in which the collection should be vested.

The Committee recommended that the Collection be vested in a body of seven Trustees, and this was accordingly done by a Treasury Minute of the 28th July, 1897. By the same Minute a Keeper was appointed whose duties—

will consist under the general direction of the Trustees in the control of the Staff of attendants, and the arrangements and custody of the works of Art. The Keeper will, however, also be entrusted with the duty of cataloguing the various Collections.

Two years later, on the 27th July, 1899, an Indenture or Declaration of Trust, was entered into between two of the Lords Commissioners of the Treasury of the first part, Mr. John Murray Scott (an executor and the residuary legatee of the Will of Lady Wallace) of the second part, and the seven Trustees (appointed as above, of whom Mr. John Murray Scott was one) of the third part.

The principal clauses of that Indenture are as follows:—

Whereas Dame Amelie Julie Charlotte Wallace, Widow of Sir Richard Wallace, Baronet, by her Will dated the 23rd May, 1894, bequeathed to the British Nation her pictures, porcelain, bronzes, artistic furniture, armour, miniatures, snuffboxes and works of art which were placed on the ground and first floors and in the galleries at Hertford House, on the express condition that the Government for the time being should agree to give a site in a central part of London and build thereon a special museum to contain the collection which should be always kept together unmixed with other objects of art and should be styled "The Wallace

Collection," but she declared that that bequest should not include personal and modern jewellery trinkets and effects nor ordinary modern furniture or chattels, but should include the Louis XIV balustrade at Hertford House which her Executors should replace by an ordinary modern balustrade and the Louis XIV balustrade should be used in the new museum to be erected for the said Collection.

And the Testatrix declared that if any doubt should arise as to whether any object should form part of the Collection or not the question should be determined by her Executors and their decision should be final.

And the Testatrix further declared that the bequest was made subject to the express condition that Her Majesty's Government for the time being should nominate John Murray Scott to be one of the Trustees of the Collection for the Nation and also that during the time the Collection should remain at Hertford House (which should not exceed a period of four years from the date of her decease) it should be at the risk and peril of Her Majesty's Government, who should also defray the cost of superintendence and preservation of the Collection.

And after making a certain devise and other pecuniary bequests the Testatrix bequeathed the residue of all her real and personal estate to John Murray Scott and appointed John Murray Scott and Frederick Lucas Capron Executors of her said Will.

And whereas the Lords Commissioners of Her Majesty's Treasury on behalf of the British Nation accepted the bequest upon the conditions contained in the Will and second Codicil so far as such conditions have not been varied or modified by the arrangements hereinafter recited.

And whereas the said John Murray Scott has agreed and doth hereby declare his intention to waive any claim he might otherwise have to be entitled to raise to the Collection as forming part of the residuary estate of the Dame Amelie Julie Charlotte Wallace by reason or on account of the non-fulfilment of the condition contained in her Will that the Government for the time being should agree to give a site in a central part of London and build thereon a special museum to contain the said Collection.

And it is hereby agreed and declared that the Wallace Collection shall at all times hereafter be deemed to be vested in and under the care and ordering of the Earl of Rosebery, Sir Edward Baldwin Malet, Sir John Stirling Maxwell, Sir Arthur Edward Augustus Ellis, Alfred Charles de Rothschild, Algernon Bertram Freeman-Mitford and John Murray Scott or other of the Trustees for the time being to be appointed as hereinafter provided, and that the Trustees shall be at liberty at all times to make such rules, regulations and bye-laws with respect to the Wallace Collection and the custody and preservation thereof and the appointment, dismissal and remuneration of officers and attendants employed for that purpose and also with respect to the times and conditions at and upon which the Wallace Collection shall be open to the public and in all other respects for the management and control of the Collection as the Trustees shall from time to time think necessary or proper.

And it is hereby agreed and declared that the power of appointing a new Trustee or new Trustees shall be exercisable by the Lord Commissioners of Her Majesty's Treasury for the time being and that upon any appointment or vacancy the number of Trustees may be augmented or reduced but so as never to be reduced below three. And that in the event of the death of the said John Murray Scott or his refusal or incapacity to act in the trusts hereof it shall not be necessary to appoint a new Trustee in his place.

In 1918, owing to the War and other causes, it became difficult to secure the attendance of a sufficient number of Trustees to conduct the business of the Board. Upon this fact being reported to the Treasury the number was increased from seven to nine by a Minute of the 6th June (9201/18):—

In the circumstances Mr. Lloyd George recommends this increase in the number of Trustees.

It will be open to the Treasury on the occurrence of future vacancies to decide in the light of then existing circumstances whether the two additional Trusteeships in excess of seven should be filled or not.

1.—*Organisation.*—The present organisation consists of a Board of nine Trustees and the following Staff:—

- 1 Keeper, Secretary, Accounting Officer and Inspector of the Armouries.
- 1 Assistant to the Keeper.
- 1 Assistant to the Keeper and Lecturer.
- 1 Technical Assistant (First Class).
- 1 Shorthand-typist.
- 1 Head Attendant.
- 1 Assistant Head Attendant.
- 2 Technical Assistants (Second Class).
- 9 Attendants (First Class).
- 14 Attendants (Second Class).
- 5 Warders (First Class).
- 13 Warders (Second Class).
- 1 Ladies' Attendant.
- 1 Furniture Repairer.

Part Time services are rendered by a Relief Lecturer and eight Charwomen.

The duties of each post are roughly indicated by its title. The Warders replaced the Police on the re-opening of the Collection in 1920.

1. *Administration.*—The Wallace Collection, having no endowment, is maintained wholly by funds provided by Parliament. The demands upon the Exchequer are lessened by the receipts from admission fees (a charge of 6d. being made upon two days a week), and by the proceeds of the sale of publications. In the current year these are estimated to produce £500 and £1,790, or £2,300 in all. Expenditure is audited in detail by the Comptroller and Auditor-General and certified in the annual Appropriation Accounts.

These funds are administered by the Trustees and, it is stated on the Estimates, that they "will be accounted for" by them. In practice this accounting is performed by the Accounting Officer.

As regards administration, other than financial, the position may be gathered from the documents already quoted.

The Trustees, as already seen, are appointed by the Lords Commissioners of His Majesty's Treasury; the Accounting Officer is also appointed by the Treasury.

The power of appointing the Keeper and all officers and attendants is given to the Trustees by the Declaration of Trust; the first Keeper was appointed by the Prime Minister as the Declaration of Trust was not then in existence. Lesser appointments were made by the Treasury as a matter of ordinary routine until 1912. In that year the Parliamentary Secretary of the Treasury voluntarily surrendered to the Trustees his supposed rights as regards minor appointments, and in 1924 the Trustees appointed the present Keeper.

1. *Accommodation.*—Hertford House was for many years the London residence of Sir Richard and Lady Wallace, and previously of the second, third and fourth Marquesses of Hertford. As already seen, it formed no part of the bequest, the Government purchasing the lease from Sir John Murray Scott and the freehold from Lord Portman. The stables and coachhouses were then converted into galleries, and at a later date, primarily as a security against fire, the woodwork in the upper floors was removed and three top-lit galleries, as well as offices and work-rooms, constructed. The present accommodation consists of XXV galleries.

The basement is fully occupied by mess and store rooms, etc.

1. *Structural Condition.*—As the First Commissioner of Works is responsible for the maintenance of Hertford House evidence upon this point will doubtless be furnished by officers from that Department.

Lighting.—Various systems of artificial lighting are in use. In gallery XVI direct light is diffused by means of a glass ceiling; in the side galleries reflected light is used; in others, crystal or gilt-bronze chandeliers and wall-lights have been converted, while many bowl fittings are used on the ground floor.

Heating is by means of hot water circulating in pipes laid below the floor or in radiators placed beneath the windows. There are no open fires.

Ventilation is natural except in the case of five top-lighted galleries, where ventilating fans are employed.

A permanent vacuum installation is laid on to every part of the building. This is used not only for removing dust from the structure, but for cleaning the tapestry, furniture and other objects.

Re-opening of Closed Galleries.—The closing of three new Galleries on the second floor of Hertford House, within twelve months of their first opening, was agreed to by the Trustees as a temporary expedient for meeting the exceptional financial pressure of 1921, and with the stipulation that they would require their re-opening when the financial stringency was past. The Trustees have no power under the Declaration of Trust to permit the permanent closing of any part of the Collection, and they have no option but to insist that re-opening shall be agreed to in principle and carried out as soon as financial exigencies permit.

Before re-opening is attempted, however, the Trustees are strongly of opinion that the means of access should be improved. At present the only approach is by means of a dark staircase with returns at every few steps. In the event of fire the staircase would, in their opinion, prove dangerously inadequate, a danger increased by the abutment of the staircase-wall upon the top landing.

The Trustees therefore invite the support of the Royal Commission in their efforts to comply with the obligations placed upon them by the Trust Deed, and recommend that the Office of Works be asked to submit plans for improving a means of access which they regard as both inadequate and dangerous.

1. *General Cost.*—Estimated expenditure for the current year is as follows:—

	£
Gross Estimate (Class IV, No. 7) ...	14,363
Building, Furniture, Fuel and Light ...	5,010
Rates	720
Stationery and Printing	180
Superannuation	1,057
Post Office	12
Gross Total	21,342
Appropriations-in-Aid	2,300
Net Total	£19,042

As regards the Wallace Collection Vote, Gross and Net Expenditure since 1920-21 is as follows:—

	Gross £	Net £	Attendances
1920-21	15,285	14,932	62,249 ⁽¹⁾
1921-22	16,637	14,756	120,538
1922-23	13,842	11,115	128,569
1923-24	12,962	10,498	117,321
1924-25	13,230	10,048	162,012
1925-26	14,750	12,412	163,089
1926	12,742	10,492	149,129

⁽¹⁾ For the five months ending 31st March 1921. The Collection was reopened to the public on the 20th November 1920.

The variations in expenditure from year to year are due to many causes: fluctuations in the cost of living bonus, vacancies on the Staff, the transfer from Stationery Office Votes of the cost of printing catalogues, etc., etc.

2. *Growth of the Collection.*—The terms of the bequest preclude any additions to the Collection. In the words of the Treasury Committee of 1897⁽¹⁾: "there can be no expansion by purchase, no diminution by weeding out or removal".

3. *Limitation of Expenditure.*—Expenditure is accounted for under four subheads. Upon two of these—telephones and uniforms—expenditure is insignificant and automatic, and consideration can therefore be limited to the remaining two—Incidentals and Salaries.

With regard to the first, the average expenditure for the fifteen years ending 31st March, 1914, was £1,576, while that for the four years ending March, 1926 reached but £219. So substantial a reduction is the result of a succession of economies aided by the postponement of work not urgently required: no further reductions can be promised.

With regard to the Salary subhead, one First Class Attendantship and two Second Class Warderships are being kept vacant as a measure of economy and three Galleries on the second floor remain closed.

The surveillance of the public is particularly difficult at Hertford House. Many of the rooms are small and the construction is such that a clear view from one to another cannot be obtained. Increased demands upon the vigilance and activity of the watching staff are made by the exhibition, along with the pictures, of the furniture and other objects of art, while many small and valuable objects are unprotected by glass. It is desirable to explain at length why this arrangement was adopted for it has been suggested by the Treasury that substantial economies in the watching staff could be effected if all the exposed objects were grouped together. It is admitted by every competent authority that the special charm of Hertford House is directly due to the present arrangement which was outlined and approved by the Treasury Committee of 1897:—

3. So long as the Wallace Collection was private property it could probably not have been exhibited in a more attractive or appropriate manner than that in which it has been dealt with at Hertford House. The combination of admirable pictures with objects of art of many different kinds, all of the highest order of excellence, and the arrangement of these throughout the different apartments and reception rooms, as well as in the exhibition galleries, have been carried out with the greatest skill and taste. It would have been impossible to display the collection in a manner more calculated to illustrate the knowledge and discrimination of those by whom it was brought together.

16 it is desirable to retain, as far as possible, the arrangement of the collection made by Sir Richard Wallace himself

3. *Admission Fees.*—A fee of sixpence is charged for admission upon two days a week.

The fee was instituted for a double purpose: to aid the revenue and to restrict the attendance of the general public for the advantage of students.

As regards the first, the receipts for the last six years were as follows:—

	£
1926	480
1925-6	509
1924-5	644
1923-24	1,038 ⁽²⁾
1922-23	1,135 ⁽²⁾
1921-2	606

⁽¹⁾ Wallace Collection: Report of Committee appointed by the Treasury, C-8445, paragraph vii.

⁽²⁾ The increase in the years 1922-23 and 1923-24 was due to the imposition of the fee upon four days a week instead of two.

It is indisputable that this revenue is obtained at the cost of excluding large numbers of the public. For example, taking the daily attendance during the last five years upon free and "student" days, it is seen that the average attendance upon paying days is less by 307 than that upon free days. Therefore, since there were 103 paying days in 1926 and 102 paying days in 1925, about 31,621 visitors appear to have been excluded by the fee in the first year and 34,272 in the second.

	Total Attendances	Daily Average		Difference
		Free	Six-pence	
1926 ...	149,859	492	185	307
1925 ...	162,342	535	199	336
1924 ...	153,957	511	218	293
1923 ...	119,127	492	200	292
1922 ...	131,869	529	220	309
				1,537
Average difference for five years				307·4

1926	No. of paying days	103	
	Average difference	307	$103 \times 307 = 31,621$
1925	No. of paying days	102	
	Average difference	336	$102 \times 336 = 34,272$

It is possible that some of these visitors returned to seek admission on other days, but the number cannot have been large for the above calculations are supported by a comparison with the figures for total attendance in 1923 and 1924. In 1923 admission was charged for on four days and the total attendance was 119,127; in 1924 (although the reversion to two paying days per week was only in force for nine months) attendances rose to 153,957, an increase of 34,830.

The benefit supposed to be derived by students from this reduced attendance is open to doubt. In the first place it is probable that a number of poor students or scholars are excluded with the general public, and in the second it cannot be alleged that attendances upon free days are so large, Saturdays and Sundays excepted, as not to permit reasonable access to the objects of art. To impose any restrictions upon the attendance of the general public for the sake of students is therefore unnecessary.

From the figures given above it is clear that some 30,000 visitors are annually lost to the Collection by the imposition of an admission fee of 6d. upon two days a week, and the Trustees therefore recommend that this fee should be abolished. Although some £500 of receipts would be lost annually by the abolition of this fee it is obvious that the cost of maintenance per visitor would be lowered, for increased attendances cause no corresponding rise in expenditure. For example, the unit cost per visitor for 1923-4 (with four paying days a week) was 1s. 9½d. In the following year (with two paying days a week for nine months only) the unit cost fell to 1s. 4d. In 1925-26, although net expenditure was greater by £2,253 than in 1923-4, the unit cost did not exceed 1s. 6d.

It is probable that the loss upon admission fees would be partly off-set by increased profits upon publications. During 1927 publications to the value of 2.75d. were purchased per visitor. An increase of 30,000 in attendances should therefore be followed by an increase in sales to the extent of £343. Since the gross profit in 1927 was 42 per cent. of the receipts an additional profit of £144 should be realised. The estimated net loss to the Vote, therefore, would not be £500 but roughly £356.

The Trustees therefore not only recommend the abolition of the fee but are of opinion that more regard should be given to the unit cost, and the question of lowering it by increasing attendances. To this end they beg to offer the following suggestions:—

(a) In the opinion of the Trustees the value of picture postcards as a means of advertising

the Collection has been insufficiently appreciated, the question of profit having been the first consideration in fixing the selling price. To induce as large a circulation as possible the Trustees recommend a reduction in the selling price from 2d. to 1d. Even with this reduction a profit exceeding ½d. per card would be made.

(b) The success which has attended the development of the museum's publications can hardly be better illustrated than by the figures for the coloured prints which were first issued in May, 1923:—

				Receipts.
				£
1923-4	176
1924-5	285
1925-6	546
1926-7	595
1927 (9 months only)	678

Not only are about one-third of the profits at the Publications Stall now derived from this source, but as a means of advertisement they are no less valuable than the picture postcards, about 3,000 having been sent abroad in the course of 1927.

The main purpose of museum publications, however, is neither the making of a profit nor their use as advertisements, but to increase the value of the Collection for the general public and students, a purpose chiefly served by the issue of well-illustrated catalogues at a moderate price. There are at present five catalogues on sale, but development has been hampered by the high cost of printing and the inadequacy of the Keeper's library at Hertford House. The Trustees consider that since substantial profits are made upon cards, prints and albums of illustrations, the selling price of the catalogues should always be fixed at a figure which will ensure the largest sale even if a slight loss is incurred on a first edition in certain cases. They also recommend that a definite percentage (of not less than 25 per cent.) of the total net profits at the Publication Stall should be allocated to removing those deficiencies in the library which are delaying the preparation of revised editions of catalogues long out of print and the planning of new ones.

(c) The Wallace Collection is at present closed to the public at 5 p.m. throughout the year. Those engaged during the normal working day have thus no opportunity of visiting the Collection except on Saturday and Sunday afternoons. The Victoria and Albert Museum is open until 9 p.m. on Thursdays and Saturdays, and the Trustees think that the experiment of opening the Collection upon one evening a week until 8 or 9 p.m. should be tried for at least two years.

The cost of such opening would be approximately £359 and £497.

		Salaries.	Lighting.	Total.
		£	£	£
Three hours	...	255	104	359
Four hours	...	341	156	497

The artificial lighting in certain Galleries is inadequate, and the cost of increasing this to a satisfactory point would also have to be incurred.

4. *Congestion and Redistribution.*—The terms of the Bequest by intention were so drawn as to preclude any distribution or loans whatsoever: "the Collection should always be kept together unmixed with other objects of art." These terms also preclude any diminution by weeding out or removal.

The Trustees are opposed to any application being made to Parliament to vary these terms as they consider their first duty is to carry out the clearly expressed wishes of the Testator. In their opinion the granting of loans could not be considered as a trifling enlargement of the terms of the bequest;

on the contrary, it would be in direct opposition to them. The number of applications received in the past has been large, and always for the chief treasures of the Collection; if only a limited number of these were granted many of the finest pictures would always be missing from its walls, and visitors from the provinces and abroad would suffer much disappointment. The need for the loan of a picture on permanent exhibition is in any case less than it is for one in private possession or which for other reasons may be inaccessible.

The Trustees would also be opposed to seeking the authority of Parliament for power to dispose of redundant or unworthy objects in the Collection. Not only would this constitute a very serious breach of trust, but either the objects would be valuable (in which case their disposal would be obviously improper) or of little worth (in which case the proceeds would be insignificant). Fluctuations in taste are frequent, and objects little esteemed to-day might one day return to favour or arouse a new interest. In any event, the number of objects unworthy of exhibition is trifling considering the scope of the Collection, a circumstance due not only to the discrimination of the founders but to the fact that all objects deemed to be unworthy of the Collection were specifically excluded from it at the time of the bequest.

6. *Central Administrative Authority.*—The present administrative authority is the Treasury, and the Trustees consider that it would neither conduce to economy nor be otherwise desirable to impose between them and Parliament a further authority.

It would be prodigal of official time, and would cause delay and friction if all correspondence concerning the supply of funds or staff matters were conducted through a third party.

As regards the administration of the Trust, the terms of the bequest are clear and inelastic, and it would not be within the power of any central authority to vary them. The responsibilities of the Trustees cannot be lessened nor can they be shared by submitting their acts to a higher authority for review or approval.

7. *Modification of the Terms of the Bequest.*—The Wallace Collection was offered to the Nation upon certain conditions. These conditions were accepted by the Government of the day and legal expression given to them in the Declaration of Trust already quoted. The reasons for those conditions are understood, and nothing has occurred in the thirty years which have elapsed to suggest that they are unreasonable or that anything is to be gained by modifying them. The obligation to carry out the wishes of a Testator, both in the letter and the spirit, is a sacred one, and the Trustees would consider it their duty to resist to the uttermost any attempt to alter them on grounds of expediency or economy.

The desire faithfully to carry out the wishes of a Testator may, however, lead to too strict an interpretation of terms. For example, the conditions that the Collection "should be always kept together unmixed with other objects of art" was taken by

the Committee of 1897, and has been so interpreted since that day, to exclude all additions whatsoever. In accordance with this view the two wings of our Cima altar-piece when offered by the Strasburg Museum were refused. Other like instances have occurred. It is doubtful whether such refusals would have been made by such ardent collectors as the fourth Marquis or Sir Richard Wallace: on the contrary, they would probably have been eager to add to their Collection any missing fragments of this character. This term of the bequest would appear to have been dictated by a quite different consideration, the words "kept together" obviously being intended to prevent distribution; the same thought is suggested by the words "unmixed with other objects of art." The Cima altar-piece, if united with its wings, could not fairly be described as mixed "with other objects of art." It would appear, therefore, that so desirable a complement to the bequest is not precluded by its terms, but by too casual an interpretation of them.

Scope of the Collection.—The Collection takes its character from the tastes and opportunities of the fourth Marquess of Hertford, who lived in Paris, and was a devotee of the arts of France in the eighteenth century. Consequently, this century, early and late, is richly represented in its painting and miniatures, sculpture, furniture, porcelain, and objects of art generally. But the body of French art extends as far as the thirteenth century, and forward, in painting, to the third quarter of the nineteenth.

Although the French section gives a distinctive character to Hertford House, it is only one among four. The second is a rich gallery of Italian and Spanish, Flemish, Dutch and English paintings. If the number of Primitives is small, the seventeenth century can be studied in Brouwer, van Dyck, Hals, de Hooch, Rembrandt, Rubens and Velasquez. The eighteenth century in Italy is represented by Guardi at his best, and among the English portraits are famous examples of Gainsborough, Hoppner, Reynolds and Romney. The nineteenth century gives us the largest existing collection of the works of Bonington, whose influence can be clearly seen in much contemporary French work.

The third section, chiefly acquired by Sir Richard Wallace, embraces mediæval objects, Italian Renaissance terra-cottas and bronzes, medals and plaquettes; maiolica from Gubbio and Urbino, Hispano-Moresque and Turkish faience; rock-crystal, glass, jewellery, gold and silversmiths' work, wax reliefs and much else.

Finally, there is the chief collection in this country of European Arms and Armour which from its exceptional quality is becoming every day more precious as private collections are dispersed and absorbed in foreign museums: this, too, we owe to Sir Richard Wallace. Adjoining it is the Oriental Armoury, the work chiefly of the fourth Marquess.

The Collection as a whole may be compared in importance, if not in extent, with the great national collections of Europe and in variety even surpasses some of these. No such gift has been received by any country from an individual.

MISCELLANEOUS DEPARTMENTAL MEMORANDA.

BOTANICAL WORK AND COLLECTIONS AT THE BRITISH MUSEUM OF NATURAL HISTORY.

MEMORANDUM BY THE KEEPER OF THE DEPARTMENT OF BOTANY, DR. A. B. RENDLE, F.R.S.

Origin of Botanical Collections.

The botanical collections at the British Museum date from the foundation of the Museum in 1755, when the Sloane Herbarium was acquired as part of

the great Sloane Collections. This herbarium is still preserved intact and is of great scientific as well as historical importance in containing some of the earliest botanical collections made in all parts of the world. Many of Linnaeus's species are founded on specimens in the Sloane Herbarium.

The herbarium at the Royal Gardens, Kew, originated in the purchase for the nation in 1865 of the private herbarium of Sir W. J. Hooker.

Intimate relations between British Museum and Banksian Herbarium.

The present Department of Botany of the British Museum was established for the reception of the herbarium of Sir Joseph Banks, bequeathed at his death in 1820. But the association between the British Museum and the Banksian Herbarium had been intimate during Sir Joseph's life. The Banksian Herbarium originated in the large collections made by Banks and Solander on Captain Cook's first voyage round the world (1768-1771). Dr. Solander, who in 1763 had been appointed Assistant Librarian of the British Museum, with the duty of cataloguing the Natural History Collections, was allowed to accompany Banks on this expedition, and after his return was, in 1773, appointed Keeper of the Natural History Department. He also acted as Banks's Secretary and Librarian from 1771 until his death in 1782, living in Banks's house in Soho Square, where he was responsible for the formation and conservation of the herbarium—one of the most important in existence at that time. The numerous volumes of manuscript descriptions of the plants in the herbarium are still preserved in the Department of Botany and form a record of Solander's work. Great freedom of access was allowed to Banks's Herbarium, which was in effect the National Botanical Collection under the charge of the Keeper of the Natural History Department of the British Museum; it thus became the natural depository of collections which would probably otherwise have been acquired by the Trustees of the British Museum.

Convenience of Position.

The British Museum Herbarium and Library are frequently consulted by the Teaching Staff and Students of the London Colleges, the Scientific Staff of the Imperial Institute and of other Scientific Institutes in London; there is still, and there will be for many years, an appreciable difference between the short journey to South Kensington by tube or omnibus and the longer journey with less frequent facilities out to Kew. A trip to Kew means a morning or afternoon to spare when an hour or two would suffice for South Kensington.

The same applies in the case of business men in town who wish to consult the herbarium or staff and to visitors from the provinces, as South Kensington is easily accessible from all the London termini. The following is quoted from a letter from the Head of the Botanical Department of one of the London Colleges:—"Surely the botanical department will not have to move to Kew? It would be a great catastrophe to many botanists who do not want to be obliged to go so far when passing through London".

Advantages of Association with a Natural History Museum.

The question of dismembering a great Natural History Museum is one of general policy, but reference may be made to certain points.

The association of members of the staffs of the various departments is invaluable, more especially in view of the increasing specialisation which drives scientific men into narrow channels. The members of the different departments come up in the train together, or meet at lunch and in the course of their work, and this intercourse must have a valuable broadening tendency.

The Botanical Department also gains from its connection with the Museum in a wider contact with collectors. The collector is passed from one department to another, and botanical collections are made by Zoologists and Geologists who would not have been brought into touch with an isolated department.

The removal of the herbarium and library would seriously hamper the work of other departments. For example, the Geological Department undertakes the study of fossil plants, which would be impossible

apart from the herbarium and library; the Entomologists enquire as to the food-plants of their insects; and in certain other groups questions may arise in which it is doubtful whether a plant or animal is concerned.

Amalgamation of the two Collections.

The numbers of visits to the herbarium and library for enquiry and research during the past few years have been as follows:—

1922	3,448
1923	3,486
1924	3,362
1925	3,950
1926	3,705
1927	4,235

The majority of these visitors would have found what they required either at the Natural History Museum or Kew; it would have been unnecessary to go from one to the other, but the more central position of the Natural History Museum has meant a great saving of time.

A comparatively small minority are students working at a limited group of plants or the flora of a limited area, and a proportion of these are overseas visitors who would spend some time at both the Museum and Kew working through the material in which they are specially interested. For the few who are engaged on an exhaustive study of a systematic subject it would be an advantage to have everything collected in one building, but such a student must visit many herbaria before his work is complete. A large part of the work of such a student is the determination and study of the partially determined material in any one collection, and it has become a general practice to allow botanists accredited to an institution to have such specimens on loan. Thus, one of my staff who is studying the family Magnoliaceae has had several hundreds of specimens on loan from the Kew Herbarium; this practice mitigates to some extent the disadvantage of separate herbaria.

It is unlikely that much saving of expenditure would accrue if the British Museum collections were removed to Kew. Such removal would create a mechanical difficulty, as, owing to their larger size, the Museum sheets could not be incorporated in the cabinets at Kew, and a new building must be erected for their reception.

Nor would there be any appreciable saving of work since there is but little duplication of scientific work as the field is so large as to give ample scope for both Institutions, while the cordial relations subsisting between the members of the two Institutions prevents overlapping in work. For example, the staff of the Kew Herbarium are specially concerned with the botany of India and of British possessions in Africa, while at the Museum we have paid special attention to the botany of the British Islands and Europe generally, and that of Australia and the West Indies. An increasing differentiation in the character of the work is also foreshadowed by the close relation of Kew with the Colonial Agricultural and Horticultural establishments which renders imperative the preparation of handbooks to the floras of these areas. On the other hand, the monographic study of genera and families, work of fundamental importance, may more especially occupy the staff at the Museum.

Association of a Collection of Living Plants.

It may be difficult for one who is not familiar with the methods of taxonomic work (the detailed study of genera and species) to appreciate the fact that a general collection of living plants such as obtains at Kew is only in exceptional cases of value for this purpose.

Taxonomic work involves the comparative study of large series of specimens of each species, illustrating its variation, its geographical distribution, &c., and a similar comparative study of all the

species of a genus. The *hortus siccus* or herbarium is the only means by which this study can be pursued. Individual specimens of a few species only, generally grown under unnatural conditions, such as would be found in a garden, are practically useless. Exceptions are certain succulent plants such as Cacti and Mesembryanthemums, which are difficult to preserve in a dried state and must be studied either in a living collection or from specimens kept in a preservative solution—we have a number of the latter in a separate room at the Museum.

Question of Floor-Space.

While increase of floor-space would be welcome (especially for exhibition purposes, which, however, would entail an increase of staff), the matter is not urgent so far as housing of specimens is concerned. With some re-arrangement of the cases in the great herbarium, work can be carried on until the completion of the Eastern wing of the Museum allows the natural expansion on the upper floor of the Department of Botany.

An Odium Botanicum.

Reference to the existence of an *odium botanicum* appears in the report of the 1901 Commissioners, and some evidence of it may be found in the "Minutes of evidence" accompanying the Report.

It was a personal affair between a few senior members of the staff, and was always a matter of regret to the junior members. It has long ago died a natural death. From the time of my joining the Museum in 1888 my relations with the Director of Kew and his staff have been perfectly friendly. At the request of the Director of the Royal Gardens I have done specific pieces of work for the "Flora of tropical Africa"—the Convolvulaceae, for Sir W. Thiselton-Dyer and the Urticaceae, for Sir David Prain. I also elaborated the "Grasses" for the "Chinese Flora," edited by Mr. Hemsley, Keeper of the Kew Herbarium.

Members of the Kew staff frequently send contributions to the "Journal of Botany," of which I am editor, and which has since its foundation in 1863 been the unofficial organ of publication of our Department of Botany.

Disaster to Systematic Botany.

The most important argument against the removal of the Botanical collections to Kew is the present trend of development of the Royal Gardens, which occupy a unique position, and are comparable with no other botanical institution in the world. On page 10 of the 1901 Report the services of Kew are described as at the immediate disposal of the Colonial, India and Foreign Offices. Such services are, in the nature of the case, mainly concerned with questions of an economic nature, that is, with applied, not pure science. The botanical establishments in the overseas dominions, whose function is to further the development of the natural resources of the Colony in question, look to Kew for instruction and guidance. The work involved increasingly occupies the attention of the Royal Gardens and tends to put more and more in the background a purely scientific outlook. The maintenance of the herbarium at the British Museum will ensure the continuation of the systematic study of plants apart from any economic aspect, which is fundamental to all branches of the science. At no distant period the question will probably arise as to the transference of the Kew Herbarium to the British Museum. The completion of the East Wing will allow ample space for its incorporation. A comparatively small herbarium would suffice for the immediate uses of the Royal Gardens as a horticultural establishment and for its economic overseas work. The large series of specimens necessary for the systematic study of the vegetation of the earth would find a natural home at the British Museum.

On the other hand, the transference of the British Museum Herbarium to Kew, in view of the present trend of development, would be a disastrous blow to the study of Systematic Botany in this country.

(Signed) A. B. RENDLE.

5th March, 1928.

WHALES AND THE WORK OF THE BRITISH MUSEUM (NATURAL HISTORY) RELATING TO WHALING.

REPORT BY MR. M. A. C. HINTON, DEPUTY KEEPER, DEPARTMENT OF ZOOLOGY, NATURAL HISTORY MUSEUM.

1. Value of whaling industry.

Although whaling is carried on in many parts of the world it is now chiefly centred in the Falkland Dependencies. Dr. Kemp has kindly supplied the following information as to the value of the industry in those Dependencies:—

"Season 1925-26.

Falkland Dependencies.

	£
Gross value of whale and seal oil	3,982,999
Gross value of Guano	143,248
Gross value of Bone meal	12,996
	£4,139,243
Whale products only	4,101,709

Annual value since 1922-23 has been between 3 and 4 millions except in one year, when it fell to 2½ millions."

2. Whale products are used chiefly in the manufacture of:—

Soap,
Fertilizers,
Margarine,

and in war time are of much importance as a source of glycerine.

3. Danger of Extinction.

Opinion differs considerably on this matter. It is necessary to distinguish between:—

- (a) Commercial extinction—that is, such a decline in numbers as will render a species too scarce for commercial exploitation.
- (b) The actual extinction of a species.

The history of whaling in the northern hemisphere shows very clearly that the primitive methods used for centuries before 1864 sufficed to bring two of the most valuable species, namely, the Atlantic Right Whale and the Greenland Whale, successively to the verge of extinction and consequently to put an end to the industry once based upon these species.

The invention of the harpoon-gun by Svend Foyn in 1864 and the introduction of steam whale-catchers enabled the whalers to attack Rorquals (Humpbacks, Finners, Sei-Whales and Blue Whales) in northern waters. After the expiration of Foyn's patent rights in 1882 many Norwegian companies were formed and from many stations on the coasts of Finmark and Tromsö and later from stations in Iceland, the Faeroes, Shetlands, Hebrides and Ireland, they carried on an extensive whaling industry based essentially upon the Rorquals. Experience at these stations tended to show that the stock of whales was not inexhaustible; the whalers had to go further and further out to sea to make captures and the whales were evidently becoming scarce. But for the discovery of the far richer whaling grounds of the Antarctic and for the passing of the Norwegian law of 1904, which prohibited whaling from the Norwegian coast for a period of 10 years, whaling in the North Atlantic and adjacent portions of the Arctic Ocean would probably have become commercially impracticable by now.

The exploitation of the Antarctic Whaling grounds began in 1905. Appliances for catching whales and

for treating whale carcasses were greatly improved and whaling on a scale previously unimaginable has been developed in the Falkland Dependencies.

The case of the Humpback, which was, on account of its convenient size and inquisitive habits, the first species to attract the attention of the whalers, is most instructive. For many years at South Georgia it formed the chief part (more than 90 per cent.) of the catch and down to 1914 (if not to a later year) it was the chosen quarry of the whalers. They obtained an accurate knowledge of its migrations, northwards along the coasts of South America and Africa from the middle of May to the end of July to tropical or equatorial waters for the purpose of breeding, southwards from the end of August onwards along the same coasts to the seas of the Falkland Dependencies for the purpose of feeding. With this knowledge the Norwegian companies were able to institute and maintain a continuous attack upon this species at all periods of the year and in all latitudes. Vast numbers of Humpbacks were slain and the species, with dramatic suddenness, almost completely disappeared. Had it not been for the presence of other and larger species of Rorqual in the Falkland seas southern whaling would have then come to an end.

The whalers were forced to modify their tackle and turn their attention to the much larger and fleetier Finners and Blue Whales. These are still so abundant that many have difficulty in believing that they too in due course will become commercially extinct. That they will do so if whaling is not regulated scientifically in the near future cannot be doubted and the introduction of the pelagic whaling by very large ships that conduct all their operations at sea, not bringing the whales into port to extract the oil, etc., will considerably hasten the end.

It is commonly thought by the whalers that vast stocks of whales live unmolested in the great unfrequented tracts of the southern oceans and that from these stocks a supply of whales to replenish the exhausted stores of the littoral seas will come continuously. There is no evidence to support such a view. On the contrary there is evidence to show that the stock of whales is limited; that broadly speaking whales are confined to the littoral belt inhabited by "Krill" (*Euphausia superba*) on which they feed during the southern summer and to the Antarctic currents (flowing northwards along the continental coasts towards the equator) in which they move northwards to breed during the southern winter and southwards to feed in the spring.

Whether actual extinction of any of the species concerned will follow commercial extinction depends upon the point of decline at which a given species becomes commercially extinct, upon the precise habits of each species, upon the precise part which it plays in the economy of the seas, and upon many other factors which are either not known or not understood at present.

4. Relation which the Museum work has to these matters.

If whaling is to survive as an industry it must be scientifically regulated.

The scientific basis of such regulations can only be acquired,

(a) from the data and material collected in the field by the "Discovery" Expedition and by others;

(b) from the study of these data and material in the Museum.

The collections at present in the Museum form the basis of all future work; as time passes and the collections and the literature relating to them grow it becomes increasingly difficult or impossible to carry on biological research of the kind required without continual reference to the National Collections.

That is proved in the present instance by the fact that the scientific staff of the "Discovery" expedition are at present housed in the Museum for the purpose of working out their results.

The investigations to be made in the Museum are of two kinds:—

1. Direct work on the whales themselves.
2. Collateral research on the food of whales ("plankton" studies, etc.).

Direct work on whales.—This falls under several distinct heads of which the principal are as follows:

Systematic researches, e.g., the question of the identity of northern and southern species—a matter of obvious importance.

Morphological and physiological researches.—Relating to the breeding, rate of growth, longevity, sexual differentiation, individual variation of whales.

For research of this kind it is necessary to have a great deal of floor space. Such research involves the bringing together and laying out for examination and study of great numbers of large objects such as whale skulls and skeletons. A great deal of information concerning the breeding, rate of growth and longevity of whales can, of course, be acquired and has been collected at the whaling stations. But the appreciation of such data involves osteological researches which can only be carried out in the Museum and on a large floor space. At the present time such a piece of work is being done in the Museum on one of the smaller species of Cetacean (*Pseudorca crassidens*). In this instance 143 skeletons, with full field data, have to be laid out and studied comparatively, the object being to acquire information, relating to a single "school" of whales all killed at one time, which may afterwards be compared with the corresponding information gathered over a long period from many schools of whales by the "Discovery" expedition and others. The importance of such an ultimate comparison is self-evident. The work on *Pseudorca*, however, is much delayed and the difficulty of doing it greatly increased by the lack of necessary space.

Opinion may differ as to the advisability of showing complete collections or long series of specimens illustrating the growth, changes in the outward form and skeletal characters of given species to the general public in a gallery. But it is necessary to have a gallery, public or private, in which such relics can be gradually developed, arranged and kept permanently ready for study.

MEMORANDUM BY THE VICTORIA AND ALBERT MUSEUM ON ITS RELATION TO INDUSTRY AND ASSOCIATIONS OUTSIDE THE MUSEUM.

In the Brief Guide to the Victoria and Albert Museum the primary object of the Museum is defined as follows: "to provide models for, and otherwise to aid the improvement of, such manufactures and crafts as are associated with decorative design; in other words, to assist craftsmen and others to study the methods, processes and taste which have governed the arts and crafts of past ages." In the fulfilment of such a function the Museum is necessarily brought into very various contact with the outside world. Its activities might be described as (1) educational; (2) consultative.

(1) *Educational.*—As an educational institution the Museum provides a collection of objects to illustrate the history of applied art in all its phases. It works in close co-operation with the Royal College of Art, whose students use the Museum as a practical laboratory, where they may observe and analyse the works of past ages. The Registrar of

the College, Mr. H. L. Wellington, gives the following details of the extent to which the Museum is used by students of the College:—

"The inter-relation of the Museum and the Royal College of Art is a traditional relationship of more importance than may appear at first sight. One may say that the same intention lay behind the original scheme for both institutions—that of benefit to Design in the industries of the country. The Museum was to provide examples of fine designs from the past, the College to provide designers and teachers of design for the future. Although both have developed vastly in scope since their foundation, it would be difficult to conceive of them as dissociated, and it is impossible to express in any formula or schedule the immense general influence of the Museum on the work done here—every School of the College uses it as a repertory of examples and as a constant stimulus.

"The following are some instances from current practice. The School of Architecture sends its students (about 100 take the course each session) to draw and measure up doorways, mouldings, interiors and models of buildings, on four days a week for a large portion of the year. The School of Design is especially closely connected with the Museum. First-year students spend half their time in study there, and till the end of their courses are encouraged to use it habitually for their own researches. The Students' Rooms of various departments are found most useful in this connection. On every day in the week students of illustration, illumination, textile designs, stained glass, metal-work, pottery and so on are at work in the Museum in large numbers, and this study is regarded as an essential factor in the formation of the standards of taste and judgment.

"The Print Room is of great assistance to students of Etching and Engraving, especially in providing examples in connection with the lectures given by the Professor of the School.

"Students of the Painting School use the Picture Galleries for copying and for studying methods, and although students of Sculpture do not copy in material, they are constantly browsing in the Sculpture Department.

"The Museum Printing Press is entrusted with the production of the College Diplomas and Certificates at the end of each session. These Diplomas are in themselves excellent examples of the craft of typography, a matter of evident importance since they are issued as a species of guarantee of training in taste at the College.

"The Museum Lecture Theatre is used for College Lectures and Ceremonies, while no part of the Institution is more valuable both to staff and students than the Library, which is in daily and constant use. Advice and assistance is freely given to students by Keepers and Assistant Keepers of the Museum, often at considerable trouble to themselves.

"The College in its turn is of assistance to the Museum—the value of expert craft knowledge such as Professor Tristram's on Mediæval Painting would be a good instance. The advice given by Professor Frank Short in building up the Department of Prints is another. The College workshops and studios afford opportunities to the Museum staff of getting actual contact with both craftsmen and processes. It is probable, moreover, that the influence of the Museum is spread most widely over the country through those who are or have been students of the College, and have become designers and teachers of Art. Folios of studies made from Museum objects are prepared by them when at College for use in future years.

"These Notes will indicate some particular phases of contact, but it may truly be said that the Museum provides a background of traditional effort and skill to the general teaching of Art throughout the College. Such association under one roof of a working Art School and a Museum is perhaps unique in the opportunities offered to both."

In addition to the Royal College of Art there are various schools not so closely affiliated with the Museum which make a similar use of the collections. Students from the Architectural Association and the Regent Street Polytechnic are given facilities to study and measure various architectural exhibits. Classes from the L.C.C. Schools of Art and the Royal School of Needlework visit the Museum regularly for object lessons. Art Classes from Secondary Schools frequently make special arrangements for educational classes and tours in the Museum. School parties are normally under the guidance of their own teachers, but in many cases the services of the official Guide-Lecturers and of Departmental Officers are called for. In the provinces various schools provide scholarships and bursaries for students, who come to London and make more or less prolonged study of design in the Museum. In a similar way important manufacturers send apprentices to London to study some particular branch of art in the Museum. Such students are offered every facility in the Departments and may receive considerable guidance from Museum Officers.

In the above instances the function of the Museum is mainly passive. It exists as a training ground for students who like to make use of its facilities. But in other ways the Museum attempts to carry out its educational functions more actively and to get into direct touch with those concerned with industrial art. In 1918 a distinct body, the British Institute of Industrial Art, was formed under the joint auspices of the Board of Trade and the Board of Education, with an initial grant from the Treasury. The purpose of this Institute is to bring together examples of the best types of modern craftsmanship for the education of the manufacturer and the public. Periodical Exhibitions are organised which include not only the productions of individual artists and craftsmen, but also the best products of large manufacturing firms. Every year a certain number of such exhibits are purchased for a permanent collection which is accommodated in the Victoria and Albert Museum. The Museum itself provides the manufacturer and the public with examples of what has been accomplished in the past; the aim of the British Institute is to fulfil a similar function for what is being produced at the present moment. Officers of the various Departments of the Museum work in close co-operation with the Institute and assist them to select specimens both for the temporary and permanent exhibitions.

Another way in which the Museum carries out its educational work is in the organisation of special exhibitions to illustrate a particular phase of art or industry. For example, in the year 1921 a large and important Exhibition of French Textiles was organised in conjunction with the French Government, thus providing a complete historical conspectus of the development of an important French industry. Last year an Exhibition was organised of the art treasures belonging to the Livery Companies of the City of London. It proved to be extremely popular, and besides giving students access to historic works of art, drew large numbers of people to the Museum and impressed them in a very spectacular way with the artistic and historical aspect of these famous commercial guilds. On two occasions (1916 and 1917) the British Industries Fair was held at the Museum, and it was considered at the time that manufacturers, by being brought into the same building in which specimens of workmanship and designs of all periods and countries were exhibited, would seize the opportunity of studying these and so gain experience for the development of their business. These are

examples of large Exhibitions involving considerable time and energy in their organisation, but every year smaller exhibitions organised by the Departments are held. A typical example is the Exhibition of Modern French and Russian Designs for Costume and Scenery held last year, and intended to illustrate the art work of the theatre in connection with costume and scenery. Such an Exhibition brings the Officers of the Department concerned into direct contact with the people in the outside world connected with the application of art to practical needs.

Another educational function served by the Museum is illustrated by the Museum's co-operation with the Royal Society of Arts in the administration of the Owen Jones Fund. Every year a considerable number of prizes are offered by this Fund for competitions in industrial design. Officers of the Museum assist in judging the entries to the competition.

Reference has already been made in the answers to the Questionnaire of the Royal Commission to the way in which the Museum carries out its functions by means of lectures and publications. The public lectures given by Museum Officers involve direct contact with the public, and the publications of the Museum are often a means, not only of spreading knowledge, but also of getting into touch with people interested in a particular subject.

Through its Department of Circulation the Museum maintains personal contact with all the more important Museums and Schools of Art in the provinces, and since these in their turn are in touch with local interests, the direct influence of the Museum spreads itself over a much wider area than might be supposed. The Officers of the Department of Circulation give special consideration to the needs of the industries and crafts of the various localities and adapt the arrangements and distribution of the collections accordingly.

(2) *Consultative*.—The ways in which the Officers of the Museum act in a consultative capacity are very numerous and impossible to detail. They can only be illustrated by typical examples. There exists in the outside world a number of Societies whose object it is to bridge the gap between art and industry, or between the art world and the world in general. Examples are:—

- The Art-Workers' Guild.
- The Embroiderers' Guild.
- The British Society of Master Glass-Painters.
- The Design and Industries Association.
- The Contemporary Art Society.
- The Print Collectors' Club.
- The Japan Society.
- The Ceramic Society.
- The Arts and Crafts Exhibition Society.
- The Art-Teachers' Guild.

Most of the Officers of the Museum are concerned in one way or another with Societies of this kind, and give to them the benefit of their help and advice.

Departmental Officers are consulted from day to day by members of the public who visit them or write to them and ask them for advice on various questions. Here, again, it is only possible to give examples. The Guildford Town Council have a bye-law which insists that the houses in a certain street should be built in 16th century style. Certain tradesmen are compelled by the necessities of their trade to build a shopfront of tiles. They come to the Museum to consult the Departmental Officer concerned on the design and technique which should be used in order to comply with the archaeological necessities imposed upon them by the bye-law. A rich American wishes to replace the destroyed statuary at Rheims Cathedral. He comes to the Museum to consult the Departmental Officer concerned as to who would be the best sculptor to employ on such an important commission. These are but two recent examples of the kind of contact which Officers in the Museum maintain continuously with the outside world. Actually, thousands of similar enquiries are

answered every year, both orally and by written correspondence. The wide-spread influence of the Museum and its Officers is witnessed by the fact that scarcely any work of research into the history and technique of the arts is published which does not explicitly acknowledge assistance received from the Museum.

A rarer form of consultation is concerned with the construction and organisation of new Museums in this country and abroad. Officers of the Museum are also regularly enlisted to give advice in connection with the preservation of works of art in churches and other public buildings, and for this purpose we work in close touch with the Central Advisory Council of the Church of England and with the Chief Inspector of Ancient Monuments.

THE TRAVELLING COLLECTIONS OF THE VICTORIA AND ALBERT MUSEUM.

NOTE BY MR. H. A. KENNEDY, KEEPER OF THE CIRCULATION DEPARTMENT.

When the Museum of Ornamental Art (now the Victoria and Albert Museum) was established in the first half of the nineteenth century, it was an integral part of the movement that facilities for the study of fine examples of craftsmanship should be extended also to schools and museums outside London by means of temporary loans from the central institution; and further that local authorities in the great centres of manufacture should be encouraged to form similar collections of works of Decorative Art in the Museums under their control.

At first, that is to say from 1864 onwards, loans were made only to schools of art recognised by the Science and Art Department and to museums attached to such schools, but in 1880 the system was extended to museums established under the Public Libraries Act and unconnected with schools. In 1919 secondary schools and training colleges recognised by the Board of Education were included, and loans are now regularly circulated to 80 museums and to 554 schools in England, Scotland, Wales and Northern Ireland.

The collections from which these loans are made are independent of those kept permanently in London, and form a separate department of the Museum known as "Circulation." They are grouped by material into Ceramics, Metalwork, Textiles, etc., like the central collections, and are estimated to contain about 50,000 objects. The conditions upon which loans are issued are to be found on the printed forms of application.

As loans to local museums are intended for the general public as well as students, they differ in several respects from those sent to schools. The former for instance consist mainly of objects in the round which are exhibited in glass cases, while the latter are (with the exception noted below) limited to such material as can be shown in frames on the walls of schools. Museum loans consist mainly of original specimens: school loans are largely reproductions.

Loans to museums consist of two, three or four collections, according to the size of the borrowing institution and the extent to which Decorative Art is represented in it. Each case contains from 20 to 30 objects, arranged by the Departmental Officers to illustrate some particular branch of Decorative Art. There are about 375 such groups available, and those which are not actually on loan can be seen upon application to the Department. No catalogue is available, but a list of the general categories of specimens with the number of collections available in each category has been issued.

The loans are changed once in every 14 or 15 months, and the local curators are invited to visit the Victoria and Albert Museum to choose the groups desired for their new loan. When an application has been approved, the objects are packed in boxes

by Museum packers. The boxes are then put in Museum vans which are sent by "parcels" train on open trucks to their destination. There the collections are unpacked and set up by Officers of the Department in the exhibition cases which are lent with the objects and remain in the local institutions from year to year. These are locked by means of Departmental locks, the keys of which are always kept by the Museum Officers. Half of the cost of transport and any local charges which may be incurred for horses, are paid by the local Authority. With a view to a reduction of cost Museums in contiguous areas are grouped together and their collections changed on one journey. Damage in transit is practically unknown. Insurance of the specimens against all risks while they are in the local museum and in transit to and fro is required from the borrowing institution.

As already stated the collections for schools consist largely of reproductions of Works of Decorative Art, but of late years a growing proportion of original material has been issued, particularly to schools of art. This includes examples of pottery, tiles, designs and drawings, woven fabrics, lace, embroideries, metalwork, wood-carvings and occasionally furniture. Selections are made by the teachers. If a teacher is unable to visit the Department, a selection is made by a Museum Officer from the list of desiderata provided by the school, but it is much preferred that the teacher should choose his own loan.

On an average from 20 to 30 frames, together with other unframed material (photographs and the like) in a portfolio, are sent annually to each of 227 schools of art; and 10 to 12 frames, as well as a portfolio of photographs, etc., to each of 299 secondary schools and 28 training colleges for teachers. In addition to the annual loan, certain small homogeneous collections of work in one material or works by one artist are also obtainable by schools for one term each year; 141 such series were issued to schools in 1926. The total number of specimens issued to schools in that year was 24,050. Applications from secondary schools are steadily increasing.

The school loans are also packed by the Museum packers, but are sent in packing cases by carrier and rail instead of by van. Damage to the protecting glasses is sustained from time to time (chiefly on the return journey for which the cases are packed by the schools); but serious damage to the actual specimens is rare. Eight hundred and thirty-seven packing cases were despatched to schools in 1926.

Some (30) of the larger art schools also receive objects in the round for exhibition in a glass case. Such loans differ from those sent to the local museums in that they are generally limited to a single case; as a rule contain specimens in several materials—pottery, metalwork, woodwork and so on; consist mainly of reproductions; and are made up to suit the needs of the individual school. The Art Master attends in person and from the material available in the Department chooses the pieces to be included in the loan. If the Art Master is unable to attend, the selection is made by the Departmental Officer. These collections for schools of art are handled like those sent to Museums, that is to say,

they are packed by Museum packers, are sent by rail in Museum vans, and upon arrival at the school are set up by Museum Officers in cases lent for the purpose, which are then locked.

Costs of transport on all school loans are shared between the Museum and the School, the School paying carriage on the packing cases one way, the Museum the other. When a van is necessary, the school pays half the cost of the journey and any local charges that may be incurred, like a local museum.

In 1926 the approximate total cost of thus circulating about 31,000 objects to 678 institutions (museums and schools) was £1,300, half of which was paid by the State and half by the local authorities.

Loans of books on Art subjects (of the more expensive kind) are also made to schools of art. The loans are generally for three months at a time and may consist of as many as eight volumes. Four hundred and eight works were issued in 1926.

Lantern slides are also lent in considerable numbers to all the above types of schools: 21,537 were issued in 1926. These are mainly illustrative of the Decorative Arts, but a number of them relate to architecture, painting and sculpture. Catalogues and lists have been issued. The slides are sent by parcel post in boxes made for the purpose. Not more than 40 slides may be lent for a single lecture. In the case of State-aided educational institutions no charge is made for the loan of slides, but the borrowing school is required to pay the cost of postage both ways.

Receipts for the objects are given by the museum or school as the case may be; and the location of any specimen out on loan can be ascertained immediately by means of the card index which is kept in the Department. A card is provided for each object in the collections, and when a specimen is despatched, the name of the museum or school and the date of sending are noted upon it. Similarly its return is also recorded in the card. These cards are arranged in numerical order, i.e., by the official number which is allocated to every object on acquisition and with which it is labelled; and secondly, for convenience of reference, by material—ceramics, metalwork, etc. Certain specimens of ephemeral interest are dealt with rather differently, and are not provided with a card, though they are listed on the receipt which is obtained from the borrowing institution.

The staff of the Department consists of one Keeper, three Assistants, six Clerks and four Attendants. Five Packers are regularly engaged on work for the Department. Except at the holiday periods one of the Departmental Officers and an Attendant are travelling with the collections three weeks out of every month.

In a covering letter Mr. Kennedy says:—

I should perhaps add that in addition to the aid given to local museums in the form of loans, we also help them with contributions towards their purchases subject to certain conditions, the most important of which is that we must be consulted beforehand and must approve the specimens. The grants are not large ones—the total amount available for the purpose is £1,000 a year—but I have often been told that the fact that we are prepared to make even a small grant, carries great weight with local museum committees.

MEMORANDA SUBMITTED BY SOCIETIES AND ORGANISATIONS IN RESPONSE TO THE COMMISSION'S INVITATION. (1)

THE ART WORKERS' GUILD.

Questions asked:

1. *The views of the Guild as to the educational facilities in the sphere of Art at present afforded by the National Museums and Galleries, together with any suggestions as to improvement of those facilities. The views of the Guild as to the stimulus (for example in the application of art to industry) furnished under present conditions.*

2. *The question of the desirability or undesirability of the imposition of fees.*

3. *Observations on such aspects of the Terms of Reference as may especially interest the Guild.*

Reply:

1. We consider that the educational facilities for students at our London Museums are excellent so far as they go, particularly the late method of showing objects in their proper setting—as in the furnished rooms at the Victoria and Albert Museum.

2. We suggest that exhibitions (for short periods) at this Museum should be made of the collections stored there, which are not known to the general public—for example, the coloured drawings of painted Gothic screens and wall paintings—and if possible easier access to reserve collections should be made for anyone desirous of seeing them.

3. The Museum system should be more extensively co-ordinated with the Educational Department in educational activities, and administered with a far-sighted policy.

4. Possibly Associates, or Voluntary helpers might be drawn in to help in stimulating a desire for knowledge in special crafts in country towns, with the object of giving groups of workers in various industries opportunities for study, which should be supplemented by small exhibitions.

5. Manufacturers and the public require to be taught as well as the student, for unless the public are educated to appreciate good work there will be no employment for the students when trained.

6. Museums are a new type of University, which teaches by sight rather than by ear, and when combined with oral and technical teaching is most convincing.

7. Both history and art are taught by museums in America and on the Continent, and we should do well to adopt their methods.

8. We do not think the Victoria and Albert Museum should be denuded of its pictures, but it should continue to be as comprehensive in its teaching as it now is. The Library should be kept open at least one night a week—preferably Saturday—until ten o'clock.

9. With regard to our Picture Galleries, it should not be possible for money to be spent in buying examples of what artists do in their weaker moments; we want only the very best of any painter's work. There are already far too many inferior specimens of great artists' works in our galleries, and they should be thinned out.

10. We feel that no fees should be charged unless it be to keep a Gallery or Museum quieter for the use of students in picture galleries on one or two days a week, and then only provided the number of students justifies it.

ASSOCIATION OF EDUCATION COMMITTEES.

Questions asked:

1. *The desirability of a greater measure of elasticity in the matter of loans between the State Galleries and Museums and the Provincial Galleries and Museums.*

2. *The educational facilities at present afforded by State Galleries and Museums, together with suggestions as to improvements of those facilities.*

3. *The question of the imposition of fees.*

4. *The steps taken to stimulate public interest in the Provincial Museums and Galleries and whether any organised propaganda exists for the purpose of encouraging gifts and benefactions.*

5. *Observations on such aspects of the Terms of Reference as may especially interest the Association.*

Reply:

1.—(i) Unquestionably it has been a great advantage to Provincial Galleries and Museums to receive on loan from the State Galleries and Museums collections for local inspection. It is probably on record in the State Galleries that loan exhibits are regarded by the Provincial Institutions as essential to the maintenance of local interest. Any measure that would extend the existing loan arrangements would, undoubtedly, enhance the educational value of the contents of the Provincial Galleries and Museums. It is not of supreme importance that the loan exhibits should always be "originals." The excellent reproductions that are now made will often suffice to connect incomplete series among exhibits already possessed by Local Institutions.

(ii) The concentration in the metropolis of the principal State Galleries and Museums is inevitable. It ought not, however, to be overlooked that the Institutions are entirely tax-supported, and that they are in the broadest sense national. Provincial Galleries and Museums are, on the other hand, generally supported by local rates, and their resources are restricted within very narrow legal limits. It is not often possible for them to complete or enlarge their collections by purchase. It should, therefore, be regarded as of primary importance that the objects which the State Museums contain should be used, so far as is reasonably possible, to supplement, by circulation of loan collections, the resources of the Provincial Institutions.

(iii) In instances where loans are already made by the State Institutions, or when it is proposed to make such loan exhibits, the necessity for proper and ample accommodation, should be made a condition in order that the fullest possible benefit is obtained. It would, however, be inadvisable to displace the local exhibits. It is suggested that travelling Inspectors should, from time to time, visit the Provincial Institutions to which loan exhibits are made, and themselves conduct lectures or demonstrations explaining the exhibits. Ample notice of such visits should be given so that publicity, through the medium of the schools, Public Libraries, Working Men's Clubs, and similar Institutions, could be arranged.

(iv) Most Provincial Institutions have special collections illustrating local history, art, or industry. These collections are invaluable, and the State should, when possible, help, by means of loans, to complete them. It is possible that they might usefully be lent to the State Museums for short periods and these loans should be well advertised.

(1) Memoranda were also submitted by the Royal Society, the Museums Association, and the Royal Anthropological Institute; these appear in the Proceedings of the Ninth, Eleventh and Sixteenth Days, respectively.

2.—(i) It is proper that due recognition should be made of the fact that the Keepers of the State Galleries and Museums have for many years been fully alive to the necessity of assisting the public to appreciate properly the almost unfathomable depths of interest and knowledge attaching to the priceless treasures contained in these Institutions. Their local exhibits to Provincial Institutions have been the means of stimulating a wider and growing desire to inspect the larger and more varied State collections. Hence a visit to the metropolis not infrequently has, as a part of its object, a visit to one or other of the Museums or Art Galleries. Further, the constant extension of educational work in Technical Institutes and Schools of Art throughout the country is developing an interest which must inevitably lead to greater development in the present educational facilities provided by the State Institutions. The officially conducted tours of the Galleries and the short lectures and explanations given in a simple and homely manner by the guides are appreciated highly by the visitors and are of inestimable value. It is suggested that these tours should be increased in number. Greater use of the small handbooks describing the collections under review should be encouraged. These handbooks should be obtainable at the smallest possible cost.

(ii) A scheme for closer co-operation between the State Institutions and Local Educational Authorities should be initiated.

(iii) It should be possible to arrange special courses of lectures for school children and for organised parties of adults.

(iv) The selection of more coherent groups of exhibits with special regard to educational value and, in certain instances, to their suitability to children's intellectual attainment should be considered. Small loan collections of such exhibits suitable for all types of schools should be made to those Local Educational Authorities who are willing to incur the expense of making proper use of them.

(v) Lack of interest in exhibits is sometimes due to the inadequate labelling of objects. Too much information cannot be given. The first thought ought always to be that the majority of persons visiting Art Galleries and Museums are mostly curious and generally are ignorant of the history, nature, use, etc., of practically everything they see.

(vi) It might be possible to utilise the large number of Public Libraries throughout the country as a means of circulating the handbooks issued by the State Galleries and Museums.

(vii) There might be more adequate accommodation for a period of rest for children.

(viii) Steps should be taken to secure the cheapest facilities and travelling arrangements for parties of school children and organised parties of adults.

3.—(i) There is no doubt that the imposition of fees on certain days of the week adversely affects the popularity of and attendance at the State Galleries and Museums. Provincials visiting the Metropolis for the day are averse from the payment of such fees. The payment of admission fees to a wholly tax-supported Institution is often resented. For this reason alone the imposition of fees is to be deprecated on principle. It is also questionable whether the revenue obtained justifies the cost of collection, accounting and audit.

(ii) The production of the return half of a travelling ticket might entitle the holder to free admission.

(iii) It is suggested that organised parties of school children and of adults should be given free admission on all days. No restriction should be placed upon the attendance at the Galleries for any educational purpose.

4.—(i) The stimulation of public interest in Provincial Museums and Art Galleries raises most vital points for consideration in regard to such Institutions. The Institutions are supported entirely by moneys raised locally and are usually under the control of *ad hoc* Committees, who are hampered by the limits of the funds available, also by lack

of specialised knowledge. The following briefly sets out some of the main difficulties to be met with in this matter.

(a) The incomplete character of every section of exhibits whether in art, archaeology or other collection.

(b) The local custodian, except in a few instances, cannot have a special knowledge of all the arts and sciences, therefore the exhibits are not displayed to their fullest advantage.

(c) The staff is insufficient to permit of the Institutions being open more than a limited number of hours a day.

(d) The Committee of Management's main concern is to keep the cost of upkeep within the limits of the legal rate and, as a rule, they have no resources whatever either for the acquisition of objects of value, or for providing further accommodation, even if donations of objects are offered to them.

(ii) Notwithstanding these difficulties, which are inherent in most of the Provincial Institutions, there is fortunately some interest felt and expressed in various ways in every Institution. In the larger Museums and Art Galleries located in the great cities and towns a competent staff is provided, and lectures and talks, similar to those undertaken in the State Institutions, are arranged for the benefit of visitors and parties. In small Institutions, such facilities are not often practicable.

(iii) It is suggested that a large number of the existing Provincial Museums and Galleries are not fulfilling the proper purpose for which they were instituted. To obtain efficiency they may, like the Public Libraries, have to be brought into closer association with the Local Education Authorities. The criterion of the value of their usefulness to the community is mainly, if not wholly, educational.

(iv) It is suggested that much more could be done to stimulate public interest if funds beyond those provided by the Museum rate were available to meet any additional expense, e.g., special lectures organised by Local Education Authorities, provided they can incur the expense, for selective groups of school children and adults. The teaching of history, geology, geography, natural science and practical subjects could be illustrated with actual objects placed before the pupils, but such courses would involve a contribution, the legality of which is at present questionable, being made by the Local Education Authority towards the upkeep of the Institution. The organisation of such courses would necessarily have to be undertaken by the Education Authority and all arrangements made in the Institution would necessitate close consultation and co-operation. Such a scheme should create and foster public interest in the local museums and galleries.

(v) The Local Education Authority might have to provide or contribute towards the cost of acquiring special objects of art, etc., necessary to supplement the objects contained in the Institution so as to complete the educational value of the latter.

(vi) The generosity of private benefactors would be encouraged by an obviously growing interest in and a recognised usefulness of Public Museums and Galleries. The formation of a private collection is a personal affair. The collector is aware that, at his death, the collection on which he had spent so much thought, interest and money will, in all probability, be dispersed, or sold for what it will fetch. Were he convinced, however, that such a collection would be accepted, appreciated, expanded and properly exhibited without further cost to his estate, he would possibly be glad to demise it for the permanent benefit of the public. Similarly, a display of lively activity in the administration of Public Museums and Art Galleries would often induce the possessors of single objects to present or lend them for exhibition.

(vii) The stimulation of public interest is the sure and certain way to encourage private benefactions. This interest, to be worthy, must be more than merely casual. It must be intelligent. It is, therefore, suggested that the value of such Institutions can

be developed only on an educational basis systematically organised under an Authority having knowledge of public necessity, and possessing the means wherewith to meet the necessary and inevitable cost.

ASSOCIATION OF EDUCATION COMMITTEES.

Thornhurst,
Clarkehouse Road, Sheffield.

THE ASSOCIATION OF EDUCATION AUTHORITIES IN SCOTLAND.

Questions asked:

1. *The desirability of a greater measure of elasticity in the matter of loans between the State Galleries and Museums and the Provincial Galleries and Museums.*
2. *The educational facilities at present afforded by the State Galleries and Museums, together with suggestions as to improvement of those facilities.*
3. *The question of the imposition of fees.*
4. *The steps taken to stimulate public interest in the Provincial Museums and Galleries and whether any organised propaganda exists for the purpose of encouraging gifts and benefactions.*
5. *Views on such aspects of the Terms of Reference as may specially interest the Association.*

Reply:

1. Excluding, for the moment, the Cities of Edinburgh, Glasgow and Dundee, it may be said generally that Museums properly so-called, that is, representative of all subjects, do not exist in Scotland. There are collections of objects of interest in some of the larger Burghs—for instance of Forfarshire and Banffshire. Perth exhibits special features on account of the excellence of its Museum, of the use made of it by the schools in the county, and of the fact that the Education Authority gives a grant-in-aid of its upkeep. Otherwise the need is met—so far as it is met—by small local collections, generally of some special category of interest. There is some evidence that objects of value found locally are lost to the locality by being sent away to the National Museums of London and Edinburgh.

2. There is, on the other hand, very general agreement as to the educational value of "Museums," using the term in its widest sense—the preference being on the whole for school collections rather than for central Museums. It is however, realised that a County Museum would be of value as setting a standard, providing an opportunity for visits of pupils from the smaller schools, and facilitating the loan of objects to the school collections. It is probably the case that to create the relationship, generally desired, between the school collections and Museums the best line of advance would be to concentrate at first on making the latter as good as possible, and so to educate the taste and stimulate the appetite for the larger institutions. The local collections, because they are objects of local interest—historical, archaeological, industrial—make a stronger appeal to the pupils in the first instance. Concentration on a few objects of a given category is the first educational need—rather than the inspection of a multiplication of objects in even a first-class Museum. There is also real educational good in stimulating the pupils themselves to build up collections. Of the value of local collections there is an interesting instance in a mining area where the school has built up a small museum of all objects—geological and mechanical—connected with coal and the winning of it.

3. Looking, therefore, at Scotland as a whole (excluding again the larger cities) the present provision of anything that can be called Museum is uneven and inadequate, while the use by the schools of such opportunities as exist is not less diverse. Yet there are so many vigorous small Museums and collections scattered up and down the country, and there is so general a sense of the educational fruit which a developed use of them would yield, that it only needs

some co-ordinating direction and help from outside to achieve a transformation of the whole scene.

4. It is suggested therefore that if such direction and help were forthcoming, it should be directed—

- (1) to encourage the formation of school collections in the largest schools, and to assist the maintenance of the many already established;
- (2) to secure the institution of a Central Museum in each county, or group of counties, of real efficiency, either by adapting one already in existence, or by creating a new one;
- (3) to organise the loan of specimens and objects of interest from the great Museums to the county ones, and through them to the school collections.

5. The matter has, naturally, a very different aspect in the large centres of population. The following notes of the provision of Museums and Art Galleries in Edinburgh, Glasgow, and Dundee, and the use made of them by the Education Authorities may be interesting.

6. In Edinburgh 20 schools in the neighbourhood send to the National Museum groups of 30 pupils, of eleven years and over, accompanied by their teachers, throughout the school year. They are met by a guide whose services for instruction are placed at their disposal. The visit lasts one hour. For Art instruction the Royal Scottish Museum gives lectures to 30 pupils at a time accompanied by their teachers, from twenty neighbouring schools from October to February; and the Royal Academy admits pupils, in groups of 30, and their teachers, at a reduced charge to the Annual Exhibition in June.

7. A specially happy arrangement is made whereby the teachers who are to accompany the pupils attend a private view on the evening before their visit.

8. In Glasgow the use of the great Institutions by the schools appears to be mostly in connection with Art. The Curator of the Art Galleries and his staff offer their services freely in giving instruction to scholars on any special line of study needed. Adults appear to be catered for by the provision of public lectures in the Art Galleries and public libraries, which are well attended. But the evidence is striking that both in this matter and in the matter of the use by the schools of the Museums of the city a large development is possible and desirable.

9. Dundee is happily possessed of a Curator of its Museums, Art Galleries, and libraries who keenly promotes their use by the schools. He has for that special purpose re-arranged and classified the specimens, so that they may be readily used to illustrate the particular subjects the teacher has in hand. Not only scholars, in groups of 50, visit regularly the Museums and Galleries, but they are allowed to return at any time to examine the specimens by themselves. In regard to technical science and Historical Memorials of a local interest, the same zealous interest in the pupils is shown. Scholars are allowed to visit Dudhope Museum—where every branch of trade in Dundee is represented—after the usual hours, and to handle the objects themselves; and there too the services of the staff are regularly employed in instructing groups of scholars. Indeed, the only development needed in Dundee seems so be a more thorough organisation on the part of the schools to make full use of opportunities so freely offered.

THE BRITISH ACADEMY.

Question asked:

The views of the Academy as regards paragraph 5 of the Terms of Reference, namely, "To consider whether it is desirable to effect any change in the existing practice of the British Museum with regard

to its reception and preservation of publications under the provisions of the Copyright Acts."

Reply:

1. The Council of the British Academy has had under consideration your letter dated 6th January, and has given particular attention to paragraph 5 of the Terms of Reference, namely, "whether it is desirable to effect any change in the existing practice of the British Museum with regard to its reception and preservation of publications under the provisions of the Copyright Acts."

2. The Council decided to issue a questionnaire to the Fellows of the Academy on the desirability of limiting the receipt of publications by the British Museum Trustees, each Fellow being invited to state whether he was for or against alteration in the existing practice, and to give any additional qualifications, if he desired to do so.

3. At a Meeting of the Council held this day I reported the result of this questionnaire. The proportion *against* alteration, as compared with those in favour of change, was two to one, there being forty-two Fellows voting *against*, and twenty-one *for*. (Since the Meeting one further reply reaches me, and this is in favour of some alteration.)

4. I was instructed to report accordingly to the Commission, in answer to your letter, to the effect that these figures represent the opinion of the Academy.

(Sd.) I. GOLLANCZ,
Secretary, British Academy.

Burlington House, Piccadilly, W.,
29th February, 1928.

THE BRITISH INSTITUTE OF ADULT EDUCATION.

Questions asked:

1. *The educational facilities (including lectures) at present afforded by the National Museums and Galleries, together with suggestions as to improvement of those facilities.*

2. *The question of the imposition of fees.*

3. *Observations on such aspects of the Terms of Reference as may especially interest the Institute.*

Reply:

1. In the interest of the general body of students the Institute desires strongly to urge that the Reading Room of the British Museum should remain open on each week-day until nine o'clock, and that this extension should apply equally to the Newspaper Room in order that access may be had to the collections of periodicals and state-papers. The present hours of closing necessarily exclude from the Reading Room large numbers of the more advanced students in adult classes, as well as teachers in schools whose daily work only ends as the Reading Room is closed; this applies also to numbers of University teachers. Many of them are engaged in research the prosecution of which is gravely hampered by the present arrangements.

2. The Institute would urge that all genuine students over twenty-one years should be entitled to the privilege of a reader's ticket to the British Museum on the production of a recommendation from a University teacher or a teacher of an adult class recognised by the Board of Education.

3. The Institute desires to point out the great need of some single and concise handbook which would serve as a general guide to the National collections, as also the advisability of sectional catalogues covering modern as well as ancient periods of history. It particularly stresses the importance, from the standpoint of adult education, of a complete catalogue of the collections in the National Portrait Gallery. The value of making available the great wealth of material at the disposal of educators hardly seems to require emphasis. At present, the absence of adequate guides to the collections makes their proper educational use no easy matter. As a supplement to the catalogues, the issue of a wider series of

post-cards illustrating the history of literature and science, and portraits of worthies in the different spheres of national life is of great importance to teachers of adult classes. The number of reproductions actually available is at present pitifully small.

4. There are two types of users of the national collections whose needs, the Institute would urge, deserve special consideration. The first group consists of those who visit the collections in a spirit of curiosity not altogether idle, but largely unregulated. They are ready to be impressed, and to react intelligently to the material, if this is presented in a manner that develops their incipient curiosity into a spirit of ordered inquiry. Their chief needs are stimulation and guidance; and it should be the aim of the authorities in charge of the collections to see that these are provided. Advantage should be taken of important anniversaries, and exhibitions arranged. Provision should also be made for display on loan in local museums. The authorities should not regard themselves merely as custodians; they should possess an instinct for the showman's art. They should not wait for visitors, but seek definitely to attract them. People should have the habit of visiting the national collections as frequently and as naturally as they now visit the Zoo. For this end, the system of guides should not only be maintained but definitely extended.

5. The second group consists of the more serious students who visit the collections (often in organised groups) with a set purpose. Their interest has already been aroused and their attention focussed on some objective. They use the museum or gallery to enrich a body of knowledge and to give it the poignancy of illustration which the national collections make possible. They, also, need expert guidance, though of a different nature; and it should be supplied through the co-operation of tutors in adult education, the voluntary bodies, and the museum authorities. Such students need to visit the museums and discuss the collections in a more detailed and intimate way than is the case with those noted above. For this reason the Institute urges the provision of Conference Rooms and a Lecture Theatre as an essential part of each gallery or museum. It would, in this connection, stress the importance of completing the plans for such provision originally proposed for the Science Museum at South Kensington. It hopes, further, that a regular series of evening lectures may be established in conjunction with the public and voluntary educational bodies.

6. Here, as with the Reading Room of the British Museum, the greatest difficulty is the scant opportunity afforded to workers in regular employment of visiting the national collections. For this reason it is urged as strongly as possible that museums and galleries should be open not less than four evenings each week, including Saturdays and Sundays. There would be no need to open all the galleries of any given museum on each evening so long as sufficient notice were given of the plan, and the authorities were prepared to consider requests for special privileges from those responsible for the instruction of adult students.

7. The Institute would particularly emphasise the desirability of increased grants to the Science Museum to enable it to develop its collection of models illustrating industrial processes and history. In this respect it is, through lack of funds, woefully behind the best museums on the Continent, e.g., that of Munich. It would venture, further, to point out that lack of funds has in recent years made the Library of the British Museum seriously defective in books relating to the American continent, especially in its political and social aspects, and in the literature of foreign legal systems.

8. The Institute ventures to urge the desirability of creating a standing National Commission on Museums the functions of which would be

(1) to act as a permanent advisory body to local collections,

(2) to co-ordinate the latter with the national collections,

(3) to advise on matters of publication, especially by way of co-operative effort.

On such a body, it is hoped, the interests of adult education would be represented.

9. The Institute finally suggests that an advisory educational committee should be set up to act under the trustees of each national collection (containing, *inter alia*, representatives of adult educational teachers) to advise the trustees upon the uses of the collections from an educational standpoint. It would particularly emphasise the value of doing this nationally as an example and stimulus to those responsible for local collections. The latter are too often to-day mere jumbles of specimens without purpose or coherency; and their re-organisation from the angle of the adult student's needs would enormously improve their usefulness.

(Signed) T. H. SEARLS,

Secretary.

British Institute of Adult Education.

39, Bedford Square, London, W.C.1.

27th January, 1928.

THE BRITISH INSTITUTE OF INDUSTRIAL ART.

Questions asked:

1. *The educational facilities in the sphere of Art at present afforded by the National Museums and Galleries, together with any suggestions as to improvement of those facilities. In this connexion the Commission would be glad to know the views of your Institute as to the stimulus (for example in the application of art to industry) furnished under present conditions.*

2. *The question of the desirability or undesirability of the imposition of fees.*

3. *Observations on such aspects of the Terms of Reference as may especially interest the Institute.*

Reply:

1. In preparing the Memorandum the Council have consulted the Fellows of the Institute, who number about 100 persons, chosen to represent all branches of the British Industrial Arts. While the replies received from a number of these Fellows to the questions addressed to them by the Council, have been utilised in drafting the Memorandum, the sole responsibility for the recommendations contained therein rests with the Council.

In this connection the Council desire to make certain points clear at the outset:

(i) While the Governors of the Institute in accordance with its constitution are appointed by the Board of Trade and Board of Education, the Institute is quite an independent body, and the opinions it expresses involve no responsibility whatever on the part of either of the parent Departments.

(ii) The Council includes the present director of the Victoria and Albert Museum and his immediate predecessor. For reasons which will be readily appreciated, these two Governors have taken no part in the preparation of the present Memorandum, and take no responsibility with regard thereto.

(iii) The Memorandum is solely concerned with the Victoria and Albert Museum, which is very much the most important National Collection from the point of view of the Institute. The Bethnal Green Museum, though national in management, is mainly local in purpose, and the consideration of its arrangements and problems would seem in some respects more akin to a general discussion of Museums throughout Great Britain, than to the main subject of the Commission's Inquiry. The Wallace Collection presents features of its own. If specially desired, the Council would be prepared to submit Memoranda with regard to these and any other Museums which may be indicated by the Royal

Commission. All that follows, however, relates solely to the Victoria and Albert Museum.

2. The observations received from Fellows of the Institute indicate very high appreciation of the quality and range of the exhibits in the Victoria and Albert Museum, of the facilities afforded for students, designers, craftsmen, and manufacturers, and of the unfailing helpfulness and courtesy of the staff. In these expressions of appreciation the Council cordially share.

From the point of view of the above-mentioned classes of visitors, there is little to criticise in the present arrangements and facilities, and the only suggestions of importance which have been received for the improvement of facilities relate to a comparatively few matters, mainly of detail.

3. Among the more important of these suggestions are:

(a) that the hour of closing on certain days on which the Museum is open in the evening should be 10 p.m. instead of 9 p.m. If it is not possible to arrange this on three days in the week, as formerly, the lengthening of the hours on one or two days would be a great boon. This applies, perhaps, with even greater force to the Library.

In a vast area like London persons who have been in an office all day and must have an evening meal before visiting the Museum, besides occupying a considerable time in travelling to it, sometimes find the closing hour of 9 p.m. too early to permit of much serious study. These considerations have been strongly urged by Fellows who in the past derived great benefit from evening study at the Museum. They state that architectural students formerly found in the Museum an important means of training, but that the present generation no longer use the facilities to the same extent. This is, of course, partly due to the development of other means of architectural training in London, but is also thought to be partly due to the alteration of the hour of closing.

The Council feel that the needs of evening students, who are already engaged in occupations dependent on industrial art, are not less important than those of day students, and they desire to urge strongly that the expediency of fixing the closing hour at 10 p.m. on one or more days of the week should be seriously considered.

(b) The second suggestion is a negative one—viz., that on no account should entrance fees be imposed. Those with most experience hold strongly that the monetary yield of such fees would be negligible compared with the certain detriment caused to the utility of the Museum. On this point there is actual experience to guide us, and no doubt the Commission will obtain the official figures from the Museum authorities. The Council believe that these figures will show that in return for a quite trivial net revenue there was large decrease in the number of visitors during the period when fees were charged.

Fees would probably be even more prejudicial to the attendance of the general public than of actual students, and, indeed, it is generally assumed by the Fellows who have replied to the question that some arrangement for exempting *bona fide students* from payment would be necessary. But such a distinction would be difficult to draw, and however drawn it would inevitably leave outside the definition of student the great mass of persons with a general interest in Art but not engaged or preparing to engage in industrial art production. It will be shown in a later part of this Memorandum that it is a matter of great national importance that the attendance of this class of visitors should be encouraged and not hindered.⁽¹⁾

⁽¹⁾ The case of school children visiting the Museum under guidance would also need consideration.

(c) The third suggestion put forward for consideration is that manufacturers, craftsmen and designers might be encouraged and assisted to make better use of the Museum collections if a special officer were appointed whose main duty it would be to act as a liaison between the collections and the commercial and industrial public. Such an officer is believed to exist in some of the important American Museums. He would not need to be an expert, though he should have a sufficient working acquaintance with the collections to know to what branch and what keeper he should direct an inquirer. It would be an important part of his duty to cultivate close relations with the commercial public and their representative organisations, to make known to them the value of the Museum in relation to their industries and generally to smooth the path of trade inquirers and to stimulate their interest. He should on no account overlap the functions of the keepers and their staff, whose competence and helpfulness are beyond all praise. He should also carefully avoid any attempt to act as a "middleman" or channel of communication between the Museum staff and the commercial world, whose mutual relation should be of the closest and most direct and intimate kind. If, however, these limitations be carefully observed, the Council suggest that considerable advantage might result from appointing such a liaison officer. It occurs to them that possibly he might be placed in charge of an Inquiry Bureau, near to the main entrance of the Museum.

At the Bureau, inquirers, and particularly commercial inquirers, would be able to obtain guidance and assistance, and appointments could be made for them by telephone with the appropriate officers. It is probable that experience of the Bureau if intelligently worked would suggest other lines of usefulness, outside as well as inside the Museum.

A few additional suggestions by individual Fellows relating to points of detail are set out in the Annex to this Memorandum.

4. The above observations have been mainly concerned with the functions of the Museum in relation to designers, craftsmen and manufacturers. When, however, we come to consider the future policy as regards the arrangement and organisation of the Museum as a whole, there are other important considerations which have to be taken into account.

The original object of the collection which has now developed into the Victoria and Albert Museum was determined by the conditions which led to its establishment. It represented a definite attempt to counteract the deplorable effect of the industrial revolution on artistic craftsmanship. The great mechanical inventions of the latter part of the eighteenth and early nineteenth centuries had snapped the thread of the old craft traditions, and the succeeding period was (and still remains) one of artistic anarchy, which showed itself in a gradual deterioration in all forms of Industrial Art. The whole subject of the duties of the State towards Art, including the Industrial Arts, was examined by Mr. Ewart's Select Committee of 1835-6, and as the result of this investigation the Board of Trade established a School of Design in 1837 at Somerset House, in rooms formerly occupied by the Royal Academy. Four years later steps were taken to promote Schools of Design in the provincial manufacturing districts. For the purposes of the central and local Schools of Design a number of models, prints and copies of examples of Works of Art were acquired and stored at Somerset House. This collection was the nucleus of the Museum. With the addition of selected objects of Art purchased from the Exhibition of 1851, together with loans from various quarters, the objects stored at Somerset House were arranged as a Museum of Ornamental Art opened in 1852 at Marlborough House. (All this work was transferred from the Board of Trade to

the newly-established Education Department in 1856.)

Thus it will be seen that (a) the original Museum was ancillary to the School of Design, and formed with it a coherent scheme for the improved training of artist-craftsmen and industrial designers; (b) the circulation of works and models to local Schools of Design was part of the original plan of the collection, and, indeed, was anterior to the opening of the Museum of Ornamental Art.

The direct education of the public, as purchasers, in the appreciation of Works of Art, formed no part of the original plan. Effort was directed almost exclusively to the improvement of the standard of Industrial Art by the improved training of designers and craftsmen and by giving persons directly interested in the commercial production of Works of Industrial Art, whether as designers, craftsmen or manufacturers, opportunities of studying the best work of past ages.

5. If in the light of present conditions and later experience this object seems unduly narrow, it had at least the great merit of being clear and definite, and, though as will be seen it has not been consistently adhered to, it has determined the basis of the present scheme of classification and display of the exhibits.

Broadly speaking, it is still true that the arrangement of the Victoria and Albert Museum is devised primarily for the benefit of designers, craftsmen and manufacturers, and to the attainment of this major object all others are subordinated, including:

(i) The Art training of the "Middleman" in the broadest sense of the term, i.e., of those who are engaged not in producing, but in buying, selling and distributing the products of Industrial Art, and whose needs as regards artistic education are in many respects different from those of designers and producers.

(ii) The broad training of Art Students and Artists in the general history and development of the Industrial Arts in different ages and cultural areas and the evolution and inter-action of so-called artistic styles expressed through different media.

(iii) The direct education of the public, regarded as the ultimate "consumers," in appreciation and critical discrimination in respect of all kinds of beautiful things, by giving them an insight into the historical development and significance of the Arts as a whole, especially in Western Europe.

It is not, of course, suggested that these wider purposes were totally ignored or neglected by the founders and early builders of the great Museum collections, but they were looked upon as subsidiary to the main object of training the craftsman in his own craft. There were naturally many departures from that object, some forced on the Museum authorities by the generosity of donors, some arising from their own perception, conscious or unconscious, that the full attainment of the main object would be imperilled by adhering to it too narrowly.

6. A perusal of the Report of 1908 of the Committee of Rearrangement shows that the Board of Education at that time was becoming uncomfortable at the situation which had gradually developed through the fact that the Museum had deviated from its original purpose, without consciously adopting any other basis. The memorandum communicated to that Committee by the Board definitely asked them to prepare their proposals for the rearrangement of the collections on the basis of two principles, "the one the direct practical purpose of stimulating the craftsman and manufacturer and inspiring the designer and student who is engaged in the production of objects of modern manufacture, and the other the spread of a knowledge and appreciation of Art in its widest and deepest sense."

The context shows that what the memorandum had in mind was the requirements of "those interested in Art without regard to its relation to industrial production." As yet there was no clear

conception of the artistic needs of distributors, or of the necessity of raising the standard of taste and appreciation of the main body of the public, regarded as "consumers" of works of industrial art. Nevertheless, the recognition of a second and wider object to be served by the Museum in addition to its original and primary object of educating the producer, marks a very important advance in opinion.

7. How great is the need for the adequate recognition of this wider object under modern conditions of industry and society has been increasingly impressed upon the British Institute of Industrial Art since its establishment eight years ago.

The designer and producer are frequently in imperfect touch with each other, and both are commonly separated from the public who are the ultimate purchasers of their products, by a screen sometimes of several layers of "middlemen," who interpret the public demand to the producer, and through their buyers and sellers exercise a great and increasing influence on the standard of Industrial Art. The whole question of the special needs of the middleman in respect of art training has recently been the subject of careful investigation by a special Committee of the Institute.

Organised visits to Museums under proper guidance form an essential part of the programme of training laid down. The Council are convinced that the better training of the distributor is of vital importance to the maintenance and improvement of a high standard of Industrial Art. The reasons for this conclusion are set out clearly in the Report and need not be repeated here. It is, however, clear that the special needs of the distributor so far as they differ from those of the producer should be taken into account in any scheme of Museum classification and arrangement.

That the interests of the general public should also be taken seriously may hardly seem to require argument, but these interests are frequently looked upon as mainly those of mere sightseers by whom the Museum is primarily regarded as a means of recreation and the satisfaction of legitimate curiosity as to past manners and customs. We would not in any way underrate the interests even of the less serious classes of visitors. Their objects so far as they go are praiseworthy, and valuable results not only to their general culture but also to their artistic perceptions may often arise from visits of casual tourists wandering freely about the Collections with no definite objective or guidance. This is a point which more than one of our Fellows have emphasised. Nevertheless, our present concern is mainly with the educating of the public regarded as potential consumers of artistic products, and for this purpose their needs in respect of Museum arrangement are more nearly akin to those of the distributor than of the producer and designer.

8. The Report of 1908 did not (probably in the circumstances of that time could not) attempt fully to satisfy the expressed desire of the Board of Education for a system of arrangement based on the double principle of regard for the craftsman and for the general public and art student.

The scheme proposed by that Committee (which in essentials is that now in force) was described by them as based on "classification by material." Within each section so determined the two main principles of subdivision were to be "the development of (a) design and (b) methods of workmanship." Clearly this was a scheme primarily aimed at meeting the needs of craftsmen and manufacturers.

It should, however, be understood that the expression "classification by material" was used in the Report, and is still interpreted, in a very broad and loose sense. The detailed scheme of classification recommended and now in force is based not on material alone, but on a combination of material, product, function and process, with the occasional intrusion of geographical or cultural considerations.

Among such terms as "metal work," "wood-work," "ceramics," "furniture," "books,"

"paintings," "engravings," "textiles," and the like may be found headings based on each of the above characteristics, either singly or in combination. This is entirely as it should be, for any so-called "logical" classification according to a single criterion such as "material" would be wholly inappropriate. As a matter of fact the logic of practical experience has led the Museum Authorities to a classification which, though nominally based on "material," really corresponds fairly closely to the modern subdivisions of industries and crafts in which design plays an important part. For the designer, craftsman and manufacturer this is clearly the most natural and convenient arrangement, and the Institute do not desire to see any fundamental change, so far as concerns the arrangement of the bulk of the Museum Collections. They do, however, desire to see the existing arrangement supplemented and modified in certain respects in order to meet the wider needs of other classes, to which attention has already been called, as well as to broaden the outlook of the craftsmen and designers themselves.

9. In offering practical suggestions with this end in view the Council desire to say that they fully recognise that the extent to which any or all of these suggestions can be carried into effect must depend largely on considerations of space and expenditure as to which they have no authoritative information. Nevertheless, they think it may be of assistance to the Commission to set out clearly in the first place the changes which the Council would desire to see carried out, followed by such tentative observations on questions of ways and means as they feel it to be within their competence to offer.

10. The first suggestion in the matter of arrangement which it is desired to make is, that in each of the principal Sections (Textiles, Ceramics, &c., &c.) a special room, or at least a special area (not necessarily large in extent) should be devoted to a small but very carefully chosen collection of representative examples drawn from all branches of the Section, and grouped in historic sequence, so as to show within a small compass the historical development of each great branch of Industrial Art as a whole. The sequence should probably be limited as a rule to Western (i.e., European) Art, as the historical phases of Oriental Art may not sufficiently synchronise with those of Western Art to enable their products to be fitted into the same chronological scheme. Where (as in Ceramics) Oriental Art has played a dominant part in influencing Western developments it may be desirable that two sequences, Western and Oriental, should be shown separately, but in close contiguity.

The object of the proposal is (a) to give the craftsman and designer a broader and truer general view of the development and inter-action of styles and methods than is obtainable from intensive study confined to particular categories of products; (b) to give a similar general "conspectus" to the distributors, general public and school students, to whom the intensive study of large numbers of examples of almost similar articles is often wearisome and unattractive, besides being impossible from mere want of time; (c) to create "departmental" historical groups, which will serve as the natural reservoirs from which to draw the material to be arranged in the manner set out in the following paragraph.

11. The adoption of the suggestion made in the preceding paragraph would be an important step towards increasing the utility and attractiveness of the Museum Collections to persons interested in Industrial Art otherwise than as producers, while also making a valuable contribution towards the better and broader training of the craftsman and designer. By itself, however, the change would be inadequate to achieve the full purpose which we have in view. The six or eight partial syntheses of the several sections could only be regarded as a first step towards a more complete synthesis of the historical development of Art culture as a whole, particularly as manifested in the various Industrial Arts. Here again we are speaking mainly of

Western or European developments during the Christian period. We doubt the possibility for reasons already given of bringing together European, Oriental and other Art cultures of a more alien character into a single chronological synthesis. It would be of great interest if space permitted to display a parallel historic sequence of Oriental Industrial Art. But far the most urgent need is to give a right understanding of the growth, decay, sequence and inter-actions of Western Art forms expressed in all kinds of media and fulfilling all kinds of functions.

Except for quite exceptional purposes and within strict limits we would not admit into such a collection examples of so-called "classic" or "antique" Art. The question of the inclusion of modern examples is referred to below. (See paragraph 25.)

12. The suggested historic collection should not be a large one. Preferably it should be small enough to enable an ordinary visitor or scholar to see the whole of it at a single visit without fatigue. Obviously the details of space and arrangement need careful consideration.

Purely as an illustration and not as a hard-and-fast proposal something like the following arrangement might be suggested:—

Mediaeval (up to, say, middle of 14th century);
Late Gothic (1350—end of "Gothic");
Early Renaissance;
Later Renaissance;
Baroque;
Eighteenth and early nineteenth centuries;

making six rooms (or equivalent areas) for which an aggregate area of (say) 25,000 square feet would probably suffice.

This severe restriction of area is necessary, not only because of the practical difficulty of affording more space, but also because it is not desired to include in the Historic rooms more than a very few carefully chosen masterpieces of each kind, period and country. These objects would be drawn primarily from the group collections formed (according to our recommendations) in the different Sections, and it would be a great advantage if the main historic collection could be systematically refreshed at suitable intervals by interchanging objects with the several sectional "bases."

For the purpose contemplated the main basis of classification would naturally be chronological, but within each historical period subsidiary lines of classification based on nationality, industrial character, material, development of methods, &c., would of course be admissible.

Arrangements more or less on the lines suggested above have already been adopted in some of the best Continental Museums, e.g., Brussels, Zurich, Hamburg, Cologne, Leipzig, Dresden and several other German Museums. (See Professor Richards, "Industrial Art and the Museum.")

It is not contemplated that the collection should (with the exception noted in the following paragraph) attempt to present a separate picture of the historic development of Industrial Art in each country.

13. It forms no part of the present scheme that the historic synthesis should be carried to the point of attempting to create the illusion of actual "period" rooms—a method which the best continental practice is tending to discard as a normal mode of presenting the historical development of the Arts. It usually involves an element of "make-believe" and unreality, while the necessity of selecting objects not for their intrinsic merits and importance, but with a view to harmonise with the other contents of the "period" room introduces a serious handicap in the choice of examples. Nor is there the counterbalancing advantage of historical accuracy, for few real rooms are or at any period have been filled with contents of uniform date. Lastly, the systematic exhibition of fitted "period rooms" in the Victoria and Albert Museum might encourage the pernicious habit of using the Museum for the purpose of facilitating the slavish reproduc-

tion of "period" works, rather than as a stimulus to fresh creative energy.

14. The exception to which reference was made at the end of paragraph 12 is the case of Great Britain itself. We understand that no historical collection illustrating the development of British Industrial Art is in existence, and we feel strongly that one of the courts of the Victoria and Albert Museum ought to be set aside for the display of such a collection. For this purpose one of the great courts on the ground floor would possibly be suitable. The collection would, of course, like the historic groups referred to above, be composed of selected examples from the different Sections.

15. It is not possible, without much more detailed information than is in our possession, to estimate with any precision the additional space and expenditure which would be required to give effect to the above proposals. That some addition under both these headings would be necessary seems inevitable, but in neither case, in our opinion, need the addition be large.

Very provisionally we suggest that an aggregate area of 60,000 square feet would probably suffice both for the Sectional and the general groups which we recommend. This area is believed to be very roughly one-tenth of the whole Exhibition area of the Museum.

While with their imperfect information the Council would not wish to pledge themselves to a definite figure, it is of the essence of their recommendations that the proposed historic groups should be kept within as narrow limits of space as possible.

As moreover the scheme does not contemplate any addition of objects to the collections but merely a partial change in their distribution, it would be unreasonable to suppose that the whole of the space required for the display of the historic groups would be an additional requirement. Some part (though of course not the whole) of the space would be saved within the Sections themselves. The balance would have to be found either by an increase of accommodation, or by the more general extension of the system (already tentatively introduced in at least one of the Sections) of relegating part of the Exhibits to secondary galleries, where they are accessible to students while occupying only a fraction of the floor space required for their public display.

16. Whether an extension of accommodation is to be looked for in the near future, either by acquiring or building further premises, or by structural modifications of the existing buildings, or by the transfer of some of their contents elsewhere, is a question on which the Council are unable to form an opinion.

Pending any such desirable consummation, and also, on its merits, apart from any such possibility, the Council consider that the extension of what have been termed above "secondary galleries" is very well worth further exploration.

No system of storage in basements or at a distance would meet the case, since it is essential that the real student should have immediate access to the objects removed from the public galleries. For this reason the secondary galleries should be easily accessible and situated near and, if possible, contiguous to the Section concerned, and the objects should, wherever practicable, be visibly shown.

The main differences between these secondary galleries and the public galleries would be that (1) they would be closed to the ordinary public, but accessible on application to the Keeper's office; (2) objects would be crowded together much more closely than in the public galleries, and without regard to considerations of effective display. Under these conditions the floor space required for a given quantity of exhibits would be very greatly reduced, probably to not more than one-third of that required for the display of the same exhibits in the public galleries.

17. The Council are fully alive to the fact that the problem of rearrangement on these lines is complicated particularly in certain sections by the

presence of special collections which are subject to the condition that they are always to be kept together. They note that the attention of the Royal Commission is specially directed to such cases in their reference.

While, however, it is obvious that such a scheme of grouping as the Council recommend would gain in perfection and completeness if specimens could be drawn freely from the "tied" collections, either for inclusion in the historic groups, or for relegation to secondary galleries, they are convinced that in most if not all of the Sections ample materials exist apart from these special collections to enable a satisfactory and representative series of historic groups to be formed.

They therefore see no reason why the formation and display of the proposed historic groups should not be put in hand, without waiting for eventual action in respect of the "tied" collections, which may possibly be subject to prolonged delay.

18. A natural beginning would be the simultaneous adoption of the expedient of secondary galleries, and the appropriation of the whole or part of the space so saved to the constitution of Sectional historic groups as recommended in paragraph 10. The next step would be the formation of the general historic groups recommended in paragraphs 11 to 14, which could be constituted by stages as and when the requisite space became available.

Since, however, it is essential that the general historic groups should form a continuous series, it is important that the space which they are ultimately to occupy should be ear-marked from the beginning. It is fully recognised that much planning and not a little re-shuffling will be necessary before the various isolated savings of space in the several Sections can be translated into the gain of an adequate series of galleries for the display of the historic groups.

19. In view of the pre-eminent importance, not only to British craftsmen, manufacturers and art students, but also to the general public, of a sound understanding of the history of British Industrial Art, the Council venture to suggest that the first of the general historic groups to be undertaken should be the Gallery of British Industrial Art, as recommended in paragraph 14. They would add that the interest and value of this collection would be materially heightened by hanging on the walls a few examples of British paintings, thus emphasising the connection between the phases and development of "Industrial" and (so-called) "Fine" Art.

20. That the process of giving effect to the above recommendations would involve initial expenditure does not, of course, admit of doubt, and it is possible that the establishment and maintenance of a series of historical groups as an integral part of the collections might require some addition to the higher as well as the lower Museum Staff. The Council have no means of estimating what would be the additional cost, either immediate or recurrent, but they are inclined to think that after the transition has been accomplished the general establishment of secondary galleries might eventually afford such relief in the matter of pressure on space, that the scheme as a whole might well, in the long run, prove to be economical. However this may be, the Council feel that the maintenance and strengthening of the connection of the Museum with the Art, Education and Industry of the country is of supreme importance, and they are convinced that the realisation of some such programme as they have sketched is essential, in order to enable the magnificent collections at South Kensington to exert their full influence for the public benefit. In comparison with the importance of this object the Council believe that any cost to be incurred is relatively trivial.

21. *Circulation.*—It has already been observed (see paragraph 4) that circulation of exhibits to provincial schools of design was one of the original objects of the Museum, and the Council can bear testimony to the ability, energy and good-will shown by the Circulation Department in this important

matter. They note that in quite recent years the circulation of specimens to secondary schools (as distinct from Art and Technical schools) has grown to be an important part of the activity of the Department.

Holding the views already expressed as to the great and growing importance of the Art-Education both of distributors and of the general public, as well as of the designer and craftsman, the Council are particularly anxious that this Branch of work should be developed, and they even hope that in due course consideration will be given to the possibility of extending the benefits of the scheme to the senior departments of elementary (especially Central) schools by direct co-operation with Local Education Authorities. Naturally this branch of Circulation is mainly concerned with reproductions.

22. The loans to Museums, though much fewer in number than the loans to schools, are generally of a more extensive character and consist largely of originals. It is impossible adequately to discuss future policy, as regards co-operation between National and Local Museums, without going beyond the terms of the Royal Commission's reference, and considering the whole position of Local Museums and their relation to Local Arts and Industries.

The Council, therefore, content themselves with reaffirming the following observations contained in their Report on "Industrial Art and British Manufacture," to the Balfour Committee on Industry and Trade,⁽¹⁾ which so far as they are aware still represents the situation:—

"It seems clear that a great development of local interest, initiative and organisation is still needed if the efforts of the Circulation Department are to bear adequate fruit. At present such local activity is at a low ebb in places where one might expect it to flow strongly. For instance, there is no historic collection of textiles at Bradford, nor of carpets at Kidderminster. Generally speaking, the funds provided for the maintenance of local industrial art collections are inadequate, and the co-operation between many local museums and local industries is defective. With one or two exceptions (e.g., pottery and lace) the surveys do not suggest that provincial art museums play an important part in relation to current industrial art and the industries dependent thereon. In the matter of provincial museums of industrial art Great Britain does not compare well with such continental countries as Germany and Switzerland. No doubt there are in some cases special reasons for the difference: e.g., many of the local German collections are in State Capitals. It is apparent, however, that without a fresh local development the efforts of the Circulation Department must be largely nugatory. The problem of strengthening and developing local museums of industrial art, and bringing them into closer touch with local industry, is one which can hardly be solved by the efforts of any central organisation, but needs systematic and intelligent local effort and interest."

It is earnestly to be hoped that the new interest of the Carnegie Trustees in the improvement of local museums will be so directed as to promote the solution of this urgent problem, which is a necessary pre-requisite of any important development of circulation. If and when a new spirit arises in the provinces there should be no difficulty in adapting the central Circulation Department to meet the needs of the altered situation.

23. As an example of valuable modes of collaboration, which are hardly practicable under present conditions, but which might readily become fruitful when once the local position as regards Museums has been put right, may be mentioned the organisation of temporary special exhibitions bearing on

⁽¹⁾ See Third Volume ("Factors in Industrial and Commercial Efficiency") published by the Committee on Industry and Trade, 1927—p. 349.

local industries in suitable industrial centres, by co-operation between the Museum and Local Museum Authorities.

24. It would be natural to suggest that part of the objects relegated to Secondary galleries under the scheme proposed above should be released for purposes of circulation. The Council do not doubt that in the process of rearrangement a certain number of valuable objects will be found which could be spared for this purpose. Any such objects, however, should as a rule be handed over definitely to the Circulation Department and cease to be part of the main Museum Collections, as experience seems to have shown the inconvenience of treating the Main Collections under ordinary conditions as a source from which to withdraw objects temporarily for circulation at a distance.

This is a point, however, on which the Commission will doubtless receive evidence from the Museum Authorities.

A suggestion has been more than once put forward that the Circulation Department should be based not only on the Victoria and Albert Museum, but also on other National Museums and Galleries. Provided that the administrative difficulties can be overcome, the Council see considerable advantages in enlarging the scope of circulation in this way, and also in centralising circulation in a single Department adequately equipped with funds.

25. *The Acquisition of Modern Examples.*—A question on which there is some diversity of opinion, even among the Fellows of the Institute, is the right attitude of a National Museum of Industrial Art towards the acquisition and display of contemporary productions. The view of the Council is that while the Museum Authorities should fully reserve the right to acquire any work of recent date which in their judgment would serve to increase the utility of the Collections, it would probably be undesirable, unless for exceptional reasons in particular cases, that they should make a practice of buying modern works, and that in accepting gifts and loans of such works they should maintain and freely exercise discretion as to the conditions and duration of their display. Experience shows that it is impossible to pass a final judgment on the permanent value of a work of art, until a considerable period has elapsed since its production, and this is especially true of objects of industrial art which are highly sensitive to changes of fashion and public taste. The Museum Authorities could doubtless quote past cases in which their judgment in purchasing contemporary works has been already falsified by time.

Nevertheless, it is of high importance that, in close contiguity to the Museum Collections, though separate therefrom, the craftsman, student and general visitor should have ready access to examples of contemporary industrial art production, especially of British production.

26. The Council consider that so far as concerns British works this object could be materially assisted by maintaining and strengthening co-operation between the Museum and a semi-official organisation (i.e., the British Institute of Industrial Art), which can, within the limits of its means, select, acquire and display modern British examples.

The Council of the Institute includes both the present and previous directors of the Museum and two members of its Advisory Council. Several of the present and past Keepers are Fellows of the Institute and Members of its Selection Committees.

Limitation of funds (for the Institute is wholly dependent on voluntary contributions) has hitherto compelled it to rely chiefly on donations and permanent loans, but it possesses a small purchase fund, raised as a Memorial to a late Governor, Sir Isidore Spielmann, out of which, in quite exceptional cases, purchases can be made.

The main limitation from which the Institute's Permanent Collection at present suffers is restriction of space even more than of funds. The present area occupied is only 1,000 square feet, and though it is not desired to make the Collection a large one, it is obvious that this limitation makes it necessary

to restrict the Collection to objects of small size, and wholly to exclude bulky exhibits, e.g.—furniture. Even with this restriction a large proportion of the exhibits cannot be simultaneously displayed. To some extent, no doubt, there is a compensating advantage for this disability, as it compels a frequent change of exhibits which keeps the Collection fresh in interest. Nevertheless, the Council feel that if the present allotment of space could be increased to a moderate extent the Collection could be made very much more useful for its purpose. At present it is only a nucleus. It is hoped that the question of space will be considered as part of the larger question of Museum accommodation.

The Council would, however, like to make clear that even with the present severe limitation of space it is very much better to keep the Collection where it is than to house it anywhere outside the Museum, where the present informal but invaluable relations between the Institute and the Museum would be necessarily weakened.

The Commission may possibly be interested to know how the exhibits in the Institute's Permanent Collection are selected, and what is the ultimate destination which is contemplated for them.

From time to time temporary exhibitions of British Industrial Art are organised either by the Institute or by some other body, e.g., the Arts and Crafts Exhibition Society. It is customary in the course of all important exhibitions which impose a standard of quality for admission, that Members of the Selection Council of the Institute should visit the exhibition and select a limited number of works which, in their opinion, are worthy of inclusion in the Institute's Permanent Collection. The owners of these works are then invited either to present or to lend them for exhibition in the Collection, and a large percentage usually comply with the request.

In exceptional cases the Spielmann purchase fund can be used where the circumstances seem to require it. Sometimes owners of works offer them direct to the Institute, but such offers are not accepted without the approval of the Selection Council.

It is contemplated that when a suitable interval of years has elapsed there shall be periodical reviews of the contents of the Permanent Collection by the Museum Authorities, who shall then be free to choose any works which have stood the test of time and to take them into the Main National Collections. Of course, the time has not yet arrived for the first review.

27. In the above observations the Council of the Institute have endeavoured to keep strictly to matters falling within their competence as representing the interests of British Industrial Art. There are therefore many matters of great importance on which they have offered no comment. Such, for example, is the question, expressly mentioned in the terms of reference to the Royal Commission, of the nature and powers of the controlling bodies and the desirability or otherwise of bringing all National Museums under the ultimate control of a single central Authority, while preserving certain defined powers to their Trustees or Directors. The Council fully realise that the right or wrong decision of this question may be of vital moment to the future of the National Museums and hence indirectly to the future of British Industrial Art, but they feel that the wide administrative problem raised could not be satisfactorily dealt with in a Memorandum which takes exclusive cognizance of Industrial Art Collections. They therefore content themselves with expressing the earnest hope that, in any decision arrived at, the interests of uniformity will not be permitted to outweigh those of elasticity and adaptation to differing conditions arising from the special nature and objects of the different National Collections.

Another very important and closely related question on which the Council have offered no observations is that of co-ordination and avoidance of overlap among the different National Collections. Here again the Council, while fully realizing the

importance of the subject, feel that it cannot be satisfactorily dealt with in a Memorandum relating only to Industrial Art. It goes without saying that there ought to be continuous and intimate co-operation and consultation, the more informal the better, between the heads of Sections of the different Museums dealing with classes of Exhibits which present the possibility of overlap. There ought moreover to be a broad and general understanding as to the respective spheres and objectives of the different National Museums, which would limit the possibility of overlap to a comparatively narrow fringe. But the Council feel that within these narrow limits (and subject to the continuous personal intercourse of directors and keepers referred to above) it may often be better to tolerate a moderate amount of overlapping than, by insisting on a hard and fast line of demarcation, to incur the risk of putting students and visitors to serious inconvenience.

These, however, are only very general propositions, and the Council have no means of discussing their detailed application to particular cases, without information which is not in their possession.

In conclusion the Council desire once more to express their sense of the extreme value of the Victoria and Albert Museum as a great National asset, and their high appreciation of the ability, patience and courtesy with which members of the Museum Staff of all grades habitually help visitors to make the best use of the Collections. The suggestions offered in this Memorandum, so far from implying any criticism of the existing efforts of the Staff, are solely directed to making these efforts more abundantly fruitful of practical results to British Industrial Art.

(Sgd.) A. LLEWELLYN SMITH,
Secretary,
British Institute of Industrial Art.

38, Bloomsbury Square, London, W.C.1.
23rd February, 1928.

ANNEX.

Miscellaneous suggestions by individual Fellows of the Institute (on matters not included in the Memorandum).⁽¹⁾

1. "Wherever uncoloured plaster casts are shown of works that either have (in the originals) colour upon them or are in materials of different colours, this should be shown in a framed colour sketch at the side."

2. "In the case of figures and groups originally in or on buildings, wherever possible a framed photograph showing the architectural setting should be placed beside them."

3. "More pieces of furniture should be open."

4. "More use might be made of the Museum collections by a series of special Exhibitions brought together from the various Departments to illustrate some particular phase or period or application of Art."

5. "I believe a good deal is done in the way of temporary sectional exhibits, but it would seem useful that such exhibits should be strongly urged on the notice of all employers of the relative industries through their federations, most of which issue a journal to their members, and also through the trade journals."

6. "Ancient works of Art should be kept quite apart from modern in our public galleries."

7. "I have a disquieting feeling that the Museum may tend to become somewhat archaeological and also objects may be bought rather from the point of view of connoisseurship and rarity than from the point of view of added stimulus in design not shown

in existing examples. Some line might be drawn between the collection in the Victoria and Albert Museum and the archaeological collections in such a museum as the British Museum. It is very difficult to draw such a line I know, but I fancy there is a difference between industrial and archaeological interests."

8. "It appears to me that a National enlarged 'Tate Gallery,' if it might collect and show year by year (as painting and sculpture are selected and shown) works of industrial 'undesigned' Art, might so help to restore to both art and workmanship their proper association. Only on the score of use and craft-excellence should any art object be shown."

9. "It would be useful if Museums could show more examples of the ordinary things of everyday life, well designed to serve their purpose, but not necessarily ornamental; for it is with ordinary things that Industrial Art is chiefly concerned: things for the million that have taken the place of the work of the humbler village craftsman rather than that of the makers of things for Kings and Princes."

THE CONVENTION OF THE ROYAL BURGHS OF SCOTLAND.

Questions asked:

1. *The desirability of a greater measure of elasticity in the matter of loans between the State Galleries and Museums and the Provincial Galleries and Museums.*

2. *The educational facilities at present afforded by the State Galleries and Museums, together with suggestions as to improvement of those facilities.*

3. *The question of the imposition of fees.*

4. *The steps taken to stimulate public interest in the Provincial Museums and Galleries and whether any organised propaganda exists for the purpose of encouraging gifts and benefactions.*

5. *Observations on such aspects of the Terms of Reference as may specially interest the Convention.*

Reply:

1. The opinion of the Convention is that where the local circumstances are suitable, it is desirable that there should be facilities for the interchange of exhibits between National and Provincial Institutions. The majority of the Scottish Provincial Galleries and Museums as at present constituted have, however, inadequate facilities for such an interchange. The danger of loss both from fire and theft is probably greater than in the case of National Institutions. An adequate watching staff can seldom be provided, and in many cases visitors are accordingly permitted access to the collections without supervision. With some notable exceptions very few Local Museums display, label, and catalogue exhibits in a scientific way. However well looked after, they are, as a general rule, under the charge of men who have no training in Museum work. To bring these Museums and Galleries generally up to a standard which would justify a recognised system of loans would entail very considerable expense which would of necessity fall on the National Exchequer or on the Local Rates. In the opinion, therefore, of the Convention, the time is inopportune for bringing forward a scheme to apply to all Provincial Museums and Galleries.

2. The educational facilities at present afforded by the State Galleries and Museums might be greatly extended. Their value would be almost indefinitely increased by the institution of courses of lectures by experts, or the extension of such courses so far as they presently exist, these courses of lectures being so arranged as to appeal, in turn, to young people and to adults. Suitable arrangements with the Education Authorities should be made.

3. Any general imposition of fees for admission to State Galleries and Museums would, in the opinion of the Convention, be undesirable. If charges for admission were made a large number of intelligent children would be debarred from visiting the State Galleries and Museums.

⁽¹⁾ NOTE.—The authors of these suggestions are all persons of weight and experience, and the Council consider that the questions raised are of sufficient interest and importance to deserve the careful consideration of the Commission or of the Museum Authorities. It is however to be understood that responsibility for the opinions expressed rests solely with the individual Fellow in each case.

4. Broadly speaking, no general organised propaganda exists for the purpose of encouraging gifts and benefactions to Provincial Museums and Galleries. The conditions which prevail at Museums and Galleries in the provinces are almost wholly dependent upon the intelligence and enthusiasm of the local Trustees or Directors and the funds at their disposal. But much might be done to stimulate interest in Provincial Galleries and Museums by visits of Art and Museum experts from the National Institutions. To meet the present needs of the Scottish National Galleries and Museums more adequate financial provision is necessary, and any addition to the educational facilities presently afforded by the National Institutions would necessitate still further contributions from the Treasury.

5. The usefulness of Local Museums might be greatly increased if "museum talks" having special relation to the material of the local collections were given more frequently by competent persons.

The foregoing answers to the four points put by the Secretary of the Commission set forth briefly the views of the Convention on the points specifically mentioned. The position of matters in the case of two of the Scottish National Institutions included within the scope of the Reference to the Royal Commission is, however, not referred to, and the Convention would respectfully include in this Memorandum short references to

The Scottish Record Office and The National Library of Scotland.

6. For more than fifty years the treatment of the Scottish Record Office by the Treasury, as compared with the treatment of the English Public Record Office, has amounted to a national injustice. As the result of vigorous protests made by bodies such as the Scottish History Society, and by the Convention of Royal Burghs, conditions as regards the numbers of the staff of the Scottish Record Office have been slightly improved, but so greatly has the work of the Record Office—particularly the Historical Department—increased within recent years that the staff is still inadequate to deal with all demands made upon its services.

7. In the opinion of the Convention, the Scottish Record Office should, without unnecessary delay, be brought up to the relative standard of the London Office both as regards staff and equipment. Further, an immediate appointment of a Head of the Register House should be made. It is nearly nine years since Sir James Patten MacDougall, who held the offices of Registrar-General and Deputy Clerk Register, died, and the Register House has been for all that time without a Statutory Head, with serious results on the organisation and utilisation of the staff.

8. Finally, with regard to the Scottish National Library, the Convention desires to point out that last year, by means of a Representation addressed to the Prime Minister, the Chancellor of the Exchequer, and the Secretary of State for Scotland, it drew the attention of the Government to the inadequacy of the financial provision at present being made for the maintenance and development of the National Library. It is recognised that time is required to set up in proper working order an Institution of the magnitude of the Scottish National Library, but, so far, the Government have given no serious indication that they intend to put the Scottish National Library on a footing comparable with that of the other National Libraries of Great Britain. This treatment of the Scottish National Library is a cause of distress to the people of Scotland, who are most earnestly desirous that the National Library, so munificently endowed as it has been by Sir Alexander Grant and others, should be put on a proper footing so that the great resources of the Library may be made fully available.

9. In particular, the numbers of the present staff are quite inadequate, even for the ordinary routine work of the Library, while any special work, such as is undertaken by other great Libraries and might be expected of the National Library of Scotland, is

entirely precluded. It is understood that some increase in the building accommodation of the Library will soon become urgent, the present accommodation being insufficient, and, to some extent, unsuitable.

ALEX. STEVENSON,
Lord Provost of Edinburgh, Preses.

ALEX. MORRISON,
Convener of Sub-Committee.

J. L. OFFICER,
Agent and Clerk.

The Convention of the Royal Burghs of Scotland,
21, Castle Street, Edinburgh.

15th December, 1927.

THE CORPORATION OF THE CITY OF LONDON.

Questions asked:

Views of the Corporation with regard to:

1. The educational facilities at present afforded by the State Galleries and Museums, together with suggestions as to improvement of those facilities;
2. The desirability of a greater measure of elasticity in the matter of loans between the State Galleries and Museums and the Museums and Galleries under the jurisdiction of your Corporation;
3. The question of the imposition of fees;
4. The steps taken to stimulate public interest in the Museums and Galleries under the jurisdiction of the Corporation, and whether any organised propaganda exists for the purpose of encouraging gifts and benefactions.
5. Such aspects of the Terms of Reference as may especially interest the Corporation.

Reply (furnished by the Committee controlling the Guildhall Library, Museum and Art Gallery):

1. The Library Committee is ready to lend from the Museum but it is not likely to wish to borrow.
2. Entrance fees are not recommended for any institution under the City's control.
3. No necessity for special student days.
4. Visits of schools to the Museum are encouraged.
5. The establishment of travelling collections from Museums as is now done in the case of the Travelling Art Collections Fund.
6. Sympathetic selection of duplicates from Museums as gifts to suitable localities and Overseas Dominions.
7. The restoration where possible of collections at present housed outside their proper sphere, e.g., the Sage collection at Stoke Newington.

(Sd.) J. L. DOUTHWAITE,
Librarian and Curator,
Guildhall, E.C.

9th December, 1927.

THE DESIGN AND INDUSTRIES ASSOCIATION.

Questions asked:

1. The educational facilities in the sphere of Art at present afforded by the National Museums and Galleries, together with any suggestions as to improvement of those facilities. The views of your Association as to the stimulus (for example in the application of art to industry) furnished under present conditions.
2. The question of the desirability or undesirability of the imposition of fees.
3. Observations on such aspects of the Terms of Reference as may specially interest the Association.

Reply:

1. *Purpose of Collections.*—The purpose of the collections in the National Galleries and Museums is two-fold; to preserve as national possessions the creative and artistic achievements of the past and to enable the community to gain a knowledge of art and industry in this and in other countries.

The achievements and the development may be studied from two points of view; from that of time

and from that of technique. These cannot be studied altogether with any degree of clearness, and the national collections should consequently be divided into two classes, the Historical Museums and the Craft Museums. The elements contained in these two types would be the same, but the idea underlying each would be separate and distinct and they would be handled in different ways.

2. *The Historical Museum.*—The Historical Museum should be so arranged as to provide a complete synopsis of the chronological development of the national civilisation and of that of other civilisations for comparison, so that the visitor could measure their progress and gain a clear apprehension of their characteristics and attainments at the various stages of that development. The whole plan of the Museum should be directed to giving this clear conception of character and progress. In the series of rooms designed to illustrate successive periods, one or two fine examples of the several arts and crafts and type objects should alone be exhibited and the countless variations of type, etc., interesting mainly to the antiquary, should be rigorously excluded from the principal exhibits. (Such surplus material should be stored in special rooms for the benefit of students, as is noted later.) There are in Continental museums certain rooms and sections which are admirably arranged on this plan, notably the Mycenaean room at Athens, the Renaissance rooms in the Kaiser Friedrich Museum in Berlin, the Egyptian rooms at the Louvre and, to some extent, in the Pompeian rooms at Naples.

The British Museum has the elements of such a Museum and it should be reorganised to become the central historical museum. At present it is overburdened with ethnological material, and with material relating to alien and isolated civilisations, for each of which a separate historical section would seem to be required. It exhibits a multiplicity of variant objects, and it ends, in the main, with the close of the Middle Ages. Its future planning might well be modelled on that of the present room of Greek and Roman life which attempts to give a coherent idea of its period.

3. *The Craft Museum.*—The Craft Museum would contain much the same material as the Historical, but it would be arranged to show, not the historical setting, but the historical sequence in the development of technique and decoration materials, the parallel development in other countries, and further, to illustrate the development of the methods of production. An instructive example of such a museum is the Pitt Rivers Museum at Cambridge and the Museum at Barcelona.

The South Kensington Museum should become the Central Craft Museum and so fulfil its original purpose of encouraging the study and development of the industrial arts and crafts of the country. At present this purpose is lost sight of and the Museum has tended to become the pendant of the British Museum carrying on with the historical sequence from the point reached by the British Museum, but grouping its objects solely according to the material of which they are made.

4. *Inclusion of Modern Work.*—In both the Historical and the Craft Museums, examples of work, up to and including modern times, should be exhibited, including, of course, foreign work, even though the examples be not retained permanently, so that the sense of development and continuity with the past be completed. In the matter of furniture, for instance, the museums show no examples of furniture beyond 1820 and there is thus a distinct break with the work of the present.

A review of the artistic products of a recent period should be undertaken from time to time, the two types of museum co-operating to assess what progress is being made.

5. *Industrial Art.*—Examples of industrial art should be included in the modern work as a current expression and development of the crafts.

6. *Re-arrangement of Collections.*—It is essential that the permanent collections should be re-arranged

from time to time in so far as they are in their nature removable to embody new accretions and to afford a fresh opportunity for valuing the objects in a changed environment. The re-arrangement will tend also to foster a live interest in the collections. If the exhibits are always in the same place the public tends to take them for granted and eventually fails to notice them at all. This re-arrangement should be a continuous process so that within a given cycle of years, perhaps five, the collections would have been entirely revised.

7. *Temporary Exhibitions.*—In all museums certain rooms should be set aside for periodical exhibitions dealing with particular subjects and showing fully the resources of the museum or dealing with exhibitions of modern work and applied art, British and foreign, and the work of modern craftsmen specially borrowed or collected for the purpose. An exhibition should be made each year of the material acquired during the year so that the policy of the Museum and its progress should be clear to all. These temporary exhibitions might be held for six months.

8. *Relation between Museums.*—Between all the National Museums there should be a constant co-ordination and pooling of resources, though the Historical Museum should have the first call on a unique object.

9. *Replicas.*—In order that the sequence of development in each museum should be complete, the use of replicas should be judiciously extended so that an important sequence should not be broken because an original cannot be shown. Replicas will also serve to indicate what is needed to complete a collection or a series and encourage the search for, and the gift of, originals. It is not intended that the museums should be loaded with replicas merely for the sake of completeness.

10. *Organisation of Museums.*—The organisation of both types of museum must be adapted to the needs of those who are the users of them. These fall generally into three classes:—(a) students, (b) the general public, coming as sightseers or as people interested in the historical and technical development of the industries of the country, but with no specialised knowledge and (c) school children. Their distinct and different needs cannot be met by a common arrangement of the collections and they must accordingly be so organised as to enable each to gain a greater value from them than is possible under the present system.

11. *The student*, for whom the collections primarily exist, should be given the greatest information and assistance. Research students should be given increased access to the objects themselves and special rooms set aside for study and research.

12. The needs of the *general public* and the sightseers can be met by the organisation of the museums on the lines indicated above, so that a clear impression of development may be obtained easily and quickly.

13. The needs of *school children* can be met by the smaller de-centralised museums, such as the Horniman Museum and the Bethnal Green Museum, where they can study without the mental and physical fatigue of a progress through the vast rooms of the British Museum and the South Kensington Museum. These museums should be developed for children and not treated as part of the national collections. Visits to these museums and in some cases to the special exhibits in the larger museums should be developed as part of the school curriculum, and attendance recognised as equivalent to school attendance.

14. *Hours of Opening.*—At present a large body of students and research workers are deprived of the opportunity for study by the closing of the museums at the time when they are most able to visit them, that is, in the evenings and on Saturdays and Sundays. Some part of the museums and galleries should be open until 9 o'clock on weekdays and until the early evening on Sundays. The difficulties of organisation might be met by the closing of each

of the museums upon one day during the week, the most suitable day for each to be ascertained from records of attendances.

15. *Lectures.*—There should be a constant series of lectures of University standard organised in the Lecture Theatres of the Museums, the practice of conducted lectures being particularly developed, so that the museums may become living educational institutions. The lectures should in every case be by recognised authorities and by those capable of presenting their knowledge in an interesting manner. The lectures should be designed primarily for students, but the general public should not be excluded.

16. *Monographs.*—The Craft Museum should issue monographs upon the technique of the various crafts, similar to the monographs now issued by the British Museum. The writing of these technical papers should be in the hands of those members of the staff whose expert knowledge fits them for the purpose.

17. *Publicity.*—Information as to days and times of closing, lectures and temporary exhibitions should be adequately advertised in the public press. A system of news paragraphs and weekly notices such as those inserted free of charge for the Zoo and the B.B.C. should be organised in the newspapers. At present it is difficult for the general public to know of the opportunities which the museums afford.

18. *Size of Collections.*—The extent of the exhibitions now shown is larger than is necessary to meet the requirements of the majority of users (except perhaps those of the student, whose needs can be met by access to the storage rooms), and the rate of acquisition to already unwieldy collections is creating a problem with which it is increasingly difficult, but increasingly necessary, to deal. The problem of the extent of the present exhibits can be dealt with by clearing out the greater part of what is now shown and certainly all those exhibits of secondary importance, into storage rooms, accessible to the student and drawn upon for temporary exhibitions and for loan and circulation to the provinces.

19. The rate of acquisition should be diminished by a rigid application of the policy of buying only the very best examples of work. Money allocated for the acquisition of exhibits should not be spent unless some first-class specimen is to be secured by its expenditure or some gap in an historical or technical sequence is to be filled. It is too often the custom to spend money because it is there upon second rate examples or those interesting to the collector for some slight variation or peculiarity. To exhibit second rate artistic specimens without the first-class specimen from which a standard can be established is to invite a current second rate art, cf., the Oriental China collection of the King of Saxony which tended to ruin the taste of the Dresden China factory.

20. *Loan Collections.*—The great amount of material released from the national collections under the foregoing proposals should be made available, not only to Art Schools and Galleries, but to other accredited bodies, by a central circulation department, which should develop the system of loan collections to a greatly increased extent. At present the national authorities have more material than they can cope with, but it is not sufficiently available to the provincial towns and industrial centres who would profit by exhibitions of the particular crafts in which they are interested. (It may be added that some provincial museums have unique specimens which should be in the national collections. It might be desirable that the national collections should have power to acquire these by provisions similar to those granted under the Ancient Monuments Act. In any event they should be registered and the authorities of the national museums should be charged to some extent with their care.)

21. *Grants and Finance.*—The present system of annual grants from the Treasury, which in many cases are notoriously inadequate, and which if not spent must be returned to the Treasury, is often a

cause of wasteful expenditure. The money which is insufficient to purchase the best is spent on the second rate, in order to avoid a reduction of the grant which would follow a return of any part of a year's allowance. (1) Any part of a grant not spent should be held by the Museum authorities and a fund built up which would furnish them with the means to acquire the first-rate pieces as they come into the market. The grants should in all cases bear some relation to the market value of the first-class specimens likely to be required by the institutions for their collections. These increased grants would be met from the economy on fabric expenditure effected by the reduction in the extent to which the collections are exhibited.

22. *Management of Museums and Staffing.*—The ability to put these recommendations into effect is dependent upon the existence of some central controlling body, and the Association consequently attaches paramount importance to the setting up of a central administrative committee, which will make co-operation and interchange of exhibits possible and usual. This administrative responsibility should be vested, however, not in a General Department as at South Kensington, but in a Board of Trustees, such as that governing the British Museum.

23. Each section in a museum dealing with a specific subject or period should be controlled by its own Advisory Committee, to which should be co-opted independent advisers, chosen for their special knowledge or interest in the collections. Recognised authorities, such as the Professors of Archaeology at Oxford or Cambridge, should serve on such committees. This policy would create a more live interest in the collections among those not officially connected with them. These committees would not be expected to judge and advise in matters of taste but only upon those things governed by known principles and rules, such as history, science and technique.

24. The decision in all matters of æsthetic taste must be in the hands of the Director, who should be chosen for his wide outlook, general culture and good taste, rather than for specialised knowledge of any particular subject. His judgment should be reinforced by consultation with other members of the staff who are experts and who are able to advise on technical points.

25. The staff of all the Museums should be competent to fulfil the educational purposes of the collections and appointment should only be from those who show adequate training, aptitude and judgment. Promotion to the higher positions should be from those who have an expert knowledge and an experience of the subject of the section which they are to control.

26. The arrangement of the collections should be in the charge of those with special qualities for display and a sense of arrangement.

27. *Donors' Bequests.*—It is suggested that in order to deal with the difficulties created by collections being left as memorials, there should be set apart in each museum a Hall of Donors where the bequests and the donors could be suitably acknowledged and commemorated and the bequests themselves set free from the hampering conditions which create miscellaneous sub-collections prevent the rejection of second-rate examples and the arrangement and the allocation of the exhibits according to their historical and technical significance.

28. *Fees.*—The present system of fee and free days answer the purpose of providing opportunities for those who wish to study under less interrupted conditions, but the Association strongly deprecates any further extension of the imposition of fees.

(Signed) LAWRENCE WEAVER,
President,
Design and Industries Association.

(1) All the Purchase grants in the Museums and Galleries are non-returnable and the Association is therefore under a misapprehension on this point.

THE FEDERATION OF BRITISH INDUSTRIES.

Questions asked:

1. *The practical utility and stimulus in the application of both Science and Art to industry afforded by the National Institutions coming within the Terms of Reference, for example, the Geological Survey and Museum, the Royal Botanic Gardens, Kew, the British Museum of Natural History, the Science Museum, the Victoria and Albert Museum, etc. Thus the work of the Geological Survey and Museum is intimately connected with problems in the mining industries; the work of Kew with the introduction into different parts of the world of plants of great economic value; of the Entomological Department of the Natural History Museum with the problem of insect pests; of the Science Museum with engineering questions; of the Victoria and Albert Museum with arts and crafts of various kinds. But it is, perhaps, not improbable that the assistance which could be afforded by these Institutions could be made much more effective were its possibilities more widely appreciated or brought more actively and intimately into contact with the industrial world.*

2. *Suggestions for stimulating public interest in the National Collections with a view to a greater measure of financial support from private sources.*

3. *Observations on such aspects of the Terms of Reference as may especially interest the Federation.*

Reply:

(i) STATEMENT BY THE INDUSTRIAL ART COMMITTEE.

The Federation has been invited by the Royal Commission to submit its views on the practical utility and stimulus in the application of art to industry afforded by the Victoria and Albert and other national museums, and as to anything which could be done to make more effective the assistance afforded by these Institutions. The following statement has been prepared by the Industrial Art Committee of the Federation solely from the point of view of industrialists and designers concerned in the industries in which artistic design plays an important part.

The Committee realise that the National Museums contain an immense amount of material of great value from the point of view of its bearing on industrial design and that these museums are, on the whole, admirably organised from the point of view of the student and industrialist, and supplied with staff who are both competent and always extremely ready to assist enquirers; at the same time there are some matters in which it seems to the Committee that some improvement might be made, and they venture to call attention to these in the following remarks.

1. *Method of Display.*—The Committee feel that the method which is at present adopted in the Victoria and Albert Museum of classification by material, though admirably adapted to the purposes of some classes of student, is not sufficiently stimulating to the designer whose principal object should not be slavishly to copy existing specimens, but rather to arrive at a proper appreciation of the artistic value of various specimens in relation to the purposes for which they were designed and the surroundings in which they were used.

The Committee understand that in other countries the classification according to material has been to some extent abandoned in favour of an arrangement which aims at illustrating the development of particular historical periods by means of combined displays of carefully selected specimens. While no attempt is made to arrange actual furnished rooms in the style of particular periods, specimens are grouped together in galleries in such a manner as to give an idea of the relation of different articles of decoration and usefulness to one another, and to furnish a general idea of the development of the applied arts through a cultural period.

It appears to the Committee that the adoption of this principle would improve the usefulness of our National Museums from the point of view of the industrial design student. It is realised that the whole

of the material at present displayed in, for example, the Victoria and Albert Museum, could not possibly be shown together in selected galleries of the kind suggested. It is submitted, however, that an adequate display of the best examples could be made in this way, which would give both the general public and the student, interested in design from the artistic point of view, a much more real idea of the value and quality of the artistic productions of different ages, while the requirements of the student who seeks more detailed information could be met by secondary galleries in which the exhibits could be shown according to a classification by materials, but with very much less attempt at display than is made in the arrangements now existing. In this way a considerable saving in space could be effected which would perhaps enable the scheme of selected galleries to be carried out without any substantial further addition of space.

2. *Educational Activities.*—The Committee venture to suggest that in addition to the lectures which are now given from time to time for the benefit of the general public, lectures of a more technical kind might be introduced for the benefit of the designer and student, the staff of the museums would be fully qualified to give such lectures, but if outside assistance were required no doubt specialists could be secured to do the work at little or, sometimes, no expense.

3. *Inclusion of Modern Work.*—The Committee feel very strongly that the Victoria and Albert Museum is incomplete without a really representative display of the modern artistic productions of all nations. They wish to point out that one of the great difficulties in the way of developing new styles of decoration and furniture is the devotion of the buying public to the antique and to traditional styles, a devotion which often has very little foundation in a real appreciation of the merits of the work of the periods concerned. If modern products were shown in their true relation to the antique the public would acquire a more just view of the subject and would be able to appreciate more readily what was good in modern production. It is sometimes said that it is difficult to form a true judgment as to what is artistically good in contemporary production, but the Committee feel that this difficulty would be gradually removed if taste were educated by the continued practice of showing modern productions in conjunction with the antique. Moreover, such productions can be obtained very much more cheaply than the antique, and therefore a certain amount of wastage in the material purchased would not be a serious matter. Another objection sometimes raised is based on the difficulty of showing satisfactorily what must be a relatively small quantity of modern objects in conjunction with the great mass of antique material exhibited. This difficulty does not seem a fatal one. Moreover, the suggested arrangement of exhibits in selected historical galleries would enable modern work to be displayed more conveniently than would be possible under the present system.

The Committee are convinced that if a generous policy of purchase of modern productions both hand-made and machine-made were adopted, the interest and educational value of the museums to the public would be greatly enhanced. Moreover, this policy could be carried out with very little extra expense, owing to the relatively smaller cost. As has already been pointed out, the modern products could be purchased cheaply, and manufacturers and artists would no doubt be willing in very many instances to present or loan objects made by them to the museums.

The Committee are aware that efforts are being made by certain independent organisations to build up collections for loan or presentation to the Victoria and Albert and other museums. They appreciate the efforts of these bodies and do not suggest that they should be discontinued, but they consider that in addition the museums themselves should definitely adopt a policy of purchases of modern productions.

4. *Temporary Exhibitions.*—The Committee cordially approve the policy of holding temporary

exhibitions at the Victoria and Albert Museum, such as the very valuable displays of the Gobelin tapestries and of the plate and furniture of the City companies. They would gladly see this policy extended and applied, especially to international exhibitions of modern work. If possible they would like to see the North Court of the Victoria and Albert continually occupied with successive temporary exhibitions of really high quality and educational value.

5. *Loans to Provincial Museums, Art Schools, etc.*—The Committee consider a generous policy of loan to provincial museums and art schools to be of prime importance and they appreciate what has been done to improve the Circulation Department of the Victoria and Albert Museum in recent years. The great majority of the population, and particularly of the industrial population, lives in districts remote from the national museums and can seldom take advantage of them. Loans to provincial museums and schools may, therefore, have a most important educative influence, transcending perhaps even that of the national museums themselves. The suggested re-arrangement of the exhibits should set free a considerable amount of material for circulation in the provinces. The material to be circulated should include examples of the best modern work. Moreover, it would be very desirable that the objects loaned should be frequently changed so as to always have material of fresh interest.

The Committee believe that proposals have more than once been made for the creation of a special circulation institution, to which material could be transferred from the Victoria and Albert and other museums, and which would be managed by a Board drawn from the Boards of the various museums. Without having any details of this proposed organisation before them the Committee are inclined to think that its creation might have a beneficial effect by increasing the importance of the circulation department and the amount of material available for it.

Finally the provision of peripatetic lecturers to speak at the various centres where loaned collections were available would be of value. Should there be any difficulty in providing these from London, efficient voluntary local lecturers could probably be found in most centres.

(ii) STATEMENT BY THE EDUCATION COMMITTEE.

The Federation approaches this matter from the point of view of those actually engaged in or training with a view to engagement in industry. They recognise that this [the Science] Museum has a general educational work to do, both for the general public and for the rising generation, and upon this question the recognised educational authorities will no doubt submit their views. The Federation greatly appreciates the remarkable progress which has been made with the development and reorganisation of the Museum in recent years. They venture however to make the following suggestions made by their Education Committee in regard to certain points in which improvement is still desirable.

1. *General Principle of Arrangement.*—In the Report for the year 1923, this is described as follows:—

“As the National Museum of Science and Industry the aim of the Science Museum is firstly to form in each group a series of carefully selected objects representing the principal stages of development in the branch of science or technology which the group represents; and secondly to show a collection illustrating the current practice of the groups. These groups, each of which represent some special industry or branch of science, number about 50 or 60, so, if the collections are not to become unmanageably large, strict limits must be laid down within which they are to be developed.

For each group of the collections, therefore, a scheme has been drafted which sets out the stages of development through which the industry or science has passed and is of sufficient importance to be represented. Lists are being

prepared of the objects which will most suitably illustrate those stages, and where these are not already in the collection examples or replicas of them will be obtained as opportunities occur, photographs or diagrams serving to represent them in the meantime. . . .

It will take many years before the majority of the groups can be adequately represented on these lines, but a great deal already exists and in the new galleries it is hoped to emphasise by this scheme of representation the past development of the various branches of science and technology more effectively than has been possible hitherto.

Besides these historical series, for which objects will be critically selected, and from which they will rarely be removed there will also be a number of examples illustrating current practice. These, which will usually be on loan, will remain on exhibition so long as they are of especial interest, and have not been superseded by new advances in the sphere to which they belong. From time to time objects of special importance in these current groups may be transferred to the historical series, but probably the great majority will remain only so long as they represent the best types of modern practice.

Thus the museum in its collections will perform a dual function, that of the museum of scientific and technical development, and that of a permanent exhibition of current practice. In this way it is hoped to increase the utility and value of the collections without enlarging them to a point at which they become so large as to be unwieldy and wearisome to the visitors.”

The Committee consider that these principles require more precise definition. It is clear that visitors to the museum fall into various classes and that methods of arrangement which would appeal to one class as being the most convenient, may not appeal to other sections. From the point of view of students and industrial designers it is open to consideration whether too much is not allocated to examples of machinery which do not show sufficient variation to justify the amount of space occupied. As a general principle it might well be laid down that actual exhibits should consist of two classes:—

(a) *Machines which make a revolutionary change in method such as the substitution of the turbine engine for previous types of engine.*

It would not, however, be necessary to follow this up by showing all the minor improvements which subsequent inventions have effected. Such a series would take up a considerable amount of space without a compensating advantage. Such patents should, perhaps, be relegated to drawings, specifications and the like, to be kept in the library and not represented by full-sized engines or even elaborate models.

(b) *Examples where the improvement in the machine was such as to considerably increase its efficiency, not by an infinitesimal amount but by a very large percentage in actual practice.*

The principle to be followed therefore should, in the opinion of the Federation be:

(1) *Inventions in Machinery which produce a revolutionary change* should be represented by the earliest practical example and should be followed by a few machines, each of which marked a very considerable advance in efficiency over the original model, leaving to the library the preservation of records of the small variations and intermediate stages leading from the revolutionary change to each successive important advance in practical efficiency. It is believed that by adopting some such principle as this a great deal of space could be saved which could be allocated to more useful purposes. In this connection it is important that the rudimentary stage of the machine should be represented, starting from the actual hand-tool from which it has evolved. Thus there should be a thoroughly representative collection of hand-tools so arranged to show how (for example) the adze became transformed into the axe and how fundamental improvements in the axe followed in due course.

(2) *Unsuitable Exhibits.*—It is open to question whether a large number of the collections maintained in the present Museum are really suitable to its objects. Thus there is a very fine collection of models of early sailing ships which might be more properly housed, either at the present United Services Museum in Whitehall, which already has a large collection of such objects, or, alternatively, placed in a new Museum which would deal with the social rather than the industrial history of the country. The preservation of such models is a matter of prime importance. It would, however, be preferable that work of this nature should be relegated to another museum which would aim at acquiring a complete series of such models rather than that some models should be in the United Services Museum, others at the Science Museum, and still others scattered about in various localities. On the other hand, one or two characteristic examples of a hand-spinning machine are essential if a student is to see how, from that machine, evolved the modern power spinning machinery of Lancashire; for the elementary process is, after all, the basis of the present machinery.
